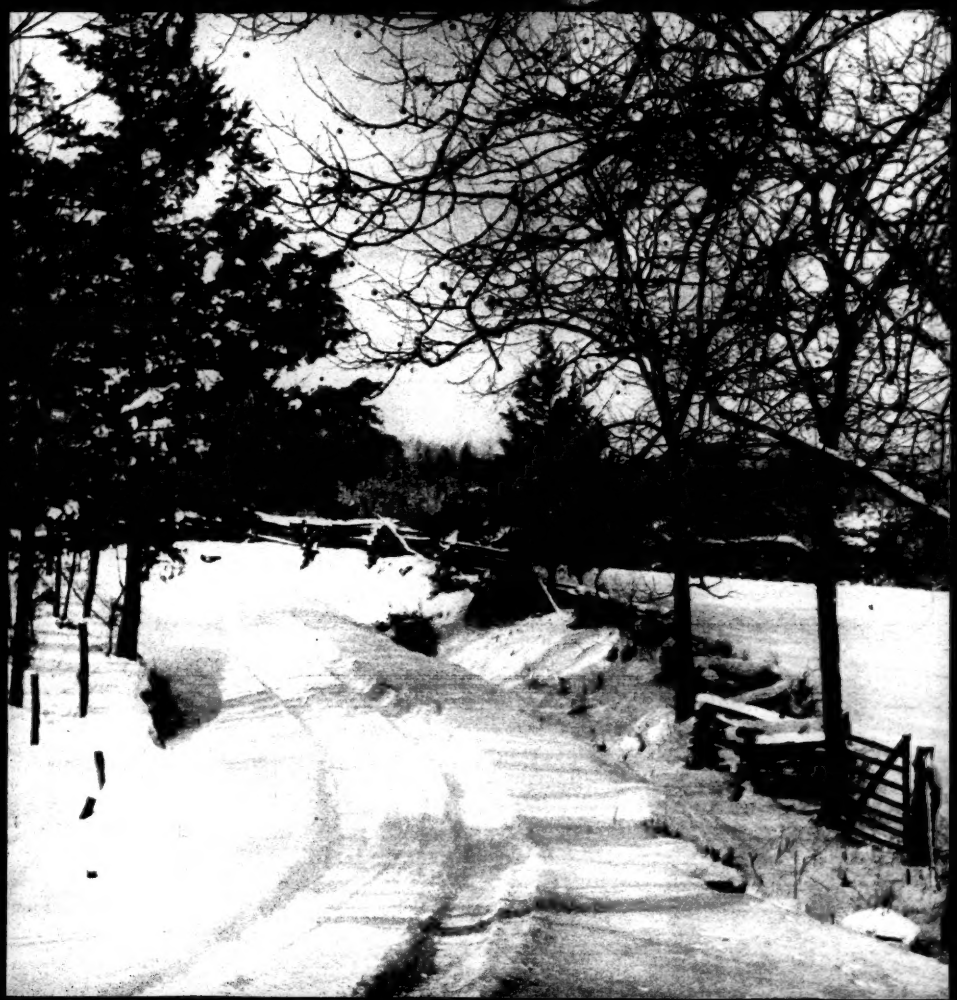
THE ILLINOIS AGRICULTURAL ASSOCIATION

Record



GOOD LUCK TO YOU IN '44!

We wish you the BEST O' LUCK in your hog raising this year. Hope you get GOOD PRICES and suffer NO GREAT LOSS. Speaking of LUCK, however, don't depend TOO MUCH on it ALONE. Use FRESH, POTENT FARM BUREAU SERUM TO CLINCH IT!

Remember: *The smaller the shoat*
The cheaper the shot

PS-ST! MAKE IT MORE OF A SURE THING BY USING THIS!

The Illinois Agricultural Association Record

The Illinois Agricultural Association RECORD is published monthly by the Illinois Agricultural Association at 1501 W. Washington Road, Mendota, Ill. Editorial Offices, 608 So. Dearborn St., Chicago, Ill. Entered as second class matter at post office, Mendota, Illinois, September 11, 1936. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1935. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 608 So. Dearborn St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578 and undeliverable copies returned under Form 3579 to editorial offices, 608 So. Dearborn St., Chicago, Ill.

Director of Information, C. L. Mast, Jr.; Editor, Merrill C. Gregory, on leave of absence with the United States Army; Assistant editor, Creston Foster; Director of Advertising, C. M. Seagraves, on leave of absence with the U. S. Navy.

An Editorial

RECENT ACTION by government agencies in removing the restrictions on farm slaughter of hogs for resale and the reduction in ration point values on retail cuts of pork were steps in the right direction toward relief of the glutted hog market. However, the action did not go far enough to be of any great practical value. Farmers still have to collect ration points on meat sales, and nobody has enough ration points to take any appreciable amount of pork off the farmer's hands.

What is really needed to help prevent congestion of hogs in the terminal markets, and avert a possible collapse of the government's support program, is removal of all ration points from pork until the glut in hog marketings is over.

Such action would do at least four things:

First, it would encourage more home and community butchering throughout the corn belt and thus prevent top heavy shipments of hogs from jamming the terminal markets.

Second, it would help the government to make good on its hog support program. The price floor under the hog market is only for hogs of 200 to 270 pounds. Farmers with hogs ready for market within these range weights have been forced to hold them over to heavier weights because the the terminal facilities were overtaxed. Others have received prices below the support level when their hogs were sold in "mixed lots" (hogs of various weights thrown together), a practice which has served to circumvent the support price.

Third, it would strengthen the producers' confidence in government officials because farmers would recognize the removal of ration points on pork as an honest attempt to alleviate a tight situation. It would further demonstrate that OPA is not holding back because of fear of losing some control over our domestic economy. Producer and consumer alike cannot understand why more pork cannot be made available to consumers when such surpluses exist.

Fourth, by enabling many farmers to market their hogs when they are ready it would conserve feed supplies.

Farmers were encouraged by their government to produce more hogs; a deliberately held down price on corn at below parity, together with the price support program on hogs resulted in the present record volume of hog marketings. Now corn ceilings have been boosted to put the brakes on hog production and the government is looking for all available means to bolster its support program. If further steps are not taken to straighten out the chaos hog producers face in trying to market their hogs, farmers will lose confidence and we may face a much larger curtailment of hog production in 1944 than the government is asking. The sound and logical move at this time is to temporarily remove all ration points on pork.

CHICAGO FAT STOCK SHOW SCENE OF

REPEAT PERFORMANCES

BY EXHIBITORS OF LAST YEAR

MOST of the winners in the 1943 Chicago Fat Stock Show were exhibitors who carried off championship honors in 1942.

R. F. Constant, Buffalo Hart, Sangamon county, a veteran showman and Chicago Producers patron, won three prizes. He took second prize in the lightweight Shorthorn class; second the medium weight Shorthorn class, and sixth in the light weight Hereford class.

Karl and George Hoffman, Ida Grove, Ia., also Chicago Producers patrons, repeated their outstanding performance of a year ago. Karl showed a load of 910-pound Herefords that finally won in keen competition with 43 other entries to be declared grand champions of the show. They were the lightest load to ever win this carload event. They sold on auction at $35 per cwt., highest price since 1937. Karl also had a load that won first prize in the medium weight Hereford class and George took fifth in the same class.

Then Karl and George showed a load of Berkshire hogs and here again took the top honor for the second consecutive year. This grand champion load of hogs brought $14.75 per cwt. (ceiling price). They also had another load of Berkshire hogs that secured first prize in the heavyweight class.

T. Richard Lacey, Edgar county, had the grand champion steer of the 1943 show with a Hereford. It sold for $4 per pound, the third highest price ever paid for a grand champion at the show.

John Oxley, Marion, Ia., had the reserve grand champion of the show and it sold for 28 cents per pound.

Summary of the cattle auction sales at the show is as follows: 79 head sold, average weight 1024 pounds, average price, $17.85 per cwt.

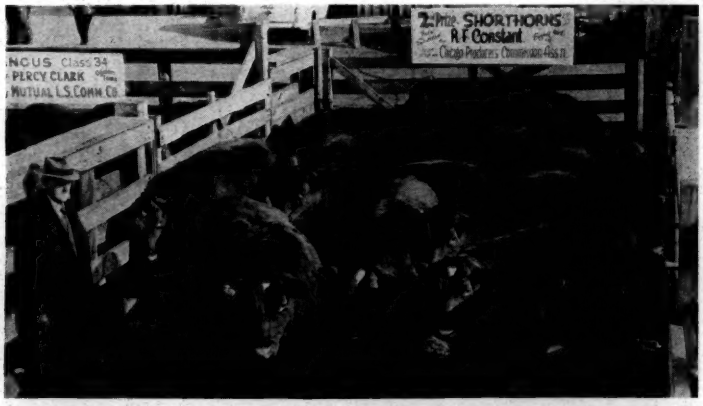
Junior feeding contest steers: 426 head sold, average weight, 1043 pounds, average price, $21.35 per cwt.

Carlot fat cattle: 44 loads (15 head to a load), average weight, 1071 pounds, average price, $17.50 per cwt.

Carlot feeder cattle, 9 loads, average weight, 421 pounds, average price, $16.-04 per cwt.

Outstanding Chicago Producers patron prize winner in the junior lamb feeding contest was Kenneth Disch of Evansville, Wis. He won first place in both weight classes in the lamb show and also had grand champion pen of three lambs for the fourth successive year. He also had grand champion individual lamb in the junior feeding contest and the reserve champion of the open class show. His champion pen sold for 91 cents per pound.

In the swine sales of the open classes, 10 head sold at an average weight of 271 pounds brought an average of $14.13 per cwt. Swine sales in the junior feeding contest of 43 head with an average weight of 259 pounds showed an average price of $17.05 per cwt.



R. F. Constant, Sangamon county, won three prizes with his cattle at the 1943 Chicago Fat Stock Show. A veteran showman, he marketed his animals through the Chicago Producers Commission Association.

Gallatin County Bureau Hires New Farm Adviser

A. L. Oxford, formerly of Hardin county, has taken over the duties of farm adviser in Gallatin county. A graduate of Rosiclare Community High School, and the U. of I. College of Agriculture, Oxford has been teaching vocational agriculture at Woodlawn High School for the past two years.

At Woodlawn High School, Oxford developed one of the outstanding livestock projects in the state. His school was high money winner at the Salem sectional FFA fair this year.

According to Gallatin Farm Bureau officials, Oxford is the first man from Hardin county to qualify for farm adviser.

George N. Peek, First AAA Administrator, Dies

George N. Peek, 70, who served as the first administrator of the AAA program in 1933, and who worked on the McNary-Haugen bill, died Dec. 17 in his home near San Diego, Calif.

Formerly of Moline, Mr. Peek was born Nov. 19, 1873 in Polo, Ill., and was graduated from Northwestern University in 1892. He was in the farm implement manufacturing business for a number of years. He worked with Deere & Webber Co., 1893-1901; served as vice-president and manager of John Deere Plow Co., 1901-11; vice-president Deere & Co., 1911-19; president and general manager, Moline Plow Co., 1919-23.

Mr. Peek served as AAA administrator in 1933, and in 1934-35 as special adviser to the President on foreign trade, and as president of the government export-import banks. Mr. Peek also was co-author of "Equality for Agriculture," a brief which later served as basis for the McNary-Haugen bill.

Miss Barbara M. Herlin, former home economics teacher in Indianola High School, is now serving as home adviser in Whiteside county.

The USDA reports that more than 1,700,000,000 cubic centimeters of hog cholera serum has been made during the period July 1, 1941 to June 30, 1943, or 25 per cent over last year's high output and a new production record.

Neighbors husk corn on the Jensen farm, Bourbon community, Douglas county, following the death of John Jensen in November. The 140 acres was husked in one day by 37 men using nine corn pickers.

Community Folks Bring Assistance to Neighbor

A demonstration of community neighborliness was made recently in the Bourbon community of Douglas county when neighbors husked the corn crop on the Jensen farm.

John Jensen died during the last of November and after folks in his community were nearly through with their corn, they went into his field of 140 acres and husked it all in one day's time using nine corn pickers and 37 men.

Of the 140 acres production, the corn from 90 acres was delivered in the ear to the Bourbon elevator within one mile of the field and the rest was stored in the corn crib on the Jensen farm.

Twenty-two ladies of the community served dinner to the workers at the Baptist Church in Bourbon. The men who furnished wagons, pickers, and tractors were Claus Tay, Arthur Albin, Milton Hallberg, Wilbur Waters, George O'Laughlin, Emery Gingerich, Capt. Roy Jones, James Waters, Ernest Perkins, Alvia Guy, Dale Still, Marion Watson, Lloyd Warnes, Ed Speelman, John Koster, Harry McConnell, Harry Hanson, Everett Decker, Ed Kroll, John Atwell, Howard Cundiff, Elmer Herringson, Harvey Kauffman, George Kauffman, O. C. Heit, Glenn Smith, Charles Dobson, Henry Schultz, Jr., Jake Waters, Welcome Garrett, Gene Selle, Thomas Herrington, Roy Goetz, George Jones, two sons and one brother of Mr. Jensen, Wayne, Walter and Pete.

SIMPLIFIED CORN PRICE CONTROLS

WITH the raising of the ceiling price on corn from $1.07 for No. 2 corn, Chicago basis, to $1.16, Dec. 6, a simplification on corn price controls was made which should give farmers a better idea of what the ceiling price is for their respective areas.

The action was taken by the OPA, with the concurrence of the WFA and embodied in a directive from the director of economic stabilization.

The Chicago No. 2 ceiling price is a formula price and the maximum price at which corn may be sold at a country point is computed on this basis with deductions for freight, handling charges, grade discounts and moisture content. White corn is worth a premium of just 15 cents per bushel over yellow.

The deductions for moisture content in excess of 15½ per cent are as follows: ½ cent per bushel for each ½ per cent of moisture content over 15½ and under 17½; ¾ cent for each ½ per cent over 17½ and under 20 per cent; 1 cent for each ½ per cent over 20 per cent.

It will be noted that corn containing moisture in the bracket 15½ to 17½ per cent will have the same discount under the new order as the old. From 17½ up there is a gradual increase in the discount under the new order so that at 28 per cent of moisture the entire increase in the base price if offset by the higher discount provided.

If a producer sells to a trucker, to another farmer, to an elevator, or any other buyer f.o.b. his crib, the ceiling price is 4 cents less than the on-track ceiling price at the nearest elevator, or 1½ cents less than the price delivered at the elevator.

If a farmer sells and delivers corn to another farmer, to an elevator, or any other buyer, the ceiling price is 2½ cents under the on-track ceiling price at the station nearest the point of delivery.

If a country elevator operates as a wholesaler, he may sell in less than carload lots to a trucker or any other buyer other than a feeder for a 4 cent markup over what the corn cost, or 1½ cents over the on-track price, provided the corn is unloaded into the elevator and loaded out.

At the same time as the new corn price regulation was issued, the OPA froze the price of oats, barley and sorghum grains pending issuance within 60 days of a permanent regulation on these feeds.

Oats and barley are frozen on the basis of the highest prices of the five-day period from Nov. 29 to Dec. 3, 1943, inclusive.

This provides a ceiling of 80½ cents Chicago for No. 3 white oats, with a ceiling of 82 cents Chicago for futures, and a ceiling of $1.26 Chicago for No. 3 barley and a ceiling of $1.26 Chicago for futures.

The increase in the corn ceiling price will not be retroactive. Last August and September, OPA promised farmers the benefit of increased prices that might be made up to Nov. 30, if they sold corn before that date. The increase in the ceiling, however, did not come until after the Nov. 30 or 6 days after the guarantee expired.

Farm-Home Week Is Set For Feb. 8-9-10 At Urbana

To aid Illinois farm families in meeting the problems of World War II and the post-war period, the 43rd annual Farm and Home Week has been scheduled for Feb. 8, 9 and 10, according to R. R. Hudelson, associate dean, U. of I. College of Agriculture.

The same type of condensed, practical program will be presented in 1943. Topics for discussion will be based on the production of food and feed, economics, farm management, rural life and home economics. In addition there will be at least one speaker of national or international reputation at each of the daily general sessions.

Farm and Home Week has been timed to occur between semesters when the majority of civilian students will be on vacation, in order to take care of the local food and housing situation for out-of-town guests. However, classes for students in uniform will still be in session.

To aid Illinois farm families in meeting the problems of World War II and the post-war period, the 43rd annual Farm and Home Week has been scheduled for Feb. 8, 9 and 10, according to R. R. Hudelson, associate dean, U. of I. College of Agriculture.

The same type of condensed practical program will be presented in 1944. Topics for discussion will be based on the production of food and feed, economics farm management, rural life and home economics. In addition there will be at least one speaker of national or international reputation at each of the daily general sessions.

Farm and Home Week has been timed to occur between semesters when the majority of civilian students will be on vacation, in order to take care of the local food and housing situation for out-of-town guests. However, classes for students in uniform will still be in session.

FARMERS' NUMBER ONE PLEDGE:

HELP WIN THE WAR!

☆ ☆ ☆ ☆ ☆ ☆ ☆

TO discharge his full responsibility to his country and to the men and women on the fighting front in the face of obstacles which may beset his path — this is the creed of the typical Farm Bureau member as he looks ahead to his job in 1944.

This is no mere slogan designed to catch the public fancy; it is the general sentiment that any honest observer could have recorded at the open forum for delegates held during the 25th annual convention of the American Farm Bureau Federation.

As one delegate from each state rose to contribute his part to the overall picture of American agriculture in 1943 and the outlook for 1944, it was apparent that not a single section of the country was without major problems in the second year of World War II, but the farmer wasn't licked as he prepared to meet the coming year. It was unmistakably clear that many of these problems were created by ill-advised and poorly conceived Government agricultural policies, but there was no talk of a letup in general production. Regardless of personal setbacks and sacrifices, the farmer demonstrated again that he is first of all a patriot.

Illinois farmers could be certain that their thoughts were properly reflected by Talmage Defrees, IAA vice-president, when he declared, "I think the Illinois farmer is more interested in winning the war and bringing our boys back home than he is in anything else.

AFBF Gathers in Annual Meeting and Dedicates Itself Anew to Task of Feeding Nation in Wartime

☆

I am sure of that . . . We are going to produce and we are going to sacrifice; we are going to do everything that is possible to further the cause of winning the war. . ."

To enable them to contribute their full share toward winning the war, there are certain things that farmers need, delegates asserted. First of all they need to have programs announced well in advance so that producers can plan their operations. Equally important, said Allen B. Kline, Iowa Farm Bureau president, is for the government to stick to its proposition once it is made.

Delegates also reported that farmers in the corn belt were particularly concerned about the government's hog program. An Indiana hog grower suggested that if the OPA would remove ration points on pork for at least a few weeks it would ease the glutted market. Such a move, he said, would permit literally hundreds of thousands of hogs to be butchered and distributed in local communities throughout the corn belt, thus removing the congestion in the terminal markets.

Delegation of more authority and responsibility in local OPA boards was recommended by George Ogilvie, president of the Nevada Farm Bureau. This, he said, would avoid much delay and confusion, since the local boards understood the problems of the area better. Other spokesmen reaffirmed the need for speeding up OPA operations. A Missouri delegate reported that his people were not opposed to the OPA because they knew they had to have some control of this type, "but for six weeks or two months in my own county we have been trying to find out definitely what the ceiling price on corn is."

The universal appeal at the forum was for a coordination of policies and programs affecting food production, "so that farmers would know what they are supposed to do."

Inflation control was strongly urged by various state leaders. Rollback subsidies were opposed as highly inflationary.

Feed shortages came in for much discussion as well as inadequate supplies of new machinery, parts, supplies and labor. Eastern and northwestern farmers are hard hit on feed supplies.

☆

Officers and directors of the American Farm Bureau Federation in session at the 25th annual meeting, seated left to right, Mrs. Elsie Mies, Illinois, Associated Women; H. J. King, Wyoming; Francis Johnson, Iowa; Vice-president Earl C. Smith; President Edward A. O'Neal; R. B. Corbett, secretary-treasurer; Donald Kirkpatrick, legal counsel; J. F. Porter, Tennessee; George M. Putnam, New Hampshire. Standing, left to right, O. O. Wolf, Kansas; Ransom Aldrich, Mississippi; George Wilson, California; Arthur Packard, Vermont; H. H. Nuttle, Maryland; Frank W. White, Minnesota; H. L. Wingate, Georgia; Hassil E. Schenck, Indiana; George Ogilvie, Nevada; J. Walter Hammond, Texas, and Perry Green, Ohio. Two directors not present when the picture was taken were R. E. Short, Arkansas, and Warren W. Hawley, New York.

President Edward A. O'Neal with Ben Kilgore, assistant to the AFBF president, and R. B. Corbett, new secretary-treasurer, at the AFBF annual meeting.

☆

These men said that at first they thought the midwestern farmers were holding out on them on corn, but they soon realized this was not true when they found corn belt farmers had to feed corn to their hogs in order to get parity for their grain. Several delegates reported they would be glad to pay up to $1.30 to $1.40 for corn since they were already paying the equivalent of that for wheat, barley and other corn substitutes.

W. P. Thorpe, president of the New Mexico Farm and Livestock Bureau, said he would guess that 50 per cent of last year's crop of feeders is still on the range because WFA slaughter regulations and OPA ceilings practically froze cattle on the New Mexico range.

Emphasis was placed on an effective public relations program for the Farm Bureau and the need to maintain after this war an agricultural program that will give our boys who come back to the farm a decent way of life.

The latter point was emphasized at the dairy conference by A. H. Lauterbach, general manager of the Pure Milk Association, who proposed that the best features of the AAA and the old McNary-Haugen plan of the 20's be combined to give the farmer control over the marketing of his products.

Delegates at the forum also stressed the importance of further strengthening farm cooperatives. At the service cooperative conference, Donald Kirkpatrick, AFBF and IAA general counsel, predicted that cooperatives would meet the situation if federal income tax laws are revised to assess for taxation earnings and savings of cooperatives. He pointed out that cooperatives would cut prices. In this way farmers would get the same return as they do from patronage dividends. He said co-ops hesitated to do this because of business hazards and also because of the confusion that would result in a cut price program that would disturb reasonable price structures.

Views expressed at the commodity conferences were in close agreement with the annual address of President Edward A. O'Neal, other main guest speakers and the convention resolutions.

Said President O'Neal, "When the economic history of this period in our national life is being read by the next generation, I wonder if the people then will not be puzzled to read that in the year when national income reached the highest record in all previous history, one of the most controversial issues was whether or not subsidies should be paid by the federal government to the consumer."

He advocated heavier taxation and more equitable taxation to halt the inflationary spiral and to make people conscious of the tremendous national debt that is growing rapidly.

On the question of foreign relations, he said, "I feel deeply that we won the war but lost the peace as a direct result of a mistaken policy of isolationism, and that that disaster must not be repeated. . ."

Congressman Everett M. Dirksen, Pekin, influential member of the sub-committee on agricultural appropriations, declared that there is no such thing as a farm bloc in Washington, but that it was a convenient name applied to representatives from agricultural states who do not always agree among themselves, nor with organized agriculture. However, he added, these agriculture representatives endeavor to do the best job possible in meeting the needs of rural people consistent with the general welfare of America.

O. D. Brissenden, IAA organization director, accepts AFBF award for the state Farm Bureau having the highest ratio of paid up members to total number of farms recorded in the state by the 1940 census, from President O'Neal. The ratio was 44 per cent.

President Earl C. Smith reports as chairman of the AFBF resolutions committee.

☆

Chester C. Davis, president of the St. Louis Federal Bank, and former head of the WFA, warned that if organized agriculture is to keep its hold on public confidence, it must state clearly the determination of farmers to prevent a general rise in the nation's food costs. He declared that he did not believe "that the general use of Treasury subsidies is necessary either to keep food prices from advancing further or to secure downward adjustment in the case of commodities when consumer prices are higher than necessary to get production and reward the producer."

H. L. Wingate, president of the Georgia Farm Bureau, gave an interesting account of his experiences in wartime England, where he spent a month as guest of the British government. He went as the official representative of the American Farm Bureau Federation. Wingate reported that Great Britain had a long-time pricing program for agriculture, and many British farmers had a better idea what they were going to get for their products in 1945 than American farmers did for 1944.

Other main session speakers were: W. A. McLeod, president of the Canadian Federation of Agriculture; H. E. Babcock, chairman of Governor Dewey's New York State Food Commission, and John Brandt, president of the National Cooperative Milk Producers Federation.

One of the highlights of the AFBF convention evening programs was the story of war told by Lt. Richard Kelly, Lt. J. A. Walsh (j.g.), and Shipfitter Raymond Johnson 2/c, all of the Navy. The latter, who wore ribbons for many campaigns and engagements, including the Navy Cross, gave an account of his experiences which brought farm folks

FARMERS' NUMBER ONE PLEDGE:

HELP WIN THE WAR!

☆ ☆ ☆ ☆ ☆ ☆ ☆

TO discharge his full responsibility to his country and to the men and women on the fighting front in the face of obstacles which may beset his path — this is the creed of the typical Farm Bureau member as he looks ahead to his job in 1944.

This is no mere slogan designed to catch the public fancy; it is the general sentiment that any honest observer could have recorded at the open forum for delegates held during the 25th annual convention of the American Farm Bureau Federation.

As one delegate from each state rose to contribute his part to the overall picture of American agriculture in 1943 and the outlook for 1944, it was apparent that not a single section of the country was without major problems in the second year of World War II, but the farmer wasn't licked as he prepared to meet the coming year. It was unmistakably clear that many of these problems were created by ill-advised and poorly conceived Government agricultural policies, but there was no talk of a letup in general production. Regardless of personal setbacks and sacrifices, the farmer demonstrated again that he is first of all a patriot.

Illinois farmers could be certain that their thoughts were properly reflected by Talmage Defrees, IAA vice-president, when he declared, "I think the Illinois farmer is more interested in winning the war and bringing our boys back home than he is in anything else. I am sure of that . . . We are going to produce and we are going to sacrifice; we are going to do everything that is possible to further the cause of winning the war. . ."

AFBF Gathers in Annual Meeting and Dedicates Itself Anew to Task of Feeding Nation in Wartime

☆

To enable them to contribute their full share toward winning the war, there are certain things that farmers need, delegates asserted. First of all they need to have programs announced well in advance so that producers can plan their operations. Equally important, said Allen B. Kline, Iowa Farm Bureau president, is for the government to stick to its proposition once it is made.

Delegates also reported that farmers in the corn belt were particularly concerned about the government's hog program. An Indiana hog grower suggested that if the OPA would remove ration points on pork for at least a few weeks it would ease the glutted market. Such a move, he said, would permit literally hundreds of thousands of hogs to be butchered and distributed in local communities throughout the corn belt, thus removing the congestion in the terminal markets.

Delegation of more authority and responsibility in local OPA boards was recommended by George Ogilvie, president of the Nevada Farm Bureau. This, he said, would avoid much delay and confusion, since the local boards understood the problems of the area better. Other spokesmen reaffirmed the need for speeding up OPA operations. A Missouri delegate reported that his people were not opposed to the OPA because they knew they had to have some control of this type, "but for six weeks or two months in my own county we have been trying to find out definitely what the ceiling price on corn is."

The universal appeal at the forum was for a coordination of policies and programs affecting food production, "so that farmers would know what they are supposed to do."

Inflation control was strongly urged by various state leaders. Rollback subsidies were opposed as highly inflationary.

Feed shortages came in for much discussion as well as inadequate supplies of new machinery, parts, supplies and labor. Eastern and northwestern farmers are hard hit on feed supplies.

☆

up to the front line of battle. Similar exploits were told by the other two Navy representatives.

Donald Kirkpatrick, IAA and AFBF legal counsel, presided at the services honoring the sons and daughters of Farm Bureau families in the services. As he gave his brief but stirring message of tribute, the lights of the convention hall were dimmed and a spotlight illuminated the service flag.

The American Farm Bureau Federation's 1943 awards for distinguished service to American agriculture were made to Dr. R. K. Bliss, director of extension service, Iowa State College, and posthumously to the late Congressman Henry B. Steagall, of Alabama. Congressman Steagall's daughter, Mrs. Myra Steagall Law, accepted the award. Congressman Steagall, chairman of the House banking and currency committee, died Nov. 22, 1943, only a short time after he had made a speech on the floor of the House opposing food subsidies.

In resolutions adopted at the closing sessions, the AFBF pledged "our all-out war effort in sustaining our sons and daughters in the armed forces, and in doing our utmost to achieve new high records of farm production;" favored U. S. responsibility for helping hold aggressor nations in check after the war; favored relief of human suffering to war-ravaged nations; full production and employment based on an economy of abundance after the war; insisted on maintenance of constitutional government with checks and balances between president, legislature and judiciary.

Authorized directors to help avoid a land and real estate boom such as occurred after World War I; recommended that control of the farm credit system be vested in farmer owners; asked for an increase in feed supplies and a higher percentage of protein concentrates from mills direct to farmers and for more imports of feed grains from Canada; recommended removal of freight rate discrimination against the South and certain commodities and demanded removal of interstate barriers to trucks; condemned forced unionization and allied undemocratic procedures, but upheld the right of workers to organize and seek improvement of their lot through legitimate means: urged self-rule and a free agriculture for Puerto Rico, and disapproved the use of U. S. tax money for building highways and transportation systems in other countries, except where necessary for war purposes.

The resolutions also reaffirmed the AFBF position in favor of a strong and aggressive program to control inflation by taxation and control clear across the board on wages, industrial prices and farm prices, and approved of price ceilings, where necessary and workable, on agricultural and other products. Opposition was voiced to subsidies in lieu of fair prices in the market place.

Another resolution declared, "Failure of the Food Administration to use every reasonable means at its command to support hog prices in line with announced guarantees and later steps taken by the War Food Administration to lower such announced support prices in certain markets of the country constitute a breach of faith, and unless immediately corrected, will result in a break-down of the confidences of farmers in all government guarantees and assurances. Farmers bitterly resent such breach of contract."

The resolution added that "the adjustment involved in the transition from war production to peace production can best be achieved through the AAA and associated laws."

Earl C. Smith, IAA president and AFBF vice-president, served as chairman of the resolutions committee which spent many hours during the convention on the drafting of the statements.

President O'Neal and Vice-President Smith were re-elected unanimously at the final sessions for two year terms along with the following board members: northeastern region: George M. Putnam, Concord, New Hampshire, and Warren W. Hawley, Ulster Park, New York; midwest region: Perry L. Green, Columbus, O.; Hassil E. Schenck, Lebanon, Ind., and Dr. O. O. Wolf, Ottawa, Kans.; western region; George H. Wilson, Clarksburg, Calif.; southern region, R. E. Short, Brinkley, Ark., Ransom Aldrich, Michigan City, Miss., and H. L. Wingate, Pelham, Ga.

Congressman Everett M. Dirksen

Randolph County Starts Woodland Co-op Project

Guy W. Hawkins, former field man for the Illinois Livestock Marketing Association, has started work in his new job as manager of the Randolph Farm Bureau Cooperative and will give most of his time to the improvement and marketing of woodland products.

Hawkins, a graduate of the University of Minnesota in forestry, has worked some time in Illinois in forestry extension, was director of organization of the Ogle County Farm Bureau, and more recently was employed with the Illinois Livestock Marketing Association with his headquarters in Jacksonville.

Randolph county has launched a woodland products project and 53 farmers have signed woodland agreements covering 2384 acres. The project is organized with the idea of marketing only those trees which are ready to market and at the same time improving the remaining stand so that there will be profitable future marketings.

The project is open to all woodland owners of Randolph county and information may be secured at the Farm Bureau office.

Producers Creamery of Galesburg reports a number of former Creamery employees have recently paid the creamery a visit while they were home on furlough. They are as follows: Floyd Becker, plant employee; Dean Nelson, former plant superintendent; Paul Olson, and Harold Winters, route drivers.

FOOD SUBSIDY FACTS

from

YOUR RESEARCH DEPARTMENT

What are food subsidies?

Food subsidies, or consumer subsidies as they are sometimes called, are grants or expenditures of public funds in order to provide artificially low retail food prices.

Do consumers need food subsidies?

Most consumers do not need food subsidies because their incomes have increased far more than has the cost of living. This is shown by virtually all of the official government reports, as well as by reports from private research organizations.

How much has the cost of living increased?

About 24 per cent, as compared with the five years 1935-39, according to the United States Department of Labor. Some items, like food and clothing, have gone up more than 24 per cent, and others, such as rent and fuel, have increased less. The increase up to September 1943 for each item is as follows:

Food	37.4%
Clothing	32.5%
House furnishings	26.3%
Rent	8.0%
Fuel, electricity and ice	7.7%
Miscellaneous	17.0%
Average, all items	23.9%

Reliable private studies, such as those of the National Industrial Conference Board, show practically the same increases as the Department of Labor.

How much have consumer incomes increased?

Consumer incomes have practically doubled since 1935-39, according to official government reports. Virtually every known measure of the income of individuals or groups shows increases of 25 to 200 per cent. The principal measures of consumer income in the United States and the per cent of increase shown by each up to September are as follows:

Average weekly earnings of factory workers	85%
Total non-agricultural income	110%
Total wages and salaries	141%
Coal mining (bituminous) payrolls	88%
Total factory payrolls	228%

These figures are all based on the reports of the Department of Labor and other government agencies, as published in the official "Survey of Current Business." These figures are not disputed, but are simply ignored, by those who advocate food subsidies. Note that total non-agricultural income has increased more than four times, and total wages and salaries nearly six times, as much as the cost of living.

How about the income of "white collar" workers?

Precise information on this point is not readily available, since wage rates are usually summarized by industries rather than by occupations. It is known, of course, that some in this group have had little or no increase in income. College professors and others especially attached by training and experience to a particular position have had the least increase in incomes. On the other hand, common observation shows that many families in the "white collar" class have experienced substantial increases in income. Such increases have come as a result of rapid "promotions," by changing employers, by changing occupations, by working more hours per week, and by the employment of more persons per family.

Should general consumer subsidies be provided on account of the fixed income families?

Consider these facts — Total wages and salaries have increased 141 per cent since 1935-39. To the exact extent that the incomes of some families have increased less than this, *the incomes of others have increased more.* It is foolish to attempt to help the relatively few fixed income families by attempting to provide subsidies for all families, most of which have had increases in income of from two to five times as great as the increase in the cost of living.

What can be done to help the fixed income families?

They can be helped in three ways: (1) by taking positive steps to control the basic causes of inflation, (2) by increasing their wages, or (3) by providing subsidies or relief especially for this group alone.

Are food subsidies necessary for inflation control?

Economists have studied and discussed the subjects of prices and inflation for many years, but there is virtually no basis in economic literature for the claim that food subsidies are either essential to, or effective in, inflation control. For example, in 1940 Dr. C. O. Hardy, of the highly respected Brookings Institution, made and published in book form a comprehensive price control study, "Wartime Control of Prices" at the request of the War Department. Although Dr. Hardy listed and discussed seven steps necessary to control prices, he did not include food subsidies among them.

Another outstanding authority, Professor E. W. Kemmerer of Princeton University, in his recent book, "The ABC of Inflation," lists six basic types of inflation controls, but he does not include food or consumer subsidies. Professor Kemmerer does recommend retail sales taxes, which are the exact opposites of consumer subsidies.

Food subsidies are neither necessary nor helpful in inflation control. On the contrary, they are inflationary in themselves, since they increase the national debt, increase the amount of money in circulation, and put more money into people's pockets to be used for bidding up prices in legitimate stores and in black markets.

Will food subsidies prevent labor from asking for, and getting, large wage increases?

As shown above, wages have already increased a great deal. This trend will certainly continue. The spokesmen for organized labor have supported food subsidies primarily as a means of obtaining wage increases. *Not one labor union spokesman has promised to drop demands for higher wages if food subsidies are continued.* On the contrary, the demands for wage increases have greatly increased since last spring, when the administration began its subsidy program.

What are the principle reasons for farmers' opposition to food subsidies?

Farmers are opposed to general food subsidies because:

(1) They increase the national debt,
(2) They are inflationary in effect,
(3) They are unjustified from the consumer standpoint,
(4) They will increase the burden of taxes in postwar years,
(5) They are subject to the most undesirable political abuses,
(6) They tend to establish low standards of values for farm products,
(7) They lead to the socialization of agriculture and other industries, and
(8) They deny to farmers the right to receive the full value of their products in the market places.

Will food subsidies prevent labor from asking for, and getting, large wage increases?

As shown above, wages have already increased a great deal. This trend will certainly continue. The spokesmen for organized labor have supported food subsidies primarily as a means of obtaining wage increases. *Not one labor spokesman has promised to drop demands for higher wages if food subsidies are continued.* On the contrary, the demands for wage increases have greatly increased since last spring, when the administration began its subsidy program.

What are the principle reasons for farmers' opposition to food subsidies?

Farmers are opposed to general food subsidies because:

(1) They increase the national debt.
(2) They are inflationary in effect.
(3) They are unjustified from the consumer standpoint.
(4) They will increase the burden of taxes in postwar years.
(5) They are subject to the most undesirable political abuses.
(6) They tend to establish low standards of values for farm products.
(7) They lead to the socialization of agriculture and other industries, and
(8) They deny to farmers the right to receive the full value of their products in the market places.

The FARM FRONT ROUNDUP

CORN LOAN RATE — As of Dec. 1, 1943, Commodity Credit Corporation was authorized to lend farmers, who have met 90 per cent of their war crop goals in designated corn belt counties, 81 to 97 cents per bushel on 1943-crop corn. Last year the loan rate was 73 to 89 cents a bushel conditioned upon compliance with acreage allotments. The rate is based on 85 per cent of parity as of Sept. 15, 1943, U. S. parity on that date was $1.06 a bushel as compared with 98.2 cents on that date last year. Loan rates in the corn belt counties are based upon freight differentials from average shipping points within the area to the terminal markets to which corn would normally flow.

OPA MEAT RULES — According to the Chicago office of the OPA, a farmer who produces livestock and slaughters for his own use may lend to a neighbor meat-producer not to exceed more than 400 pounds of beef and veal together, and 150 pounds of any other meat in any one calendar year. Farmers are not required to surrender points when such loans are made and repaid. The borrower must return the loan of meat within six months, or an amount of meat of equal point value. This same office also has explained that a consumer may surrender stamps that are not yet valid when acquiring meat from a farm slaughterer. WFA has temporarily lifted all restrictions on the amount of pork which a farmer may deliver to persons living off his farm, but he must collect ration points for such pork sold. All points collected are to be surrendered to the ration board.

DRAFT REGULATION — According to State Selective Service headquarters, pre-Pearl Harbor fathers with agricultural experience or background, but not now employed in agricultural work, may be classified III-C if they begin work before their induction notice is mailed to them. Selective Service recently made a recommendation that local draft boards permit men with agricultural background to move to agricultural employment with a sufficient number of war units and defer them because of this type of work.

SUBSIDY EXTENSION — Congress, just before it recessed until Jan. 10, voted a temporary continuance of food subsidies and the Commodity Credit Corporation until Feb. 17. Debate on this vital issue will be resumed at that time.

COPPER SULPHATE — WFA has been assured by the WPB that sufficient copper for producing copper sulphate to protect 1944 food crops from bacterial and fungus diseases will be available. It is further pointed out that consumers and distributors should order and accept delivery as soon as possible.

FERTILIZER PRICES — To simplify its fertilizer price regulation, OPA has set dollars-and-cents maximum prices for every grade of mixed fertilizer, superphosphate and potash whose manufacture and sale is permitted by WFA. Ceilings are maintained approximately at the same average level as those which prevailed during the base pricing period in February, 1942.

FLOUR SUBSIDY — A subsidy program to enable wheat flour millers to pay as high as parity prices

Prices of Farm Products

PRODUCT	Average U.S. farm price Nov. 15, 1943	Parity price Nov. 15, 1943	Highest price Jan. 1 to Sept. 15, 1942
Wheat (bu.)	$ 1.37	$ 1.48	$ 1.06
Corn (bu.)	1.05	1.07	.83
Oats (bu.)	.75	.67	.52
Soybeans (bu.)	1.80	1.60	1.79
Eggs (doz.)	.47	.50	.35
Chickens (lb.)	.24	.19	.20
Butterfat (lb.)	.51	.47	.43
Milk (100 lb.)	3.37	2.94	2.64
Wool, av. all grades (lb.)	.41	.31	.40
Lambs (cwt.)	11.90	9.82	12.07
Hogs (cwt.)	12.90	12.10	14.13
Veal calves (cwt.)	12.70	11.30	13.00
Beef cattle, av. all grades (cwt.)	11.30	9.05	11.30
(Below are Chicago market prices)			
Choice and prime steers	$15.93	$16.92	$15.82
Good steers (cwt.)	14.83	14.66	14.92
Medium steers (cwt.) 9	12.61	12.13	13.42
Common steers (cwt.)	10.40	9.77	11.45
Heifers, good and choice (cwt.)	14.52	13.67	14.16

Notes concerning price ceilings: The Emergency Price Control Act as amended October 2, 1942, provides that "no maximum price shall be established or maintained for any agricultural commodity . . . below a price which will reflect to producers . . . the higher of the following prices — (1) the parity price . . . or (2) the highest price received . . . between January 1, 1942 and September 15, 1942." Under this law no legal price ceiling can be established which will prevent farmers as a whole from receiving an average return as high as the higher of the prices in the two columns at the right above. Price ceilings have been established for many farm products. Your County or Local Price and Rationing Board should be able to furnish accurate information regarding local price ceilings on these products.

IAA Department of Research and Taxation

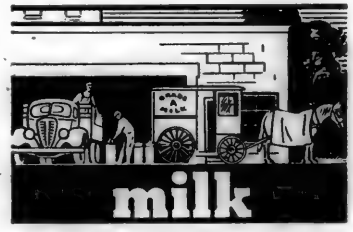
December 20, 1943

for wheat should the market reach that level and at the same time continue to sell flour for no more than the ceiling prices now in effect has been announced by the Office of Economic Stabilization. Reconstruction Finance Corporation has been requested to provide the funds and administer the program.

PULPWOOD CEILING OFF — Wood delivered to mills producing roof felt by the defibrator process does not come under the pulpwood ceiling, according to a new interpretation by the OPA of the pulpwood ceiling regulation, RMPR 464, reported by H. D. MacCall, pulp and paper branch, OPA, Washington. This means that woodland owners can again afford to produce cordwood for sale at prices in effect before Oct. 14, 1943, providing these prices were permitted under the log and bolt ceiling price regulation, MPR 348, according to J. E. Davis, extension forester.

FLASHLIGHT BATTERIES — WPB has directed manufacturers of flashlight batteries to distribute approximately 20 per cent of their production to farmers. The purpose is to make flashlight batteries available to assist farmers in the care of young stock in the winter.

ALFALFA SEED CONTROL — OPA has announced that all alfalfa seeds, including all state certified improved varieties, have been made subject to control of the price regulation governing legume and grass seeds.



By Wilfred Shaw

U. of I. College of Agriculture in cooperation with the Illinois Dairy Industry will hold and conduct a series of milk production conferences thruout the state during January and in early February.

These conferences are for the purpose of discussing and presenting the suggestions and information which the College is in a position to offer, that will be helpful to dairymen in increasing or maintaining milk production during 1944.

These schools are open to anyone who is interested in this important subject. Dairymen, dairy plant operators, field men and extension workers are invited to attend. There will be no charge.

The program of the conference will include the following general subjects: A survey of the dairy situation and its needs for additional production; the feeding problems in 1944; the feed supply situation; balancing rations with feeds available; providing for adequate pasture in 1944; herd management problems as they affect production and quality; the seed situation; health measures and nutritional deficiency problems in dairy cattle; production problems from the farm point of view; an explanation and discussion of the Dairy Industry Committee's Eight Point Program of increasing milk production.

The subject matter at the conference will be presented by specialists of the College of Agriculture in each of the departments of dairy husbandry and animal pathology; soils and crops. Opportunity for questions and discussion will be given to those in attendance.

The first conference is to be held at the U. of I. College of Agriculture, Urbana, Jan. 20 and 21. This will be a two day conference, starting at 9:30 a.m., and will be the only two day conference of the series.

The one day conferences will be held at the following places, starting at 9:00 a.m.:

Monday, Jan. 24 — Mt. Vernon, Hotel Emerson

Wednesday, Jan. 26 — Galesburg, Hotel Custer

Friday, Jan. 28 — Rockford, Hotel Nelson

Tuesday, Feb. 1 — East St. Louis, Broadview Hotel

Currently milk production nationally is below that of a year ago and is far inadequate to meet the current needs or to equal the 1944 goal of 121 billion pounds.

To increase or to maintain milk production as needed for the war and civilian needs is an important and serious problem. In order to increase or maintain milk production during 1944 will require better utilization of feed, pasture and management of herds. Realizing this important and vital problem, the U. of I. College of Agriculture is conducting these conferences which in conjunction with the joint Dairy Industry of Illinois.

The following are the gross blended prices paid to producers for milk in the following named cities thruout the United States, and are quoted on a 3.5% butterfat basis delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for October unless otherwise noted:

Boston	$3.80
Chicago (70 mile zone) (Nov.)	3.24
Detroit	3.46
Milwaukee	3.00
New York (201-210 mile zone)	3.78
Pittsburgh	3.60
Seattle	3.10
St. Louis (Nov.)	3.70
St. Paul & Minn.	3.06
Washington	4.05

The annual meeting of the McLean County Milk Producers will be held Saturday, Jan. 8 in the McLean County Farm Bureau building, according to Forrest Fairchild, manager. The principal speaker will be Prof. Peterson of the Dairy Department, University of Minnesota. A dinner will be served at noon by the Home Bureau.

Sanitary Milk Producers will hold its annual meeting Thursday, Jan. 27, in the Community Hall at St. Jacob, Ill., reports A. D. Lynch, general manager. Dinner will be served to those in attendance by various church organizations. Announcement of the detailed program will be released later.

The following prices are the blended prices received by producers supplying the respective Illinois markets. All are October and November prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

	Oct.	Nov.
Bloomington	$2.48	$2.48
Canton	2.55	2.55
Champaign	2.55	2.80
Chicago	3.20	3.24
Danville	2.275	2.275
Decatur	2.70	
DeKalb	2.74	2.74
Freeport	2.79	2.81
Galesburg	2.65	2.65
Harrisburg	2.40	2.60
Jacksonville	2.40	2.40
Kewanee	2.55	2.55
LaSalle	2.50	2.50
Moline	3.17	3.24
Peoria	2.89	2.89
Pontiac	2.406	
Quincy	2.39	2.40
Rockford	3.17	3.16
Springfield	2.60	2.60
St. Louis	3.66	3.70
Streator	2.40	2.45

By G. H. Iftner

The Lee County Grain Association paid out $28,000 in patronage dividends at the annual meeting Dec. 10. The business of the county-wide cooperative was contributed by farmers living in areas served by five small county elevators, which would have all been in old-line hands except for the foresight of farm adviser, C. E. Yale, and the Farm Bureau board of directors.

Eighteen managers of member elevators of Illinois Grain Corporation attended the annual meeting at Chicago. They are as follows:

George Besore, Lenzburg Farmers Cooperative Grain Co.; P. W. Ehrlich, LaPlace Cooperative Grain Co.; Otto Krenz, West Brooklyn Farmers Cooperative Co.; R. E. Phalen, Sublette Farmers Elevator Co.; Walter F. Reichert, Columbia Farmers Cooperative Grain Co.; F. W. Jordan, Savoy Grain and Coal Co.; A. B. Scheeler, Graymont Cooperative Association; C. H. Willke, Anchor Grain Company; Eugene C. Hoerner, Ludlow Cooperative Elevator Co.; Roy N. Phillips, Nokomis Equity Elevator Co.; Andrew Homann, Farmers Grain Company of Dorans; Leo F. Drew, Walton Cooperative Company; C. B. Kenney, Cruger Farmers Cooperative Ass'n.; Sam B. Baer, Summerfield Farmers Cooperative Grain Co.; H. C. Morel, Cooperative Grain & Supply Co. of Serena; A. D. Goers, Cissna Park Cooperative Grain & Coal Co.; E. S. Apple, Alhambra Grain & Feed Co.; Harry Carrell, Tuscola Cooperative Grain Co.

"Some Day This War Will End. THEN..."

CHESTER DAVIS GIVES LONG-RANGE VIEW OF PROBLEMS FACING AGRICULTURE IN POST-WAR ECONOMY. GIVES FORTHRIGHT VIEWS ON OUTLOOK

"SOME day this war will end. Then the demand for farm products will be radically changed. Then we will have millions more men to employ than ever worked in peacetime before; we will have the greatest endowment of natural and mechanical resources known to the world; and we will have the monetary basis for expanded productive activity far greater than ever existed heretofore. And we will have an almost unlimited gap of unfilled human wants and needs.

That is the outlook I want you to keep in mind as background for my talk, while I try to throw a flashlight on two parts of the general picture which seem to me to be points that are very important.

Point No. 1: I want to talk plainly about some problems and dangers which, unless you overcome them, may seriously weaken the usefulness of farm leadership to the nation in the years ahead. The American Farm Bureau Federation must not only make sure that its policies are foursquare with the broad national interest; it must do a better job than it has been doing to convince the rest of the country that this is the case.

Point No. 2: We have seen how a nation fighting for its life can employ all of its human and material resources in high and sustained production. We know that this all-out effort has meant a high and widely distributed national income. The problem that confronts us is to continue high levels of production and income after the nation has turned from war to peace.

. . . . Returning now for a closer look at Point No. 1: What you and other farm organizations do now to fit agricultural policy into national policy will affect decisively your influence in the postwar years. You need to take a stand on wartime prices for farm products, and to make your position clear. As I discuss that question, and the accompanying one of food subsidies that has gripped the nation's attention, I expect that some of you will not like everything I say.

The general public believes the American Farm Bureau is opposing the administration's program of general food subsidies because you want a chance to raise the level of farm prices. If that is not your position — and I do not believe that it is — then you have failed in getting across to the nonfarming public and to press and radio just what your position is.

I am not trying to settle the argument over whether the advanced prices of farm products has exceeded the rise in factory workers' income that has taken place, or vice versa. A lot depends on the date at which you start your comparison.

Personally, I am convinced that a degree of improvement in farm prices over those prevailing in the pre-war years 1935-39 should have been permitted without assuming that the adjustment called for wage increases. Bear in mind that the rates of pay of factory workers for the period 1935-39 were the highest in history up to that time and 14 per cent above the level of 1929. In contrast, farm prices were still at depression levels and 27 per cent below 1929.

The point I want to make tonight, however, is that the general level of farm prices in 1943 has been high enough to yield a cash farm income between 19 and 20 billion dollars as against 8.7 billions in 1939 and 11.3 billions in 1929.

. . . For 1910-14 the average net (not *gross*, not *cash*, but *net*) income is estimated at $3.6 billions, for 1935-39 $4.7 billions, for 1941 $6.3 billions, for 1942 $9.5 billions, and for 1943 $12.5 billions.

. . . . In the interest of long-time farm welfare any further marked increase in the general level of farm prices is undesirable. Unless their production costs materially increase, farmers for their own and general welfare should join wholeheartedly to hold their prices in check. For one thing, further increases would add to the danger of inflation in farm real estate prices that already is on the horizon.

I am talking about the general level of farm prices. Flexibility in adjustment between commodities is needed and is almost wholly lacking in the present OPA-WFA-Economic Stabilization setup. Some prices have ranged higher than necessary to get needed production and yield satisfactory returns: others are lower than they should

Excerpts from the address of Chester C. Davis, president, Federal Reserve Bank of St. Louis, before the 25th annual convention of the American Farm Bureau Federation in Chicago.

have been. The policy that attempted to freeze old relationships inside the farm price structure hasn't worked well; nor will it.

The best protection the consumer can have is an ample supply of essential foods. Some of the support price subsidies have, in my opinion, contributed substantially to expanded production. They ought to be continued, and similar moves should not be outlawed in the future if they become desirable. On the other hand, the impulsively and poorly planned 'rollback' subsidies on meat and butter were not intended to increase the food supply; they were aimed to bring about a slight statistical lowering of the cost-of-living index, but they were not well chosen from the standpoint of wartime food management.

Subsidies are not justified as an end of themselves. A general subsidy of consumer costs contradicts the basic principle of inflation control, which is that consumer buying power must be brought down by taxes and firm savings until it is in balance with the goods that are for sale. Neither are subsidies the only alternative to runaway food prices. But a large part of the general public is being led to believe they are. The farm groups which are classified by the public in the present struggle as 'opposed to subsidies' have a real job on their hands. Consumers are worried; as you listen to the hysterics of radio commentators and read the editorials, you understand why.

Organized agriculture, if it is to keep its hold on public confidence, must throw its weight positively on the side of assuring them that in opposing broad, general subsidies you do not advocate, but on the other hand are determined to prevent, a general rise in the nation's food costs. To utter a pious hope isn't enough; you must have a program, and convince a large part of the consumer public that it will work.

. . . . I have been amazed at how many news columnists, radio commentators, and well intentioned city people believe that the American Farm Bureau is an organization dominated by large commercial farmers who are antagonistic to the interests of tenants and small farm operators. The city press more and more takes it for granted that this is true.

. . . . I asked for a spot check of the Illinois Agricultural Association, the great Farm Bureau of this state . . . . Seven countries were picked because they represented every geographical setion and every type of farming in the state — Winnebago, La Salle, Adams, Logan, Edgar, Effingham, and Randolph countries . . . . Of the combined membership of these seven counties 43.2 per cent are tenants. For the entire state of Illinois, including all farmers, the percentage of tenants is 43.1 per cent. . . . Not much support there for the contention that the Farm Bureau is not concerned with the interest of the tenant and the small farmer.

. . . . A large and important part of our city population is highly emotional on this subject, and more or less believes that the Farm Bureau is on the other side of the fence. . . . This great organization cannot afford to hold a negative position; it must not only have a positive program for tenant purchase and rehabilitation, but it must also be able to sell the public on its sincerity and effectiveness.

. . . . I find myself talking of reaction, a drop from present prices and returns, as if it is inevitable. One condition that could do much to avert or temper it materially would be a sustained high rate of industrial employment at good wages. And that brings me to Point No. 2.

. . . . I repeat here tonight that the problem will be largely solved if industry and labor will use their factories and their hours as fully as the farmer have always done. The men and women on the American farms will fit comfortably into any national program of full production.

. . . . All my life I have preached what you have preached, the wholesome effect which a prosperous farm population has on factory employment and wages. Now I want to preach its corollary to this audience. I want to emphasize the effect which high wages and sustained industrial production have on farm income. The fact that our employable population is now working regularly, most of it at good wages, has been the principal factor in building up a high and mainly profitable demand for the products of the farmer.

The challenge that confronts leadership in this country as we approach the postwar period is to find a way to use our factories and our manpower for the maximum production of peacetime goods . . . Our national economy must be expansive, not restrictive. That condition cannot be had by striving for the highest possible return for the lowest possible output, as both business management and labor leadership have done too often in the past.

. . . . I submit that this challenge to use our resources in peace as fully as we are now using them for war will become, after all, the nation's economic problem No. 1. Work it out, and many of the difficulties of the farmer will tend to shrink and disappear. Of one thing we can be perfectly sure: Sooner or later the American people are going to lose patience with an economy that can only function fully under the whip of a desperate war; which in peace tolerates unemployment and poverty in the midst of potential abundance."

Choir from the Great Lakes Naval Training Station, directed by Chaplain H. F. Hanson, sang during Sunday afternoon program of the Associated Women.

"Some Day This War Will End. THEN..."

CHESTER DAVIS GIVES LONG-RANGE VIEW OF PROBLEMS FACING AGRICULTURE IN POST-WAR ECONOMY. GIVES FORTHRIGHT VIEWS ON OUTLOOK

Excerpts from the address of Chester C. Davis, president, Federal Reserve Bank of St. Louis, before the 25th annual convention of the American Farm Bureau Federation in Chicago.

SOME day this war will end. Then the demand for farm products will be radically changed. Then we will have millions more men to employ than ever worked in peacetime before. We will have the greatest endowment of natural and mechanical resources known to the world; and we will have the monetary basis for expanded productive activity far greater than ever existed heretofore. And we will have an almost unlimited gap of unfilled human wants and needs.

That is the outlook I want you to keep in mind as background for my talk, while I try to throw a flashlight on two parts of the general picture which seem to me to be points that are very important.

Point No. 1: I want to talk plainly about some problems and dangers which, unless you overcome them, may seriously weaken the usefulness of farm leadership to the nation in the years ahead. ..."AS FARMERS FORWARD GO"

By O. D. Brissenden, Organization Director

THE drive that put Farm Bureau membership in Illinois over the 100,000 mark at the IAA annual meeting is still going strong as evidenced from reports coming in from County Farm Bureau annual meetings.

Here's an example: when Moultrie county held its annual meeting Dec. 16, it had 799 members, or one short of its goal, so Tom Wright, COD, went out and got that 800th member. Moultrie, of course, was over its 100,000 goal at the time of the IAA annual meeting.

DuPage county is shooting for a goal of 1200 members and at its annual meeting, Dec. 15, had only 12 more to go. Probably by the time this issue of the RECORD is off the press that 1200-mark will be history.

Kankakee County Farm Bureau at its annual meeting Dec. 11, presented a membership report that's worth noting. Here are a few figures: in 1934 Kankakee had 300 Farm Bureau members with 235 paid up, and in 1943, the membership was 1130 with 1098 paid. Incidentally, the Kankakee Farm Bureau distributed an attractive annual report, utilizing the cover scheme of the organization worker's kit in the recent 100,000 campaign. Inside pages of the cover, both front and back were occupied by an honor roll of the members' boys and girls in the services, with special recognition being given to those who have made the supreme sacrifice.

Due to limited space in the annual convention issue of the IAA RECORD some of the reports of outstanding individual accomplishments in the 100,000 campaign were held over until this month. Even a 60-page issue devoted exclusively to these accomplishments would be insufficient to tell all of the story, but here are a few highlights reported to the organization director's office.

Effingham county went over its quota in the campaign by three, and high men were Clarence Wilmeth with 12 new members, and Glen Percival with seven. A. C. Ziegler, COD, reports that in five sections of Lucas township in Effingham county every acre of land is covered by a Farm Bureau membership with the exception of one 80 acre farm. The tenant on this place has indicated he will join the Farm Bureau in the near future.

In Macoupin county, Arthur Mansholt, signed 14 members by himself and helped to sign two more. Elmer Loehr signed 10 members, and Herb Mieher signed eight new members and his township was the first to go over its goal for the 100,000 campaign.

In Ford county, E. B. Radliff, who is serving his first term as director, had nine new members to his credit in addition to some assists. F. W. Tieken, COD, says "Our membership committee men are more determined than ever to answer critics of farmers and their organization by building a stronger organization."

"Teamwork, persistence and seeing prospects put Grundy county over the 100,000 quota. Directors, members and employees all did their part," says William L. Steinbeck, COD. High man was Director Adolph J. Burk, who alone signed eight new members.

As an ex-soldier, this is what Harold Neal, Peoria county organization director, has to say about the 100,000 member goal attainment. "What 100,000 Farm Bureau members means to me! It means that when your sons and my buddies return to us, we will have proof that we did everything within our power to help them finish the *big job over there as speedily as possible.*

M. H. Austin, Whiteside COD, reports that a final checkup shows his county had 9 members over its quota in the 100,000 campaign. "Our total membership now stands at 1741, which is 298 more than one year ago."

Here are some comments taken from the IAA annual meeting that are worth recording in the annals of organization history.

W. H. Smith, Woodford county, pioneer Farm Bureau member, — "This is one of the happiest days of my life. I was one of the first Farm Bureau workers. I started in Lake county in 1919 helping to build the membership that this organization now has. So many things have been accomplished we never thought about at that time. I want to say that being here with this organization today makes me very, very happy.

Every Farmer in This Township a Member!

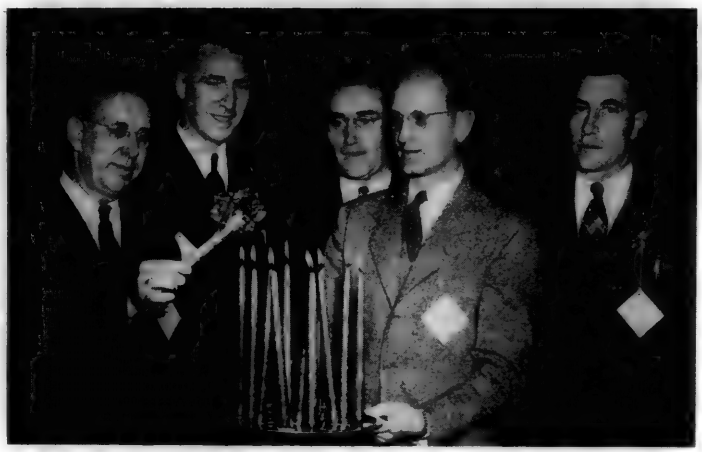
Every Berea township farmer a Morgan County Farm Bureau member. That's the record of these organization workers and new members. Standing, left to right: Harold Stewart, township chairman; Lester Martin, Farm Bureau director of township 16-9; Homer Butler, new member; Fred Hagen, township director; John Leahy, new member; Don Huston, 4-H club leader. Seated, left to right: Clarence Duncan, new member, and Albert Nall, a tireless worker for the Farm Bureau.

EVERY farmer in the township a Farm Bureau member! That's something of a record and it's just what the folks in Berea township, Morgan county have accomplished. Members in the township have always felt that it could be accomplished and started out this fall with the spirit of "Now Is The Time," and a dream came true.

When asked what formula was used, Don Huston, 4-H club leader and worker, replied, "When we explained what the Farm Bureau was doing and what it had accomplished for every farmer in the land — well they just said — 'Sure I'll sign.'"

The workers are pretty much agreed that information brings understanding, and understanding in this case creates a desire to help and be a part of a great movement.

Township Chairman Harold (Bud) Stewart says, "Our quota now is, 'Hold That Line.'"



W. S. Batson, Shelby county farm adviser, touches the mortgage to the flame, symbolizing final clearance of debt from the Producers Creamery of Champaign. Watching the ceremony are F. C. Fairchild, manager; O. P. Hamm, vice-president; A. Oliver Bower, president, and G. A. Lichtenwalter, secretary.

Russell McKee, Marshall-Putnam county—"The whole thing reminds me of the old white house in which we live. We didn't realize when we purchased our farm just how good the house was until we tore into it to change it a little. Just like our organization, it was not all built at once. Whoever built it certainly had a sense of honesty and integrity to build it well. . . It has been added to as the needs of the household had demanded. This 8000 new members is the latest addition to our building. Back of that is the responsibility of leadership and the fact that that leadership has found through the Farm Bureau the opportunity and the urge to serve its many members. It is the concrete expression of almost a religious principle to be of service to our fellow men."

Leo Lybarger, Clay county—"I like to look at this whole thing as a patch of hay mowed down. Let's rake it up. We have a big job to assimilate these new members. The building of community organizations should help us in this task."

"You have done a wonderful job. I see in the power of 100,000 farmers working together the possibility of a finer America and a better opportunity for our children," said Otto Steffey, chairman of the organization committee of the IAA board.

That some day there would be a membership of 100,000 had long been the intention of leaders. When the total passed 90,000, during March of 1943, many began to talk seriously of an early attempt to reach 100,000. It was clearly seen that such an achievement would be the best possible answer to all those who were bitterly denouncing Farm Bureau and its policies. Months before this, however, Tom Drummond, veteran Clark county COD, had written the IAA organization office saying that in the opinion of Clark county folks, the goal should be reached soon, and pledging that their county would, in the event of such a statewide effort, sign three times their new member quota. (They actually signed 427 per cent!)

Partly because of the suggestion made by Tom, and partly because of the general agreement among leaders in the state, it was decided to go "all out" during 1943 and attempt to reach the goal before IAA annual meeting time. As a preparatory "buildup" step, an "On Toward 100,000 Campaign" was launched, in which county organization directors were asked to make personal efforts to reinstate and to sign as many new members as possible, so as to bring the attainment of the balance needed within practical limits. The period of Aug. 15 to Sept. 11 was set aside for this purpose.

Tom Drummond, one of the instigators of the effort, proved his mettle by taking first place in that event. Other winners were Walter Specht, Clay county; John Pyle, Marion county; Frank Rathbun, Mercer county; J. Clint Miller, Winnebago county; L. R. Lee, Greene county; Verne Campbell, Randolph county; and Gerald Spencer, Washington county. Drummond went on to sign his full new member quota during September and came back with more in the final push during the week of Nov. 8.

Thus the ground was cleared for the major drive. July 31 membership had stood at 93,415. Quotas were set for each county which would bring a total of slightly over 100,000, if made. Since this required an increase of 7½ per cent for the state as a whole, each county was asked to increase its membership by that percentage. A "dream map" published in THE BUILDER was the means used of making county quotas vivid.

First big thrill of the 100,000 campaign came when John Pyles and Walter Specht, COD's of Marion and Clay counties, respectively, presented George Metzger notice that their quotas were attained, during the state leaders' meeting in Springfield, on Sept. 10. Every leader present was impressed. "The job can be done: here are the early birds, both of them from counties which had suffered devastating floods and droughts through the year, yet they have made their quotas within a week."

These 100,000-quotas seemed extremely heavy. In some instances, in view of previous net gains made by counties, they seemed even unfair, but there was little if any quibbling. County leaders saw that there was a job to do. It was tackled in good spirit. Some counties found it impossible to reach their goals but they gave their best. Seventy-one counties achieved or surpassed the figure set. District quotas were in all three cases exceeded.

■

This was a happy moment for Gardner Township Farm Bureau members as they dedicated their new community building recently. Seated about the table are Irwin Whitcomb, secretary-treasurer of the unit; Tom L. Spratt, unit president, and John Bumke, chairman of the building committee. At extreme left are Wilfred Shaw, IAA milk marketing director, and Farm Adviser Edwin Bay. The service flag, presented at the meeting, shows that 41 members from the 130 families in the unit are in the armed services.

..."AS FARMERS FORWARD GO"

By O. D. Brissenden, Organization Director

THE drive that put Farm Bureau membership in Illinois over the 100,000 mark at the IAA annual meeting is still going strong as evidenced from reports coming in from County Farm Bureau annual meetings.

RUST IN PEACE!

REST

Outdoor Farm Machinery Storage Now Safely Possible Due to New Rust Preventive Compound Spawned by War Experience

(Reprinted by Courtesy Farm Implement News)

By R. I. SHAWL

University of Illinois College of Agriculture

PREVENTION of the rusting and corrosion of mechanical equipment is one of the grave threats to the prosecution of the war both with our armed forces and on the home front.

The farmer who suddenly remembers that he left his tractor plow in the field three months before with its shiny moldboards protected only by a coat of cylinder oil and returned to find it completely rusted could have saved all this trouble by using one of the new rust preventive compounds. This experience is not uncommon, because most any farmer you question will acknowledge that he has spent many hours scouring rusty plow bottoms with a soft brick or replacing broken machine parts that were weakened by rust.

The great need for a farm machinery rust preventive is revealed in surveys of the annual use of farm machinery in Iowa, Indiana, and Kentucky where it was found that the most important farm machines are only used from 9 to 15 days per year. During the remaining eleven and one half months of the year, some of this machinery will stand outside several months between crops, some of it will be housed in open sheds and some of it will stand outside the entire year because of the lack of shed room or because the machinery is too large for housing.

This new rust preventive weapon which increases the efficiency of farm machinery and labor by eliminating lost time and broken equipment due to rust has just been released for retail sale the last few months by several of the large oil companies. These new rust preventive compounds are not paints but are usually petroleum greases or liquids to which chemicals have been added to prevent the rusting of bright or unpainted metal parts while not in use. These compounds are easily applied by brushing or sometimes by spraying and are readily removed with kerosene or any petroleum fuel when the machine is to be put into use again.

Rust preventive compounds prevent the rusting of machinery because they adhere firmly to the metal, which prevents their being washed off, and form a nonporous elastic film through which air and moisture cannot penetrate. These compounds will prevent rusting when applied over wet surfaces because they absorb the small amount of moisture present. They also stop further rusting when applied over rusted surfaces and will loosen up rust already present.

When using axle grease, transmission oil, or crankcase oils to prevent rusting of machinery surfaces, the amount of protection against rust depends largely upon the viscosity and thickness of the coating. The reverse is true of rust preventive compounds, because thin films of these compounds when properly applied will give protection for quite a long period.

A good rustproof compound for farm machinery should meet the following requirements:

1. Provide a protective film over the metal surface that will not crack, peel, or slip under extreme ranges of temperature and long periods of exposure to the elements.
2. Prevent rusting when applied to surfaces containing moisture and stop further rusting when applied over rusted surfaces.
3. Be easily applied by brushing or diluted for spraying.
4. Contain some lubricating properties if it is to be used to prevent rusting in bearings or moving parts.
5. Be easily removed preferably with petroleum fuels.
6. Be easily removed from hands and clothing.

Tests run by the Department of Agricultural Engineering at Urbana during the past year and a half have shown the superiority of the new rust preventive compounds in preventing the rusting of machinery as compared with the common farm oils and greases now used for this purpose.

Results of Tests

Two sets of tests were run under outside exposed conditions in which the rust preventive samples were applied to polished black metal strips 3 inches by 12 inches, and to plow bottoms, Fig. 1. Three inches of the top of each metal strip was left untreated as a check, and the lower 9 inches of each

Machinery being prepared for safe outside storage with a rust preventive grease which will give rust-free protection for a year or more.

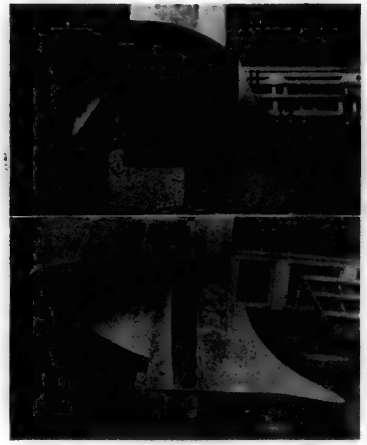

Fig. No. 1—Plow bottom used in test showing the vertical strips of rust preventatives. Sample 1, 11, 13, 14, and 17 have given perfect protection for 526 days. Samples that cracked or slipped allowed early rusting.

strip was covered with one of the various rust preventive materials being tested. The backs of the strips were treated with the same materials except that the surface was thoroughly wet with water before the material was applied. A second test was made by painting vertical strips of the rust preventive compounds on the front surfaces of plow bottoms. Twenty-eight of the thirty-six samples tested on the metal strips under outside, exposed conditions were special rust preventive compounds; the other eight samples were crankcase oils, transmission oils, chassis lubes, water pump grease, and axle grease.

These tests were started in March 1942 during a period of heavy rainfall, which soon washed most of the common oils and greases off the metal test strips, allowing rusting to start within a few days. The following observations were made on the front or exposed sides of the metal test strips:

Crankcase and transmission oil prevented rusting for seven to thirty days.

Axle and pressure gun grease prevented rusting for thirty to ninety days.

Five samples of rust preventive compounds prevented rusting for 360 days.

One sample of rust preventive compound prevented rusting for 453 days.

On the back or protected side of the metal strips twenty-two of the twenty-eight rust preventive compounds tested still show no rusting after 551 days.

Observations made on the plow bottoms, Fig. 1, showed that five of the same rust preventives which were tested on the metal strips were still giving perfect protection on the plow bottoms after 526 days of direct exposure. Quite a number of the rust preventive samples submitted for testing were not suitable for outside use.

The following recommendations are made on the basis of this series of tests:

1. That suitable types of grease rust preventive compounds when brushed on metal surfaces will prevent their rusting from ten to twelve months or more on machinery stored outside and for an indefinite period on machinery stored under cover. The same grease which contains some lubricating properties can be applied to roller and ball bearings with a grease gun where there is danger of rusting while machinery is in storage.

2. That liquid rust preventives when sprayed or brushed on directly exposed metal parts, will prevent rusting from three to six months on machinery standing outside, and for a year or more on the unexposed parts of machinery left outside or on all parts of machinery stored under cover.

Adding kerosene or one of the other diluents mentioned to the grease will thin it down to a spray mixture. The small hand spray is suitable for very small areas, but for the inside of a combine or other large machines the bucket type of sprayer or the paint spray gun is more satisfactory.

The use of a special rust preventive compound will stop the tremendous losses in machinery rusting now taking place and will save many hours of farm labor spent in getting rusted machinery back into operating condition.

4-H Member Killed In Action

Word has been received of the death of a Menard county 4-H member who was killed in the South Pacific during the last part of October. The youth who gave his life for his country is James Ashton, a member of the Rock Creek 4-H club. He enlisted in the Navy on June 5, 1943, immediately after his 17th birthday.

After completing his naval base training, he was assigned to his initial cruise in the Pacific. It was on this cruise that the enemy was met and James was critically wounded. He died on Oct. 26.

NOTICE

Illinois Agricultural Association Election of Delegates

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the months of January and February, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During January, annual meetings will be held in Carroll, Champaign, Clark, DeWitt, Edgar, Fulton, Greene, Grundy, Iroquois, Kendall, Knox, McDonough, Mason, Mercer, Ogle, Rock Island, Sangamon, Winnebago and Woodford counties.

During February, annual meetings will be held in Coles, DeKalb, Douglas, Lake, McHenry, Monroe, Wayne, Whiteside and Will counties.

PAUL E. MATHIAS,
Corporate Secretary.

December 20, 1943

Ready to Fight Rust

Rust is the biggest enemy of 186 million dollars worth of implements and farm machinery on Illinois farms. Rust can be prevented and controlled.

Blue Seal Anti-Rust offers the protection your farm machinery needs whether it is under roof or "in the shade of the old apple tree." Here's why:

1. Blue Seal Anti-Rust gives a protective coating over metal surfaces. It adheres tightly without cracking, peeling, or slipping. It holds in extreme hot or cold weather, and resists rain, snow, and sleet.
2. Blue Seal Anti-Rust can be brushed over surfaces already wet and stops further rusting.
3. Blue Seal Anti-Rust is soft and smooth, and can be applied easily with a brush or with a spray if diluted.
4. Blue Seal Anti-Rust may be removed easily with gasoline or kerosene.

Get a supply today. Available in 10 and 25 pound containers. For further information call your Blue Seal Serviceman or contact your local service company office.

The reverse is true of rust preventive compounds, because thin films of these compounds when properly applied will give protection for quite a long period.

A good rustproof compound for farm machinery should meet the following requirements:

1. Provide a protective film over the metal surface that will not crack, peel, or slip under extreme ranges of temperature and long periods of exposure to the elements.
2. Prevent rusting when applied to surfaces containing moisture and stop further rusting when applied over rusted surfaces.
3. Be easily applied by brushing or diluted for spraying.
4. Contain some lubricating properties if it is to be used to prevent rusting in bearings or moving parts.
5. Be easily removed preferably with petroleum fuels.
6. Be easily removed from hands and clothing.

Tests run by the Department of Agricultural Engineering at Urbana during the past year and a half have shown the superiority of the new rust preventive compounds in preventing the rusting of machinery as compared with the common farm oils and greases now used for this purpose.

Results of Tests

Two sets of tests were run under outside exposed conditions in which the rust preventive samples were applied to polished black metal strips 3 inches by 12 inches, and to plow bottoms, Fig. 1. Three inches of the top of each metal strip was left untreated as a check, and the lower 9 inches of each

Machinery being prepared for safe outside storage with a rust preventive grease which will give rust-free protection for a year or more.

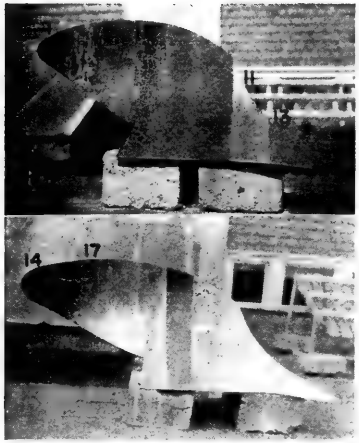

Fig. No. 1—Plow bottom used in test showing the vertical strips of rust preventatives. Sample 1, 11, 13, 14, and 17 have given perfect protection for 526 days. Samples that cracked or slipped allowed early rusting.

strip was covered with one of the various rust preventive materials being tested. The backs of the strips were treated with the same materials except that the surface was thoroughly wet with water before the material was applied. A second test was made by painting vertical strips of the rust preventive compounds on the front surfaces of plow bottoms. Twenty-eight of the thirty-six samples tested on the metal strips under outside, exposed conditions were special rust preventive compounds; the other eight samples were crankcase oils, transmission oils, chassis lubes, water pump grease, and axle grease.

These tests were started in March 1942 during a period of heavy rainfall, which soon washed most of the common oils and greases off the metal test strips, allowing rusting to start within a few days. The following observations were made on the front or exposed sides of the metal test strips:

Crankcase and transmission oil prevented rusting for seven to thirty days.

Axle and pressure gun grease prevented rusting for thirty to ninety days.

Five samples of rust preventive compounds prevented rusting for 360 days.

One sample of rust preventive compound prevented rusting for 453 days.

On the back or protected side of the metal strips twenty-two of the twenty-eight rust preventive compounds tested still show no rusting after 551 days.

Observations made on the plow bottoms, Fig. 1, showed that five of the same rust preventives which were tested on the metal strips were still giving perfect protection on the plow bottoms after 526 days of direct exposure. Quite a number of the rust preventive samples submitted for testing were not suitable for outside use.

The following recommendations are made on the basis of this series of tests:

1. That suitable types of grease rust preventive compounds when brushed on metal surfaces will prevent their rusting from ten to twelve months or more on machinery stored outside and for an indefinite period on machinery stored under cover. The same grease which contains some lubricating properties can be applied to roller and ball bearings with a grease gun where there is danger of rusting while machinery is in storage.

2. That liquid rust preventives when sprayed or brushed on directly exposed metal parts, will prevent rusting from three to six months on machinery standing outside, and for a year or more on the unexposed parts of machinery left outside or on all parts of machinery stored under cover.

Adding kerosene or one of the other diluents mentioned to the grease will thin it down to a spray mixture. The small hand spray is suitable for very small areas, but for the inside of a combine or other large machines the bucket type of sprayer or the paint spray gun is more satisfactory.

The use of a special rust preventive compound will stop the tremendous losses in machinery rusting now taking place and will save many hours of farm labor spent in getting rusted machinery back into operating condition.

4-H Member Killed In Action

Word has been received of the death of a Menard county 4-H member who was killed in the South Pacific during the last part of October. The youth who gave his life for his country is James Ashton, a member of the Rock Creek 4-H club. He enlisted in the Navy on June 5, 1943, immediately after his 17th birthday.

After completing his naval base training, he was assigned to his initial cruise in the Pacific. It was on this cruise that the enemy was met and James was critically wounded. He died on Oct. 26.

NOTICE

Illinois Agricultural Association
Election of Delegates

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the months of January and February, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During January, annual meetings will be held in Carroll, Champaign, Clark, DeWitt, Edgar, Fulton, Greene, Grundy, Iroquois, Kendall, Knox, McDonough, Mason, Mercer, Ogle, Rock Island, Sangamon, Winnebago and Woodford counties.

During February, annual meetings will be held in Coles, DeKalb, Douglas, Lake, McHenry, Monroe, Wayne, Whiteside and Will counties.

PAUL E. MATHIAS,
Corporate Secretary.

December 20, 1943

Ready to Fight Rust

Rust is the biggest enemy of 186 million dollars worth of implements and farm machinery on Illinois farms. Rust can be prevented and controlled.

Blue Seal Anti-Rust offers the protection your farm machinery needs whether it is under roof or "in the shade of the old apple tree." Here's why:

1. Blue Seal Anti-Rust gives a protective coating over metal surfaces. It adheres tightly without cracking, peeling, or slipping. It holds in extreme hot or cold weather, and resists rain, snow, and sleet.
2. Blue Seal Anti-Rust can be brushed over surfaces already wet and stops further rusting
3. Blue Seal Anti-Rust is soft and smooth, and can be applied easily with a brush or with a spray if diluted.
4. Blue Seal Anti-Rust may be removed easily with gasoline or kerosene.

Get a supply today. Available in 10 and 25 pound containers. For further information call your Blue Seal Serviceman or contact your local service company office

ILLINOIS FARM SUPPLY CO.

608 S. Dearborn St., Chicago 5, Illinois

LIVESTOCK LIQUIDATION?

DEAN RUSK WARNS CORN-HOG RATIO MAY FORCE IT

A word of warning that there is real danger that liquidation of livestock might very rapidly go too far if the delicate balance of price relationships becomes too unfavorable, and especially if such unfavorable relationships are maintained too long, was issued by Dean H. P. Rusk of the U. of I. College of Agriculture at the livestock conference of the American Farm Bureau Federation annual meeting.

Dean Rusk sounded this note of caution as he concluded his discussion of the present livestock and feed situation in which he covered the new ceiling price on corn, longtime hog-corn ratios and the general feed situation.

Referring to current hog-corn ratios, Dean Rusk said, "The new ceiling of $1.16 on corn, Chicago basis, and the current support price of $13.75 on hogs gives a hog-corn price ratio slightly above the long-time average," Dean Rusk reported. "On the other hand," he added, "this ratio will apply mainly to hogs now on hand. The bulk of next year's pig crop will come to market after Oct. 1, 1944, when the announced support price of $12.50 becomes effective. On the basis of this support price and $1.16 corn, the hog-corn price ratio may be as low as 10.77 which is considerably below the 11.39 long-time average.

"Farmers who continue maximum hog production under such conditions would be gambling on wartime prices considerably above support prices. The more efficient producer would probably find this a good gamble, especially if the ceiling on hogs is not lowered."

Earlier in his speech, Dean Rusk reported that "many farmers believe that hog prices will advance, probably to the ceiling, after the heavy runs are over and before another hog crop is finished. However, the large number of sows coming to market, and reports from many heavy hog-producing areas indicate that growers are responding to appeals for a reduction in numbers."

Dean Rusk also asserted that if "we could be assured that the present ceilings on hogs will not be lowered we would probably get a better distribution of marketings and be less likely to discourage efficient producers who should stay in the business."

Dean Rusk pointed out that with the hog ceiling now at $14.75, it is only $1 above the present market floor of $13.75. This is entirely too narrow a spread, he said, since the normal seasonal spread is about 20 per cent. Such a normal spread with a $13.75 floor would mean the spread should be $2.75 instead of $1.

"If we had a $2.75 spread we would have pulled more of these hogs into market earlier," he said, "instead of letting them come in at the end of the season.

"The price floor under the market is to be $12.50 after Oct. 1, 1944. Now if they leave the ceiling where it is, ($14.75) they would have about the usual spread in price, encouraging better distribution of marketing next fall."

Some reduction in the livestock numbers is imperative because the total feed supply is limited, Dean Rusk explained. He pointed out that price relationships established by government agencies encourage a very rapid expansion of livestock numbers. Relatively low corn price ceilings have prevented the normal swing in the hog-corn price ratio and have encouraged an overexpansion in hog production.

"I presume it may be just as logical to argue that the support price of hogs has been too high as it is to contend that the ceiling price of corn is too low. The support price of hogs was placed higher than at least one state war board recommended. In view of this support price commitment, the only honorable way to readjust the hog-corn ratio was to allow corn prices to rise," Dean Rusk declared.

Dean H. P. Rusk

Current attempts to encourage the production of milk by payment of subsidies will tend to make a more favorable net income showing for the dairy farmer if he can get the feed," he said. "But so long as price relationships encourage the farmers in the areas that normally produce surplus grain to feed it to other classes of livestock rather than sell at ceiling prices, payment of subsidies to the dairy farmer will not help him to get the feed. Increases in the price of corn and in returns for products are both needed to put dairymen in a more favorable competitive position with producers of hogs and other classes of livestock."

A poll of the cattle feeders, lamb feeders and hog producers present at the livestock conference was taken to find out their intentions for 1944 for producing meat animals. This poll represented a cross section of the entire United States. Here are the results of the poll:

	Cattle Feeders	Hog Producers	Lamb Feeders
Increase Over 1943	1	8	4
Same as '43	18	29	5
Less Than '43	48	53	12

It was the general opinion of the entire group that the livestock committee of the American Farm Bureau Federation should become more effective and active in 1944, and that the committee should serve as a clearing house, through which the livestock producers' problems could be solved and coordinated for the livestock producers of the entire country.

Edwin Bay, Sangamon county farm adviser, president of Illinois Association of Farm Advisers, center, chats with L. V. Toyne, Greeley, Colo., president of National Association of County Agricultural Agents, left, and W. H. Sill, Parkersburg, W. Va., secretary, right.

Horticultural Groups Hold Annual Session

THERE was a general note of optimism at the Illinois State Horticultural Society annual meeting Dec. 13 to 15 in St. Louis as growers seemed to be fairly well satisfied with the general prices of fruits and vegetables.

Along with this note of optimism, however, there was also some apprehension because of numerous problems of the fruit growers which are not yet solved. Everyone realized that labor would be difficult to get next year. There also is developing an extremely serious package shortage and the outlook for transportation is far from good. Ceiling prices now in effect are causing some concern especially because there is no provision for financial reward to the grower who puts up a fine pack.

The State Horticultural Society meeting this year was really a central states' horticultural conference as the state Horticultural Societies of Missouri, Illinois, Iowa, Indiana, Kansas, Nebraska, Arkansas, Kentucky, Oklahoma and Tennessee held their state society meetings in connection with it. Also the American Pomological Society held its annual meeting jointly with the state groups.

Perhaps the highlight of the convention was the talk by F. A. Motz, principal marketing specialist, USDA, who discussed "The National and International Fruit Situation."

One point emphasized by Motz was: South America may be potentially a good customer, but we must remember that at present only about 10 per cent of her population is financially able to buy fruit.

Other speakers at the meeting were C. C. Chapelle, tax consultant, Illinois Agricultural Auditing Association, who discussed figuring federal income tax returns for orchards, and Ben Kilgore, assistant to the president of the American Farm Bureau Federation, who gave the main address at the banquet, Dec. 14, and at which A. O. Eckert, IAA director, and president of the Illinois Fruit Growers Exchange, presided.

All directors of the Illinois Fruit Growers Exchange, with the exception of Nelson Cummins, who is serving in the U.S. Navy, attended the meeting and held their monthly board meeting in connection with it.

New officers of the Illinois State Horticultural Society are as follows: president, Hugh Hale, Carmi; first vice-president, Frank Penstone, Pittsfield; second vice-president, Dave Perrine, Centralia; secretary, C. C. Mast, Quincy, and treasurer, L. M. Smith, Ozark.

Soil Improvement

By John A. Spencer

Fertilizers sold in Illinois during the first six months of 1943 increased 33% over the same period in 1942, according to the agronomy department of the University of Illinois, which reports a sale of more than 77,000 tons. Ninety-seven per cent of the mixed goods sold was covered by 15 analyses or combinations. In single unit materials, nearly 60 per cent was in the 18 and 20 per cent superphosphates. The reduction in numbers of different combinations is due in large part to governmental orders but this change is regarded favorably by both fertilizer manufacturers and college agronomists. Fewer combinations increase factory efficiency and reduce confusion among purchasers, with no loss in effectiveness on crops.

A limestone property at Cordova in Rock Island county has been purchased by operators of the Milan quarry. This change is expected to result in considerably increased output for the Cordova area as the Milan operators produced and sold nearly 100,000 tons of agricultural limestone from the Milan plant in 1942.

Another limestone quarry change in western Illinois is from a site immediately west of Morrison in Whiteside county to the Frank Norrish place, north of town. Increased crushing capacity and output is being planned by the operator.

There are also rumors of two additional quarries starting in Whiteside county for the production of agricultural limestone, which would tend to indicate more adequate supply even with one "mortality" or loss of quarry at the point near Ideal. Whiteside county in 1942 used 44,000 tons of limestone.

No farmer should pay the so-called "sales tax" on agricultural limestone, since it was defined as a "fertilizer" back in 1942. This Retailers' Occupation Tax Act rule No. 33 states, "Fertilizer . . . . means a commodity which contains one or more substances to increase the available plant food content of the soil and which becomes a part of the products grown therein . . . . Persons who sell fertilizer to purchasers who are regularly engaged in the business of producing agricultural products for sale are considered to be making sales for purposes of resale because in such cases the fertilizer becomes a part of products which are subsequently sold." Believe it or not, four different limestone producers were found recently by this department to be charging this tax. (Do not confuse this, however, with the present and valid 3% transportation tax — Federal).

According to newspaper comment, many current farm sale values are reflecting the known improved producing ability of soil that has been "limed, phosphated, and clovered."

The War Food Administration urges farmers who are planning to use commercial fertilizer next spring to apply now and accept delivery during the winter months. This is important and essential if fertilizer mixers are to meet farmers' needs.

A recent letter from Marvin Jones, War Food Administrator, to quarry operators emphasizes the importance of agricultural limestone for increased crop and food production and points out their classification under the war manpower act.

Charter member Thurman McCoy signs his neighbor, Andrew Meyer, as the 1000th member in the Jo Daviess County Farm Bureau. The county went over the 1000th mark by eight in the 100,000 member campaign for the state.

A. E. Richardson, manager of Illinois Agricultural Mutual, gives George Thiem, Chicago Daily News farm editor, an interview during IAA annual meeting.

W. H. Smith, Woodford county, who started in Farm Bureau membership work in Lake county in 1918, chats with Farm Adviser L. E. McKenzie, Edgar county.

LIVESTOCK LIQUIDATION?

DEAN RUSK WARNS CORN-HOG RATIO MAY FORCE IT

A word of warning that there is real danger that liquidation of livestock might very rapidly go too far if the delicate balance of price relationships becomes too unfavorable, and especially if such unfavorable relationships are maintained too long, was issued by Dean H. P. Rusk of the U. of I. College of Agriculture at the livestock conference of the American Farm Bureau Federation annual meeting.

Parker, chairman at luncheon given for Illinois delegation by Chicago Association of Commerce, Ruth Jacques, Peoria, Girls' 4-H luncheon speaker, and Ray Thompson, Kendall, boys' representative.

By Frank Gougler

Producers' Creamery of Olney is planning to increase its outstanding capital stock so that additional facilities can be added for handling increased volume of milk. During November, 1943, 41.2% more butter was manufactured than the same month last year. This increase is due largely to increased volume of milk received, rather than cream.

It appears that in this area there is a general trend on the part of producers to sell milk in preference to cream. This condition at the present time is being augmented because of the fact that the federal subsidy for milk is 35c per 100 pounds to the producer and only 4c per pound butterfat for cream sold.

The expansion program provides for replacing the present small roller dryer with one double its capacity. A larger roller makes it necessary to provide more boiler capacity, as well as additional receiving and storage milk equipment.

Producers' Creamery of Carlinville, Dec. 4, held its sixth annual meeting with the largest attendance in history. Rev. A. R. Grummon, pastor of the First Methodist Church of Springfield, discussed "We Can Build for A Permanent Peace."

Patronage dividends amounting to $10,000 were distributed at the close of the meeting and a like amount was added to surplus. Manager Gourley reported that the Creamery at the time of the meeting was serving 400 milk producers and 800 cream partons. Harold Enns, president of Illinois Producers' Creameries, attended the meeting and brought greetings from the state association and the other nine associated companies.

Farmers Creamery Company of Bloomington held its annual meeting Nov. 13 with four hundred patrons in attendance. Manager Fairchild reported the Creamery manufactured 1,250,757 pounds of butter during the year. President Harold Enns reported, "that the two financial highlights of the year were the fact that the Creamery was able to pay a patronage dividend of 2c per pound to patrons and that the mortgage indebtedness on the new building was reduced from $44,700 to $10,200.11."

Producers Creamery of Champaign held its annual meeting Nov. 9. This plant is also managed by Forrest Fairchild. Highlights accomplished at this creamery were the liquidation of the creamery's mortgage and the payment of two year's dividends on company stock.

Producers' Creamery of Carbondale made slightly less butter than a year ago, but net profits were much greater, being more than $12,000. At the present time, volume has increased 10.11% over last year. New improvements are being completed which will provide additional cooler space for storing as much as three cars of butter and additional refrigeration equipment is being added to take care of the expanded cooler room.

In his annual report, Manager Cliff Huppert of Producers' Creamery of Moline showed that during the year just closed 383,236 pounds of butter and 210,752 pounds of cheese were produced. The cheese output represented 44.24% of total milk receipts.

Fieldman Kenneth Shields reported to the annual meeting that during the year creamery trucks traveled 160,171 miles and that truck maintenance costs were 2c per pound butterfat hauled over a year earlier. He said, "Our trucks are old and costly to operate."

Producers' Creamery of Mt. Sterling chalked up its best year in history. The new venture of investing about $30,000 additional capital so that powdered milk could be processed proved profitable. The year's operation resulted in a net profit of $15,775.69. Present volume shows a slight gain over a year ago, but it is expected that more milk will be received during 1944 than 1943.

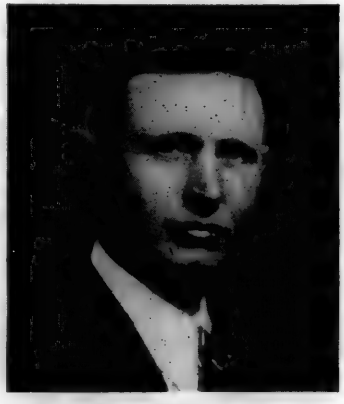
Union County Farm Bureau at its annual meeting Dec. 10, discussed the promotion of a cooperative locker plant. Local leaders are of the opinion that Anna and surrounding territory will support a 500 to 700 locker plant. An organization is being projected to sell $30,000 worth of stock to finance the project.

Monday, Dec. 13, Farm Adviser L. E. McKinzie of Edgar county called a meeting of local Farm and Home Bureau leaders to discuss the subject of a locker plant to be located in Paris. The group voted to undertake the project. This makes the 15th unit to undertake such a project since material has been made available for building locker plants. Several old plants are being expanded.

Mortgage Burning Ceremony: Manager Ellis Kugler of the Champaign and Rantoul Cooperative Locker Plants reported to his patrons recently that the last of the indebtedness on both of these plants has been paid. A mortgage burning ceremony will be held some time in the future.

The Champaign plant has 910 lockers and the Rantoul plant 415 lockers — all rented. Sufficient funds have been raised and the necessary lockers have been rented to meet federal requirements for a 300 locker plant at Fisher. Dan P. Zehr is Chairman of the Fisher Unit.

A fourth unit is now being promoted at Sidney, Champaign county. Manager Kugler is satisfied that in a short time the leaders in this rural community will sell the necessary stock and rent the required number of lockers.



E. E. Houghtby, Shabbona, who retired from the board of directors of the IAA at the 29th Annual Meeting. He was not a candidate for re-election.

Rural YOUTH

As the RECORD goes to press, Illinois Rural Youth have purchased $58,479.20 in War Bonds in its campaign to reach $75,000, or the cost of a pursuit ship. With one-third of the reports yet to be received from county groups, the goal should be reached by the deadline of Jan. 1, 1944.

Rural Youthers holding Christmas parties during December remembered the boys in service by sending them greeting cards. Other county groups turned the proceeds from their parties into presents or checks for orphanages and others send gifts to men of the armed services who were facing bleak holidays in the hospitals.

McLean County Rural Youth built up a Christmas fund at their December party instead of having a gift exchange and the proceeds were sent to the hospital at Rantoul for wounded service men. About 60 members and guests were present at the party, reports Violet Wiekert, president.

Mason county's Christmas party resulted in a number of gifts being collected for the needy children of the county. Other news from this county brings the announcement of the marriage of Jane Stone and Harvey Rutledge on Nov. 24. Harvey was past president of the Mason county group. The young couple plans to make their home on a farm in the southern part of Mason county.

Bureau county had a gift exchange at its party with the gifts being donated to the local orphanage, reports Herman Pierson, president.

Edgar county Rural Youthers had a Christmas party Dec. 15 with a gift exchange and pot luck supper attended by 35 members. They sent holiday greeting cards to the boys in service with the monthly news-letter, reports Thelma Sturgeon, president.

Some 145 persons attended Tazewell's ninth annual banquet in Tremont Dec. 11. Visitors were welcomed from Macon, Mason, DeWitt, Fulton, McLean, Woodford, and Peoria counties, reports Franklin Allen, president.

Wayne County Rural Youth remembered the boys in service with holiday greetings. As the RECORD goes to press this Rural Youth group was scheduled to hold its first big banquet. The date was Dec. 23.

Richland county's annual meeting is set for Jan. 13, reports Lester Sterchi, president. Attendance at the Dec. 9th meeting was 45 with a party and gift grab bag. They closed the program with Christmas songs and the Christmas Bible story.

Macoupin county had a pie and pound social Dec. 1, and made $26.80. Members are planning a Christmas dance for the holidays, says Lucille Denby, president.

Versa Lee Bradley, Gallatin County Rural Youth secretary, writes, "Our president, Wilson Rister, is in the Army and our Rural Youth program is temporarily discontinued."

New Rural Youth state committee, first row, left to right, Harold Toepke, McLean county; Lawrence Herbert, Christian; Margaret Sharp, Woodford; Franklin Allen, Tazewell; Lester Sterchi, Richland. Second row, alternates, Don Bowton, Peoria; Theron Summers, Edwards; Evelyn Mire, McLean; Harold Teeple, Kane, and Clifford Betzold, Montgomery.

Lyle Given is the new Rural Youth president in McHenry county.

Nearly 1,700,000 farm boys and girls were participating in the wartime 4-H club program on July 1, according to estimates by state agricultural extension services.

Charles W. Vieth, seaman second class, greets his father, William F. Vieth, former president of Madison County Farm Bureau, at IAA annual meeting in Chicago.

Effingham County Farm Youth Killed in Action

Mr. and Mrs. Henry Bierman, Effingham County Farm Bureau family, received word in October of the death of their son, Pvt. Ralph B. Bierman, who was killed in action in the North African territory.

Ralph was inducted into the U. S. Army on May 12, 1942 and a few months later was assigned to an overseas contingent. Before he entered the Army he helped his father on the farm. Mr. and Mrs. Bierman have another son, Harry, who is serving his country in the South Pacific war zone.

This is a copy of the citation received by Illinois Rural Youth from the United States Treasury Department for the Bonds for Bombers campaign conducted in 1943. Enough Bonds to equal the cost of a medium Bomber were purchased by September 30, at which time a second campaign was launched for the last three months of the year to buy enough Bonds to equal the cost of a pursuit ship.

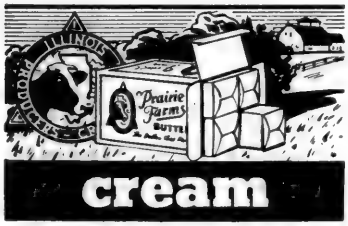
Henry Morgenthau Jr.

Three Illinois youth named national 4-H champions at recent Club Congress are left to right, Calvin C. Meyer, Will county, dairy; Glenn Eisenbrandt, Will, electrification, and Wallace Deeke, Cook, 4-H victory garden. Next in line are Leslie M. Parker, chairman at luncheon given for Illinois delegation by Chicago Association of Commerce, Ruth Jacques, Peoria, Girls' 4-H luncheon speaker, and Ray Thompson, Kendall, boys' representative.



By Frank Gougler

Producers' Creamery of Olney is planning to increase its outstanding capital stock so that additional facilities can be added for handling increased volume of milk. During November, 1943, 41.2% more butter was manufactured than the same month last year. This increase is due largely to increased volume of milk received, rather than cream.

It appears that in this area there is a general trend on the part of producers to sell milk in preference to cream. This condition at the present time is being augmented because of the fact that the federal subsidy for milk is 35c per 100 pounds to the producer and only 4c per pound butterfat for cream sold.

The expansion program provides for replacing the present small roller dryer with one double its capacity. A larger roller makes it necessary to provide more boiler capacity, as well as additional receiving and storage milk equipment.

Producers' Creamery of Carlinville, Dec. 4, held its sixth annual meeting with the largest attendance in history. Rev. A. R. Grummon, pastor of the First Methodist Church of Springfield, discussed "We Can Build for A Permanent Peace."

Patronage dividends amounting to $10,000 were distributed at the close of the meeting and a like amount was added to surplus. Manager Gourley reported that the Creamery at the time of the meeting was serving 400 milk producers and 800 cream partons. Harold Enns, president of Illinois Producers' Creameries, attended the meeting and brought greetings from the state association and the other nine associated companies.

Farmers Creamery Company of Bloomington held its annual meeting Nov. 13 with four hundred patrons in attendance. Manager Fairchild reported the Creamery manufactured 1,250,757 pounds of butter during the year. President Harold Enns reported, "that the two financial highlights of the year were the fact that the Creamery was able to pay a patronage dividend of 2c per pound to patrons and that the mortgage indebtedness on the new building was reduced from $44,700 to $10,200.11."

Producers Creamery of Champaign held its annual meeting Nov. 9. This plant is also managed by Forrest Fairchild. Highlights accomplished at this creamery were the liquidation of the creamery's mortgage and the payment of two year's dividends on company stock.

Producers' Creamery of Carbondale made slightly less butter than a year ago, but net profits were much greater, being more than $12,000. At the present time, volume has increased 10.11% over last year. New improvements are being completed which will provide additional cooler space for storing as much as three cars of butter and additional refrigeration equipment is being added to take care of the expanded cooler room.

In his annual report, Manager Cliff Huppert of Producers' Creamery of Moline showed that during the year just closed 383,236 pounds of butter and 210,752 pounds of cheese were produced. The cheese output represented 44.24% of total milk receipts.

Fieldman Kenneth Shields reported to the annual meeting that during the year creamery trucks traveled 160,171 miles and that truck maintenance costs were 2c per pound butterfat hauled over a year earlier. He said, "Our trucks are old and costly to operate."

Producers' Creamery of Mt. Sterling chalked up its best year in history. The new venture of investing about $30,000 additional capital so that powdered milk could be processed proved profitable. The year's operation resulted in a net profit of $15,775.69. Present volume shows a slight gain over a year ago, but it is expected that more milk will be received during 1944 than 1943.

Union County Farm Bureau at its annual meeting Dec. 10, discussed the promotion of a cooperative locker plant. Local leaders are of the opinion that Anna and surrounding territory will support a 500 to 700 locker plant. An organization is being projected to sell $30,000 worth of stock to finance the project.

Monday, Dec. 13, Farm Adviser L. E. McKinzie of Edgar county called a meeting of local Farm and Home Bureau leaders to discuss the subject of a locker plant to be located in Paris. The group voted to undertake the project. This makes the 15th unit to undertake such a project since material has been made available for building locker plants. Several old plants are being expanded.

Mortgage Burning Ceremony: Manager Ellis Kugler of the Champaign and Rantoul Cooperative Locker Plants reported to his patrons recently that the last of the indebtedness on both of these plants has been paid. A mortgage burning ceremony will be held some time in the future.

The Champaign plant has 910 lockers and the Rantoul plant 415 lockers — all rented. Sufficient funds have been raised and the necessary lockers have been rented to meet federal requirements for a 300 locker plant at Fisher. Dan P. Zehr is Chairman of the Fisher Unit.

A fourth unit is now being promoted at Sidney, Champaign county. Manager Kugler is satisfied that in a short time the leaders in this rural community will sell the necessary stock and rent the required number of lockers.

E. E. Houghtby, Shabbona, who retired from the board of directors of the IAA at the 29th Annual Meeting. He was not a candidate for re-election.

Rural YOUTH

As the RECORD goes to press, Illinois Rural Youth have purchased $58,479.20 in War Bonds in its campaign to reach $75,000, or the cost of a pursuit ship. With one-third of the reports yet to be received from county groups, the goal should be reached by the deadline of Jan. 1, 1944.

Rural Youthers holding Christmas parties during December remembered the boys in service by sending them greeting cards. Other county groups turned the proceeds from their parties into presents or checks for orphanages and others send gifts to men of the armed services who were facing bleak holidays in the hospitals.

McLean County Rural Youth built up a Christmas fund at their December party instead of having a gift exchange and the proceeds were sent to the hospital at Rantoul for wounded service men. About 60 members and guests were present at the party, reports Violet Wiekert, president.

Mason county's Christmas party resulted in a number of gifts being collected for the needy children of the county. Other news from this county brings the announcement of the marriage of Jane Stone and Harvey Rutledge on Nov. 24. Harvey was past president of the Mason county group. The young couple plans to make their home on a farm in the southern part of Mason county.

Bureau county had a gift exchange at its party with the gifts being donated to the local orphanage, reports Herman Pierson, president.

Edgar county Rural Youthers had a Christmas party Dec. 15 with a gift exchange and pot luck supper attended by 35 members. They sent holiday greeting cards to the boys in service with the monthly news-letter, reports Thelma Sturgeon, president.

Some 145 persons attended Tazewell's ninth annual banquet in Tremont Dec. 11. Visitors were welcomed from Macon, Mason, DeWitt, Fulton, McLean, Woodford, and Peoria counties, reports Franklin Allen, president.

Wayne County Rural Youth remembered the boys in service with holiday greetings. As the RECORD goes to press this Rural Youth group was scheduled to hold its first big banquet. The date was Dec. 23.

Richland county's annual meeting is set for Jan. 13, reports Lester Sterchi, president. Attendance at the Dec. 9th meeting was 45 with a party and gift grab bag. They closed the program with Christmas songs and the Christmas Bible story.

Macoupin county had a pie and pound social Dec. 1, and made $26.80. Members are planning a Christmas dance for the holidays, says Lucille Denby, president.

Versa Lee Bradley, Gallatin County Rural Youth secretary, writes, "Our president, Wilson Rister, is in the Army and our Rural Youth program is temporarily discontinued."

NEW HORIZONS

DISCUSSED BY ASSOCIATED WOMEN OF AFBF

"LET us plan to take our share of responsibility in this speeded up, changed, contracted world in which we must live."

Thus did Mrs. Elsie D. Mies, Urbana, Champaign county, president of the Associated Women of the American Farm Bureau Federation, in her annual address focus attention on the convention theme of "New Horizons" as women from 43 states and Puerto Rico gathered for a two-day meeting, Dec. 5 and 6, in Chicago.

"We'll agree," Mrs. Mies said, "first of all that we are wives and mothers — interested in the welfare of our families, in what we shall eat and how much money we can have to buy the food and comforts that our family needs. Then our interests must extend around the world because what goes on the world affects our food, our comforts and our pocketbooks. To accomplish all these adjustments which we can glimpse on the horizon, let us utilize the opportunities of organization to help us."

Mrs. Mies further pointed out that "with our husbands, we must take on interest in civic affairs — taking advantage of the privilege of voting which men of the country gave us after the other war. If we are negligent of study in becoming informed and do not individually arrive at our decisions, then we have been given a privilege which we did not deserve."

This emphasis on the responsibility of women in shaping the affairs of community, state, and nation was reflected by other speakers. Mrs. W. D. McLeod, Jackson, Tenn., winner of southern region speaking contest for women, said she believed that "one problem facing the American family is that of adjusting itself to changing conditions both within and without the home so as to make available the richest possible life for all its members."

Said R. B. Corbett, new secretary of the American Farm Bureau Federation, "The key to post-war period maintenance is the keeping of normalcy in farm homes."

In their convention resolutions, the Associated Women declared that "a woman with children at home can render the greatest contribution to her nation by making the care of her family and home her primary responsibility."

Strengthening of the rural church was cited as the responsibility of rural women, and it was also recommended that farm women study their local school problems to the end that state and national legislation may be supported for maintaining and extending a more effective school system. These stalwart institutions of community life, together with neighborhood meetings, were cited as means of making better citizens of adults and youths. The foundation of good citizenship, and the primary means for thwarting juvenile delinquency, however, lies in the home, the resolutions stated.

Sister Elizabeth Kenny

The Associated Women also went on record as favoring "an intensive attack on the problems of better medical care for all groups, particularly in rural areas." The resolution on health read in part, "In general we favor action on this problem by the voluntary organization of cooperative health and hospital associations, which have already proved their value. . . We are opposed to legislation designed to provide compulsory medical care and hospitalization. We recommend full cooperation of rural with our established health units and existing health programs, including immunization, clinics, preventive medicine, nutrition courses and home nursing."

In looking to the job of food production in 1944, the Associated Women declared, "In order to accomplish maximum production of food in the coming season it will be necessary to employ urban youth and women in many localities. Farm women may well promote healthful living arrangements, recreational opportunities and working conditions for these co-workers from town and city. Such a program can well constitute a long step in the direction of improved public relations through mutual understanding."

On winning the peace, an adopted resolution warned, "If we are to achieve a just and durable peace, we shall have to make sacrifices for it as we have had to make sacrifices in war. . .We urge that women be represented in all phases of policy making for post-war planning and readjustment, both foreign and

Officers and directors of the Associated Women of the AFBF, left to right, are Mrs. Charles W. Sewell, administrative director; Mrs. Raymond Sayre, Iowa, director, Midwest region; Mrs. Florence Bovett, Nevada, director, Western region; Mrs. Paul Palmer, Missouri, secretary; Mrs. Elsie D. Mies, Illinois, president; Mrs. R. C. F. Weagly, Maryland, vice-president; Mrs. D. W. Bond, Tennessee, director, Southern region, and Miss Elizabeth MacDonald, New York, director, Northeastern region.

domestic. As the mothers who send their sons to war; as citizens who bear their full share of the burden of the conflict; as guardians of family and fireside; we believe that women should at long last be given a voice at the peace table."

Among the highlights of the ninth annual convention of the Associated Women was the program and vesper services Sunday afternoon featured by the Great Lakes Naval Training Station choir and addresses by Rev. C. H. Newham, pastor of the Covenant Methodist Church, Evanston, and W. C. Coffey, president of the University of Minnesota and recipient of the Farm Bureau Distinguished Service Award in 1942.

Monday night's audience enjoyed the privilege of hearing Sister Elizabeth Kenny, famed Australian nurse, tell of long years of work with those who had been stricken with infantile paralysis. She told the story of successful treatment of the disease among the bush families of Australia and how she came to this country and explained her methods to the leading medical men of America. At first she was rebuffed, but as patients under her care regained use of their crippled bodies, her contribution to mankind became recognized. As Sister Kenny brought this great message to her listeners, none could help but feel the imprint of a truly great personality.

Handicraft Day Popular With Stark Home Bureau

Stark County Home Bureau held a most successful "handicraft day" early in December with an attendance of some 80 interested women, reports Mrs. Anna H. Robertson, new home adviser. The major event was textile painting and other projects including stippling, making hot-mats, wood-burning and uses for feed sacks which have been bleached. Since the meeting, several units have ordered sets of textile paints for use within their groups.

Mrs. Robertson reports that this was the most popular meeting she has held since coming to the county in the last of October. A graduate of the U. of I. College of Agriculture home economics department, Mrs. Robertson has had experience as a teacher and office worker with the superintendent of schools in Wayne county.

Clara R. Brian Honored

Miss Clara R. Brian, McLean county home adviser for 24 years, received from Mrs. Spencer Ewing, county past president, a pin symbolizing life membership in the Associated Country Women of the World. Mrs. Floyd Thomas, president of the McLean Home Bureau, left, and Mrs. Merle Norris, second vice-president, participate in ceremony.

(Pantagraph Photo)

Mc Lean Home Adviser Past 24 Years

Miss Clara R. Brian, home adviser for 24 of the 25 years that McLean County Home Bureau has been organized, was recently honored with a presentation of a life membership in the Associated Country Women of the World.

The membership came as a gift from the McLean County Home Bureau in recognition of Miss Brian's service to the rural women of the county.

Each life member of the international organization is given a page in a permanent book, especially designed and beautifully bound, which is kept in London. On this page is recorded the story of the work and accomplishments of the life member.

Mrs. Spencer Ewing, past president of the McLean County Home Bureau, and the Illinois Home Bureau Federation, made the presentation. In response, Miss Brian said, "The honor belongs to the members throughout the county as much as to me, for without them it would be impossible for me or any one person to achieve very much.

Miss Brian was graduated from Illinois Wesleyan University in 1915, and went to the University of Kansas, where she was head of the home economics department until 1918. She then returned to McLean county to aid in a program of food conservation which led to the organization of the county Home Bureau. She was named its first adviser.

Miss Brian left the county in 1926 to study at the University of Minnesota, and when she concluded her work she was asked to return to McLean county as her successor had resigned because of illness. Miss Brian has the longest continuous record of service for any home adviser in the United States. She has served as president of the Illinois Home Advisers Association and of the National Association of Home Demonstration Agents.

What The Members Say

Illinois Agricultural Association Record:

Enjoy reading the RECORD and the news therein. Can't describe the area we are in but we are doing all right. Have received letters from Ted Shambaugh, Oakley, Ill., and Alfred E. "Ack" Bodman, Bement, Ill. Both expressed the tremendous efforts the farmers are putting forth in helping win this war. We in the service appreciate these efforts and they certainly refute any attempts to belittle the efforts of the farmers. They speak of 16 to 24 hours per day in sowing and harvesting time.

Major Edward A. Crumm

4-H YOUNG FOLKS DOING JOB OF ADULTS

THEY call them 4-H club boys and girls, but the records revealed at the 22nd National 4-H Club Congress showed that many are doing a man or woman's job on the home front in food production and conservation.

Illinois had four national champions to its credit at the Congress, three boys and one girl. They were: Calvin Meyer, 18, Peotone, Will county, national dairy champion; Wallace Deeke, 18, Arlington Heights, Cook county, national victory gardener champion; Glenn Eisenbrandt, 18, Lockport, Will county, national rural electrification champion, and Esther Elaine Finley, 19, Bridgeport, Lawrence county, national champion in 4-H girls' record contest. All were 1943 state champions.

Here are thumbnail sketches on the champions: Meyer, son of Clarence S. Meyer, spent eight years in club work, during which he handled 62 dairy animals. He now has a herd of 12 cows. Five of his cows produced 59,980 pounds of milk, and had an average butter-fat production of 430 pounds. His dairy animals are valued at $4,339.92.

Deeke, son of Edwin Deeke, starting in 1937 with a quarter-acre plot, increased his garden each year until this year it included two acres. During the seven-year period the value of produce he raised amounted to $1,334.81. When farmers were called upon to plant more crops this year, he put most of his land into tomatoes and carrots — the two most important vegetables listed.

Eisenbrandt, son if Mr. and Mrs. E. C. Eisenbrandt, a club boy for nine years, gained his electrical experience through wiring a nine-room house, barn, milk house, and garage; making a yard light and reflector out of discarded materials, and a lamp out of a funnel, socket and an old lamp shade. He also did electrical repair work about the farm and home and exhibited a brake for testing the efficiency of fractional horsepower motors and a light electric welder.

Miss Finley, daughter of Mrs. Bessie E. Finley, a club member for 10 years, has served five years as assistant and junior leader. She completed 21 projects, which include sewing 71 garments, baking 43½ dozen quickbreads, and 23 dozen cookies, preparing 35 dairy dishes, and 1285 meals, canning 321 quarts of foods, and making four room improvement articles. She also made 31 demonstrations and 55 talks before club and community groups.

Deeke received a $100 War Bond at the Congress and the other three champions received $200 college scholarships.

Illinois 4-H club scholarship contest winners were James Litchfield, McDonough; Donald Stengel, Ogle, and Robert Worrell, Scott.

Other state winners in 1943 are:

Rosemary Sharp, Woodford county, daughter of Mr. and Mrs. Ellis S. Sharp, state canning champion. During 3 years of food preservation work she has canned or helped to canned 1500 quarts of fruits and vegetables.

Wayne Bates, 18, Macoupin county, son of Mr. and Mrs. Byron C. Bates, is state champion in national 4-H achievement contest. Farming 223½ acres of land, he has carried six projects, served as assistant 4-H leader and been active on judging teams.

Charles J. Kinsey, Marion county, is the state champion in the national 4-H meat animal contest. Starting eight years ago with a litter of Hampshires, he has built up a $25,000 swine business. He is active in community affairs, a Farm Bureau member, and a wartime educational leader.

Edgar C. Gabel, 19, Kendall county, was selected to represent Illinois in the national 4-H leadership contest. Leader of the Future Farmers' club for the past three years, he has 69 Hampshires, 22 baby beeves, and 270 laying hens and pullets.

Ruth Walker, Champaign county, daughter of Mr. and Mrs. Carle Walker, was named to represent Illinois in the national leadership contest for 4-H girls. During 11 years of club work she has been county and state project honor member, county and state outstanding member, and state leadership champion in 1942.

Geraldine Clark, Scott county, daughter of Mr. and Mrs. Olin Clark, is Illinois' representative in the national 4-H club achievement contest. She has been in club work for nine years and president of her club the last three years.

Elaine E. Devereaux, Kendall county, daughter of Mr. and Mrs. Robert Devereaux, is state 4-H clothing champion. She has just completed her ninth year of club work.

Three Illinois 4-H club girls have been awarded $100 college scholarships for their excellent 4-H club work, high school records and leadership in their communities. They are Virginia E. Hagen, Grundy county; Marian E. Healy, Kankakee, and Eleanor J. Icenogle, Cumberland.

Three Illinois 4-H boys have been named state winners in the national victory achievement contest. They are Bruce Mowery, Pulaski-Alexander county; T. Richard Lacy, Edgar, and Wayne Canterbury, Sangamon.

Three girls whose contributions to the victory effort have been ranked outstanding by state 4-H club officials are Ruhama L. Walling, La Salle; Helen M. Risley, Wabash, and Louise E. Lock, Jersey.

Marjorie F. Lofftus, Warren county, daughter of Mr. and Mrs. Everett Lofftus, is the state winner in home beautification.

ANSWERS

1. Eight out of 10 will live.
   Of 31,000,000 chicks hatched in Illinois each year, about 6½ million, or 20%, die as chicks.
2. Approximately one-half square foot.
   250 chicks require a brooder size 10 x 12 feet.
3. Warm under the hover (90 - 95°)
   Cool house (50 - 70°)
4. Before baby chicks arrive, clean the brooder house; then scrub it with boiling lye water (one can to 30 gallons, adding three cups of flake or granulated soap). Before chicks arrive, warm the house and test the thermostat.

4-H YOUNG FOLKS DOING JOB OF ADULTS

THEY call them 4-H club boys and girls, but the records revealed at the 22nd National 4-H Club Congress showed that many are doing a man or woman's job on the home front in food production and conservation.

Illinois had four national champions to its credit at the Congress, three boys and one girl. They were: Calvin Meyer, 18, Peotone, Will county, national dairy champion; Wallace Deeke, 18, Arlington Heights, Cook county, national victory gardener champion; Glenn Eisenbrandt, 18, Lockport, Will county, national rural electrification champion, and Esther Elaine Finley, 19, Bridgeport, Lawrence county, national champion in 4-H girls' record contest. All were 1943 state champions.

Here are thumbnail sketches on the champions: Meyer, son of Clarence S. Meyer, spent eight years in club work, during which he handled 62 dairy animals. He now has a herd of 12 cows. Five of his cows produced 59,980 pounds of milk, and had an average butter-fat production of 430 pounds. His dairy animals are valued at $4,339.92.

Deeke, son of Edwin Deeke, starting in 1937 with a quarter-acre plot, increased his garden each year until this year it included two acres. During the seven-year period the value of produce he raised amounted to $1,334.81. When farmers were called upon to plant more crops this year, he put most of his land into tomatoes and carrots — the two most important vegetables listed.

Eisenbrandt, son if Mr. and Mrs. E. C. Eisenbrandt, a club boy for nine years, gained his electrical experience through wiring a nine-room house, barn, milk house, and garage; making a yard light and reflector out of discarded materials, and a lamp out of a funnel, socket and an old lamp shade. He also did electrical repair work about the farm and home and exhibited a brake for testing the efficiency of fractional horsepower motors and a light electric welder.

Miss Finley, daughter of Mrs. Bessie E. Finley, a club member for 10 years, has served five years as assistant and junior leader. She completed 21 projects, which include sewing 71 garments, baking 43½ dozen quickbreads, and 23 dozen cookies, preparing 35 dairy dishes, and 1285 meals, canning 321 quarts of foods, and making four room improvement articles. She also made 31 demonstrations and 55 talks before club and community groups.

Deeke received a $100 War Bond at the Congress and the other three champions received $200 college scholarships.

Illinois 4-H club scholarship contest winners were James Litchfield, McDonough; Donald Stengel, Ogle, and Robert Worrell, Scott.

Other state winners in 1943 are:

Rosemary Sharp, Woodford county, daughter of Mr. and Mrs. Ellis S. Sharp, state canning champion. During 3 years of food preservation work she has canned or helped to canned 1500 quarts of fruits and vegetables.

Wayne Bates, 18, Macoupin county, son of Mr. and Mrs. Byron C. Bates, is state champion in national 4-H achievement contest. Farming 223½ acres of land, he has carried six projects, served as assistant 4-H leader and been active on judging teams.

Charles J. Kinsey, Marion county, is the state champion in the national 4-H meat animal contest. Starting eight years ago with a litter of Hampshires, he has built up a $25,000 swine business. He is active in community affairs, a Farm Bureau member, and a wartime educational leader.

Edgar C. Gabel, 19, Kendall county, was selected to represent Illinois in the national 4-H leadership contest. Leader of the Future Farmers' club for the past three years, he has 69 Hampshires, 22 baby beeves, and 270 laying hens and pullets.

Ruth Walker, Champaign county, daughter of Mr. and Mrs. Carle Walker, was named to represent Illinois in the national leadership contest for 4-H girls. During 11 years of club work she has been county and state project honor member, county and state outstanding member, and state leadership champion in 1942.

Geraldine Clark, Scott county, daughter of Mr. and Mrs. Olin Clark, is Illinois' representative in the national 4-H club achievement contest. She has been in club work for nine years and president of her club the last three years.

Elaine E. Devereaux, Kendall county, daughter of Mr. and Mrs. Robert Devereaux, is state 4-H clothing champion. She has just completed her ninth year of club work.

Three Illinois 4-H club girls have been awarded $100 college scholarships for their excellent 4-H club work, high school records and leadership in their communities. They are Virginia E. Hagen, Grundy county; Marian E. Healy, Kankakee, and Eleanor J. Icenogle, Cumberland.

This is 1944!

WHAT WILL YOU DO TO MAKE IT THE VICTORY YEAR?

The Goal–VICTORY

The Place–EUROPE

The Time–THIS YEAR

The Responsibility–YOURS

ORGANIZED agriculture, 100,000 strong in Illinois, pledges maximum production in 1944 . . . maximum effort . . . maximum sacrifice . . . for VICTORY.

FIRST on its list for the new year is UNSTINTED, ALL-OUT PARTICIPATION in the 4TH WAR LOAN CAMPAIGN. Organized agriculture knows that every war bond bought now protects the farm home of tomorrow . . . and brings Victory nearer!

By buying our quota and more of bonds, we fulfill the wartime pledge adopted by delegates from all parts of the state at the IAA convention last November.

"We pledge to the nation, to its Commander-in-Chief, and to our honored allies, the best that we have in thought, in labor, in wealth, and in our manhood and womanhood, to the great objectives of our day: the final and decisive victory of arms, and the preservation in America and in the world of the hard-won freedoms which were bequeathed to us by our fathers, and which, God willing, we will pass on to generations yet unborn."

Let's *All* BACK THE ATTACK!

This Month

THE failure of the government to make fully effective its assurance to farmers that a floor of $13.75 per hundred, Chicago basis, would be maintained for hogs reaching market until October of 1944 has resulted in a loss to hog producers and feeders of many millions of dollars, to say nothing of the confusion and delay farmers have been forced to encounter in marketing their hogs.

Farm Bureau members are entitled to know of the activities of their organization in anticipating present day conditions, in the efforts made to forestall these losses and the steps taken to establish the confidence that is always necessary for the orderly marketing of any important farm commodity or product.

Early last year when insisting that ceiling prices on corn should not be established at less than parity levels, the Illinois Agricultural Association recognized: (1) that in justice to corn producers the ceiling should not be set at less than parity levels, and (2) that a ceiling price on corn below parity would ultimately result in the production of a larger supply of pork tonnage than had been anticipated by the government.

Late in October it was relatively easy to foresee the necessity of the government taking definite action if its announced price support for hogs was to be made effective. At that time the Illinois Agricultural Association recommended to the War Food Administrator that the following steps be taken:

1. Assist packers in securing additional experienced help so that all packing houses could operate to the full extent of their facilities for such a time as the supply of hogs warranted.

2. Call the packers together and inform them that for each 10 cents their average daily purchases were below the floor of $13.75 that double that amount would be deducted from the subsidy then being paid to packers.

3. Complete removal of all restrictions then in effect upon country killing of hogs — this to include both farmers and local butchers.

4. Complete removal of all point requirements for the purchase of pork by consumers for the emergency period.

5. That if necessary to spread the marketings of hogs there be an increase in the weights at which the government would make the support prices effective.

When making these recommendations it was recognized that the Office of Price Administration apparently had sole authority for determining all point requirements for the purchase of food. Any fair appraisal of conditions existing during recent weeks will disclose that the War Food Administrator has taken steps to put all of these recommendations and possibly others into effect, with the sole exception of removing point requirements for the purchase of pork by consumers.

We are forced to conclude, therefore, that the responsibility for the confusion of farmers, the delay in the marketing of hogs, and the millions of dollars lost by producers and feeders rests with the Office of Price Administration.

It is also interesting to note even at this late date that it was the Office of Price Administration which refused to deal fairly in determining corn price ceilings last spring.

These experiences are increasingly convincing that fair treatment of farmers, the production of adequate food for the nation and its orderly distribution should be centered wholly within the War Food Administration.

Curtail Hemp Program In Illinois for 1944

ILLINOIS hemp production program for 1944 calls for the planting of 17,000 to 18,000 acres in the areas of four mills in the state as compared with the planting of approximately 44,000 acres in 11 mill areas in 1943, according to Fred E. Butcher, Chicago, president of the War Hemp Industries, Inc.

Hemp mills in Illinois for which acreage will be planted in 1944 include Kirkland and Shabbona in DeKalb county; Polo in Ogle county, and Earlville in La Salle county. The Polo plant is the only one that has started operations.

The other 7 mills during 1944 will process the 1943 crop as soon as the plants are completed and will be kept in operating condition for possible use in 1945. These 7 mills are located at Wyoming, Stark county; Lexington, McLean; Muncie, Vermilion; Galva, Henry; Ladd, Bureau; Galesburg, Knox, and Minonk, Woodford.

Reduction in the hemp program came after the War Production Board reviewed the fiber situation in the light of the progress of the war. It is now possible to import sisal fiber from East Africa and North Africa; jute from India, hennequin and sisal from Yucatan and other Central American points. The net result has been that the reserve supply of fiber in this country has not disappeared at the rate expected when the present hemp program was initiated. In addition the War Food Administration has announced substantially increased acreage goals for the canning crops, corn, soybeans and wheat.

The 1943 production in the 11 Illinois mill areas will amount to between 90,000 and 100,000 tons of straw of which approximately 18 per cent will mill out as fiber, Butcher estimates.

Of the more than 44,000 acres planted in Illinois in 1943, there was approximately 4200 acres abandoned because of weather and crop conditions. The abandonment ran from 100 acres to as much as 1200 acres in some areas. Production ran from 6500 tons of straw to 11,500 tons in the 11 various mill areas. Kirkland and Shabbona were reported to be the highest production areas in 1943.

Returns for the average grower ran in the neighborhood of $75 per acre for the 1943 crop with some realizing as much as $200 per acre. On the H. T. and Lowell Marshall farm, La Salle county, 16 miles from the Earlville plant, 40 acres produced 196 tons of No. 1 hemp worth $50 per ton. His hauling costs amounted to $4 a ton or $784; machinery for harvesting, $5 per acre or $200, and $14 an acre for seed or $560 to make total costs $1544. Taking the costs from the gross returns of $9800 leaves $8256, or an average of approximately $206 per acre.

Hemp plants outside of Illinois which will contract for plantings in 1944 are: Britt, Eagle Grove, Hampton and Grundy Center in Iowa; New Richland, Mapleton and Blooming Prairie in Minnesota; and Cuba City, Darien and DeForest in Wisconsin. This makes 14 plants in the country calling for contracts of 60,000 acres of hemp to be planted in their areas in 1944 as compared with the program calling for 42 plants with contracts for 185,000 acres in 1943.

On or about Sept. 1, 1944, the War Production Board will again review the fiber situation and determine the quantity of fiber required from the crop planting of 1945. If, for any reason, an expanded program is found necessary, the 11 plants in Illinois and the ones in other states will be available to meet that need, Butcher reported.

Lyon New Director For Young People's Activities

Ellsworth D. Lyon, 44, who has served as a rural pastor in Iroquois, Ford, Pulaski, Winnebago, and Madison counties, and whose primary interest has been with young folks and 4-H groups, started work Feb. 1 as director of young people's activities for the Illinois Agricultural Association. He succeeds Frank Gingrich who resigned May 31, 1943, to work as district supervisor in the Emergency Farm Labor program of the U. of I. College of Agriculture Extension.

Mr. Lyon was graduated from the Chicago Theological Seminary in 1929 and after serving on a home missionary project for 11 months in Kentucky and after spending the summer of 1930 at the Seminary, he began work as a pastor in Illinois. From September, 1930, to July, 1933, he served as pastor of the Loda Congregational Church in Iroquois county, and the Clarence Presbyterian Church in Ford county. From this dual position he went as pastor to the Villa Ridge Union Church and the Mound City Congregational Church in Pulaski county. In the latter county he helped in 4-H club work and served as a leader and member of the county 4-H committee as well as helping in Farm Bureau organization work.

Ellsworth D. Lyon

After the 1937 flood at Mound City, Mr. Lyon went to Pecatonica in Winnebago county where he served as pastor of the Congregational Church until April, 1941. From April to December of 1941 he was in the CCC district of Sparta, Wis. serving as chaplain to camps in northern Wisconsin and the Upper Peninsula of Michigan. Since February, 1942, he has been pastor of the Godfrey Congregational Church in Madison county.

Mr. Lyon has had an interest in the Farm Bureau for a number of years. When he wrote his thesis for graduation from the Seminary he went out to Homer township in Will county and studied rural organizations, including the Farm Bureau, to find out what they were contributing to rural life.

"I found the Farm Bureau there to be a live organization and a constructive force in the lives of the people," Mr. Lyon said.

Mr. Lyon is married and has four children, two boys and two girls. His hobbies are folk games, leather-craft, gardening and fishing. He was born in West Virginia and grew up on a cattle farm.

Patronage to Co-op Shippers

Champaign County Livestock Marketing Association paid $5700 back to its patrons on 1943 business, according to a report made by Harold Davis, manager, at the annual meeting of the Association Jan. 20 held in conjunction with the annual session of the Champaign County Farm Bureau. This patronage was in addition to 7 per cent interest paid on preferred stock.

Outlook for 1944 is not as favorable as 1943, Davis reports, because of the glut in hog marketings. The Association has 2500 hogs listed ahead to be marketed.

Plan Co-op Marketing Meetings for February

A series of district meetings for the purpose of discussing all phases of the co-operative marketing program is being sponsored throughout the state by the Illinois Agricultural Association during February. Purpose of the meetings is to discover, if possible, ways and means through which the co-operative marketing program can be improved or strengthened.

The meetings are scheduled as follows:

Mt. Vernon, Emmerson Hotel, Feb. 3.
Galesburg, Farm Bureau Building, Feb. 11.
Champaign, Farm Bureau Building, Feb. 16.
Jacksonville, Farm Bureau Building, Feb. 17.
De Kalb, (place to be announced later), Feb. 21.

All meetings will start promptly at 10 a.m. and they will be adjourned by 3 or 3:30 p.m.

Expected to attend the meetings are: County Farm Bureau marketing committees, farm advisers, Farm Bureau presidents, county organization directors, and other members of the County Farm Bureau boards, if they desire to attend. Attending from the IAA will be the heads of the marketing departments, field secretary, one or more members of the IAA marketing committee, and other members of the IAA board if they desire to attend.

Producer Annual Meetings

Springfield Producers — Feb. 26 — St. Nicholas Hotel
St. Louis Producers — March 8 — Jefferson Hotel
Chicago Producers — March 9 — Hotel Sherman

Charles H. Berg, DuPage County Farm Bureau member, demonstrates the powder-dry condition of his soil in January.

Annual meeting of the Southern Illinois Horticultural Society Jan. 17 at Carbondale was well attended by growers of the area.

FARM AND HOME WEEK

ILLINOIS farmers will take over the U. of I. campus Feb. 8 to 10 as they gather for the 49th annual Farm and Home Week program and prepare for the big job of production in 1944. A list of rooms available for Farm and Home week visitors will be maintained at the registration desk in the U. of I. auditorium. Meals may be secured at the Illini Union Building between the hours of 7:15-8:30 a.m.; 11:30 a.m. — 1 p.m. and 5:30-7 p.m.; and at local restaurants.

For those who are unable to attend the program at the university, arrangements have been made to broadcast as much as possible of the program. Station WILL, 580 on the radio dial, will broadcast these programs.

The 1944 program is streamlined to make the best possible use of time and yet is designed to cover every subject from taxes to machinery. The various sessions are arranged so that visitors may select those they wish to attend by the general topic listings.

GENERAL SESSIONS

There will be a general session at 3 p.m. in the University Auditorium on Tuesday, Wednesday, and Thursday, and an evening session at 7:30 p.m. on Tuesday and 8:p.m. Wednesday in the Auditorium. Vesper services will be held at 5:15 p.m on Tuesday and Wednesday in Smith Music Hall.

Speaker for the Tuesday general session will be John H. Kolb, research worker and author in rural sociology, University of Wisconsin. His topic will be "Youth in the Rural Community." Feature of the Tuesday evening session will be an address and slides on "Some Impressions of Brazil," by H. H. Alp, specialist in poultry production, U. of I., recently returned from an assignment in Brazil. At 8:30 p. m. Tuesday there will be a "Farm and Home Week Open House" in the Illini Union.

General session speaker Wednesday afternoon will be Paul G. Hoffman, chairman of committee for economic development, New York, and president of the Studebaker Corporation. His topic will be "Productivity—The Key to the Maintenance of Freedom." Evening session speaker will be Roscoe Turner, winner of air races and pioneer in aviation, who will discuss "Aviation, Yesterday, Today, and Tomorrow." At 9 p. m. there will be a social recreation program in the lower gymnasium of the Woman's Building.

Speaker for the Thursday afternoon

(Continued on page 25)

Jones Reorganizes WFA; Sets Up Office of Price

Marvin Jones, War Food Administration director, has announced a reorganization of the WFA which establishes a new "Office of Price" within the WFA and sets up the AAA, FSA and Soil Conservation Service as independent agencies reporting directly to Jones. Previously the AAA, FSA and SCS were under the Food Production Administration.

Jones named Ashley Sellers, assistant administrator, as temporary head of the Office of Price. It will supervise all WFA functions relative to approval of maximum prices and price-support programs. The Office of Price takes over some of the functions of the Commodity Credit Corporation and will recommend directly to Jones what commodities should be supported and the levels and methods of support.

J. B. Huston, head of the CCC, remains as head of the Food Production Administration, which is renamed Office of Production.

The Food Distribution Administration under Lee Marshall was renamed the Office of Distribution.

Curtail Hemp Program In Illinois for 1944

ILLINOIS hemp production program for 1944 calls for the planting of 17,000 to 18,000 acres in the areas of four mills in the state as compared with the planting of approximately 44,000 acres in 11 mill areas in 1943, according to Fred E. Butcher, Chicago, president of the War Hemp Industries, Inc.

Hemp mills in Illinois for which acreage will be planted in 1944 include Kirkland and Shabbona in DeKalb county; Polo in Ogle county, and Earlville in La Salle county. The Polo plant is the only one that has started operations.

The other 7 mills during 1944 will process the 1943 crop as soon as the plants are completed and will be kept in operating condition for possible use in 1945. These 7 mills are located at Wyoming, Stark county; Lexington, McLean; Muncie, Vermilion; Galva, Henry; Ladd, Bureau; Galesburg, Knox, and Minonk, Woodford.

Reduction in the hemp program came after the War Production Board reviewed the fiber situation in the light of the progress of the war. It is now possible to import sisal fiber from East Africa and North Africa; jute from India, hennequin and sisal from Yucatan and other Central American points. The net result has been that the reserve supply of fiber in this country has not disappeared at the rate expected when the present hemp program was initiated. In addition the War Food Administration has announced substantially increased acreage goals for the canning crops, corn, soybeans and wheat.

The 1943 production in the 11 Illinois mill areas will amount to between 90,000 and 100,000 tons of straw of which approximately 18 per cent will mill out as fiber, Butcher estimates.

Of the more than 44,000 acres planted in Illinois in 1943, there was approximately 4200 acres abandoned because of weather and crop conditions. The abandonment ran from 100 acres to as much as 1200 acres in some areas. Production ran from 6500 tons of straw to 11,500 tons in the 11 various mill areas. Kirkland and Shabbona were reported to be the highest production areas in 1943.

Returns for the average grower ran in the neighborhood of $75 per acre for the 1943 crop with some realizing as much as $200 per acre. On the H. T. and Lowell Marshall farm, La Salle county, 16 miles from the Earlville plant, 40 acres produced 196 tons of No. 1 hemp worth $50 per ton. His hauling costs amounted to $4 a ton or $784; machinery for harvesting, $5 per acre or $200, and $14 an acre for seed or $560 to make total costs $1544. Taking the costs from the gross returns of $9800 leaves $8256, or an average of approximately $206 per acre.

Hemp plants outside of Illinois which will contract for plantings in 1944 are: Britt, Eagle Grove, Hampton and Grundy Center in Iowa; New Richland, Mapleton and Blooming Prairie in Minnesota; and Cuba City, Darien and DeForest in Wisconsin. This makes 14 plants in the country calling for contracts of 60,000 acres of hemp to be planted in their areas in 1944 as compared with the program calling for 42 plants with contracts for 185,000 acres in 1943.

On or about Sept. 1, 1944, the War Production Board will again review the fiber situation and determine the quantity of fiber required from the crop planting of 1945. If, for any reason, an expanded program is found necessary, the 11 plants in Illinois and the ones in other states will be available to meet that need, Butcher reported.

Lyon New Director For Young People's Activities

Ellsworth D. Lyon, 44, who has served as a rural pastor in Iroquois, Ford, Pulaski, Winnebago, and Madison counties, and whose primary interest has been with young folks and 4-H groups, started work Feb. 1 as director of young people's activities for the Illinois Agricultural Association. He succeeds Frank Gingrich who resigned May 31, 1943, to work as district supervisor in the Emergency Farm Labor program of the U. of I. College of Agriculture Extension.

Mr. Lyon was graduated from the Chicago Theological Seminary in 1929 and after serving on a home missionary project for 11 months in Kentucky and after spending the summer of 1930 at the Seminary, he began work as a pastor in Illinois. From September, 1930, to July, 1933, he served as pastor of the Loda Congregational Church in Iroquois county, and the Clarence Presbyterian Church in Ford county. From this dual position he went as pastor to the Villa Ridge Union Church and the Mound City Congregational Church in Pulaski county. In the latter county he helped in 4-H club work and served as a leader and member of the county 4-H committee as well as helping in Farm Bureau organization work.

Ellsworth D. Lyon

After the 1937 flood at Mound City, Mr. Lyon went to Pecatonica in Winnebago county where he served as pastor of the Congregational Church until April, 1941. From April to December of 1941 he was in the CCC district of Sparta, Wis. serving as chaplain to camps in northern Wisconsin and the Upper Peninsula of Michigan. Since February, 1942, he has been pastor of the Godfrey Congregational Church in Madison county.

Mr. Lyon has had an interest in the Farm Bureau for a number of years. When he wrote his thesis for graduation from the Seminary he went out to Homer township in Will county and studied rural organizations, including the Farm Bureau, to find out what they were contributing to rural life.

"I found the Farm Bureau there to be a live organization and a constructive force in the lives of the people," Mr. Lyon said.

Mr. Lyon is married and has four children, two boys and two girls. His hobbies are folk games, leather-craft, gardening and fishing. He was born in West Virginia and grew up on a cattle farm.

Patronage to Co-op Shippers

Champaign County Livestock Marketing Association paid $5700 back to its patrons on 1943 business, according to a report made by Harold Davis, manager, at the annual meeting of the Association Jan. 20 held in conjunction with the annual session of the Champaign County Farm Bureau. This patronage was in addition to 7 per cent interest paid on preferred stock.

Outlook for 1944 is not as favorable as 1943, Davis reports, because of the glut in hog marketings. The Association has 2500 hogs listed ahead to be marketed.

Plan Co-op Marketing Meetings for February

A series of district meetings for the purpose of discussing all phases of the co-operative marketing program is being sponsored throughout the state by the Illinois Agricultural Association during February. Purpose of the meetings is to discover, if possible, ways and means through which the co-operative marketing program can be improved or strengthened.

The meetings are scheduled as follows:

Mt. Vernon, Emmerson Hotel, Feb. 3.
Galesburg, Farm Bureau Building, Feb. 11.
Champaign, Farm Bureau Building, Feb. 16.
Jacksonville, Farm Bureau Building, Feb. 17.
De Kalb, (place to be announced later), Feb. 24.

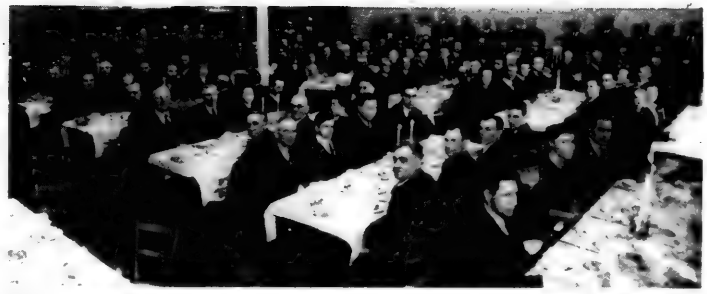
All meetings will start promptly at 10 a.m. and they will be adjourned by 3 or 3:30 p.m.

Expected to attend the meetings are: County Farm Bureau marketing committees, farm advisers, Farm Bureau presidents, county organization directors, and other members of the County Farm Bureau boards, if they desire to attend. Attending from the IAA will be the heads of the marketing departments, field secretary, one or more members of the IAA marketing committee, and other members of the IAA board if they desire to attend.

Producer Annual Meetings

Springfield Producers — Feb. 26 — St. Nicholas Hotel
St. Louis Producers — March 8 — Jefferson Hotel
Chicago Producers — March 9 — Hotel Sherman

Charles H. Berg, DuPage County Farm Bureau member, demonstrates the powder-dry condition of his soil in January.



Annual meeting of the Southern Illinois Horticultural Society Jan. 17 at Carbondale was well attended by growers of the area.

FARM AND HOME WEEK

ILLINOIS farmers will take over the U. of I. campus Feb. 8 to 10 as they gather for the 49th annual Farm and Home Week program and prepare for the big job of production in 1944. A list of rooms available for Farm and Home week visitors will be maintained at the registration desk in the U. of I. auditorium. Meals may be secured at the Illini Union Building between the hours of 7:15-8:30 a.m.; 11:30 a.m. — 1 p.m. and 5:30-7 p.m.; and at local restaurants.

For those who are unable to attend the program at the university, arrangements have been made to broadcast as much as possible of the program. Station WILL, 580 on the radio dial, will broadcast these programs.

The 1944 program is streamlined to make the best possible use of time and yet is designed to cover every subject from taxes to machinery. The various sessions are arranged so that visitors may select those they wish to attend by the general topic listings.

GENERAL SESSIONS

There will be a general session at 3 p.m. in the University Auditorium on Tuesday, Wednesday, and Thursday, and an evening session at 7:30 p.m. on Tuesday and 8:p.m. Wednesday in the Auditorium. Vesper services will be held at 5:15 p.m on Tuesday and Wednesday in Smith Music Hall.

Speaker for the Tuesday general session will be John H. Kolb, research worker and author in rural sociology, University of Wisconsin. His topic will be "Youth in the Rural Community." Feature of the Tuesday evening session will be an address and slides on "Some Impressions of Brazil," by H. H. Alp, specialist in poultry production, U. of I., recently returned from an assignment in Brazil. At 8:30 p. m. Tuesday there will be a "Farm and Home Week Open House" in the Illini Union.

General session speaker Wednesday afternoon will be Paul G. Hoffman, chairman of committee for economic development, New York, and president of the Studebaker Corporation. His topic will be "Productivity—The Key to the Maintenance of Freedom." Evening session speaker will be Roscoe Turner, winner of air races and pioneer in aviation, who will discuss "Aviation, Yesterday, Today, and Tomorrow." At 9 p. m. there will be a social recreation program in the lower gymnasium of the Woman's Building.

Jones Reorganizes WFA; Sets Up Office of Price

Marvin Jones, War Food Administration director, has announced a reorganization of the WFA which establishes a new "Office of Price" within the WFA and sets up the AAA, FSA and Soil Conservation Service as independent agencies reporting directly to Jones. Previously the AAA, FSA and SCS were under the Food Production Administration.

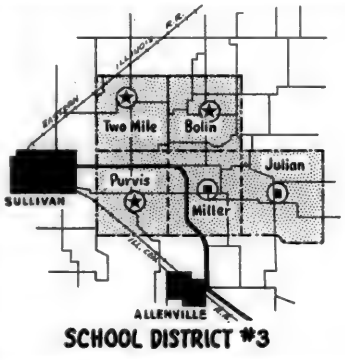
Jones named Ashley Sellers, assistant administrator, as temporary head of the Office of Price. It will supervise all WFA functions relative to approval of maximum prices and price-support programs. The Office of Price takes over some of the functions of the Commodity Credit Corporation and will recommend directly to Jones what commodities should be supported and the levels and methods of support.

J. B. Huston, head of the CCC, remains as head of the Food Production Administration, which is renamed Office of Production.

The Food Distribution Administration under Lee Marshall was renamed the Office of Distribution.

Here are the three school buildings used by the newly reorganized district No. 3 of Moultrie county. First in the panel is the Two-Mile school housing the first and second grades. Third, fourth, and fifth grade pupils attend the Bolin school in the center picture. At the extreme right is the Purvis school attended by sixth, seventh and eighth grade pupils.

Is This The NEW DAY FOR RURAL SCHOOLS?



SCHOOL DISTRICT #3

FIVE DISTRICTS REORGANIZE INTO THREE, MAINTAINING MODERN AND WELL-EQUIPPED SCHOOLS; PARENTS AND STUDENTS LIKE NEW PLAN

★ ★ ★ Stars designate the three schools that serve the five former districts in the newly reorganized district No. 3 of Moultrie county. The three former districts at the bottom are in East Nelson township, and the top two former districts are in Jonathan Creek township.

By CRESTON FOSTER

TEN-YEAR-OLD Peggy goes to the Bolin school, one of the three schools of the newly reorganized district No. 3 in Moultrie county and she "likes it fine." She rides to school in a limousine converted to a school bus and she doesn't have to trudge down snowy or muddy roads; she has a hot lunch in the schoolhouse at noon, and throughout the day she enjoys competing with children of her own age in the classroom and on the playground.

Peggy Freese is typical of the children who attend the three one-room schools of the district No. 3. This district serves the same area formerly served by five separate one-room school districts. The Bolin school houses 20 pupils of the middle grades — the third, fourth and fifth. Twenty pupils of the sixth, seventh and eighth grades attend the Purvis school, and 23 first and second-graders go to the Two Mile school.

Before district No. 3 was organized in the fall of 1942, some of the five one-room schools, each housing eight grades, had been experiencing rapidly decreasing enrollments. In the 1940-41 school year, the Julian district had an average daily attendance of 8.71, Miller, 7.20, and Purvis, 9.98. In 1939-40, the Miller school didn't operate and pupils were sent to other nearby schools. The other two of the five districts had good attendance in 1940-41 with Bolin having an average of 17.30, and Two Mile, 18.03.

That was the picture confronting the directors of the Purvis district as they met during the summer vacation period of 1941. They came to the conclusion that one approach to the problem would be to merge some of the districts. This idea was suggested to the directors of the Julian and Miller districts. They thought the plan had merit, but since the time was short, the five districts started the 1941-42 school year as separate units. In the fall of 1941, however, the boards of the five districts and the directors of a sixth district, Business Knoll, located in the north section of the area, got together to talk over the problem. It was decided to hold public meetings in each of the six districts to present the merger plan to the people. A favorable response was received in each of the districts and as a result petitions were circulated calling for an election on the proposition in the spring of 1942 ahead of the general school election. Election results showed the people to be in favor of reorganizing the six districts into one.

The way then seemed clear to reorganizing the schools of the new district,

Mrs. Blaine Erhardt, who drives one of the school buses, supervises the loading of her charges.

It's recess time at the Bolin school and children take to the playground swings. This picture wasn't posed; they always wait in line like this.

but the three districts in the northern area with a fairly good attendance were not entirely convinced of the merits of the merger. A demand grew in the Two Mile, Bolin, and Business Knoll districts to withdraw from the new district setup. Folks in each of these districts voted on the question of withdrawing, and as a result, one of the districts, Business Knoll, had sufficient votes to withdraw. That left five districts in the new district No. 3 as it is now being operated.

In the first year of operation of the new district, 1942-43, the first four grades were housed in the Two Mile school, and the upper four grades in the Bolin school, with one teacher for each. Routes were worked up to pick up the children and bring them home from school with one large sedan used as the school bus.

At the close of the 1942-43 school year, attendance in the two schools of district No. 3 was on the increase and the prospects for the 1943-44 school year indicated a fairly large number of beginners. With this outlook, the school directors decided to bring one more school into operation, and the sixth, seventh, and eighth grades were placed in the Purvis school at the start of the present school year. It also was necessary to increase the number of buses from one to two. Here's the current enrollment by grades of the Purvis school: 6th grade, 8; 7th grade, 5; and 8th grade, 7; in the Bolin school; 3rd grade, 6; 4th grade, 8; and 5th grade, 6; in the Two Mile school, 1st grade, 13, and second grade, 10.

What do the pupils and parents think of the new district? Mrs. Earl Freese who has a 10-year-old daughter in the Bolin school reports that she likes the idea of grouping the grades so that the pupils will be in a smaller age range than in the setup of eight grades all together. Last year her daughter attended the Two Mile school and she had to meet the bus earlier in the morning than she does this year.

Mrs. Victor Landers, who has a son in the Bolin school, also has a good word to say about the new district. "I didn't think it was such a good idea at first," Mrs. Landers says, "and I used to tell some of the directors what I thought. Now the only objection I have is that I miss the smaller group meetings we used to have in the school. I haven't been to the meetings this year." The Parent-Teachers' Association for the district alternates its meetings between the three schools, and sometimes the school buildings are rather small for the large attendance.

Fred Seelo, a parent who has one pupil at each of the three schools, says that his only objection to the setup is the transportation. Because of the bus route, his oldest boy is late getting home to do the chores, but Seelo says he is willing to go along with any plan that the majority wants and any proposition that is an improvement of the school system.

Directors of district No. 3 are frank to admit that the transportation plan is not ideal. They have worked it out as best they can. They also point out that the entire district No. 3 program is not a final one, but they believe they are travelling in the right direction. After the war, if the people of the district want it, they plan to build a moderate cost central school of four rooms. This would eliminate many of the difficulties encountered in transportation.

Joe Pound, farmer and rural mail carrier who has a boy in the Two Mile school, is very positive in his approval

(Continued on page 19)

Pupils of the third, fourth and fifth grades study in the pleasant surroundings of the Bolin school taught by Mrs. Margaret Gilmer of Coles county who attended a one-room school of eight grades when she was a farm girl.

First and second graders of the Two-Mile school enjoy a hot lunch of scrambled eggs, lettuce, oranges, green beans, and milk. Miss Helen Turner, teacher, delegates second grade pupils to help serve each day.

IAA School Committee Makes Progress Report

AFTER studying the problems of rural education since August of 1943, the Illinois Agricultural Association School Committee has put forth a summary of findings and suggestions in the form of a progress report.

THIS REPORT IS NOT INTENDED TO INDICATE THE FINAL RECOMMENDATIONS OF THE COMMITTEE. RATHER, IT IS INTENDED TO PRESENT SOME OF THE FACTS ABOUT THE SCHOOLS SERVING THE RURAL PEOPLE OF ILLINOIS, AND TO STIMULATE THE STUDY AND DISCUSSION OF EDUCATIONAL PROBLEMS IN THE VARIOUS COMMUNITIES.

It is hoped that the suggestions may serve as guideposts in the community discussions and thus aid local people in solving their local problems.

The studies and discussions in local communities are expected to aid the Committee in making its final report in November 1944. To this end suggestions and contributions are invited from all those who are interested in the education of rural children and in the maintenance of rural schools.

THE COMMITTEE WOULD ESPECIALLY LIKE TO HEAR FROM PARENTS WHOSE CHILDREN ARE ATTENDING OR WILL ATTEND SCHOOLS IN RURAL AREAS.

The Committee making this report is composed of two persons from each of the 15 Congressional districts of the state, plus the four members of the IAA public relations committee. To select this committee, each of the 15 members of the IAA board of directors, (each elected by the Farm Bureau members in his Congressional district) after conferring with the leaders in his district, selected and recommended two persons from his district who were well qualified to serve on a committee of this character.

The Committee progress report makes the following summary:

1. The rural people of Illinois want good schools — the best they can afford.

2. There are many good schools in Illinois, but many of the children attend schools which are definitely below the standards the Committee believes to be desirable.

3. The Committee urges the rural people of each county and community to study their school problems, try to agree on what kind of schools they want, and then get together with other interested groups to make their desires a reality.

4. No "ready-made" system of education will meet the needs of all localities; the school system of each community should be "tailor-made" to meet the needs and desires of the people which it serves.

5. All teachers serving rural elementary and high schools should be especially trained for the particular grades and subjects they are expected to teach. Teachers' compensation should be adequate to attract and retain teachers of the highest caliber.

6. The teachers and teaching in rural schools should be more carefully supervised. This should be done by persons especially trained and qualified for such work. These supervisors should be responsible to the local people.

7. Under most conditions a minimum of 15 pupils is needed for a good one-room school, and the responsibilities of teaching such a school should be entrusted only to the very best of teachers.

8. A much better elementary school may be had by having an attendance unit large enough to have three capable teachers, and 20 or more pupils under each teacher. In the interests of efficiency and economy, districts should be planned for the larger enrollments.

9. In the elementary school, the major emphasis should be placed on the fundamentals — numbers and language. Many of the examples and problems used should be drawn from agriculture.

10. In the high school, pupils should be given a wide choice of courses, including agriculture, home economics, business training, and manual arts, as well as the traditional college preparatory course.

11. Both elementary and high schools should carry on an active health program including physical education, the study of hygiene, annual physical examinations of pupils and teachers, immunization against contagious diseases, and the provision of hot lunches for all of the pupils.

12. Both elementary and high schools should offer pupils an opportunity to study music and to participate in group singing. High school pupils certainly, and elementary pupils desirably, should have an opportunity to participate in orchestra and band work.

13. An adequate high school staff will require at least seven or eight well trained teachers, including one person especially qualified for administration and supervision.

14. High schools with less than 150 pupils are very likely to provide inferior educational opportunities, or to be unduly expensive on a per pupil basis, or both. Therefore, it is recommended that, wherever practicable, smaller high schools be combined with other high schools.

15. Schools should be housed in attractive, healthful buildings, have well equipped libraries, and an abundance of other modern teaching equipment. The school should be located at the natural center of the community it serves, and the building and grounds should serve as the general community educational and recreational center, as well as for ordinary school purposes.

16. Satisfactory transportation of pupils is a prerequisite for an adequate community educational program. Such satisfactory transportation can be provided by adequate equipment, operated over good roads, by carefully selected and well trained personnel — all of which is expected to be available after the war.

17. People in many areas may find it advantageous to organize administrative and financial units (districts) which will be considerably larger than the attendance unit or district. Such an administrative district would operate several schools, one in each of the different communities or neighborhoods in the district.

18. Many communities may find it advantageous to have both elementary and high schools (12 grades) operated by a single board of education, either with one or with several attendance units.

19. A larger part of the total cost of public elementary and high school education should be raised on a statewide basis and distributed principally to the schools in the communities least *able* to provide adequate educational programs.

20. State aid should be distributed in such a manner as to encourage school reorganization for greater educational efficiency.

21. The basic control of the schools which serve rural people should remain in the hands of the people in the rural communities.

New Assistant Adviser

Ben F. Wallace, a graduate of the U. of I. College of Agriculture in the spring of 1943, has been hired as assistant farm advisor in Perry county. Wallace will work on full time in Perry county. He will work out of the Farm Bureau office in Pickneyville.

A native of Kansas, Wallace is a former 4-H and Rural Youth member. From the time of graduation at the university until taking his present job Wallace was employed by Production Credit Corporation.

Only two misses in 23 years of Cook County Farm Bureau board meetings. That's the record of D. A. Nietfeldt who served as president in 1925, vice-president in 1926, and again as president from 1927 to 1933 inclusive. During the last of 1943 Mr. Nietfeldt was injured while operating a side delivery rake and he was unable to attend the board meeting, thus accounting for one of his two unavoidable absences from the board sessions. The only other time he missed a meeting was when the notice went astray in the mail. He's now back attending meetings.

Illinois Grain Opens New Branch Office in Champaign

A new branch office of the Illinois Grain Corporation was opened in Champaign Jan. 24 with Rex LaFleur, manager of the IGC Bloomington branch in charge. The branch office with a teletype machine and two trunkline telephones is now located on the second floor of the Champaign County Farm Bureau in Champaign. It is expected, however, that the branch office will later occupy quarters in the Lincoln building in Champaign. This move is not expected to be made for a month or six weeks as the Lincoln building quarters are now occupied by another tenant.

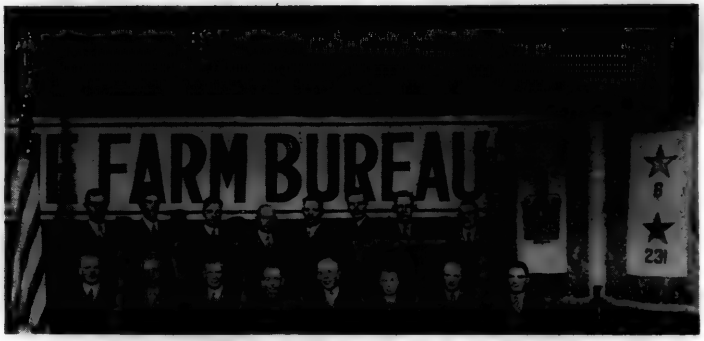
With LaFleur going to manage the new Champaign office, H. D. Lavery, whose home is in Jacksonville, has been hired as the Bloomington manager, according to Frank Haines, manager of the Illinois Grain Corporation. Lavery was born in Vandalia and was reared in a farming community. He has lived in Jacksonville since 1910 and until recently was employed with a flour concern. He is married and has two sons in the armed services and two daughters in high school.

The new Champaign office brings the IGC branch units to four. Other branch offices are located at Mendota, Bloomington, and Jacksonville. The new office will serve Champaign, Iroquois, Vermilion, Piatt, Douglas, Ford, Moultrie, Coles and Edgar counties. In addition to the branch offices, IGC has terminal offices in Chicago, St. Louis, and Peoria.

The Champaign office, as do the other branch offices, will serve as a contact unit of the Illinois Grain with its members and patrons in the area.

In addition to operations through its own terminal offices, the IGC works closely with the Indiana Grain cooperative through a reciprocal marketing agreement under which producers in Illinois are afforded an outlet through cooperative channels for grain moving to the Indianapolis gateway.

H. D. Lavery



Two service flags were dedicated by the Kankakee County Farm Bureau at its recent annual meeting, one for the children of members in the services, and one for the boys who are serving on the farm front. Farm Bureau board members and officials, front row, left to right, G. Tupper Swaim, farm adviser; Edward J. Fecke, W. C. Hatch, secretary-treasurer; Lester Day, president; Edward LeClaire, Donald Fortner, Charles I. Woore, and Hirio Hicks, general agent. Back row, G. W. Mussman, Henry Tammen, Harold Seedorf, John R. Schott, Henry Weber, Fred Imhauser, Edward W. Schwark, and W. W. Holmes, organization director. Absent are Directors Henry Beedy, Edgar Bonvallet, Percy Cook, and Knute Jensen.

Figured Your Income Tax Yet?

IT WILL soon be income tax time again! March 15 is just around the corner and farmers are already busy trying to figure out their income tax returns for 1943.

A complete final income report on 1943 income is required on or before March 15, 1944. This return will complete the income tax requirements for 1943. If this final report shows a tax obligation higher than the payments made during 1943, the difference must be paid when the return is filed. If the payments have been over the amount indicated in this final return, a credit on future or back taxes or refund will be granted.

Here are the two forms which farmers will use in filing their income tax returns:

FORM 1040F: This is the farm form that has been in use for several years. A farmer must use Form 1040F if he reports on the cash basis; it is also beneficial to those who report on an accrual basis. This form enables the farmer to classify his farm income and farm expenses and determine his net farm income. The net farm income is the base farm income for both the regular income tax and the Victory tax. Farmers are urged to fill out this form as completely as possible before seeking aid with their tax reports.

FORM 1040: Every farmer who files an income tax report on or before March 15, 1944, will use Form 1040. The net farm income on Form 1040F will be transferred to Form 1040. All other income and exemptions will be entered on Form 1040. The tax obligation is computed on Form 1040. Provision is made on Form 1040 for reporting both the regular income tax and the Victory tax.

A number of County Farm Bureaus are providing assistance to farmers in filing their income tax returns. A series of income tax schools was held during the last of January by the U. of I. department of agricultural economics for those who will assist farmers in preparing their returns.

Further income tax information may be secured from a new circular No. 569, "Figuring the 1943 Income Tax," which is available at the County Farm Bureau or the College of Agriculture, Urbana, for 5 cents. This booklet has been prepared by R. C. Ross, professor of farm management, U. of I. College of Agriculture.

Mason County Farm Bureau put out a special income tax edition of their "Farm Bureau News" in January in the form of a farm record book for filing 1943 income tax returns.

Farm Adviser E. H. Garlich of Brown County has received this suggestion for a national farmers' slogan in 1944 from Frederick A. Soderburg:

"I resolve to produce all the food that is humanly possible, hoping in doing so I will be able to help my government end the war in '44."

IAA School Committee Makes Progress Report

AFTER studying the problems of rural education since August of 1943, the Illinois Agricultural Association School Committee has put forth a summary of findings and suggestions in the form of a progress report.

THIS REPORT IS NOT INTENDED TO INDICATE THE FINAL RECOMMENDATIONS OF THE COMMITTEE. RATHER, IT IS INTENDED TO PRESENT SOME OF THE FACTS ABOUT THE SCHOOLS SERVING THE RURAL PEOPLE OF ILLINOIS, AND TO STIMULATE THE STUDY AND DISCUSSION OF EDUCATIONAL PROBLEMS IN THE VARIOUS COMMUNITIES.

It is hoped that the suggestions may serve as guideposts in the community discussions and thus aid local people in solving their local problems.

The studies and discussions in local communities are expected to aid the Committee in making its final report in November 1944. To this end suggestions and contributions are invited from all those who are interested in the education of rural children and in the maintenance of rural schools.

THE COMMITTEE WOULD ESPECIALLY LIKE TO HEAR FROM PARENTS WHOSE CHILDREN ARE ATTENDING OR WILL ATTEND SCHOOLS IN RURAL AREAS.

The Committee making this report is composed of two persons from each of the 15 Congressional districts of the state, plus the four members of the IAA public relations committee. To select this committee, each of the 15 members of the IAA board of directors, (each elected by the Farm Bureau members in his Congressional district) after conferring with the leaders in his district, selected and recommended two persons from his district who were well qualified to serve on a committee of this character.

The Committee progress report makes the following summary:

1. The rural people of Illinois want good schools — the best they can afford.

2. There are many good schools in Illinois, but many of the children attend schools which are definitely below the standards the Committee believes to be desirable.

3. The Committee urges the rural people of each county and community to study their school problems, try to agree on what kind of schools they want, and then get together with other interested groups to make their desires a reality.

4. No "ready-made" system of education will meet the needs of all localities; the school system of each community should be "tailor-made" to meet the needs and desires of the people which it serves.

5. All teachers serving rural elementary and high schools should be especially trained for the particular grades and subjects they are expected to teach. Teachers' compensation should be adequate to attract and retain teachers of the highest caliber.

6. The teachers and teaching in rural schools should be more carefully supervised. This should be done by persons especially trained and qualified for such work. These supervisors should be responsible to the local people.

7. Under most conditions a minimum of 15 pupils is needed for a good one-room school, and the responsibilities of teaching such a school should be entrusted only to the very best of teachers.

8. A much better elementary school may be had by having an attendance unit large enough to have three capable teachers, and 20 or more pupils under each teacher. In the interests of efficiency and economy, districts should be planned for the larger enrollments.

9. In the elementary school, the major emphasis should be placed on the fundamentals — numbers and language. Many of the examples and problems used should be drawn from agriculture.

10. In the high school, pupils should be given a wide choice of courses, including agriculture, home economics, business training, and manual arts, as well as the traditional college preparatory course.

11. Both elementary and high schools should carry on an active health program including physical education, the study of hygiene, annual physical examinations of pupils and teachers, immunization against contagious diseases, and the provision of hot lunches for all of the pupils.

12. Both elementary and high schools should offer pupils an opportunity to study music and to participate in group singing. High school pupils certainly, and elementary pupils desirably, should have an opportunity to participate in orchestra and band work.

13. An adequate high school staff will require at least seven or eight well trained teachers, including one person especially qualified for administration and supervision.

14. High schools with less than 150 pupils are very likely to provide inferior educational opportunities, or to be unduly expensive on a per pupil basis, or both. Therefore, it is recommended that, wherever practicable, smaller high schools be combined with other high schools.

15. Schools should be housed in attractive, healthful buildings, have well equipped libraries, and an abundance of other modern teaching equipment. The school should be located at the natural center of the community it serves, and the building and grounds should serve as the general community educational and recreational center, as well as for ordinary school purposes.

16. Satisfactory transportation of pupils is a prerequisite for an adequate community educational program. Such satisfactory transportation can be provided by adequate equipment, operated over good roads, by carefully selected and well trained personnel — all of which is expected to be available after the war.

17. People in many areas may find it advantageous to organize administrative and financial units (districts) which will be considerably larger than the attendance unit or district. Such an administrative district would operate several schools, one in each of the different communities or neighborhoods in the district.

18. Many communities may find it advantageous to have both elementary and high schools (12 grades) operated by a single board of education, either with one or with several attendance units.

19. A larger part of the total cost of public elementary and high school education should be raised on a statewide basis and distributed principally to the schools in the communities least *able* to provide adequate educational programs.

20. State aid should be distributed in such a manner as to encourage school reorganization for greater educational efficiency.

21. The basic control of the schools which serve rural people should remain in the hands of the people in the rural communities.

New Assistant Adviser

Bert F. Wallace, a graduate of the U. of I. College of Agriculture in the spring of 1943, has been hired as assistant farm advisor in Perry county. Wallace will work on full time in Perry county. He will work out of the Farm Bureau office in Pickneyville.

A native of Kansas, Wallace is a former 4-H and Rural Youth member. From the time of graduation at the university until taking his present job Wallace was employed by Production Credit Corporation.

Only two misses in 23 years of Cook County Farm Bureau board meetings. That's the record of D. A. Nietfeldt who served as president in 1925, vice-president in 1926, and again as president from 1927 to 1933 inclusive. During the last of 1943 Mr. Nietfeldt was injured while operating a side delivery rake and he was unable to attend the board meeting, thus accounting for one of his two unavoidable absences from the board sessions. The only other time he missed a meeting was when the notice went astray in the mail. He's now back attending meetings.

Illinois Grain Opens New Branch Office in Champaign

A new branch office of the Illinois Grain Corporation was opened in Champaign Jan. 24 with Rex LaFleur, manager of the IGC Bloomington branch in charge. The branch office with a teletype machine and two trunkline telephones is now located on the second floor of the Champaign County Farm Bureau in Champaign. It is expected, however, that the branch office will later occupy quarters in the Lincoln building in Champaign. This move is not expected to be made for a month or six weeks as the Lincoln building quarters are now occupied by another tenant.

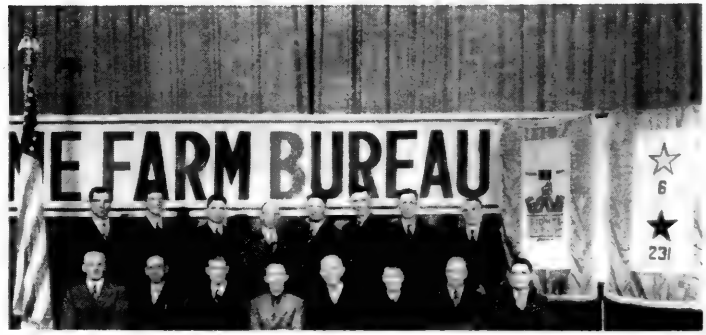
With LaFleur going to manage the new Champaign office, H. D. Lavery, whose home is in Jacksonville, has been hired as the Bloomington manager, according to Frank Haines, manager of the Illinois Grain Corporation. Lavery was born in Vandalia and was reared in a farming community. He has lived in Jacksonville since 1910 and until recently was employed with a flour concern. He is married and has two sons in the armed services and two daughters in high school.

The new Champaign office brings the IGC branch units to four. Other branch offices are located at Mendota, Bloomington, and Jacksonville. The new office will serve Champaign, Iroquois, Vermilion, Piatt, Douglas, Ford, Moultrie, Coles and Edgar counties. In addition to the branch offices, IGC has terminal offices in Chicago, St. Louis, and Peoria.

The Champaign office, as do the other branch offices, will serve as a contact unit of the Illinois Grain with its members and patrons in the area.

In addition to operations through its own terminal offices, the IGC works closely with the Indiana Grain cooperative through a reciprocal marketing agreement under which producers in Illinois are afforded an outlet through cooperative channels for grain moving to the Indianapolis gateway.

H. D. Lavery



Two service flags were dedicated by the Kankakee County Farm Bureau at its recent annual meeting, one for the children of members in the services, and one for the boys who are serving on the farm front. Farm Bureau board members and officials, front row, left to right, G. Tupper Swaim, farm adviser; Edward J. Fecke, W. C. Hatch, secretary-treasurer; Lester Day, president; Edward LeClaire, Donald Fortner, Charles I. Woore, and Hirlo Hicks, general agent. Back row, G. W. Mussman, Henry Tammen, Harold Seedorf, John R. Schott, Henry Weber, Fred Imhauser, Edward W. Schwark, and W. W. Holmes, organization director. Absent are Directors Henry Beedy, Edgar Bonvallet, Percy Cook, and Knute Jensen.

Figured Your Income Tax Yet?

IT WILL soon be income tax time again! March 15 is just around the corner and farmers are already busy trying to figure out their income tax returns for 1943.

A complete final income report on 1943 income is required on or before March 15, 1944. This return will complete the income tax requirements for 1943. If this final report shows a tax obligation higher than the payments made during 1943, the difference must be paid when the return is filed. If the payments have been over the amount indicated in this final return, a credit on future or back taxes or refund will be granted.

Here are the two forms which farmers will use in filing their income tax returns:

FORM 1040F: This is the farm form that has been in use for several years. A farmer must use Form 1040F if he reports on the cash basis; it is also beneficial to those who report on an accrual basis. This form enables the farmer to classify his farm income and farm expenses and determine his net farm income. The net farm income is the base farm income for both the regular income tax and the Victory tax. Farmers are urged to fill out this form as completely as possible before seeking aid with their tax reports.

FORM 1040: Every farmer who files an income tax report on or before March 15, 1944, will use Form 1040. The net farm income on Form 1040F will be transferred to Form 1040. All other income and exemptions will be entered on Form 1040. The tax obligation is computed on Form 1040. Provision is made on Form 1040 for reporting both the regular income tax and the Victory tax.

A number of County Farm Bureaus are providing assistance to farmers in filing their income tax returns. A series of income tax schools was held during the last of January by the U of I department of agricultural economics for those who will assist farmers in preparing their returns.

Further income tax information may be secured from a new circular No. 569, "Figuring the 1943 Income Tax," which is available at the County Farm Bureau or the College of Agriculture, Urbana, for 5 cents. This booklet has been prepared by R. C. Ross, professor of farm management, U. of I. College of Agriculture.

Mason County Farm Bureau put out a special income tax edition of their "Farm Bureau News" in January in the form of a farm record book for filing 1943 income tax returns.

Farm Adviser E. H. Garlich of Brown County has received this suggestion for a national farmers' slogan in 1944 from Frederick A. Soderburg.

"I resolve to produce all the food that is humanly possible, hoping in doing so I will be able to help my government end the war in '44."

M. R. Thomas, Chicago Producers salesman, and Lee E. Mosher, DeKalb organization director, and chairman of the DeKalb livestock marketing committee, look over some of Mosher's hogs at the Chicago yards.

HOG MARKETING JAM

HOG producers in the years to come will probably look back on the last months of 1943 and the first of 1944 as a strange and confusing period in their marketing experience.

They'll remember it as a time when record marketings glutted the terminal markets; when they had to hold their shipments back from the market while the hogs ate more corn, and added pounds that often carried them outside the government-supported weight ranges; when in spite of surplus pork supplies the OPA refused to declare a temporary removal of pork ration points. They'll remember it as a time when consumer income was at an all time high and the government rolled back the retail prices of pork and paid the packers a subsidy of $1.30 per hundred.

Hog producers probably will not forget either that packers were able to buy non-government weight hogs at bargain prices; that holdover hogs on the terminal markets were purchased at shrunk-out weights.

During this period the cooperative marketing agencies did the best job they could to protect the farmer's interest. Units of the Illinois Livestock Marketing Association adhered to the support price on their offerings to the producer, but they had limited orders to fill. They had to ask their patrons to list their hogs weeks ahead for marketing. Some Illinois Livestock Marketing Association units had as many as 2000 head of hogs listed ahead. The Bushnell unit ceased hog buying entirely announcing that they would be ready to serve their patrons when the market returned to normal.

Producer agencies limited consignments as far as possible by advising their patrons to hold hogs off the market while the glut in marketing existed. Their percentage of holdovers was relatively small in comparison with other agencies.

During the last days of January several steps were taken to ease the hog market situation. The WFA temporarily extended the government's price support program to include choice butcher hogs weighing up to 330 pounds. This was the second extension during the month as the price floor of $13.75 at Chicago originally was for 200 to 270 pound hogs, and the first extension boosted it to 300 pounds.

A permit system also was inaugurated on the Chicago terminal market on Jan. 24 and receipts on that day were 40,000 as compared with 54,000 on Jan. 17. Under the permit plan about 100,000 salable hogs were to be permitted to come into the Chicago market each week.

It was hoped that this system would reduce the holdovers on the Chicago market that had been running as high as 25,000 on some days. On Jan. 17, it was estimated that 300,000 hogs were held over in all the markets. On Jan. 18, it was estimated that on the Chicago market 25,000 government weight hogs, 200 to 300 pounds, were held over. Hogs below 200 pounds and over 300 moved well at prices between $11.75 and $13.

As producers looked into the month of February they were in hopes that the worst of the marketing jam was over, but they couldn't be sure.

Out of the marketing chaos of the past several months some predicted there would come a considerable reduction in the 1944 spring pig crop. R. C. Ashby, department of agricultural economics, U. of I. College of Agriculture, said a 22 per cent cut in the spring pig crop was expected by buyers at local packing plants and concentration yards throughout the state, according to an average of estimates he secured from these sources.

"This reduction," Ashby said, "is 2½ times as high as the 9 per cent cut requested for Illinois by the WFA and is above the expected U.S. reduction of 16 per cent as reported by the December pig survey.

"It is believed that producers who have ample feed should not cut hog production unduly. By closely watching market developments of the next six weeks, producers may see encouragement to increase the production of summer pigs. Since production needs have been carefully considered, producers will do well to keep in mind the goals set for their own counties," he stated.

IAA Insurance Service Agency Roundup Set for Feb. 22-23

Members of the Agency Force of the Illinois Agricultural Association's Insurance Service will gather in the Hotel Sherman, Chicago, Feb. 22 and 23 for a streamlined annual "Round-Up."

Speakers have been selected from the Agency Force, the IAA staff, and its affiliated companies, and from among the outstanding men in the insurance field.

Those on Tuesday morning's program are: A. E. Richardson, manager of IA Mutual Insurance; L. V. Drake, claims superintendent, IA Mutual Insurance; Walter Acker, director of Kansas Farm Bureau Mutual Insurance Co.; and Wilbur Gibbs, general agent, Sangamon county. Tuesday afternoon speakers: Vern Holland, manager, Farmers Mutual Reinsurance Co.; R. C. Graham, general agent, Vermilion county; J. H. Kelker, manager, Farmers Mutual Reinsurance; John D. Bryant, general agent, DeKalb county, and A. R. Jaqua, editor, Agents' Diamond Life Bulletin.

Tuesday night, Donald Kirkpatrick, IAA legal counsel, and Harvey McNaughton, general agent, Adams county, will be the speakers.

Wednesday morning's program will include talks by D. C. Mieher, sales director, IAA Insurance Service; Bruce

(Continued on page 23)

MORE FARM EQUIPMENT

BUT NOT ENOUGH FOR DEMAND

(above)

Machinery shortages boom farm sales as evidenced here where bidders crowd around a 1927 model tractor that sold for $475 at a McLean county sale.

(Pantagraph Photo)

WHAT'S the farm machinery picture for 1944? That's one of the biggest questions on the farm front today.

Here's the overall picture as received from W. F. Heesch, deputy director, farm machinery and equipment division, War Production Board, Washington, D. C., who visited the IAA offices in mid-January.

As a whole there will be more new machinery available in 1944 than in 1943. But there still will be a minimum number of implements available to do the job of maximum production, and the new equipment will go only to those who have the most urgent need for its use in food production.

Because of the realization that every piece of used equipment will have to be utilized to the fullest extent in 1944, the farm implement industry is marshalling its resources on the production of repair parts. WPB is placing special stress on this part of the machinery program and farmers are advised that they should be persistent in seeing to it that dealers follow through on getting the repair parts from the manufacturer. In filling orders for repair parts on implements that have been out of production for some time, it may mean that manufacturers will have to dig out old patterns to make the parts, but the industry is ready to do this, according to the WPB.

Manufacturers are allotted twice as much raw materials in 1944 for making new machinery and repair parts as in 1943, and what's more important they are actually getting the materials. The only bottleneck this year will come from labor shortages and the difficulty of getting certain parts to complete a farm implement such as bearings, bushings, magnetos, forgings, or any other items in which there is also a heavy military demand. These are the very components required by Army tanks, the Navy's landing craft, airplanes, trucks and other war equipment.

David Meeker, chief farm machinery and supplies division, WFA, says "As an example, engine blocks and heads have been a critical problem in making tractors. This is because some of the foundries are supplying castings for fighting machines. These same plants were supplying engine block and head castings for tractor engines. This resulted in a collision between orders for tractor components and landing craft components. However, tractor companies who make their own castings or get them from companies not working on military orders are not being interfered with. Those who are involved can only overcome that difficulty by reopening unused facilities, or shifting their orders to a plant that can deliver."

A tractor corn planter brings $587 at a McLean county farm sale.

(Pantagraph Photo)

However, Meeker reports that the farm machinery program, as a whole, is in good shape. The production of new farm machinery has been speeding up in the last two months, and except for a few items, is not in serious direct competition with the manufacture of mechanical war equipment.

Anyone who doubts the scarcity of farm equipment in Illinois only has to attend a farm sale. At one sale in December a four row corn planter sold for $840. At another a 17-year-old four section peg tooth harrow bought for $45 and used for 17 years was sold for $99.50. A manure spreader bought for $160 a year ago sold for $240.

At that kind of prices, it's a safe bet that the machinery situation is tight in the corn belt. A farmer who wants to be sure of maintaining full operation during the heavy seasons will have to get his equipment in shape during the winter months. There can be no letup in the "Care, Repair and Share" campaign.

Farmers Petition to Retain Carrollton Branch Line

Some 150 Calhoun and Greene county farmers attended the hearing Jan. 10 and 11 in the Carrollton courthouse held by the Interstate Commerce Commission on the petition of the Alton railroad to abandon the Carrollton-East Hardin branch line of 19.4 miles. The line is the only adequate rail outlet for the produce of 200,000 tillable acres situated between the Mississippi and Illinois rivers.

Representing the farmers' interests at the hearing was Guy W. Baxter, director of transportation for the Illinois Agricultural Association, who called 13 witnesses to furnish evidence in support of continuing the line in service. A decision on the hearing is expected in the near future.

Disastrous spring floods covered the branch line until about Sept. 1, and on Sept. 24, 1943 action to secure resumption of service was started by the farmers of the two counties when Baxter filed a complaint with the Illinois Commerce Commission on behalf of the Calhoun and Greene County Farm Bureaus. The complaint charged that the Alton railroad had abandoned service without authorization of the Illinois Commerce Commission or the Interstate Commerce Commission.

On Oct. 20, Alton railroad attorneys notified Baxter that work had been started on rebuilding the line, and shortly afterward it was returned to service. However, the Alton railroad filed a petition with the Interstate Commerce Commission asking permission to abandon service, and the hearing in January was on this petition.

M. R. Thomas, Chicago Producers salesman, and Lee E. Mosher, DeKalb organization director, and chairman of the DeKalb livestock marketing committee, look over some of Mosher's hogs at the Chicago yards.

HOG MARKETING JAM

HOG producers in the years to come will probably look back on the last months of 1943 and the first of 1944 as a strange and confusing period in their marketing experience.

They'll remember it as a time when record marketings glutted the terminal markets; when they had to hold their shipments back from the market while the hogs ate more corn, and added pounds that often carried them outside the government-supported weight ranges; when in spite of surplus pork supplies the OPA refused to declare a temporary removal of pork ration points. They'll remember it as a time when consumer income was at an all time high and the government rolled back the retail prices of pork and paid the packers a subsidy of $1.30 per hundred.

Hog producers probably will not forget either that packers were able to buy non-government weight hogs at bargain prices; that holdover hogs on the terminal markets were purchased at shrunk-out weights.

During this period the cooperative marketing agencies did the best job they could to protect the farmer's interest. Units of the Illinois Livestock Marketing Association adhered to the support price on their offerings to the producer, but they had limited orders to fill. They had to ask their patrons to list their hogs weeks ahead for marketing. Some Illinois Livestock Marketing Association units had as many as 2000 head of hogs listed ahead. The Bushnell unit ceased hog buying entirely announcing that they would be ready to serve their patrons when the market returned to normal.

Producer agencies limited consignments as far as possible by advising their patrons to hold hogs off the market while the glut in marketing existed. Their percentage of holdovers was relatively small in comparison with other agencies.

During the last days of January several steps were taken to ease the hog market situation. The WFA temporarily extended the government's price support program to include choice butcher hogs weighing up to 330 pounds. This was the second extension during the month as the price floor of $13.75 at Chicago originally was for 200 to 270 pound hogs, and the first extension boosted it to 300 pounds.

A permit system also was inaugurated on the Chicago terminal market on Jan. 24 and receipts on that day were 40,000 as compared with 54,000 on Jan. 17. Under the permit plan about 100,000 salable hogs were to be permitted to come into the Chicago market each week.

It was hoped that this system would reduce the holdovers on the Chicago market that had been running as high as 25,000 on some days. On Jan. 17, it was estimated that 300,000 hogs were held over in all the markets. On Jan. 18, it was estimated that on the Chicago market 25,000 government weight hogs, 200 to 300 pounds, were held over. Hogs below 200 pounds and over 300 moved well at prices between $11.75 and $13.

As producers looked into the month of February they were in hopes that the worst of the marketing jam was over, but they couldn't be sure.

Out of the marketing chaos of the past several months some predicted there would come a considerable reduction in the 1944 spring pig crop. R. C. Ashby, department of agricultural economics, U. of I. College of Agriculture, said a 22 per cent cut in the spring pig crop was expected by buyers at local packing plants and concentration yards throughout the state, according to an average of estimates he secured from these sources.

"This reduction," Ashby said, "is 2½ times as high as the 9 per cent cut requested for Illinois by the WFA and is above the expected U.S. reduction of 16 per cent as reported by the December pig survey.

"It is believed that producers who have ample feed should not cut hog production unduly. By closely watching market developments of the next six weeks, producers may see encouragement to increase the production of summer pigs. Since production needs have been carefully considered, producers will do well to keep in mind the goals set for their own counties," he stated.

MORE FARM EQUIPMENT

BUT NOT ENOUGH FOR DEMAND

(above)

Machinery shortages boom farm sales as evidenced here where bidders crowd around a 1927 model tractor that sold for $475 at a McLean county sale.

(Pantagraph Photo)

WHAT'S the farm machinery picture for 1944? That's one of the biggest questions on the farm front today.

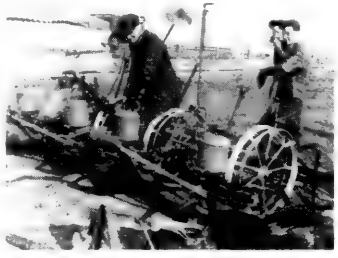
Here's the overall picture as received from W. F. Heesch, deputy director, farm machinery and equipment division, War Production Board, Washington, D. C., who visited the IAA offices in mid-January.

As a whole there will be more new machinery available in 1944 than in 1943. But there still will be a minimum number of implements available to do the job of maximum production, and the new equipment will go only to those who have the most urgent need for its use in food production.

Because of the realization that every piece of used equipment will have to be utilized to the fullest extent in 1944, the farm implement industry is marshalling its resources on the production of repair parts. WPB is placing special stress on this part of the machinery program and farmers are advised that they should be persistent in seeing to it that dealers follow through on getting the repair parts from the manufacturer. In filling orders for repair parts on implements that have been out of production for some time, it may mean that manufacturers will have to dig out old patterns to make the parts, but the industry is ready to do this, according to the WPB.

Manufacturers are allotted twice as much raw materials in 1944 for making new machinery and repair parts as in 1943, and what's more important they are actually getting the materials. The only bottleneck this year will come from labor shortages and the difficulty of getting certain parts to complete a farm implement such as bearings, bushings, magnetos, forgings, or any other items in which there is also a heavy military demand. These are the very components required by Army tanks, the Navy's landing craft, airplanes, trucks and other war equipment.

David Meeker, chief farm machinery and supplies division, WFA, says "As an example, engine blocks and heads have been a critical problem in making tractors. This is because some of the foundries are supplying castings for fighting machines. These same plants were supplying engine block and head castings for tractor engines. This resulted in a collision between orders for tractor components and landing craft components. However, tractor companies who make their own castings or get them from companies not working on military orders are not being interfered with. Those who are involved can only overcome that difficulty by reopening unused facilities, or shifting their orders to a plant that can deliver."



A tractor corn planter brings $587 at a McLean county farm sale.

(Pantagraph Photo)

However, Meeker reports that the farm machinery program, as a whole, is in good shape. The production of new farm machinery has been speeding up in the last two months, and except for a few items, is not in serious direct competition with the manufacture of mechanical war equipment.

Anyone who doubts the scarcity of farm equipment in Illinois only has to attend a farm sale. At one sale in December a four row corn planter sold for $840. At another a 17-year-old four section peg tooth harrow bought for $45 and used for 17 years was sold for $99.50. A manure spreader bought for $160 a year ago sold for $240.

At that kind of prices, it's a safe bet that the machinery situation is tight in the corn belt. A farmer who wants to be sure of maintaining full operation during the heavy seasons will have to get his equipment in shape during the winter months. There can be no letup in the "Care, Repair and Share" campaign.

Farmers Petition to Retain Carrollton Branch Line

Some 150 Calhoun and Greene county farmers attended the hearing Jan 10 and 11 in the Carrollton courthouse held by the Interstate Commerce Commission on the petition of the Alton railroad to abandon the Carrollton-East Hardin branch line of 19.1 miles. The line is the only adequate rail outlet for the produce of 200,000 tillable acres situated between the Mississippi and Illinois rivers.

Representing the farmers' interests at the hearing was Guy W. Baxter, director of transportation for the Illinois Agricultural Association, who called 15 witnesses to furnish evidence in support of continuing the line in service. A decision on the hearing is expected in the near future.

Disastrous spring floods covered the branch line until about Sept. 1, and on Sept. 24, 1943 action to secure resumption of service was started by the farmers of the two counties when Baxter filed a complaint with the Illinois Commerce Commission on behalf of the Calhoun and Greene County Farm Bureaus. The complaint charged that the Alton railroad had abandoned service without authorization of the Illinois Commerce Commission or the Interstate Commerce Commission.

On Oct. 20, Alton railroad attorneys notified Baxter that work had been started on rebuilding the line, and shortly afterward it was returned to service. However, the Alton railroad filed a petition with the Interstate Commerce Commission asking permission to abandon service, and the hearing in January was on this petition.

The FARM FRONT ROUNDUP

MEAL SET ASIDE — Processors have been ordered to set aside 20 per cent of their February production of oilseed meal for direct distribution to areas designated by the WFA. Mixed feed manufacturers can use no more protein meal for mixed feed than the average used during the calendar years 1942 and 1943. Distribution of meal in critical areas is in the hands of state and county AAA committees. County committees will take requests for meal, but will not be able to take any action at the time. It is not expected that the Illinois allocation will be large enough to permit individual feeders or small feed mixers to obtain carload lots. Most county allocations will be divided among feeders.

RATIONING CONTROL — Farm rationing and distribution functions have been placed under the jurisdiction of the state AAA committee at state levels and county AAA committee at county levels. Jurisdiction was formerly under the state and county USDA war boards. While the county AAA committee assumes the general supervision over the rationing of farm equipment, the actual rationing will be done by county farm rationing committees as in the past.

FARM WAGES — Marvin Jones, WFA administrator, Jan. 22, announced plans for extending government control over farm wage rates. State agricultural wage boards will be appointed, he said, where necessary to hold public hearings and assist in establishing specific wage ceilings. The boards will function for agricultural workers in a manner similar to the War Labor Board control over industrial wages. Economic Stabilization Director Fred M. Vinson has frozen wages and salaries of agricultural labor which are $2400 per year or more, and ruled that they cannot be increased over this figure without prior approval of Jones, or the commissioner of Internal Revenue where such salaries are above $5000 per year. Wages and salaries which are below $2400 per year may be increased without prior approval, unless the WFA administrator has established specific ceilings for such labor. However, no reduction can be made in the wages or salaries for any particular work below the highest wages or salaries paid for that work between Jan. 1, 1942, and Sept. 15, 1942.

CUSTOM WORK CEILING — Peoria district office of the OPA has issued a reminder that operators doing custom work may not charge more than the prices charged in March, 1942. Regulations required all persons performing custom services to file their prices with local OPA boards in March, 1942, and those prices are still ceiling prices for that type of service. Regulations which fix prices at March, 1942, levels include shelling, grinding or mixing, cleaning, cracking, crushing, drying, elevating, hulling when done on a custom basis.

DAIRY PAYMENTS — WFA continued its dairy payment program through January. John F. Bickett, member of the Illinois AAA committee, reports that figures on October dairy feed payments indicated that 72,277 farmers have made application for this payment in Illinois. These applications totalled $773,682.83 or an average of $10.70 per payment. To save gas and tires, Bickett said, most counties will mail applications to farmers, and most evidence for payment will be submitted to county AAA offices by mail. January rate for Illinois is 35 cents per hundredweight for milk delivered and 5 cents per pound for butterfat delivered.

CONTAINER SHORTAGE — WFA has repeated its warning to growers and shippers of fruits and vegetables that new wooden containers will be scarce in 1944. If fruit and vegetable yields are normal, wooden container materials will be short of demand by 10 to 20 per cent, WFA reports.

PARITY FOR WHEAT — Ceiling prices for sales of all classes of wheat by producers and all other distributors have been established by OPA at levels that reflect at least 100 per cent of parity, without taking into consideration AAA payments.

CHEESE SET ASIDE — Manufacturers of cheddar cheese will be required to set aside 30 per cent of their output for government purchases in February, a 5 per cent increase over November and December. January set aside was 30 per cent.

NO MARKETING QUOTA — In view of the great amount of corn needed to sustain the high rate of livestock production called for in 1944 production goals, there will be no marketing quotas on the 1944 corn crop, says the WFA.

FEED GRINDERS — WFA has announced removal of rationing restrictions on feed grinders and crushers, and pressure cookers for food preservation uses. Hammer and burr mills are also released from rationing controls.

MEAL DISTRIBUTION — Illinois Feed Advisory Committee, cooperating with the Illinois AAA committee, has worked out a schedule of distribution of oilseed meals for the deficit areas of the state from the January allocation of meal set aside under Food Production Order No. 9. Some 3356 tons of oilseed meal were allotted to Illinois and have been distributed to feed mixers and to farmers throughout the state.

Representing farmers on the feed Advisory Committee are Lee M. Gentry, state AAA chairman, and chairman of the feed committee; J. S. Bumgarner, McNabb; Joe Boyd, Taylorville, and B. J. Schumacker, Altamont.

J. J. Lanter of the Illinois Farm Supply Company is also a member of the committee.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES

The accomplishments of 1943 are now history. The Farm Bureau was materially strengthened and its responsibilities and opportunity for service to agriculture increased accordingly. We are proud of having attained the 100,000 goal.

We now have the responsibility of maintaining an organization of members exceeding that number. This means careful planning and hard work.

Right now County Farm Bureaus are holding "MM" meetings. These membership maintenance sessions have already been held in 12 counties. If your county has not been scheduled for one of these double-barrelled sessions, get in touch with your district organization director immediately. It will not be possible to serve every county and it will be more or less "first come, first served."

"MM" meetings consist of two sessions: 1. An afternoon conference with your board or organization committee, officers, and key men: farm adviser, Service Company manager, general agent, and COD. At this meeting the topic of discussion is, "What program can this county adopt that will help to maintain 100,000 Farm Bureau members?"

2. An evening session for heads of departments and all employees of Farm Bureaus and subsidiaries. At this meeting W. P. "Bill" Sandford, director of sales service for the IAA, talks to employees on their responsibility and opportunity in maintaining membership.

Here's a 1944 resolution adopted by the Greene County Farm Bureau that sets the pace for the year ahead: "Resolved that the 883 reached Jan. 1 in Greene county shall be THE MEMBERSHIP FLOOR now henceforth and forever. Help us reach the 1000 goal in 1944." Incidentally, Greene county Farm Bureau had 840 at its annual meeting. The membership of 883 on Jan. 1 compares with 480 on Jan. 1, 1940 for the county.

From Grundy County Farm Bureau comes word that the board of directors have set a goal of 1000 members for the county by Jan. 1, 1945. In their campaign plans they intend to start the program off following the annual meeting with a five-day drive from Jan. 31 through Feb. 4. At the IAA annual meeting Grundy county went over its quota in the 100,000 campaign to reach a membership of 828. Directors, members and employees all did their part. The high man in the campaign was Director Adolph J. Burk, who single handed signed eight new members.

Writes Harold Neal, Peoria COD, "Peoria county has 800 members who have paid their 1944 dues on or before Jan. 1. This is 55 per cent of the membership. In 1942, which was the year this practice was started in the county, approximately 400 members paid before Jan. 1. In 1943, approximately paid before the first of the year. We believe that this increase will continue and that 1945 will be even larger than the 800 for 1944."

Madison County Farm Bureau Jan. 26 entertained new members and their wives at a dinner with 300 in attendance. Volunteer drive Jan. 19 brought a 105 new members into Farm Bureau. This gives Madison County Farm Bureau a total of 1280 members. The goal now is 1500.

Special Safety Awards To Be Given Counties

One of the highlights of the 43rd annual Farm and Home Week, Feb. 8-10 at the U. of I., will be the presentation of two special safe home awards at the Wednesday afternoon session, Feb. 9, in Lincoln Hall Theatre.

Prepared by the National Safety Council, one award will go to the county having the largest number of enrolled families reporting no home accidents, and the other to the county having the lowest per cent of accidents among the families enrolled.

During the past year more than 5000 families from 60 counties in the state have been participating in the program, according to Miss Gladys J. Ward, home management specialist.

Enrollment for 1944 is now under way and will continue through February. Any family in Illinois is eligible to participate, and information about the plan of the program may be secured from county home advisers, and from farm advisers in counties having no Home Bureau organization.

Fruit Exchange Supply Has Record Year In '43

Fruit Exchange Supply Company has just finished a record year's business, according to L. L. Colvis, manager, and director of fruit and vegetable marketing for the Illinois Agricultural Association. Total sales almost doubled those for 1942 and more than doubled those for 1941. Since the general price level for insecticides and other materials has not changed much during the past two years, most of this increase was due to additional business.

The savings on the 1943 business will amount to thousands of dollars. This money is already "earmarked" to be turned back to growers entitled to it on a patronage dividend basis. Since the last annual meeting of the cooperative, every Farm Bureau member who makes any purchase from the Supply Company is a member of it, entitled to all the rights and privileges of a member—including that of sharing in patronage dividends.

Prices of Farm Products

PRODUCT	Average U.S. farm price Dec. 15, 1943	Parity price Dec. 15, 1943	Highest price Jan. 1 to Sept. 15, 1942
Wheat (bu.)	$ 1.43	$ 1.49	$ 1.06
Corn (bu.)	1.11	1.08	.83
Oats (bu.)	.76	.67	.52
Soybeans (bu.)	1.81	1.61	1.79
Eggs (doz.)	.45	.44	.35
Chickens (lb.)	.24	.19	.20
Butterfat (lb.)	.51	.48	.43
Milk (100 lb.)	3.40	2.94	2.64
Wool, av. all grades (lb.)	.41	.31	.40
Lambs (cwt.)	12.10	9.88	12.07
Hogs (cwt.)	12.80	12.20	14.13
Veal calves (cwt.)	12.70	11.30	13.00
Beef cattle, av. all grades (cwt.)	11.40	9.11	11.30
(Below are Chicago market prices)			
Choice and prime steers (cwt.)	$16.26	$16.94	$15.82
Good steers (cwt.)	14.98	14.58	14.92
Medium steers (cwt.)	12.81	12.30	13.42
Common steers (cwt.)	10.73	10.11	11.45
Heifers, good and choice (cwt.)	14.94	13.39	14.16

Notes concerning price ceilings: The Emergency Price Control Act as amended October 2, 1942, provides that "no maximum price shall be established or maintained for any agricultural commodity . . . below a price which will reflect to producers . . . the higher of the following prices — (1) the parity price . . . or (2) the highest price received . . . between January 1, 1942 and September 15, 1942." Under this law no legal price ceiling can be established which will prevent farmers as a whole from receiving an average return as high as the higher of the prices in the two columns at the right above. Price ceilings have been established for many farm products. Your County and Local Price and Rationing Board should be able to furnish accurate information regarding local price ceilings on these products.

FARM BURE

The Farm Bureau members of Illinois have established their own modern, comprehensive insurance service to protect their homes, their families, and their property. To provide their life insurance service they have built Country Life Insurance Company. They have established the Illinois Agricultural Mutual Insurance Company to supply casualty protection. The Farmers Mutual Reinsurance Company supplies property insurance protection.

To make this service available to each Farm Bureau member, there is a county general agent of insurance in each Farm Bureau office. Under his supervision are local special agents in the various communities. These agents understand the problems confronting farmers and are prepared at all times to assist in solving individual insurance problems.

These are Farm Bureau folk. These are your companies, owned, controlled, and operated by the Farm Bureau members of Illinois, with one purpose in mind — to give you the best insurance possible, at the lowest net cost.

BUREAU INSURANCE SERVICE

A MILLION BUSHELS OF GRAIN

MARKETED IN 1943 BY LEE COUNTY CO-OPERATIVE ASSOCIATION

By CRESTON FOSTER

IN THE fall of 1932 a group of Farm Bureau members launched the Lee County Grain Association to provide a cooperative outlet for grain products in the northeastern section of the county. The co-operative started in practically a minus financial position. Today its farmer-members have a co-operative with total net assets of $120,000, including a surplus of $96,000. In 1943 it did over a million dollars in business, paid a patronage dividend of $27,440, and added $22,000 to surplus. Is it any wonder that folks say, "it pays to cooperate?"

Lee County Grain boosted its marketings from 395,000 bushels in 1933 to more than one million bushels in 1943. Merchandise sales alone amounted to $185,868 in 1943. It would only take about one and one-half days of the 1943 merchandise business to equal the total merchandise business in 1933.

Another way of looking at the co-operative's 1943 business statement is to report that it established an average daily volume of 3600 bushels of grain and $620 in merchandise sales in the 12-month fiscal period. Regardless of how the accomplishments of the Lee County Grain Association are estimated, they all point to one conclusion: there are no limits to what co-operative-minded farmers with an able board of directors and good management can do in the field of marketing.

Glenn Gonnerman, patron, and Joy Sandrock, secretary-treasurer, examine a grain sample with Manager Nathan Sword of the Ashton elevator.

Like many other successful co-operatives, Lee County Grain had one important asset when it opened for business and that was a group of farmers who believed in co-operation. In the northeastern part of the county there were five idle elevators with a short line railroad running through the heart of the territory, the Lee County Central Electric which connected with the C. B. & Q. at Amboy. This line hadn't been used for a number of years. Other co-operatives in the county had been successfully launched, so a group of farmers and Farm Adviser C. E. Yale decided to see what could be done about aiding producers in marketing their grain. The co-operative was organized with the Lee County Farm Bureau holding "B" stock. Lee County Grain was to originate the grain under contract with the Lee County Elevator Company, a privately owned company which was to serve as the operating unit leasing the elevators and railroad. Lee County Grain, as a member of the Illinois Grain Corporation, would receive patronage dividends on its grain marketings. Under this setup, Lee County Grain was able to organize practically without an investment.

Organization was completed Oct. 14, 1932, and Glen Hart, who served as president until three years ago, recalls that on the day operations were begun farmers were offered a full cent more per bushel for their grain by other private elevators in the adjacent territory than they had previously been offering. The co-operative had already exerted an influence on the market. In those days, Hart remembers, corn was selling as low as 12 cents a bushel. There were some pretty hard times and in 1935 Lee County Elevator Company was unable to secure capital to complete operations and Lee County Grain took over all debts and leases on the elevators from the private operator. Some $1600 of preferred stock was sold by Lee County Grain and a loyal group of farmer-members who had faith in their co-operative pledged their efforts toward maintaining a grain marketing service in their community.

From 1935 to 1938, members didn't get any patronage dividends from their co-operative because it was concentrating on building its financial structure soundly. But from the beginning, member patrons increased in number because of the service offered and because they were made to feel they were a part of the organization. Annual meetings were well attended as invitations were extended not only to the Mr. and Mrs. of the family, but to the children. Each family brought a bas-

ket lunch and the annual meeting was a social event of the year. Some of the older boys who attended the first annual meetings with their parents are today the best customers of the Lee County Grain.

In 1938 the first patronage dividend was paid. It covered the period from Oct. 1, 1935 to Sept. 30, and amounted to $12,163. It was paid on the basis of 1 per cent on grain and 4 per cent on merchandise. Patronage dividends have been paid every year since 1938. Patronage dividends paid in 1943 were based on 1½ per cent on grain and 8 per cent on merchandise sales. Patronage dividends are paid to all customers. Method of payment is as follows: Those who hold a share of class A preferred stock receive their patronage dividend in cash. Those who do not hold stock shares have their patronage credited to subscription of a share of stock with a par value of $25 per share. Today patrons hold 780 shares of class A preferred stock with a total par value of $19,500, and other patrons have credit on partially paid-up shares of $4,516.48.

What did Lee County Grain have after it took over the operating end of the business in 1935? The leased elevators taken over included the Lee Center, Ashton, Aschenbrenner, a storage elevator, Kersten, and the Middlebury elevator. With the exception of the Ashton elevator on the Northwestern railroad, the remaining operating elevators depended on the Lee County Electric for rail outlet.

Robert Hoyle, general manager of Lee County Grain, shows Farm Adviser C. E. Yale the cooperative's progress for the year.

Today, Lee County Grain leases the Lee Center elevator where the co-operative has its central offices. The elevator has a capacity of 23,000 bushels. It also leases the Aschenbrenner elevator for storage, and last year 12,000 bushels of soybeans were stored there. It owns the Ashton elevator of 16,000 bushels capacity, the Steward with 35,000 bushel capacity on the Milwaukee, and the Shaw with 8,000 bushels capacity on the C. B. & Q. The Lee Center elevator is the only operating elevator that is on the Lee County Electric.

The Shaw elevator represents the co-operative's first purchase as it was acquired in 1937. In 1940, the Steward Co-op Elevator was in financial straits and the Lee County Grain operated it

How Soybean Growers Can

SAVE 30%
ON INOCULANTS

PLACE YOUR ORDER IN FEBRUARY

If you place your order in February, a 25-bushel size of Soybean Inoculant which usually sells for $2.50 can be had for $1.75. This is a saving of 75 cents on a $2.50 purchase — or 30%. Proportionate savings can be made on 5-bushel sizes also. This material will be delivered **fresh** and will be made available to you when you are ready to plant.

BLUE SEAL "GROW CROP" INOCULANTS ARE UNSURPASSED IN QUALITY

The purpose of inoculation is to cover the seed with those tiny microscopic "nitrogen-gathering" bacteria which ultimately fix themselves to the roots in the form of "nodules." Because of these nodules the plant transforms nitrogen from the air into valuable proteins which are stored in the plant.

Blue Seal "Grow Crop" inoculants have been tested in nationally known and reliable laboratories. These tests have demonstrated that Blue Seal contains adequate numbers of these nitrogen-gathering bacteria of the proper strains to give the desired results. Each 25-bushel package of Soybean Inoculant is packed with a minimum of 187 billion bacteria of pre-determined strains.

A humus base is used to carry these bacteria — a base that has been carefully selected and properly processed to assure adequate moisture and aeration. In this base the bacteria will live and grow from the time they are packaged until they are applied to the seed up to the time of the expiration date on the package.

No better proof of Blue Seal "Grow Crop" Inoculant's results can be found than the satisfaction of the thousands of users all over Illinois who had excellent results last year. In 1943, our second year, Blue Seal "Grow Crop" Inoculants were used on soybeans sufficient to plant 364,000 acres.

Here is Why You Save Money

This 30% saving is made possible through large volume cooperative buying and by the elimination of the wasteful practice of holding unsalable, shelf-worn packages, or the return of unsold merchandise to the manufacturer.

For example, in past years retailers of inoculants failed to sell and returned as out-dated and therefore worthless, 25 to 37 packages out of every 100. This represented an expense which was borne by the user, as this cost was included in the original price. In contrast to this, the average Blue Seal "Grow Crop" distributor in 1943 had less than 4 packages left out of each 100. By further use and extension of this pre-season offer, even this record can and will be improved.

Additional savings are made through Patronage Dividends payable to Farm Bureau members who use this service.

See opposite page for Authorized Blue Seal Grow-Crop Inoculant Distributor list

(Continued from page 7)

of the district No. 3 setup. "I believe we are headed in the right direction, and after the war I would be in favor of establishing a central school. My sister-in-law has a child in a one-room rural school in Illinois where there are only four in attendance. She wishes they had a school setup like we have in Moultrie county."

Conversations with the pupils of the upper grades in the Purvis school reveals a 100 per cent endorsement of the present school plan of the district. Said one, "We used to be in with a bunch of little kids. This is better." Another said, "The first graders were noisy." A third reported, "I like to see if I can beat some of the others in my grade in spelling and other subjects. It's better than having all the grades in one school." None said that he or she would rather walk to school.

The three teachers in district No. 3 all have had long experience in rural schools. Mrs. Margaret Gilmer, at Bolin school, studied for three years at Teachers College in Charleston, and has been a rural school teacher for 7 years. Born and reared on a farm, she has attended country schools and is very much interested in her present job. She lives in Coles county and has three children in school. "I wish they had experienced the advantages of this school system," she said.

Miss Helen Turner at the Two Mile school is another teacher who attended a country school. She also attended the Charleston Teachers College and has been teaching for seven years.

Mrs. Vera Slover at the Purvis school also studied at Charleston and has been teaching for 14 years.

Other employees of the school district are the cooks who prepare the noon meals at Two Mile, Bolin, and Purvis. They are Mrs. Alan Bozell, Mrs. Fred Seelo, and Miss Gladys Mosby. Each child pays 10 cents for his hot meal, and the War Food Administration allows 9 cents for the type "A" menu that is being served in the district No. 3 schools. A typical meal for example consists of scrambled eggs, half an orange, lettuce, green beans, and a half-pint of pasteurized milk. Nutritionists outline the menus so that the one meal will contain one-third of nutrients in one day of a properly balanced diet.

Bus drivers for the district are Mrs. Blaine Erhardt, a farm girl of the neighborhood whose husband is overseas with the armed forces, and A. O. Perrine, one of the directors on the school board who has a daughter attending one of the schools of the district.

Until recently the district had a music teacher, Kenneth Wooley, but he is now in the U. S. Navy. The teachers report that his music instruction is missed very much, and they would like to be able to secure someone to fill the vacancy.

One of the natural questions that arises is that of the cost of operating the new school district. In the first year of operation, 1942-43, net expenditures of district No. 3 amounted to $4,662.29 as compared with total net expenditures of the five districts in the 1940-41 school year of $5,480.95. Tax rate for district No. 3's first year of operation was 71 cents for the educational fund and 3 cents for the building fund. Average rate for the previous year for the five school districts was approximately 79 cents for educational and 14 cents for building.

District No. 3 finished its first year of operation with a balance of $3,762.43 as compared with the five districts' balance for the previous year of $3,039.75.

For the 1942-43 school year, district No. 3 received $742.50 from the state department of education for transportation of pupils. This is based on an allowance of $15 per pupil.

President of district No. 3 board of directors is Clark Lowe, with Walter Jenkins as clerk. Other directors are Reuben Johnson, Guy S. Bolin, Francis Waggoner, Emery Righter, and A. O. Perrine. Other directors who served during the first year of the district's operation are Charles B. Shuman, a member of the board of directors of the Illinois Agricultural Association, and O. W. Powell, who is a member of the Illinois Agricultural Association's school committee.

Tractor Course Offered At University Feb. 14-19

Annual tractor short course will be held by the department of agricultural engineering, U. of I. College of Agriculture, Feb. 14 to 19, inclusive, at Urbana. The course is open to anyone over 16 years of age.

Four hours each day of lecture and demonstration are provided in which explanations will be made of the operation of engine valves, valve timing, high compression, ignition, fuels, carburetors, lubrication, lubricating oil, greases and engine troubles. Speakers and movies will be used to cover some of the most interesting phases of power farming not covered during the lecture and laboratory periods.

A registration fee of $2.50 is charged by the engineering department. Men wishing to attend will be able to find board ranging from $8 to $10 a week in Urbana or Champaign. The number that can be accommodated is not over 35.

By Wilfred Shaw

Twentieth annual meeting of the McLean County Milk Producers was attended by 325 members and their wives in the McLean County Farm Bureau building and dinner was served by the Home Bureau. A mammoth birthday cake having 20 candles was cut by Manager F. C. Fairchild.

Guest speaker at the meeting was Victor Gordon Lennox, London correspondent of the Chicago Daily News, who was introduced by Frank Bill, farm editor of the Bloomington Pantagraph.

Prof. N. E. Peterson of the dairy department of the Minnesota College of Agriculture, discussed, "What Makes the Dairy Cow Tick."

Manager Fairchild reported a substantial increase in membership in 1943 with the number of active shippers varying from 459 to 508 during various months of the year. Total milk production was 24½ million pounds with a value of $750,000. Milk production declined in 1943 for the first year since 1939.

Clarence Ropp, Normal and Dwight Hemenover, Shirley, were re-elected to the board for three year terms and Ross Wills, Saybrook, was elected to succeed Roy Gilmore, Arrowsmith.

William Mays, Bloomington, was re-elected president; George Pitts, McLean, vice-president; Elmer Orendorff, Randolph, secretary; and Frank Mason, Bloomington, as treasurer.

Directors of Illinois Milk Producers' Association recently elected officers for 1944 are as follows: president, Ryland Capron, Peoria; vice-president, B. J. Schumacher, St. Louis; and secy.-treasurer, Wilfred Shaw, Chicago.

The following were elected members of the executive committee: Ryland Capron, Peoria; B. J. Schumacher, St. Louis; W. J. Swayer, Chicago; Arthur Meyer, Quad Cities; Glen Tombaugh, Streator; Edwin Gumm, Galesburg; and O. H. Ryan, LaSalle-Peru.

Twenty-three cooperative milk marketing associations are members of Illinois Milk Producers' Association and each member has one director on the board.

The following milk marketing cooperatives will hold their annual meetings in February on the following dates:

Feb. 8—Producers Dairy Company, City Hall, Harrisburg

Feb. 14—Producers Coop. Dairy, Adams County Farm Bureau, Quincy

Feb. 15—Peoria Milk Producers, Peoria Producers Dairy, American Legion Hall, Peoria

Feb. 16—Producers Dairy Company, Abraham Lincoln Hotel, Springfield

Feb. 22—Decatur Milk Producers, Macon County Farm Bureau, Decatur

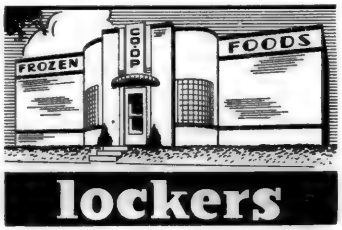
Feb. 26—Quality Milk Association, Consistory Bldg., Moline

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis delivered f. o. b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for November unless otherwise noted:

Boston	$3.93
Chicago (70 mile Zone) Dec.	3.19
Detroit	3.46
Milwaukee	3.00
New York (201-210 mile zone)	4.05
Pittsburgh	3.67
Seattle (Dec.)	3.10
St. Louis (Dec.)	3.49
St. Paul, Minn.	3.00
Washington	4.06

The following prices are the blended prices received by producers supplying the respective Illinois markets. All are December prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.45
Canton	2.55
Champaign	2.80
Chicago	3.19
Danville	2.275
Decatur	2.70
DeKalb	2.74
Freeport	2.83
Galesburg	2.65
Harrisburg	2.55
Jacksonville	2.40
Kewanee	2.55
LaSalle-Peru	2.50
Moline	3.21
Peoria	2.89
Pontiac	2.406
Quincy	2.40
Rockford	3.13
Springfield	2.60
St. Louis	3.49
Streator	2.40



By Frank Gougler

Board of directors of the Illinois Cooperative Locker Service is again making available to member locker companies the services of John L. Bodine as consulting engineer. Every locker company that used his services last year has again subscribed for his services during 1944.

Most of the organizations that have plans for building new plants are contracting for his services to aid them in developing plans, in securing priorities, and in the installation of equipment.

During December three communities have started to raise funds for locker plants. They are Anna, Paris, and Saybrook. The total number of new cooperative plants now being promoted in Illinois is 16.

A new ruling issued by government officials in regard to new locker plant construction still requires that first year rentals be paid in advance by 60 per cent of the prospective locker renters. Those who may be counted are as follows: (1) Farm operators who reside on their farms; (2) A city owner who operates his farm with tenant, hired help, and (3) Those not classified above, but who grow food of the type normally stored in lockers in sufficient quantities to justify the use of a locker. In general this shall mean at least 200 pounds of meat or poultry, or 150 pounds of fruits or vegetables which would be stored in the locker.

Homer England, an operator of a 359-locker plant, and a branch plant with 125 lockers, and who does curing and smoking for five other plants, lists the following factors as essential for successful plant operation:

"A man's personality, the convenience of his plant, plant sanitation, and the appreciation shown to patrons will always be the big factors involved in weathering storms which we are bound to have."

OPA Announces Plan To Mail Gasoline Coupons

A new plan of mailing gasoline ration coupons to individual motorists from carefully guarded central issuing stations located in population centers throughout the country is now being established, the OPA has announced.

Elimination of thefts of ration coupons from local rationing boards, which last year cost the nation 142 million gallons of gasoline, is an important purpose of the plan. Another is to eliminate a great load from local boards and increase the efficiency of gasoline ration coupon issuance.

NOTICE

Illinois Agricultural Association Election of Delegates

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the months of February and March, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During February, annual meetings will be held in Coles, DeKalb, Douglas, Lake, McHenry, Wayne, Whiteside and Will Counties.

During March, annual meetings will be held in Boone and Monroe Counties.

PAUL E. MATHIAS,
Corporate Secretary

January 22, 1944

Rural YOUTH

Illinois Rural Youth have gone over the top again! Latest reports show that the $75,000 War Bond goal equalling the purchase price of a pursuit plane has been passed. And what's more that isn't a complete report on all the purchases for the campaign. There are still some more figures to come in and we hope that county officers will see to it that they are all sent in soon. The figure compiled on bond purchases as the Record goes to press is $75,130.10. In 1943, Illinois Rural Youth bought $183,913 in the "Bonds for Bombers" campaign. This total more than equals the cost of a medium bomber. The campaign for the purchase of a pursuit ship was held during the last three months of 1943. Rural Youthers can take pride in launching two fighting ships for the country's Air Force, a bomber and a pursuit ship.

Now that Macoupin County Rural Youth's membership contest is over, (with a swell increase of from 15 to 50) they plan to give a Valentine's dance at Chesterfield to acquaint young people in that district with their program. And that's not all — there's a big carnival coming up the latter part of February. Look's like these Rural Youthers are in for some fun!

Patriotism isn't lacking in Tazewell and Washington County Rural Youth groups. Both are busy with drives for paper scrap. Tazewell President Franklin Allen also reports a 30-minute panel discussion over WMBD in Peoria on "Patriotic Spending Of Wartime Farm Income".

We agree with Rural Youth President Wanda Kenshalo when she says "jewelers were certainly busy a few days before leap year" when we look at the list from Wayne County. Here are the couples to be congratulated: Bernice Winters and Kenneth Stephens; Wanda Kenshalo and Paul Trapp; Ruby Cox and Pvt. Orlen Brach; Esther Simpson and Seaman 2/c Earl Meeks; Eleanor Finley and Pvt. Leonard Morris; and Grace Cockrum and A/Seaman George Book.

The party committee in Peoria County Rural Youth saw to it that everyone had a real good time at the dance held at Orange Grange Hall Jan. 25. Admission was 25c to cut rugs and waltz to Ruth Eslinger's orchestra. The committee also has tentative plans for a roller skating party.

HELP! HELP! Ogle County Rural Youthers were disappointed in the small attendance at their recent dance. Looks like they need some new members to swell the crowd. What's keeping the rest of the crowd away from all the fine dances and skating parties?

President Everett Sturm reports that White county held a box supper for their New Year's Eve celebration. They had a very impressive ceremony for making resolutions. Each of the 101 members present lit a candle for one of the four freedoms as he made his resolution.

"Our slogan is, 'Remember—a new member'", says Theron Summers, Edwards County Rural Youth president. They are sponsoring a membership drive extending over a two-month period. During the month of January the drive brought in 22 new young people.

Brown County Rural Youth held a talent night recently attended by 125 parents and Rural Youth members. The program consisted of songs, readings, blackface and comic dialogues, a talk by Farm Adviser E. H. Garlich on the history of Brown County Rural Youth, PLUS a peppy recreation session to top off the meeting.

Former Moultrie 4-H Club Member Missing In Action

Mr. and Mrs. John T. Smith of Lake City, Moultrie County Farm Bureau family, recently received word from the War Department that their son, T/Sgt. Charles E. Smith, had been missing in action since Dec. 22 over German territory. He was a radio operator in a B-24 heavy bomber.

Charles is a former member of the Sunnyside Flea Flicker 4-H club and of the Lovington FFA. He was graduated from the Lovington Township High school in 1941 and was a leader in school activities. Charles, who has passed his 20th birthday, has a brother, Leonard, who is stationed at Camp Crowder, Missouri.

U. of I. Issues Booklet "Self-Feeders For Hogs"

To help swine producers conserve the limited amounts of feed available for 1944, a circular, "Self-Feeders for Hogs," has been prepared by D. G. Carter, professor of farm structures, and W. E. Carroll, professor of swine husbandry, U. of I. College of Agriculture.

Plans for self-feeders for shelled corn and mixed feed, ear corn, legume hay and mineral supplement are shown in the circular together with formulas for rations for fattening hogs, young pigs and brood sows.

Copies of the circular No. 562 may be obtained from the county farm adviser or upon request to the College of Agriculture, Urbana.

Junior Vegetable Group Announce 1944 Contest

Some $6000 in scholarships for farm youths will be offered in the 1944 National Junior Vegetable Growers' Association Production and Marketing contest.

Those who wish to enter the contest and become a member of the National Junior Vegetable Growers' Association may write to Prof. Grant Snyder, 103 French Hall, Massachusetts State College, Amherst, Mass.

Requirements for membership and entrance in the contest are:

1. You are at least 14 years of age at the time of registration and you will not have passed your 22nd birthday by Dec. 31, 1944.

2. You have completed at least two years of garden work or vegetable project work, including the current year.

3. You were not the national or a regional champion in the 1943 contest.

Those who become members will receive the official insignia of the organization and the monthly newsletter of the association.

George Whitman Resigns As Adams Farm Adviser

George B. Whitman, Adams county farm adviser for the past six years, has resigned his position effective March 1 to work as field representative of the Illinois Chain Store Council with headquarters in Chicago. His work with the Council will be to secure closer cooperation between rural and urban citizens and with farm and city organizations and the 45 chain store manager groups.

Prior to his period of service in Adams county, Whitman was farm adviser in Henderson county for four years, and he has been active in Extension work since graduating from the University of Illinois in 1920. During World War I he was an ensign in the Navy.

In Adams county, Whitman developed the 4-H "Little Fair," promoted an extensive reforestation project that resulted in the planting of 600,000 saplings on the sub-marginal lands of the county, was instrumental in organizing the Adams county soil conservation district of 458,000 acres and many other projects of great benefit to the farmers of the area.

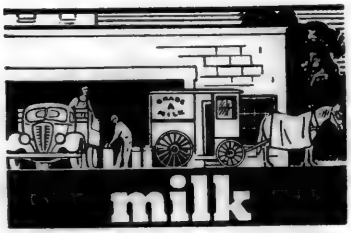
'43 Production Sets New Record, Wickard Reports

Food production in the United States attained another high record in 1943, for the seventh year in succession, according to Secretary of Agriculture Claude R. Wickard in his annual report just issued.

This record was made, he said, primarily because farm people applied their skill, resourcefulness, and energy to the job as never before, and secondly because they tackled it cooperatively on plans worked out farm by farm with federal and state help from one end of the country to the other.

Total food production, he reported, was about 5 per cent greater than in 1942, and about 32 per cent above the average for the period 1935-39. This achievement, says the report, should be viewed against the background of 1942's much more favorable weather conditions.

Crop production in 1943 was 6 per cent less than in 1942, but nearly 5 per cent more than in any previous year.



By Wilfred Shaw

Twentieth annual meeting of the McLean County Milk Producers was attended by 325 members and their wives in the McLean County Farm Bureau building and dinner was served by the Home Bureau. A mammoth birthday cake having 20 candles was cut by Manager F. C. Fairchild.

Guest speaker at the meeting was Victor Gordon Lennox, London correspondent of the Chicago Daily News, who was introduced by Frank Bill, farm editor of the Bloomington Pantagraph.

Prof. N. E. Peterson of the dairy department of the Minnesota College of Agriculture, discussed, "What Makes the Dairy Cow Tick."

Manager Fairchild reported a substantial increase in membership in 1943 with the number of active shippers varying from 459 to 508 during various months of the year. Total milk production was 24½ million pounds with a value of $750,000. Milk production declined in 1943 for the first year since 1939.

Clarence Ropp, Normal and Dwight Hemenover, Shirley, were re-elected to the board for three year terms and Ross Wills, Saybrook, was elected to succeed Roy Gilmore, Arrowsmith.

William Mays, Bloomington, was re-elected president; George Pitts, McLean, vice-president; Elmer Orendorff, Randolph, secretary; and Frank Mason, Bloomington, as treasurer.

Directors of Illinois Milk Producers' Association recently elected officers for 1944 are as follows: president, Ryland Capron, Peoria; vice-president, B. J. Schumacher, St. Louis; and secy.-treasurer, Wilfred Shaw, Chicago.

The following were elected members of the executive committee: Ryland Capron, Peoria; B. J. Schumacher, St. Louis; W. J. Swayer, Chicago; Arthur Meyer, Quad Cities; Glen Tombaugh, Streator; Edwin Gumm, Galesburg; and O. H. Ryan, LaSalle-Peru.

Twenty-three cooperative milk marketing associations are members of Illinois Milk Producers' Association and each member has one director on the board.

The following milk marketing cooperatives will hold their annual meetings in February on the following dates:

Feb. 8—Producers Dairy Company, City Hall, Harrisburg

Feb. 14—Producers Coop. Dairy, Adams County Farm Bureau, Quincy

Feb. 15—Peoria Milk Producers, Peoria Producers Dairy, American Legion Hall, Peoria

Feb. 16—Producers Dairy Company, Abraham Lincoln Hotel, Springfield

Feb. 22—Decatur Milk Producers, Macon County Farm Bureau, Decatur

Feb. 26—Quality Milk Association, Consistory Bldg., Moline

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis delivered f. o. b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for November unless otherwise noted:

Boston	$3.93
Chicago (70 mile Zone) Dec.	3.19
Detroit	3.46
Milwaukee	3.00
New York (201-210 mile zone)	4.05
Pittsburgh	3.67
Seattle (Dec.)	3.10
St. Louis (Dec.)	3.49
St. Paul, Minn.	3.00
Washington	4.06

The following prices are the blended prices received by producers supplying the respective Illinois markets. All are December prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.45
Canton	2.55
Champaign	2.80
Chicago	3.19
Danville	2.275
Decatur	2.70
DeKalb	2.74
Freeport	2.83
Galesburg	2.65
Harrisburg	2.55
Jacksonville	2.40
Kewanee	2.55
LaSalle-Peru	2.50
Moline	3.21
Peoria	2.89
Pontiac	2.406
Quincy	2.40
Rockford	3.13
Springfield	2.60
St. Louis	3.49
Streator	2.40

Garlich on the history of Brown County Rural Youth, PLUS a peppy recreation session to top off the meeting.

Former Moultrie 4-H Club Member Missing In Action

Mr. and Mrs. John T. Smith of Lake City, Moultrie County Farm Bureau family, recently received word from the War Department that their son, T/Sgt. Charles E. Smith, had been missing in action since Dec. 22 over German territory. He was a radio operator in a B-24 heavy bomber.

Charles is a former member of the Sunnyside Flea Flicker 4-H club and of the Lovington FFA. He was graduated from the Lovington Township High school in 1941 and was a leader in school activities. Charles, who has passed his 20th birthday, has a brother, Leonard, who is stationed at Camp Crowder, Missouri.

U. of I. Issues Booklet "Self-Feeders For Hogs"

To help swine producers conserve the limited amounts of feed available for 1944, a circular, "Self-Feeders for Hogs," has been prepared by D. G. Carter, professor of farm structures, and W. E. Carroll, professor of swine husbandry, U. of I. College of Agriculture.

Plans for self-feeders for shelled corn and mixed feed, ear corn, legume hay and mineral supplement are shown in the circular together with formulas for rations for fattening hogs, young pigs and brood sows.

Copies of the circular No. 562 may be obtained from the county farm adviser or upon request to the College of Agriculture, Urbana.

Junior Vegetable Group Announce 1944 Contest

Some $6000 in scholarships for farm youths will be offered in the 1944 National Junior Vegetable Growers' Association Production and Marketing contest.

Those who wish to enter the contest and become a member of the National Junior Vegetable Growers' Association may write to Prof. Grant Snyder, 103 French Hall, Massachusetts State College, Amherst, Mass.

Requirements for membership and entrance in the contest are:

1. You are at least 14 years of age at the time of registration and you will not have passed your 22nd birthday by Dec. 31, 1944.

2. You have completed at least two years of garden work or vegetable project work, including the current year.

3. You were not the national or a regional champion in the 1943 contest.

Those who become members will receive the official insignia of the organization and the monthly newsletter of the association.

George Whitman Resigns As Adams Farm Adviser

George B. Whitman, Adams county farm adviser for the past six years, has resigned his position effective March 1 to work as field representative of the Illinois Chain Store Council with headquarters in Chicago. His work with the Council will be to secure closer cooperation between rural and urban citizens and with farm and city organizations and the 45 chain store manager groups.

Prior to his period of service in Adams county, Whitman was farm adviser in Henderson county for four years, and he has been active in Extension work since graduating from the University of Illinois in 1920. During World War I he was an ensign in the Navy.

In Adams county, Whitman developed the 4-H "Little Fair," promoted an extensive reforestation project that resulted in the planting of 600,000 saplings on the sub-marginal lands of the county, was instrumental in organizing the Adams county soil conservation district of 458,000 acres and many other projects of great benefit to the farmers of the area.

'43 Production Sets New Record, Wickard Reports

Food production in the United States attained another high record in 1943, for the seventh year in succession, according to Secretary of Agriculture Claude R. Wickard in his annual report just issued.

This record was made, he said, primarily because farm people applied their skill, resourcefulness, and energy to the job as never before, and secondly because they tackled it cooperatively on plans worked out farm by farm with federal and state help from one end of the country to the other.

Total food production, he reported, was about 5 per cent greater than in 1942, and about 32 per cent above the average for the period 1935-39. This achievement, says the report, should be viewed against the background of 1942's much more favorable weather conditions.

Crop production in 1943 was 6 per cent less than in 1942, but nearly 5 per cent more than in any previous year.

LEE COUNTY CO-OPERATIVE

(Continued from page 17)

for a year while the Steward Co-op attempted to get back on its feet. Unable to do this, Lee County Grain purchased the elevator at a bankruptcy sale in February, 1941. This purchase necessitated borrowing $5000 from the St. Louis Bank for Co-operatives, but the loan was repaid in less than a year's time.

The Ashton elevator was purchased in the spring of 1941. This included the elevator structure and a feed mill. The grinding equipment was moved from the mill to the elevator soon after the purchase was completed and the mill is now used for storing supplies.

There you have the Lee County Grain's physical setup—four operating elevators and one storage elevator. At the Lee Center and Ashton elevators there are facilities for grinding and mixing feed. Since the outbreak of the war, farmers of the territory have found their co-operative of increasing value in supplying them with protein feeds. A carload of soybean meal is shipped in every month and the co-operative also mixes supplement feeds. Gross feed sales income for 1943 amounted to $96,161, and the grinding and mixing income totaled $4680, or almost double that of 1942. The co-operative also does considerable seed business as well as selling coal, lumber, and other supplies.

Since the Lee County Grain started business it has maintained good working relationships with other Illinois Grain Corporation member elevators in the area. These include the Eldena Co-operative, the Sublette Farmers' Elevator, the Walton Co-operative, and West Brooklyn. Lee county ranked sixth among the counties in the state for volume of grain marketed through the Illinois Grain Corporation for the period July 1 to Nov. 30, 1943.

The men who are entitled to the major share of credit in the success of the Lee County Grain are the board members. At the 1943 annual meeting in December, two men who have served continuously since the first organization meeting were reelected. They are Wesley Attig, president, who represents district 1 of the co-operative's territory, and Glenn Pfoutz, district 2. Pfoutz served continuosly as secretary for nine years until he was succeeded in this office two years ago. Frank Mynard, who also served on the board since the cooperative was organized, retired as director at the 1943 annual meeting. Mr. and Mrs. Mynard recently celebrated their 50th wedding anniversary. Other present directors are Arthur Burkhardt, district 3, starting his second year of service; Holly Smith, district 4, starting his second year; Roy McCracken, district 5, starting his first year; Joy Sandrock, secretary-treasurer, district 6, starting his second year. Clarence Hart, vice-president, is the member at large on the board nominated by the Lee County Farm Bureau board. The co-operative's board of directors was set up by district in 1941 to give a better representation over the territory.

According to Glen Hart, who served as president from the beginning of the organization until he retired three years ago, most of the board lived in the Lee Center territory when the co-operative was launched, and the district setup was finally decided on to give representation from other territories.

Charles Kersten, Lee County Grain patron, gets a ticket from Manager Harry Andes at the Steward elevator.

Glen Hart, first president of the Lee County Grain, gets his hog supplement feed from his co-operative.

Richard Sondgeroth is the manager of the Lee Center elevator.

Other directors on the first board at the organization meeting in October, 1932, in addition to Glen Hart, Pfoutz, Mynard, and Attig, were Carl Sartorius, William E. Taylor, and the late Wiliam Degner. Taylor retired from the board about four years ago. Other early directors elected at the first annual meeting in 1934 who contributed to the early building of the cooperative include Vernon Pomeroy and Robert Ramsdell.

Robert J. Hoyle, general manager of the Lee County Grain, is another man who has been with the cooperative since its early days, having been employed in 1933. He ably interprets the policy of the board of directors and sees to it that the co-operative is run on a business-like basis. For example, a daily report is required from each of the elevators so that an accurate check can be kept of sales, grain movement, etc. There are 10 employees handling this million-dollar business in addition to the general manager. Elevator managers are Richard Sondgeroth at Lee Center, Nathan Sword at Ashton, Harry Andes at Steward, and Kenneth Gentry at Shaw. Employees in service include Oliver Dickinson and Adin Rounds, U. S. Navy; Harry Lambert, Reuben McBride, and Lawrence Chesley, U. S. Army.

What are the future plans of the Lee County Grain? That will depend largely on future conditions. This much, however, is certain. The board is seeing to it that the co-operative is prepared financially to safeguard the producers' grain marketing interests. This safeguard is not confined to the territory of the co-operative, but includes any part of the county where producers may be in danger of losing their grain marketing facilities as the result of an elevator going out of business.

Country Life Insurance Establishes New Record

Country Life Insurance Company has set up another record. This time it's the biggest year's business in its 15 years of operation.

For the calendar year of 1943, Country Life had a paid business of $25,836,917, making a net gain of business in force for the year of $20,853,042. At the close of 1943, business in force totalled $202,958,977, according to Dave C. Mieher, manager.

The previous largest year in the company's history was in 1936 when paid business amounted to $25,244,832; net gain of business in force, $20,124,312, and total in force at the end of the year, $100,133,614.

cream

By Frank Gougler

The question of expansion of plant operations in order to handle both separated cream and fluid milk was discussed at the annual meeting of the Producers Creamery of Peoria in January. This would involve the establishment of two or more plants to adequately serve the producers of the entire territory. One of the proposals advanced was the establishment of a new creamery to serve the north territory, and a new creamery to serve the south territory. Following the discussion, stockholders and patrons voted unanimously in favor of such an expansion program. In the event that the two or more creameries were established, it is possible that the operations in Peoria might be discontinued, and that both milk and cream would be processed at the new plants.

Producers Creamery of Mt. Carroll hopes to have a new home some time during 1944. Recently the board of directors voted to undertake an expansion program which would provide for a milk dryer, new boiler, additional milk equipment, and a new home to house the equipment. A goal was established for raising more than $40,000 through the sale of stock to finance the project. Reports indicate that this goal is nearly reached.

Manager Frank Mleynek of Olney reports that the stock selling program under way in the Olney district is going successfully and it appears that the additional capital needed for the expansion program will be raised entirely through mail subscriptions. The additional capital is to be used for the purchase of a larger milk dryer, a larger boiler, and additional milk equipment. This program is necessary because 41 per cent more volume is being received than a year ago and 1000 per cent more milk powder is being produced.

Creamery butter production in the United States during November, 1943, is reported to be 14 million pounds less than in November, 1942. The total make for the month was 93 million pounds, which is the smallest November make since 1915. The reduction is reported to be due to diversion, insufficient help, and shortage of protein feeds.

IAA INSURANCE ROUNDUP

(Continued from page 10)

Batho, actuary, Country Life Insurance Co.; Dr. Duane Propst, medical director, Country Life; R. W. Hilgedag, legal editor, Insurance Research & Review, and C. W. Homann, general agent, Edgar county.

Following the Wednesday afternoon luncheon there will be presentation of awards and addresses by President Earl C. Smith of the IAA, and Dr. George M. Gibson, Chicago pastor.

PRE-SEASON REQUEST

Your Name .....

Address ..... baby chicks in 1944

(1) I plan to raise ..... pounds of Blue Seal Chick Starter (2 pounds per chick for the first six weeks)

(2) Please reserve .....

(3) I will get my chicks in February, March, April, May. (circle one)

NOTE: No price or discount can be stated at this time as both will be governed by ceilings and regulations of O.P.A. then in effect.

★ We believe that authorized Blue Seal distributors will be able to supply their patrons with their Blue Seal Chick starter needs — each patron should make his needs known in ADVANCE of the season.

★ Our first responsibility is to maintain highest quality standards — to select and use only best ingredients — to formulate and manufacture Blue Seal Chick Starter so that it is in complete balance, containing adequate proteins, minerals, and vitamins — so that it is palatable, has proper texture, that chicks will be sure to grow, feather evenly, and stay strong and healthy.

★ To be sure that you get yours FRESH and ON TIME, fill out the coupon above and give it to your Blue Seal feed serviceman, or mail it to the office of your authorized Blue Seal distributor.

BLUE SEAL

ILLINOIS FARM SUPPLY CO.

608 S. Dearborn St., • Chicago 5, Illinois

Home advisers get some pointers on sewing machine maintenance from Frank Andrew, Macoupin county farmer, who is best known for his invention of a robot control for circular plowing. Seated are Mrs. Leona J. Calvin, Ford county; Mrs. Helen Turner, Edgar, and Miss Lorennie Berry, Piatt. Standing are Miss Marian Simpson, Tazewell; Miss Clara Brian, McLean; Mrs. Ila Wells, Woodford; and Miss Lola Antisdell, Peoria.

Home Sewing Solution to Clothing Problems

Because children's garments and work clothes have been hard to buy many homemakers are bringing their sewing machines back into use. With the return of more home sewing came the discovery that some sewing machines were in need of adjustment and repairs. As a result many requests were received by home economics Extension leaders for sewing machine clinics from county Home Bureaus.

In answer to this demand, five sewing machine clinics have been held in Jacksonville, Monmouth, Amboy, Bloomington and Pickneyville. Attending the clinics were the home advisers and one leader from each county. Cooperating with the home economics Extension, the department of agricultural engineering at the U. of I. College of Agriculture furnished Frank Andrew of Palmyra as instructor. Andrew will be remembered as the U. of I. graduate farmer who developed the circular method of mechanical plowing.

With the completion of the clinics, the home adviser and county leaders are now holding clinics in their respective areas, and are reporting large attendance and high interest.

There are two bulletins available which may be of great aid in keeping sewing machines in operation. One of these is "Sewing Machine Cleaning and Adjusting," Farmer Bulletin No. 1944, which may be secured by writing the United States Department of Agriculture, Washington, D. C. Another bulletin is available at the U. of I. Home economics Extension, "Aids to Home Sewing."

Conservation Keynotes Clothing Project Work

Conservation is the keynote of the clothing work being done this year throughout the state by Home Bureau units. Programs have been planned and set up to meet the needs of the various counties and women are doing their best to make what they have last, and to buy new clothing only when absolutely necessary.

Edgar county women feel that a great deal can be accomplished by working in small groups. Last year, in response to requests for special work in clothing construction, Mrs. Helen D. Turner, home adviser, planned short courses or classes for groups of interested women. They met one day or evening each week for a period of 6 or 8 weeks.

Each member decided on a garment she wished to make and Mrs. Turner assisted in selecting patterns and materials as well as with construction problems. Leaders of 4-H clubs formed a special group and met with Mrs. Turner once every two weeks for training in clothing construction.

This year clothing is the major program for Edgar county. Interest in the county-wide program developed as a result of the splendid work done by women and 4-H club leaders working in small groups.

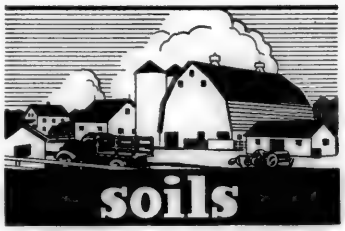
Postwar Readjustment Women's Program Theme

Looking Forward to the postwar world is the theme of the homemakers' program for the 43rd annual Farm and Home Week, at the U. of I., Feb. 8-10. Two of the special sessions will be devoted to rehabilitation, a problem of vital concern to every citizen today.

On Tuesday afternoon, Feb. 8, Dr. T. R. Sarbin of Northwestern University, will discuss, "Psychological Rehabilitation of the Returning Soldier."

Miss Beatrice Wade, associate professor and director of occupational therapy, U. of I., will discuss the "Relation of Occupational Therapy to Rehabilitation" Thursday afternoon, Feb. 10.

Women of the Paris unit of the Edgar County Home Bureau model the garments in their project study. Left to right are Mrs. Earl Mathews, Mrs. J. E. Russell, Mrs. L. O. DuBois, and Mrs. B. A. Kinnedy. Mrs. Kinnedy is demonstrating the practical use of the inexpensive clothes form which the women made.



By John R. Spencer

Illinois limestone producers met with the state AAA committee recently in Decatur to discuss arrangements for contracts for limestone under the conservation material program in 1944.

AAA is again attempting to furnish as much limestone as possible in lieu of payments, but payment will be made to farmers for application of limestone purchased from any source they wish. Limestone purchased through the AAA conservation materials program or by individual farmers through regular commercial channels will receive the same credit for application in 1944. It appears that the limestone program will operate in a similar manner to that of 1943. Details will soon be available at county AAA offices.

The labor manpower shortage both in production and distribution of this material is a real problem in most areas. The favorable though somewhat dry weather of December and January in the north half of the state has been a helpful factor in limestone field operations.

Several quarry operators report that they have produced and sold more limestone in 1943 then any past year while others report less production due largely to labor shortage. It's anyone's guess now whether the total tonnage applied last year will exceed the record amount of 1942.

A ton of average farm manure contains about 500 pounds of organic matter, 10 pounds of nitrogen, two pounds of phosphorus and eight pounds of potassium. The U. of I. and other experiment stations have found that a ton of manure will produce crop increases on the average worth about $3 at pre-war prices. At present wartime prices the value is about $6.

The war does not change the principles of soil fertility. There is only one way to increase the total production of crops, meat and milk and that is to put into the soil more of "what it takes" to produce high crop yields.

At least it's good weather for spreading lime. Here are 29 trucks lined up at a La Salle county quarry on a busy day in December.

There is an increasing trend by the U. of I. College of Agriculture agronomy department to recommend crop varieties according to the soils productive capacity. At the recent Kane County War Committee meeting, Prof. J. C. Hackleman suggested for grade one soils (top) in that area, Vicland oats; for grade two soils (emidum capacity) Boone oats, and for grade three, Tama or Marion oats. A similar list according to soil production capacities was given for several varieties of soybeans: Richland on grade one, then Illini and Dunfield on the third level of fertility.

Sometimes soils are "tested" (for sourness) by attempting to grow alfalfa or red clover. These seeds are entirely too scarce and high priced this spring for this type of experimentation. For best growth both require liberal quantities of phosphorus in addition to a neutral soil. "The most effective place to use rock phosphate is ahead of clover or alfalfa . . . . we don't lose these phosphates (by leaching etc.) unless the soil washes away." Prof. A. L. Lang.

Youth Gets Safety Award

Fourteen-year-old Kasper Richter, Breese, Clinton county, has been named Illinois' most outstanding 4-H club member in safety work for 1943 by the state club office and will receive a $100 War Bond donated by Mennen Company.

Richter's achievements in the current national 4-H farm safety activity include filling holes in the yard, removing nails from boards on the ground, hanging rake, fork and scythe in a safe place, and repairing extension cords. He also riveted weak spots in harness traces, nailed loose boards in hay loft steps and built a railing at the loft opening. He persuaded his parents to have their automobile brakes tightened and to replace the worn rope on a hay fork.

FARM AND HOME WEEK

(Continued from page 5)

general session will be Jessie W. Harris, representative of WFA and director of University of Tennessee school of home economics. She will discuss "The People's Choice and Goals for 1944."

PRODUCTION PROGRAM

Here is the general outline of the "Production Program" sessions: Tuesday Feb. 8, morning session, "Adjustments for Livestock Efficiency and Profits in 1944"; afternoon session, "Conservation of Feeds in Swine Production."

Wednesday, Feb. 9, morning session and afternoon sessions, "Crop Production and Soil Maintenance in 1944."

Thursday, Feb. 10, morning and afternoon sessions, "Dairy and Poultry Problems."

AGRICULTURAL ECONOMICS

Schedule of sessions and topics for the "Agricultural Economics and Rural Life Program" are: Tuesday, Feb. 8, morning session, Rural Youth program in 112 Gregory Hall, and afternoon session in 108 Woman's Building. Tuesday afternoon, sessions for 4-H club leaders, "Adjusting the 1944 Program for 4-H Club Work to Reach the Maximum Number of Boys and Girls."

Wednesday, Feb. 9, morning session, and afternoon sessions "Educating for Rural Community Life," in 112 Gregory Hall.

Thursday, Feb. 10, morning session, "Current Farm Economic Problems"; afternoon session, "Farm Labor and Equipment Problems."

SPECIAL GROUPS

Programs for special groups include: "Farm Machinery Conference," Tuesday, Feb. 8, morning and afternoon, 201 Agricultural Engineering Building.

"Rural Electrification Conference," Wednesday, Feb. 9, morning and afternoon sessions, 201 Agricultural Engineering Building.

"Farm Building Conference," Thursday, Feb. 10, morning and afternoon sessions, 201 Agricultural Engineering.

Seventh Annual Rural Pastors' Short Course, Tuesday, Feb. 8, and Thursday, Feb. 10, Latzer Hall, University YMCA.

First Annual Farm Bureau Organization Directors' Conference, Tuesday, Feb. 8, 103 New Agriculture; Thursday, Feb. 10, 103 New Agriculture, morning session, joint conference with Grange Leaders.

Second Annual Grange Officers' conference, Thursday, Feb. 10, afternoon session, 103 New Agriculture.

HOMEMAKERS' PROGRAM

Homemakers' program will be held Tuesday, Wednesday, and Thursday in Lincoln Hall Theatre on the campus.

Illinois Home Bureau Federation annual meeting will open at 9 a. m. Tuesday in Smith Memorial Hall. A new president and secretary and three directors are to be elected. Tuesday evening a presidents' dinner will be held and past state presidents will be honored on the 20th anniversary of the Federation. An organization discussion for county and unit Home Bureau officers will be held at 7:30 p. m. Wednesday, Feb. 9, in 112 Gregory Hall.

STATE GROUPS

Conferences of state organizations are as follows:

ILLINOIS BROWN SWISS BREEDERS' ASSOCIATION, Thursday, Feb. 10, 10 a. m. to 3:30 p. m., 314 Illini Union.

ILLINOIS CROP IMPROVEMENT ASSOCIATION, Wednesday, Feb. 9, 4 to 6 p. m., 103 New Agriculture Building.

ILLINOIS FARM MANAGERS' ASSOCIATION, Thursday, Feb. 10, 8 a. m. (program with agricultural economics); afternoon program, 314 Illini Union.

ILLINOIS FARMERS' INSTITUTE, conference of delegates, Wednesday, Feb. 9, 4:15 p. m., 302 Old Agricultural Building.

ILLINOIS GUERNSEY BREEDERS' ASSOCIATION, Wednesday, Feb. 9, 10 a. m. to 3:30 p. m., 314 Illini Union.

ILLINOIS SWINE GROWERS' ASSOCIATION, Tuesday, Feb. 8, 4 p. m., 316 New Agricultural Building.

ILLINOIS TURKEY GROWERS' ASSOCIATION, Thursday, Feb. 10, and Friday, Feb. 11, 406 Old Agricultural Building.

BANQUETS

Banquets scheduled are as follows:

ILLINOIS CROP IMPROVEMENT ASSOCIATION, Wednesday, Feb. 9, 6:30 p. m., First Methodist Church, Urbana.

ILLINOIS TURKEY GROWERS' ASSOCIATION, Thursday, Feb. 10, 6:30 p. m., Latzer Hall, University YMCA.

RURAL ELECTRIFICATION CONFERENCE, University YMCA, room 3, Wednesday, Feb. 9, 5:45 p. m.

RURAL LIFE CONFERENCE, 5:45 p. m., Wednesday, Feb. 9, Latzer Hall, YMCA.

RURAL YOUTH BANQUET, Tuesday, Feb. 8, 6 p. m., University Christian Church, Champaign.

STOCKMEN'S BANQUET, Tuesday, Feb. 8, 6 p. m., University Place Christian Church, Champaign.

EDITORIAL

For the New Member Only

ARE you one of the several thousands who became Farm Bureau members during the latter half of 1943? If so this editorial is for you.

Have you visited your Farm Bureau office when in town? It's there to serve you as your headquarters. *You own a share of it.* You'll be welcome at any time, even if it is only to say "Hello."

What Services of Farm Bureau Are You Using?

Your organization, with its membership of 100,000, grew to that size (the largest of any state farm organization) largely because it does render needed services to its members. One of the ways in which you can benefit from your membership is to inform yourself of what services are available, and to use those which meet your needs.

In the county Farm Bureau office you will find the farm adviser, who represents the U. S. Department of Agriculture and the agricultural extension service of the University of Illinois. His job is to serve farmers generally with useful information on farming methods, as proved and tested in the laboratories and demonstration plots. He or his assistant can help you solve difficult farm problems. Their work is so varied and extensive that most of the informational service must of necessity be carried on with groups rather than individuals, but even personal consultation is available. Space does not permit listing of the many projects sponsored by your county Farm Bureau, but whether you have a soil, crop, or livestock problem — if you are interested in 4-H, Rural Youth, farm management, or any other project related to your farming operations, contact your Farm Bureau office to see what information or service is available.

Provides Cooperative Marketing

Co-operative marketing agencies through which you are invited to market your milk, cream, grain, livestock, wool, fruits and vegetables have been established throughout the state and today are serving thousands of Farm Bureau members.

Business Services

Farmers working together — co-operatively — have also developed a great many business services which are available to you. Many of the services are exclusively for Farm Bureau members. You can get the greatest return out of your investment in Farm Bureau membership by learning what these services are and by using them according to your needs.

Insurance

A complete line of insurance designed to meet the needs of Illinois farmers is offered by the three Farm Bureau insurance companies. The general agent, located in the Farm Bureau office, or the special agent in your community, will gladly go over your life, casualty and property insurance needs with you without obligation on your part.

Farm Supplies

Your county service company was developed to provide farmers with high quality farm supplies, better service and savings which result from volume purchasing and sound management. The manager of your county service company or the Blue Seal petroleum or feed serviceman will be glad to discuss the complete line of farm supplies they have to offer.

Hog Cholera Serum

The Producer Supply Company, also a subsidiary of the Farm Bureau, handles hog cholera serum and virus, and other supplies. You'll find many, many other useful services in the office.

In the development of the many business services by Farm Bureau members of the state, the aim and purpose has always been to provide high quality products, and the best possible service, at the lowest net cost. These associated companies are owned, controlled and operated by the Farm Bureau members of Illinois.

Farm Bureau Folks are Friendly

You'll find Farm Bureau folks friendly, and willing and glad to serve you. Won't you help them and help yourself by getting acquainted, and by taking part in local activities? Farmers can do a lot if they'll work together.

By attending meetings as they are called, by getting acquainted with the personnel of your Farm Bureau, and by taking part as the opportunity affords, you will soon find that there are tremendous satisfactions to be gained in your organization.

Don't Be Hesitant About Asking Questions

As a new member, you are fully entitled to all the information you want. You have joined a large, successful educational and service organization. If you utilize even a part of the benefits which it is anxious to give you, you will find that the investment you have made will be repaid many fold.

Farm Bureau Works For You

In everyday ways, as well as in taking a strong part in the discussion and settlement of great legislative programs affecting agriculture, Farm Bureau works day and night for the welfare of its members, and of the country as a whole. You can bear a part of the responsibilty for its future by becoming thoroughly informed about its many activities.

Information and participation will pay you the greatest dividends of all.

To Help You Get Your Crop in *On Time* This Spring, Here Are — 3 timely Suggestions

Keep Your Gasoline Storage Full

Because of the splendid cooperation of service company patrons last year, our statewide "Keep Filled" Program proved to be very effective in the Spring peak emergency. The 1944 planting season is but sixty days away. The need for keeping your fuel storage full at all times now is even greater than a year ago. There are three reasons:

1. Selective service inductions are making deep inroads among our service company petroleum tank truck servicemen. Many are scheduled to leave just about the time Spring work begins. These men will have to be replaced by men who will be strange to the work and unfamiliar to the territory.
2. Our fighting forces are now taking 40% of all petroleum products produced in this country. The balance will be apportioned between agriculture and civilian needs. We have been assured that agriculture will be given top priority; however, it appears that both civilian and agricultural fuels will be extremely short with the advent of the farm work season. Remember that this tremendous volume must be refined, allocated, transported, dispatched, and delivered. Manpower and transport truck deliveries will interfere all along the way.
3. Other petroleum marketers are experiencing similar difficulties. We do not believe that it is safe to rely on the thought, "In a pinch I can call on the other fellow." Your best protection is to have ample storage space for fuels and permit your Blue Seal Serviceman to keep this storage filled on every regular route call.

Build a Reserve of Motor Oil Now

How much lubricating oil do you have on hand? Do you have enough to carry through the heavy work of Spring, Summer, and Fall of 1944? Ample oil reserves behind an army is an essential part of victory. A goodly supply of lubricating oil on farms today is also an important part of safety. Anything can happen at either place, and it is the army or the farm that has plenty of lubricating oil that will come through with a margin of safety.

Blue Seal, "Master," and Penn Bond are today the same top quality lubricants that thousands of progressive tractor farmers have preferred for the past seventeen years. In this family of motor oils we have the correct type and grade to meet the needs of heavy duty service on Illinois farms.

Have your Blue Seal Serviceman deliver your requirements on his next regular call.

In addition to motor oils, check your supply of greases. Be sure that you have ample Luco Lube, Aluminate Gun, Aluminate Cup, Hi-Temp Bearing, Harvester, and other Blue Seal grease specialties.

Get Your Tractor in Shape Early

Have you checked over your tractor? Does it need an over-haul, or just a a few replacement parts? How are your spark plugs?

Get your bid in early. Most repair shops are heavily loaded with work — and they're short-handed too.

And another thing — use Blue Seal Anti-Rust on machinery after each operation during Spring work. Anti-Rust protects plowshares, disks, grain drills, cultivator shovels, chains, V-type pulleys, and many other parts of machinery whose effectiveness is destroyed by rust. See your Blue Seal Serviceman today for special introductory package.

For further help on these timely suggestions, see your Blue Seal Petroleum Serviceman or contact your local service company office.

THAT EXTRA EFFORT

. . . . is producing the food, guns, ships, planes, tanks, and supplies to bring about an early victory.

As farmers approach another planting season they do so with quiet determination and a stern realization that their job of continuing to produce food on a scale unequaled in the history of our country is a task that can only be accomplished by an all-out effort in the truest sense of the term. Intelligent planning — long hours for months on end — sacrifice — hard manual labor — these are the sinews of production — they are the price of victory — the price we must pay to bring about the final and decisive defeat of the Axis at the earliest possible moment.

Shortages in labor, equipment, and supplies, uncertainties of weather, government programs and prices are obstacles which are very real to farmers. Although they are perplexed and sometimes discouraged at seemingly needless barriers thrown in their way, they face their task with the spirit and patriotism traditional of American farmers, knowing that victory is the great goal.

In this they ask and expect that every other group in the nation do likewise in prosecuting the war on the home front to the fullest possible extent — giving that EXTRA EFFORT which may mean the difference between an early victory or one that is delayed at the cost of many American lives.

These things we will do. As individuals, we will work for every wartime objective, without stint or delay or shirking. As an organization, we will promote and fight for those principles, policies, and practical programs that make it possible to achieve a maximum production.

THAT EXTRA EFFORT

. . . . is producing the food, guns, ships, planes, tanks, and supplies to bring about an early victory.

As farmers approach another planting season they do so with quiet determination and a stern realization that their job of continuing to produce food on a scale unequaled in the history of our country is a task that can only be accomplished by an all-out effort in the truest sense of the term. Intelligent planning — long hours for months on end — sacrifice — hard manual labor — these are the sinews of production — they are the price of victory — the price we must pay to bring about the final and decisive defeat of the Axis at the earliest possible moment.

Shortages in labor, equipment, and supplies, uncertainties of weather, government programs and prices are obstacles which are very real to farmers. Although they are perplexed and sometimes discouraged at seemingly needless barriers thrown in their way, they face their task with the spirit and patriotism traditional of American farmers, knowing that victory is the great goal.

In this they ask and expect that every other group in the nation do likewise in prosecuting the war on the home front to the fullest possible extent — giving that EXTRA EFFORT which may mean the difference between an early victory or one that is delayed at the cost of many American lives.

These things we will do. As individuals, we will work for every wartime objective, without stint or delay or shirking. As an organization, we will promote and fight for those principles, policies, and practical programs that make it possible to achieve a maximum production.

Announcing
A NEW LIABILITY INSURANCE POLICY!

FOR FARM BUREAU MEMBERS ONLY

FARMERS EMPLOYERS LIABILITY — Protection up to $5,000 for claims made against the insured by injured farm laborers, including domestic servants. Up to $10,000 where more than one is injured in the same accident. Higher limits if desired.

GENERAL LIABILITY — Protects against claims of persons not employed by the insured who sustain injury by reason of the insured's negligence. Covers all farming operations including the use of farm tractors, personal activities of the insured and liability for injuries sustained around the home of the insured. Limits are $5,000 one person — $10,000 one accident. Property damage limits $2,000. Higher limits if desired. (A typical farm accident covered by this policy is an animal getting out on the highway and injuring some person or damaging a motor vehicle.)

MEDICAL EXPENSE COVERAGE — Policy pays to or for injured employees reasonable and necessary medical, hospital, dental, surgical, ambulance, registered nurse service and medical supplies up to $250.00 for one accident and up to $500.00 in case of death of the employee. This coverage also available to certain members of the family, for a small extra charge.

POLICY NON-ASSESSABLE

DON'T TAKE CHANCES ANY LONGER

FOR FULL PARTICULARS ON COST SEE SPECIAL AGENT IN YOUR COMMUNITY OR GENERAL AGENT AT COUNTY FARM BUREAU OFFICE OR WRITE

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and education interests of the farmers of Illinois and the Nation, and to develop agriculture.

MARCH, 1944 **VOLUME 22 - NUMBER 3**

Here's A Way To Cooperate

THE thousands of farmers who have joined the ranks of organized agriculture recently have done so, presumably, because they realize the need for organized effort.

There is no field in which organized effort can accomplish more than in the marketing of farm products. Farm Bureau offers you many valuable services.

Do you feed cattle and hogs, and perhaps some sheep? The Illinois Agricultural Association sponsors a statewide program of cooperative livestock marketing. At its foundation are the livestock marketing committees in each county. They cooperate with a field staff in holding educational programs. Get acquainted with them. Attend the meetings they sponsor.

Farmer-owned Producer agencies are located at terminal markets to sell your livestock, and the Illinois Livestock Marketing Association operates seven concentration points in the central part of the state.

In grain marketing, 107 farmer-owned cooperative elevators are members of the Illinois Grain Corporation, your statewide cooperative agency.

In milk marketing, there are 17 local bargaining associations and six cooperative dairies. In cream marketing, there are the ten Producers' Creameries manufacturing butter, dried milk and cheese.

For wool marketing, there is the Illinois Wool Marketing Association.

In the field of fruit and vegetable marketing, there is the Illinois Fruit Growers Exchange at Carbondale, and its subsidiary which deals in orchard supplies.

All of these concerns are owned and directed by farmers. They are affiliated with Farm Bureau. When you patronize them, you are not only helping yourself but you are helping the cause of cooperative marketing in general.

It can be shown that every one of them has been responsible for definite gains to producers — in getting better prices, in acting as a "yardstick" to regulate market abuses or undesirable practices, and in giving farmers greater bargaining power. Taken together, they have benefited farmers in Illinois to the extent of many thousands of dollars.

Of any one of them, it can be said, "This is YOUR marketing agency. It works for you. Your patronage of it means that you appreciate the need of farmers standing together."

Greater volume of livestock, grain, milk and cream, wool, fruits and vegetables, passing to market through cooperative channels, will spell greater influence for farmers in determining the prices they receive.

One of the best things that a Farm Bureau member, old or new, can do is to use his own marketing agencies.

Get detailed information on the cooperative marketing program for your products at your county Farm Bureau office.

PLANS SET ON FARM LABOR

THE 1944 farm labor program in Illinois is ready to move ahead at full speed, according to H. P. Rusk, Director of the Agricultural Extension Service, University of Illinois. The Farm Labor Supply Appropriation Act 1944, passed Feb. 14, provides funds to continue the farm labor program started April 29, 1943, by the passage of Public Law 45.

The new legislation provides that funds shall be apportioned among the several states on the basis of need to be expended by the agricultural extension services of the land-grant colleges in such states.

It is anticipated that ample funds will be allotted to Illinois to carry on a vigorous farm labor recruitment and placement program in 1944, Director Rusk said.

The most serious farm labor problem is the shortage of experienced year-round farm hands. Latest reports from farm advisers indicate unfilled orders for 796 married men and 525 single men with only 291 married men available and 78 single men available.

A vigorous recruitment campaign will be launched immediately in an attempt to find men to fill these positions. All men with agricultural background and experience now in nonessential industries are urged by Director Rusk to apply to farm advisers for farm work.

There will not be enough experienced workers to fill all the year-round jobs open this spring as thousands of farm boys volunteered for induction into the armed forces since the end of the 1943 crop season.

The following staff will be responsible for the farm labor program at the state level: P. E. Johnston, state supervisor; W. D. Murphy, assistant state supervisor; Mrs. Madge L. Little, assistant state supervisor, Women's Land Army; Frank Gingrich, assistant state supervisor, Victory Farm Volunteers. H. W. Gilbert will serve as district supervisor in central Illinois, E. H. Regnier in western Illinois, and T. L. Davis in the southern part of the state.

District meetings attended by farm advisers and farm labor assistants were held throughout Illinois during February to make plans for the 1944 farm labor program and agree on county budgets to provide funds for the employment of field and office personnel to carry on the recruitment and placement of farm workers under the supervision of the county farm adviser.

It is estimated that 102,000 farm jobs will be filled in Illinois this year as compared with 76,147 jobs filled during the last eight months of 1943. Since there are less men available this year than last year, it is expected that over 50,000 of the farm jobs will have to be filled by women and youth.

All women who are placed on farm jobs will be known as members of the Women's Land Army. All boys and girls under 18 years of age who do farm work will be Victory Farm Volunteers. A majority of these workers will come from our towns and cities.

Plans are being developed to place more than 1,000 town and city boys on farms by arranging with farmers for weekend trials for the boys during March and April.

Such tryouts will give the farmers and the boys a chance to get acquainted and find out whether or not they can work together. A new College of Agriculture publication, Circular 571, "Mr. Farmer, Can You Use This Boy?" explains this Victory Farm Volunteer program and also gives some valuable hints on how to use inexperienced labor for best results. A total of 40,000 farm jobs will probably be done by boys and girls this year.

Through the distribution of 200,000 copies of a new pamphlet, "More Food With Less Labor," farmers will be given help on where to find workers and how to keep them. Emphasis is placed upon more efficient use of labor available by training inexperienced workers, by more neighborhood cooperation, by the use of labor-saving devices, and by job simplification.

The purpose for which farm labor funds may be expended includes, in part: (1) the recruiting, placement, and training of workers; (2) transportation and housing of workers to meet emergencies; (3) operation of labor supply centers; (4) employment of field and office personnel; (5) supplying information to Selective Service Boards regarding agricultural registrants.

The act also provides that if the Administrator finds that there is inadequate farm labor in any area, the Administrator and the agricultural extension service of the land-grant college in the respective states are authorized to negotiate directly with the War Department for the utilization of prisoners of war and the emergency use of members of military services for the production and harvesting of agricultural commodities.

The War Food Administration will administer the farm labor act at the national level and will be responsible for the recruitment of foreign workers and for the transportation and housing of foreign and interstate workers.

American Red Cross Drive Is Launched

Because of outstanding past performance, the American farmer and the rural community are being counted on to maintain their record in the 1944 Red Cross War Fund drive which opened March 1.

Rural America, represented by 2902 Red Cross chapters communities of less than 10,000 population, raised 128.5 per cent of its 1943 War Fund quota, Red Cross national headquarters revealed. Impressive figures, just released, disclose that rural sections also are giving much of their time to Red Cross service.

Brig. Gen. Earl Maxwell

Sparta Young Man is Made Brigadier General

THERE are quite a few folks around Sparta in Randolph county who can now say they personally know a general. He is Brigadier General Earl Maxwell who grew up on a farm four miles south of Sparta and graduated from high school there in 1922.

News that a home-town boy had just been elevated to this high military rank was told in a banner headline across the front page of the Sparta News Plaindealer when the announcement came from the War Department recently.

General Maxwell has held the rank of colonel since last fall. He is now chief surgeon at headquarters for U. S. Army forces in the South Pacific and senior flight surgeon for the South Pacific area. At last reports he was located in New Caledonia.

The new general is the son of R. J. Maxwell, Randolph County Farm Bureau member, who retired several years ago, and a brother of J. Rupert Maxwell, former truck service man for the Randolph County Service Company. Rupert has been a Farm Bureau member since 1926 and now farms 750 acres of land. General Maxwell's wife, the former Miss Margaret Hopkins, is living in Sparta with her two children, Robert, 10, and Ann, 8.

When the war started, General Maxwell was a major in the medical corps at Savannah, Ga. He was sent overseas about 18 months ago and in March, 1942, was promoted to lieutenant colonel. Last fall he became a colonel. He received his medical degree at Washington University in St. Louis and shortly afterward he entered the Army as a first lieutenant at Ft. Sam Houston, Tex. In the

next year he was graduated from the Army Medical School at Washington, D. C.; in 1930 from the Medical Field Service School at Carlisle Barracks, Pa., and in 1931 from the School of Aviation Medicine at Randolph Field, Tex., qualifying as a flight surgeon.

Since going overseas, General Maxwell has had charge of a number of hospitals in the fighting zone and base hospitals on the South Pacific Islands.

According to the Sparta News Plaindealer, General Maxwell is the first native son to reach the rank of general, although Brig. Gen. Harry J. Collins, now in charge of the Rainbow Division at Camp Gruber, Okla., gives his home address as Sparta, having lived there for several years before entering the Army at the start of World War I.

Myers Succeeds Whitman As Adams County Adviser

Sterling Myers, of the Adams Soil Conservation District, and a graduate of the U. of I. College of Agriculture in 1931, has been hired as farm adviser in Adams county. He succeeds George B. Whitman who is now employed with the Illinois Chain Store Council.

The new farm adviser is the son of C. F. Myers, who lives east of Augusta in Hancock county, and who for a number of years has been active in promoting the Augusta Live Stock Show.

Myers has long been interested in soil conservation programs supervising CCC forces in such projects and more recently working with the Adams district.

HONOR AGENTS AT ROUND-UP

EVERINGHAM HEADS CLIPPER CLUB

WHEN the agents of the three insurance companies of the Illinois Agricultural Association met at the Hotel Sherman Feb. 22-23 for their annual Round-Up sales conference, the meeting was unexpectedly turned into a celebration of the outstanding record of Country Life Insurance Company. This company is the Farm Bureau's life insurance company and has made life insurance history by attaining $200,000,000 of life insurance in force in less than 15 years.

The three companies making up the IAA Insurance Service are the Farmers Mutual Reinsurance Company, the Illinois Agricultural Mutual Insurance Company, and Country Life.

Recognition was given to G. O. Chenoweth, Pontiac, Livingston county; D. P. Robinson, Cambridge, Henry county; L. R. Welk, Peoria; and Homer Hitchcock of Rockford, Winnebago county, for the outstanding service they have given on the agency force of Country Life. Each of these men has represented the company since it started and has attained his annual quota of new business. They were presented with rings bearing the company's seal.

Pins were presented to C. R. Hays, Normal, McLean county, Clifton Stoops, Monmouth, Warren county, and Charles Homann, Paris, Edgar county, in recognition of ten successive years of outstanding service.

At the banquet held the evening of Feb. 22, presidents of the two insurance honor clubs, Ray Brown, Joliet, Will county, and A. C. Everingham, Toledo, Cumberland county, were installed.

A drive for new life insurance business had been staged during the first 21 days of February prior to the meeting and the effort had been dedicated to Manager Dave Mieher. The total production during the 21-day period of the drive amounted to better than $3,800,000 of new business. A scroll was presented to Mieher bearing the signatures of all the agents participating in the drive. A silver punch bowl was also presented to Mieher by President Earl C. Smith on behalf of the board of directors, in appreciation of his leadership.

Donald Kirkpatrick and Earl C. Smith, legal counsel and president, respectively, of the IAA, give a hand to A. C. Everingham, new president of the Illinois Agricultural Mutual's Clippers' Club, as he tries on the new hat presented to him by fellow agents of his district.

J. E. Stine, Carmi, White county, welcomes Ray Brown, Joliet, Will county, new president of Country Life's General Agents' Club.

Highlight of the Round-Up banquet was the scholarly and thought-provoking Washington Day address of Donald Kirkpatrick, legal counsel of the IAA and ABFF. Quoting from the many writings of Washington and particularly Washington's farewell address on leaving office, Kirkpatrick declared, "It is time that we become fundamentalists. It is time for us to set our own house in order. It is time to read again the farewell address of Washington, America's prophet, America's seer, America's oracle.

"The question in everyone's mind is what we can do to speed the winning of this terrible war. . . I am wondering as to whether or not the reading and the re-reading of the Farewell Address by our elder statesmen, by the members of Congress, yes, and even the Commander-in-Chief himself, might not be helpful. I am sure that if the advice of the address were followed it would be helpful."

On post-war adjustment Kirkpatrick also recommended Washington's message. "I am for a cooling off period long enough to allow our elder statesmen to read and follow the advice of the Farewell message and in this respect I do not want you to think that I am speaking facetiously. Some world order will evolve. Some world order must evolve."

Donald McAllister Leaves To Manage Corporate Farm

Donald G. McAllister resigned his position as farm adviser at De Kalb county effective March 1 to take a job as farm superintendent for the Seabrook Corporation of Bridgeton, N. J., who can and process the truck crops from some 30,000 acres.

McAllister has been employed in De Kalb county for four years as assistant farm adviser and farm adviser.

Carroll Mummert, now assistant farm adviser in De Kalb county, will take over McAllister's work as acting farm adviser. Mummert has been working as assistant since last summer, coming from Big Rock, where he taught agriculture for seven years.

Exterior paint may be slightly poorer in quality after present stocks are exhausted. The new paint will use more thinner and linseed, by government specification.

Farm and Home Week visitors found their cars buried under snow when they came from the last day sessions. Many were snowbound until Friday.

CAN '43 PRODUCTION BE MATCHED IN '44?

FARMERS SEEK WAYS OF GETTING MOST OUT OF ALL RESOURCES

CAN the farmer equal his 1943 production record in 1944?

His machinery is a year older, which increases the liability of breakdowns, and although some moves have been made toward easing the machinery and repair parts situation, the problem isn't licked yet.

Labor will be harder to get. In addition, some of the older men with years of "know how" experience worked last year although they were past retirement age. Some of them tried to do too much and they were forced to retire this year. Whether production drops on these farms will depend on the efficiency of the operator who takes over the land.

But there's one bright spot in this picture which helps to whittle the big problems down to man-size proportions. That's the fact that farmers don't quit when the going gets tough. They have proved this to be true time after time. Look at the record of 1943.

These were some of the things folks talked about at Farm and Home Week in February. That's what brought most of the 2329 visitors to the 43rd annual sessions — they wanted all the pointers they could get to help them do the best job in 1944. They know it's going to take a lot of figuring to meet the staggering production goals, and that in spite of the most carefully laid plans, weather will tip the scales one way or another.

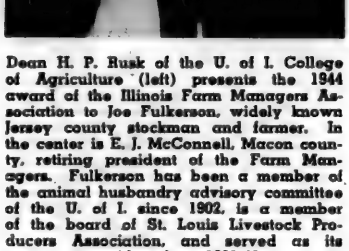
Speaking of the weather, the 11-inch record snowfall and blizzard that kept a number of Farm and Home week visitors snowbound in Champaign-Urbana after the final sessions Thursday was a mighty welcome sight in spite of the stalled cars and wet feet. As one said, "A person ought to know better than to come to Farm and Home Week without overshoes." When some of them had left home they had been doing spring plowing and some had been carrying water for their stock because wells had gone dry.

One of the many questions brought to the front at Urbana was whether the soybean goal would be met in 1944. R. F. Fuelleman, assistant professor of crop production, suggested that if every acre of soybeans in the state could be made to yield one extra bushel of beans in 1944, the state's total yield would be increased by approximately 4 million bushels.

With a support price of $1.94 announced for 1944 on beans there is a reluctance on the part of some feeders to increase bean acreage in view of the difficulty they had getting bean meal last year. Others feel that the discount rates on beans are unfair.

During the last month a shortage of soybeans developed on the markets in Illinois and processors were hard pressed to find beans. The price was upped 6 cents a bushel by processors, making No. 2 yellow beans of 14 per cent moisture $1.86 to the farmer.

The shortage is believed to have developed in Illinois because so many



Dean H. P. Rusk of the U. of I. College of Agriculture (left) presents the 1944 award of the Illinois Farm Managers Association to Joe Fulkerson, widely known Jersey county stockman and farmer. In the center is E. J. McConnell, Macon county, retiring president of the Farm Managers. Fulkerson has been a member of the animal husbandry advisory committee of the U. of I. since 1902, is a member of the board of St. Louis Livestock Producers Association, and served as its president from 1928-40.

Participants in a panel discussion at the organization dinner meeting during Farm and Home Week, left to right, C. L. Mast, Jr., IAA director of publicity; August Eggerding, IAA board member; L. B. Hornbeck, and John C. Moore, assistant directors of organization; Otto Steffey, IAA board member; Harry Claar, assistant director of organization, and W. P. Sandiford, IAA director of sales service.

By CRESTON FOSTER

beans of the 1943 crop were shipped out of the state for processing.

Expectations of larger soybean yields in 1945 are pinned on a new variety of soybeans for Illinois, the Lincoln. C. M. Woodworth, professor of plant genetics, reported that the Lincoln variety is being increased for wide distribution in 1945. Trials during the past five years indicate important yield increases.

J. L. Trisler, Vermilion county, winner in the state soybean 10-acre contest, had an average yield of 39.36 bushels per acre at a cost of 59 cents per bushel. His beans were grown on good black land with no special soil treatment other than fertilizer with drilling. Soybeans on this land followed corn after sweet clover.

Corn King Clarke M. Howard, Tazewell county, had a yield of 136.21 bushels per acre in the 10-acre corn contest produced at a cost of 22 cents per bushel. The corn was planted May 20. Manure was applied last winter, but no commercial fertilizer had been added to the land. The field was on a rotation of oats, corn, clover. Corn was drilled in rows 36 inches apart with one foot between the hills. It was cultivated twice.

It was interesting to note in the 10-acre corn contest results that many 100-bushel yields were obtained from corn planted June 1 to 7 and some as late as June 13 and 14. J. H. Bigger, State Natural History Survey, pointed out that delayed planting proved its value as a corn borer control measure in 1943.

Prof. G. H. Dungan gave some valuable information on tests of commercial hybrid corn conducted in 1943 in six locations of the state. Complete report of these tests can be obtained by writing the College of Agriculture at Urbana for Bulletin 500.

Prof. Benjamin Koehler, chief crop pathology, reported that Arasan, a superior and entirely new seed corn disinfectant, has been placed on the market and is highly recommended by agricultural experiment stations. Average increase in yield of 8.5 bushels per acre was recorded from using Arasan in the last two years.

Koehler also stressed treatment of spring oats, especially the older varieties with new improved Ceresan. Treat now, he said, or at least two weeks before sowing with ¼ ounce per bushel. If treatment is delayed until shortly before sowing, ½ ounce per bushel will be needed.

Koehler recommended the new smut and rust resistant oat varieties, Marion, Tama and Vicland. "You can treat the older varieties to prevent smut, but you can't do anything about rust," he pointed out. These new varieties practically eliminate the loss from rust.

"There is no danger of producing too much oats," he said. "Every pound is needed and we should make every acre do its best." At the present time the price situation on oats is very favorable.

Livestock producers and feeders were told by Prof. L. F. Stice, agricultural economics department, that present livestock production threatens to outrun feed supplies.

Price relationships between hogs and corn is less favorable than at any time since 1941, but is not below the average, he said, and a reduction in hog numbers is expected.

Conversation with producers at Urbana during the sessions indicated that their experience with the marketing jam in the last few months is likely to cause some curtailment in 1944 pig production. Those who have expanded considerably during the last few years are expected to cut down, but the large producers and feeders who have been maintaining about the same level will not change their plans in 1944. The latter believe that the liquidation may go far enough to bring the markets to the $14.75 ceiling in October, 1944, when the floor will be $12.50.

Figures presented by R. C. Ashby, professor of livestock marketing, for drylot feeding of balanced rations show that in a hog's gain from 180 to 200 pounds, the feed cost to produce a 100 pounds of pork increased 22 cents, but the overhead cost was reduced 44 cents, leaving a net advantage of 22 cents hundredweight.

In the next 40 pounds, from 200 to 240, there was a net disadvantage of 45 cents per 100 pounds, but in going from 240 to 280 pounds, the net dis-

(Continued on page 22)

Paul G. Hoffman, chairman of the Committee for Economic Development and president of the Studebaker Corporation who spoke at one of the Farm and Home Week general sessions, chats with Prof. Robert R. Hudelson, assistant dean of the College of Agriculture, left, and Prof. W. L. Burlison, head of the department of agronomy.

Here are the four champions of the Farm and Home Week grain show. Left to right: Clark M. Howard, Tazewell county, "Corn king", got 136.21 bushels in 10-acre corn yield contest; Jesse Riley, Macon, won the Pillsbury award for wheat with a yield of 34 bushels; J. L. Trisler, Vermilion, "soybean king", got 39.36 bushels in 10-acre contest, and H. L. Stiegelmeier, McLean, won the Pillsbury award with Richland beans which ran 40 bushels per acre. (Courier Photo.)

Voting Records *on Farm Issues*

CHECK IAA LEGISLATIVE ANALYSIS BEFORE VOTING

IN ACCORDANCE with action taken by the voting delegates of Illinois Agricultural Association at an annual meeting several years ago, the Board of Directors has authorized and directed the publication of the following statement, together with the records of the members of the General Assembly as determined by their votes and general attitude on matters of important legislation directly affecting farmers, as supported or opposed by the Illinois Agricultural Association. In the 1943 regular session, the Association did not sponsor an ambitious program but endeavored to avoid highly controversial issues. However, there were numerous legislative matters of considerable interest to agriculture upon which the Association took a position. The Association regarded the Gateway Amendment to the Constitution and the companion Party Circle bills as the most important agricultural legislation in the session. The Association believes the adoption of these measures is necessary and fundamental if needed changes in our State Constitution are to be made. The Association informed members of the legislature of its position on these measures and stressed their importance. The voting record of downstate legislators on the amendment issue was given in the August 1943 issue of the Record. In view of the fundamental importance of the Gateway Amendment and the so-called Party circle bills, this report is weighted heavily by the vote and attitude of members on these measures.

Basis of Report

This report is based entirely upon the legislator's record and attitude as observed in Springfield. The Association has not given and obviously cannot be aware of, or give consideration to, the record or attitude upon local problems which may affect the voters' decision.

The first column of the report tabulated below lists the number of regular sessions of the General Assembly during which the respective members have served. The second column carries the legislative record of the legislators as determined by their votes on agricultural legislation during the last regular session, together with their general attitude on legislation supported or opposed by the Illinois Agricultural Association throughout their terms of service.

Ratings Used

A member, to receive a rating of "Excellent" must have not only a satisfactory voting record, but his general attitude throughout his legislative service must have been generally recognized as actively supporting the Illinois Agricultural Association's legislative program. To achieve an "Excellent" record, a member must also have served more than one two-year legislative period and must have taken a favorable position on highly controversial legislative proposals.

First term members, to secure a "Very Good" rating, must have a satisfactory voting record and must have actively supported the Illinois Agricultural Association's legislative program. This rating is the highest given any first term member.

In compliance with the directions given by the delegates of the Illinois Agricultural Association, members of the Association are advised that all members of the present General Assembly seeking reelection who are rated as "Excellent" or "Very Good" are entitled to support by all members and friends of the Illinois Agricultural Association in the coming primary and general elections.

The records of members rated as "Good" are worthy of careful consideration in comparison with the qualifications of new candidates seeking office.

VOTE IN THE PRIMARIES APRIL 11

In line with its long-established policy, the Illinois Agricultural Association publishes herewith the voting records of members of Congress and of the Illinois General Assembly.

Many of these legislators are candidates for office in the primaries on April 11. The Association urges its members to study carefully the information published in this issue of the RECORD and to actively support for nomination and election those representatives and Congressmen who, by their records, have proved themselves worthy of confidence of farmers.

Farm people represent only a minority of the population. Only through their united action at the polls, wherein they place the interests of agriculture above parties and personalities, can they hope to maintain fair representation in lawmaking bodies.

Record of our Legislators in Washington

PROBABLY the most far-reaching and serious issue of domestic policy considered by the present Congress had to do with the so-called roll-back consumer food subsidies. The Association did not believe these subsidies to be warranted or justified and consistently opposed them. The ban on the continuation of these consumer food subsidies was carried in a bill to continue the Commodity Credit Corporation. In addition to continuing the Commodity Credit Corporation, this bill prohibited subsidies to consumers of agricultural commodities and provided for the termination of the subsidy programs now in effect. The bill permitted and proposed to continue the price support programs. The Association and the American Farm Bureau Federation supported this measure. The opposition to consumer food subsidies was on the ground that these subsidies were unnecessary and placed a huge burden on the Federal treasury at a time when consumers generally were able to pay their food bills. The Association was opposed to passing these costs on to future generations. Further, it pointed out that subsidies would not increase or tend to increase production of needed agricultural products. The bill passed the House by a vote of 278 to 117 and passed the Senate by a vote of 43 to 28. It was vetoed by the President and his veto was sustained. The vote of members of Congress from Illinois upon this subsidy measure is given below.

Another far-reaching measure con-

sidered by the present Congress was the Smith-Connally Act or anti-strike bill. This legislation, which was supported by the Association and the American Farm Bureau Federation, provided a thirty day cooling off period before strikes were voted, provided criminal penalties for strikes in government operated plants and forbade labor unions to make political contributions. The bill passed the House and Senate and was vetoed by the President. The President's veto was overridden and the measure became law. The vote of the members of Congress from Illinois upon the proposal to override the President's veto is given below.

Upon each of these measures a "Yea" vote is in support of the Association's position and a "Nay" vote is against the Association's position. The Illinois vote follows:

☆ ☆ How Illinois Congressmen Voted

	Proposal to Ban Subsidies	Smith-Connally Anti-Strike Bill
Senator Lucas	Nay	N.V.
Senator Brooks	N.V.	Yea
Congressional District No.		
1 Dawson	Nay	Nay
2 Rowan	Nay	Nay
3 Busbey	Yea	Nay
4 Gorski	Nay	Nay
5 Sabath	Nay	Nay
6 O'Brien	Nay	Nay
7 Schuetz (Deceased)	Nay	Nay
8 Gordon	Nay	Nay
9 Dewey	G.P.	Yea
10 Church	Yea	Yea
11 Reed	Yea	Nay
12 Mason	P.F.	Yea
13 Allen	Yea	P.F.
14 Johnson, A. J.	Yea	Yea
15 Chiperfield	Yea	Yea
16 Dirksen	P.F.	Yea
17 Arends	Yea	Yea
18 Sumner	Yea	Yea
19 Wheat (Deceased)	Yea	G.P.
20 Simpson	Yea	Yea
21 Howell	Yea	Yea
22 Johnson, C. D.	Yea	G.P.
23 Vursell	Yea	Yea
24 Heidinger	Yea	G.P
25 Bishop	Yea	Nay
A.L. Day	Yea	Nay

The abbreviation "N.V." means not voting; the abbreviation "G.P." means general pair, that is, position not made known, and the abbreviation "P.F." means paired for, that is, in support of the measure.

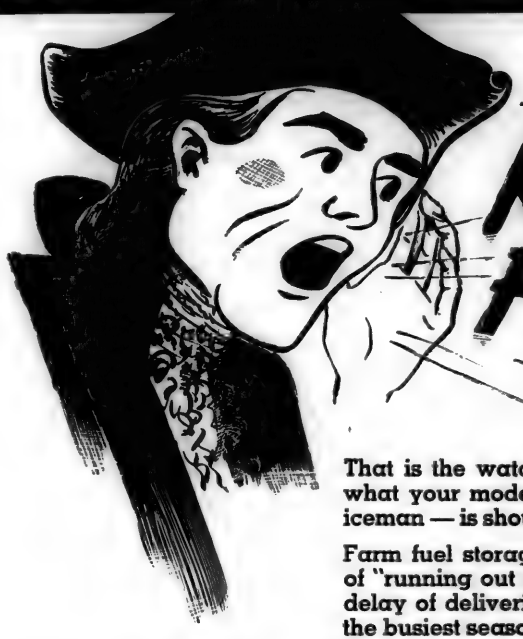
If Paul Revere Were Your Serviceman He Would Ride Through the Country Shouting—



KEEP FILLED!

That is the watchword of modern American farmers. That is what your modern Paul Revere — your own Blue Seal Serviceman — is shouting.

Farm fuel storage should be kept full to avoid the possibility of "running out of gas." Transportation difficulties may cause delay of deliveries and a consequent loss of valuable time at the busiest season.

Provide extra storage facilities for fuels and arrange with your Blue Seal Serviceman to keep your reserve tanks filled on his regular route calls.

Specify "MAGIC ALADDIN" or "KLEER MOTOR" gasoline or "T-40" tractor fuel, whichever your needs require. Each is "tops" in its particular field.

BUILD A RESERVE OF MOTOR OIL

Many of the conditions affecting fuels also apply to motor oil. Be sure you have enough on hand to carry you through the season. "BLUE SEAL," "MASTER," and "PENN BOND" are today the same top quality lubricants that tractor farmers have preferred for years. In this family of motor oils we have the correct type and grade to meet the needs of heavy duty service on Illinois farms.

In addition to motor oils, check your supply of greases. Be sure that you have ample LUCO LUBE, ALUMINATE GUN, ALUMINATE CUP, HI-TEMP BEARING, HARVESTER, and other Blue Seal grease specialties.

BLUE SEAL ANTI-RUST

This is a new product which will save you hours of labor in conditioning your equipment and save many dollars in repair and replacement of machinery. Use Blue Seal Anti-Rust on machinery after each operation during Spring work. Anti-Rust protects plowshares, disks, grain drills, cultivator shovels, chains, V-type pulleys, and many other parts of machinery whose effectiveness is destroyed by rust. See your Blue Seal Serviceman today for special introductory package.

ILLINOIS FARM SUPPLY COMPANY

608 SOUTH DEARBORN ST., CHICAGO 5, ILLINOIS

The FARM FRONT ROUNDUP

DRAFT ORDER — Draft boards Feb. 17 were ordered to review immediately cases of deferred farm workers to determine if they are still eligible for deferment. Local boards are expected to first go through the list of registrants in 2-C, the classification for men deferred solely because of farm work. Next to be reviewed by the boards is class 3-C which consists of men deferred not only for agriculture but also because of having dependents. This classification is being changed to 2-C because dependency is no longer a ground for deferment. Those in 3-C who can still qualify for a farm deferment will be put in 2-C.

USDA county war boards may request the deferment of registrants whom the war board considers necessary to and regularly engaged in agricultural occupations or endeavors essential to the war effort. Also, the war boards may appeal from local board decisions denying registrants classifications in Class II-C in cases in which the war board has filed a request for the deferment of a registrant. Such appeals would be made to the Selective Service appeal boards.

TRACTOR TIRES — Farmers can no longer get tires to convert tractors and other steel-tired farm equipment to rubber, according to an announcement by the OPA.

TIRE ELIGIBILITY — Purpose for which a person drives his automobile, rather than the mileage he drives in a given month, will be the determining factor used by ration boards in issuing purchase certificates for passenger tires. Farmers transporting farm products and supplies are entitled to consideration by ration boards for grade I tires even if they drive less than 601 miles per month, according to this new ruling. The tire situation is tight and quotas are extremely limited, OPA reports.

TIRE EXCHANGE — Essential truck operators in areas where tire recapping facilities are inadequate or unavailable may now obtain a ration certificate permitting them to exchange with dealers a tire which needs recapping for a used tire or a new "war" tire, OPA announces. A "war" tire is one made from reclaimed rubber.

PORK SALES — WFA has extended until March 17 the period in which farmers can slaughter hogs without a permit or license and deliver any quantity of pork to persons not living on the farm. Farmers still have to collect ration points for the pork sold. Twelve red stamps in War Ration Book Four with a total value of 120 points can be used by consumers to buy pork or other meat from farmers.

FEED GRAIN MAXIMUMS — OPA has established maximum prices of oats, barley, and grain sorghums at the levels of the prices set by the temporary freeze order which was in effect Dec. 6, 1943, to Feb. 4, 1944.

MACHINERY RATIONING — WFA has removed moldboard plows, one way disc plows or tillers, cultivators, stationary threshers, and stationary pea and bean threshers from the list of machinery items over which the government maintains distribution control. The order leaves the distribution of items named entirely in the hands of manufacturers.

CHEESE PROGRAM — Effective Feb. 1, the WFA issued an order restricting the total production in 1944 of all types of cheese other than cheddar, cottage, pot, and bakers' to the quantity produced in 1942. So far as war use is concerned cheddar is the most valuable cheese type, WFA officials explained.

BUTTER PROGRAM — Production of butter during 1944 is expected to be sufficient to allow each U.S. civilian slightly more than a pound of butter a month, the WFA announces. Civilians will get about 76 out of every 100 pounds of farm and creamery butter estimated as available for use in 1944. U.S. military and war services have been allocated almost 18 out of every 100 pounds. Five pounds out of every 100 have been tentatively allocated for lend-lease.

CANNING SUGAR — Housewives who wish to can early fruit may now obtain five pounds of sugar from their retailers for this purpose by using sugar stamp No. 40 in War Ration Book Four, the OPA announced. The stamp will be valid from Feb. 1, 1944, through Feb. 28, 1945. Additional amounts will be made available later on application to local boards.

VEGETABLE PRICES — WFA has announced a price support program for vegetables grown for canning during the 1944 season to apply to growers who contract with canners certified by state agricultural committees. Price schedule per ton follows: green peas, $71 to $91 with Illinois and southeast Wisconsin $85; tomatoes, $24 to $28, with all central states $24; sweet corn, $17 to $28, with all central states $17; beets, $19 in all states except East and West Coast; lima beans, $95 to $120, with all central states $95; beans, $80 to $110, central states $80.

TRACTOR FUEL APPLICATIONS — Under a new plan this year farmers are filing application for their tractor fuel needs for 1944 with county AAA committees. These applications are to be approved by the county committees and turned over to local ration boards for making allotments. Maximum allotments are 9 gallons per cultivated acre for the year if the farmer has a combine or corn picker, and 6 gallons if he does not have these machines, according to OPA. These are the general rules subject to interpretation and application by the various district OPA offices in the state.

Framework of 1944 Farm Price Structure Shown by Support Rates

WAR Food Administrator Marvin Jones has given farmers some idea of what farm prices will be in 1944 through his announcement of proposed government support prices for various commodities in the coming year.

Jones pointed out in making his announcement that the proposal is subject to action by the Congress making provisions for carrying out the support price program, and will not be effective unless provision is made.

It is planned to carry out the support price programs through loans, purchases of commodities for military, lend-lease, and other governmental uses, and, for some commodities, direct payments to farmers or processors.

Here are the support prices on the major crops of the Illinois area:

CORN — 85 per cent of the parity price of corn as of Oct. 1, 1944. Support price on the 1943 crop ranges from 81 to 97 cents in the commercial corn area. The 1944 price is expected to be higher because parity probably will be higher in October, 1944, than it was in October, 1943.

WHEAT — 85 per cent of parity as of July 1, 1944. The 1943 support price averages $1.23 a bushel at the farm. As in the case of corn the 1944 support price is expected to be higher because of the rise in parity.

SOYBEANS — $1.94 a bushel for green and yellow beans grading No. 2 or better with a 14 per cent moisture content. The 1943 support price was $1.80.

EGGS — 90 per cent of parity, but in no event less than specified prices which will be announced from time to time, and which will reflect not less than a U.S. average farm price of 30 cents per dozen in the spring and early summer, and an annual average U.S. farm price of 34 cents.

CHICKENS AND TURKEYS — 90 per cent of parity. The support price does not apply to broilers and to chickens weighing less than three pounds live weight. Specified prices to be announced at a later date, together with methods of support.

MILK & BUTTERFAT — During period ending Dec. 31, 1944, WFA will support returns to producers for milk and butterfat at levels of not less than 30 cents per 100 for whole milk or 4 cents a pound butterfat above the returns which will be reflected by the following prices for butter, cheese, and skim milk powder:

Butter, U.S. Grade A or 92 score, 46 cents a pound, Chicago basis.

American Cheddar cheese — U.S. Grade A or No. 1, 27 cents a pound, Plymouth, Wis., basis.

Skim Milk Powder, U.S. Extra Grade, spray 14½ cents and roller 12½ cents a pound, f.o.b. midwest plant basis.

HOGS — Good to choice butcher hogs of designated weights, at $13.75, Chicago basis, until Oct. 1, 1944. From October, 1944, to March 31, 1945, the price will be $12.50 for hogs weighing from 200 to 240 pounds.

FRUITS — WFA will support prices to producers and processors for peaches and pears for canning, and for the following dried fruits: apples, apricots, clingstone and freestone peaches, pears, prunes, raisins. Details of the program will be announced before the marketing season.

VEGETABLES FOR CANNING — Prices to growers for snap beans, sweet corn, green peas, tomatoes, beets, carrots, lima beans, and spinach grown in 1944 for canning will be supported by the WFA through price supporting contracts by canners who are certified by the state AAA committees as agreeing to contract with producers for at least the support levels. WFA stands ready to accept all offers of such canners to sell specified products. Growers must contract with certified canners to assure themselves of the support prices.

WOOL — WFA will offer to purchase the 1944 domestic production of wool at the present support price (which is the current ceiling price less specified marketing costs).

Winners of the grand championship trophy in the dressed turkey show and contest of the Illinois Turkey Growers' Association were Mr. and Mrs. Frank Keene, Dixon, Lee county. Prof. H. H. Alp (right) presents the award.

Barbed wire and woven wire are being produced in quantities equal to the highest level of production prior to the war. The supply situation is better than during 1942 and the first few months of 1943 and should continue to improve.

Supplies for mixed fertilizers are expected to be ample, although potash will be about 10 per cent short of last year.

Directors and officers of the Illinois Crop Improvement Association named during Farm and Home Week, left to right, seated, are: Richard Ferris, Princeton; Lawrence L. Lowe, Aroma Park, president; George Pfeifer, Arcola. Back row, Oscar Mountjoy, Atlanta, retiring board member; Roy Burrus, Aroaville, vice-president; Merle Morgan, Galva; Porter Fox, Elburn; Charles Shuman, Sullivan, secretary-treasurer. Absent from the picture are Harold E. Lesser, Rochelle, new director, and Berniece B. Michael, Urbana, assistant secretary-treasurer and office manager.

(Courier Photo)

What are the life insurance needs of Illinois farm people? What type of insurance policy will best take care of those needs? . . . . . Country Life Insurance Company issues only those types of insurance adapted to the special needs of farmers. It is owned and operated by the farmers of Illinois. Its local representatives are Farm Bureau members. They understand the problems of farmers and are trained to help solve those problems. . . . . If you have a question in regard to insurance, feel free to call upon the insurance man in your county Farm Bureau. Avail yourself of this Farm Bureau service.

Country Life Insu

1. SETTLING YOUR ESTATE — To pay off debts, expenses connected with last illness, and to carry your family through the adjustment period, is the purpose of Country Life's "ordinary life" policy.

2. PAYING OFF A MORTGAGE — To guarantee to a farmer that in case of his death before his mortgage is paid off, the payments will be completed, is the purpose of Country Life's Mortgage policy.

3. SUPPLYING A FAMILY INCOME — Country Life's "family protector" policy provides that, in case of the death of the father, an income will be paid to his family for the balance of a twenty-year period.

4. PROVIDING A RETIRING INCOME — After paying premiums on a Country Life endowment policy for a specified number of years, a policyowner receives the amount of his policy either in one cash payment, or as an income.

5. GUARANTEEING AN EDUCATION — A Country Life policy will help guarantee that money will be available for educating the children, even in case of the father's death.

6. TEACHING THRIFT — There is no better way to educate children in the responsibility of regular savings than through the use of Country Life's juvenile insurance.

Insurance Company

SMP Sets New Record Sales Volume In 1943

Total sales of the Sanitary Milk Producers for 1943 amounted to more than $11 million and there was an increase in the average price over 1942 of 65 cents per cwt, according to the report made by A. D. Lynch, secretary-manager, at the annual meeting held in St. Jacob.

More than 700 attended the meeting and heard the reports of their officers and guest speakers. President J. King Eaton urged a membership program to increase bargaining power, emphasized the necessity for adequate reserve and a study of milk transportation. Treasurer H. P. Wicklein reported that the net worth of the association had increased and that the association was in good financial shape. Total assets were reported at $108,689.57.

Addresses were given by Roger B. Corbett, AFBF secretary; George E. Metzger, IAA field secretary; Owen Richards, manager of American Dairy Association; Marie Harrington, educational director, St. Louis Dairy Council; W. C. Eckles, market administrator, and Rev. George J. Hildner, Villa Ridge, Mo.

Directors from the following districts were re-elected: (1) J. King Eaton, Edwardsville; (2) Orville Plocher, Highland; (3) John Voss, Breese; (4) Aug. Dieckman, Lebanon; (6) H. P. Wicklein, Evansville, Ill.; (7) Summer Wilson, Butler; (8) Frank Traty, Jerseyville; (9) C. Monte Craft, Pevely, Mo.; (11) B. J. Schumacher, Altamont; (13) R. D. Pennewell, Palmyra, Mo.; (14) Tom Creech, Troy, Mo.; (15) Anthony Boland, New Haven, Mo., and (16) Arthur Kelpe, Cape Giradeau, Mo.

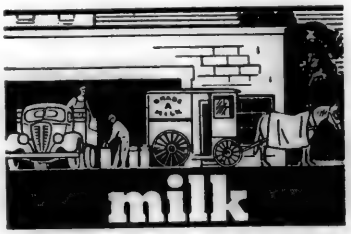
Emil Klingenberg, (5) Okawville; Julian D. Ray, (10) Vandalia, and Clem Bierman (12) Wheeler, are three new members on the board.

Some 283 new members joined the association during 1943.

Christianson To Address PMA Meeting on March 14

Dr. J. O. Christianson of the University of Minnesota will be the guest speaker at the 19th annual meeting of Pure Milk Association March 14 in the Hotel Sherman, Chicago. His subject will be "Get Your House in Order for the Depression."

This is election year for directors of the even-numbered districts in the PMA and the following are scheduled for election to 2-year terms on the board: district 2, Lee Cartier, Whitewater, Wis.; district 4, John Voelkering, Burlington, Wis.; district 6, Walter Winn, Richmond; district 8, Harvey Norem, Newark; district 10, John P. Case, Naperville; district 14, W. M. Kimmelshue, Manteno; district 16, Fred Hiigli, Union Mills, Ind.; district 18, Whitney E. Kline, Culver, Ind., and Earl Whitaker, Elkhart, Ind., to fill the term of Albert P. Brucker who died in December.



By Wilfred Shaw

The 22nd annual meeting of the Producers Cooperative Dairy of Quincy held Feb. 14 revealed the past year to have been one of the largest in volume of sales ever experienced as well as in net income. In addition to the current year's dividend payments upon capital stock a patronage dividend to members of 4% upon producers' patronage for the year and an additional dividend of 5% upon patronage of producers for October, November and December were declared. Total dividends paid out amounted to $8500. All capital stock held by non-members of the cooperative were called in during the year and redeemed.

The following were re-elected directors for a three year period: Lawrence Brinkman and Wilmer Cornwell. Alfred Dedert was elected a director succeeding Charles M. Eaton, and Henry Summers was elected a director for the unexpired term of Albert Heckle, who resigned because of his retirement from the farm. At a directors' meeting after the annual meeting the following were elected officers for the coming year: Anton Grawe, president; Wilbur Coe, secretary; Lawrence Brinkman, vice president; and Ben Putnam, treasurer.

"The dairy industry could well take a leaf from the automobile industry and eliminate its protection of inefficient dealers and leave in business only those who can meet competition," R. W. Bartlett, professor of agricultural economics, declared during Farm and Home Week.

Hope for reduction in the milk loss from mastitis in Illinois lies in an effective control program such as the one being carried on through cooperation of the state department of agriculture and the U. of I. department of animal pathology, Dr. Robert Graham, head of the latter department, reports.

A recent bovine mastitis survey in 121 herds in 11 Illinois counties showed six herds free from the disease while 108 were infected. Seven herds were classified as "suspicious." Figures in this survey indicate that production of 539 cows in every county of the state would be required to offset the milk loss resulting from this disease.

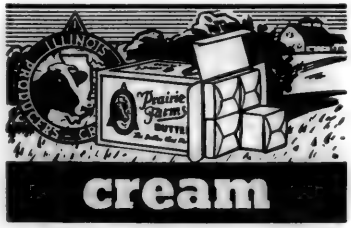
George A. Fox of the state department of agriculture reports that 34 Illinois counties are now qualified and are doing area work in Bang's disease control. Twelve other counties are making plans to carry on this work.

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for December unless otherwise noted:

Baltimore	$3.85
Boston	3.93
Chicago (70 mile zone) (Jan.)	3.14
Milwaukee (Jan.)	3.00
New York (201-210 mile zone) (Jan.)	3.98
Pittsburg	3.60
Seattle (Jan.)	3.10
St. Louis (Jan.)	3.49
St. Paul (Jan.)	2.96

The following prices are the blended prices received by producers supplying the respective Illinois markets. All are January prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.44
Canton	2.55
Champaign	2.75
Chicago	3.14
Danville	2.28
Decatur	2.70
DeKalb	2.74
Freeport	2.79
Galesburg	2.63
Harrisburg	2.60
Jacksonville	2.38
Kewanee	2.55
La Salle-Peru	2.50
Moline Rock Island-Davenport	3.14
Peoria	2.89
Pontiac	2.41
Quincy	2.58
Rockford	3.10
Springfield	2.60
St. Louis	3.49
Streator	2.40



Frank Gougler

The dairy industry in cooperation with U. of I. Extension specialists recently completed a series of meetings intended to stimulate increased milk production. This program is nationwide in scope. It is recognized that there are three serious handicaps to increased milk production — namely, insufficient suitable labor, insufficient equipment, and inadequate suitable dairy feeds.

In spite of these handicaps, it is believed milk production can still be increased through good management. Throughout these meetings, an eight point program was stressed as follows:

1. Grow more legumes, both hay and grain. Prof. C. S. Rhode stressed the importance of balancing rations according to quality of roughage available and to feed each cow in relation to the amount of milk produced.
2. Fertilizers applied to pasture lands have proven profitable. Prof. J. C. Hackleman discussed this subject ably.
3. Avoid summer slump in milk production. Summer pasture of sudan grass and silage are very helpful during the usual dry

season of July, August and September.
4. Feed cows liberally while cows are dry.
5. Keep as many cows as feed will permit.
6. Market whole milk whenever possible.
7. Avoid waste by producing good milk.
8. Breed for better herd replacement.

Manager Forrest Fairchild, Farmers' Creamery Company of Bloomington, reports that his cream salesman, Geo. Mitchell, who worked in Livingston county, is stationed at Camp Wolters, Tex.

Also, Otto Schreiter, formerly field representative of the Creamery and Milk Producers' Association, who was inducted into the Army Feb. 17, 1943, is now in England.

David W. Smith, plant superintendent of the IPC central butter cutting plant, is recovering from injuries sustained in a fall at the plant. While working one Saturday near the elevator shaft, he fell down the shaft and suffered ankle fractures and serious bruises.

Financing Expansion Programs: Producers' Creamery of Olney is being expanded so that the increased volume of milk can be handled more efficiently. From 25 to 30 thousand dollars is needed for the additional equipment. Nearly all of this has been secured through the sale of stock by mail. This additional money will be used to install a larger dryer, a larger boiler, can washer, build a garage and storage room and to enlarge the milk handling department.

The Producers' Creamery of Carlinville through action of its board of directors recently authorized its Manager F. A. Gourley to solicit from patrons some $10,000 for additional capital. The letter brought in more than $21,000. The excess will very likely be returned.

Producers' Creamery of Mt. Carroll is now considering bids for building a new plant for its expansion program. The new building will probably be 60x100 feet.

lockers

By Frank Gougler

At a recent meeting of the business service committee of the IAA, the board of directors of Illinois Cooperative Locker Service and locker managers, policy matters relative to county cooperative locker associations were discussed and the following policies agreed upon:

1. **That Farm Bureau members be given preference in renting lockers.**
2. **That County Farm Bureaus in promoting cooperative locker plants within a county if more than one plant or branch plant is established, then all shall be under one county board of directors and one management.**
3. **That a county locker board should have at least two board members nominated from the Farm Bureau board, and in order to be eligible as a director of the locker board, that said members from the County Farm Bureau board must at all times be a regularly elected member of the County Farm Bureau board.**
4. **That all locker companies should provide class "B" stock to the County Farm Bureau. Before a locker company can become a member of state company, it should have County Farm Bureau approval and continued Farm Bureau approval.**
5. **That class "A" preferred stock shall be cumulative and the rate of dividends shall be not less than five percent (5%) nor more than seven percent (7%).**
6. **That Farm Bureau members in good standing who move from one county to another county shall have the same consideration with reference to renting a locker in his new county as extended to other Farm Bureau members of the new county.**

Construction of a $30,000 cooperative locker plant at Paris in Edgar county seems well assured with 450 Farm Bureau members having rented lockers at $15 each and 720 shares of class "A" preferred stock sold by mid-February. At a meeting Jan. 31 of more than 100 township leaders in the Edgar County Farm Bureau, the following were selected to serve on the locker board: Leo Swinford, president; O. W. Winans, vice-president; John M. Tate, treasurer; David Long, secretary; O. N. Brothers, Otto Davis and Roy Henry. The new board has adopted the policy of giving all Farm Bureau members an opportunity to rent a locker before making them available to nonmembers.

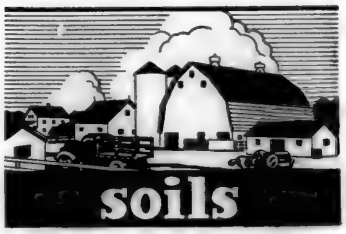
Contract has been let for a new $15,000 cooperative locker plant in Sibley, Ford county. The plant will be equipped with modern curing and smoke ovens operated by steam. There will be 312 lockers in the plant and lard rendering services will be made available. Directors of the Sibley Cooperative Locker Service are Gene Radliff, chairman; John Lanz, vice-chairman; Donald Gentes, secretary and treasurer; Ray Ward and H. J. Branz, Sibley.

Co-op Locker of Champaign reports stock sales of $13,500 for the building of a unit in Sidney, and the locker signup goal was just about completed in mid-February. Application for remodelling of a building in Fisher for another locker unit has been approved in Washington.

Prospects Still Good For State Peach Crop

Prospects are still bright for an Illinois peach crop despite some injury to fruit buds from the sub-zero wave of Feb. 10, reports L. L. Colvis, director of fruit and vegetable marketing for the IAA, and manager of the Illinois Fruit Growers Exchange at Carbondale.

Colvis said that at a meeting of fruit growers held during the week of Feb. 14 at Newton, Jasper county, growers reported that the percentage of buds killed ranged from 1 per cent on Red Bird variety to 53 per cent on Elbertas. At Centralia, growers said that 20 to 30 per cent of the buds were killed. At Carbondale it was found that the kill ranged from about 33 per cent down to nothing.



By John R. Spencer

The AAA program again made substantial contributions to the soil fertility of Illinois farm land by furnishing large tonnages of limestone and phosphates to their cooperators during 1943. The total tonnages are 1,078,363 tons of limestone, 46,656 tons of rock phosphate and 10,990 tons of superphosphate.

According to Lee Gentry, chairman of the state committee, these amounts were furnished during the calendar year of 1943 including, however, a very small portion during November and December of 1942.

Jefferson county received the largest amount of limestone of any county in the state, over 43,000 tons. Wayne co. 42,000; Marion co. 37,000; Randolph 31,500 and Jasper 30,000 tons, all in southern Illinois.

In central Illinois, Vermilion and Kankakee counties received approximately 40,000 tons each.

In rock phosphate, McLean county farmers were furnished 3,680 tons, LaSalle 3,040 tons, Livingston 2,000 tons, Marshall-Putnam 1,830 and Ford 1,520 tons. In superphosphate, DeKalb county farmers were furnished 1,080 tons, Johnson 730 tons, Pope Hardin 700 tons, Stephenson 600 tons and Lake 460 tons.

"Many years ago it had been theorized (not believed) that since nearly all Illinois soils contained large amounts of total potash, the return of potash containing materials or fertilizer would not be necessary. . . Testing this theory on the Illinois experiment fields over a period of 20 years has completely overthrown it. This theory has been discarded.

"Our first attack at the problem was to study the replaceable potassium in the soil and its need for potash. In general, soils containing less than 100 pounds per acre (two million pounds of soil) of replaceable potassium (by the new test) gave good responses to potash; soils testing between 100 and 150 pounds gave medium responses, mostly for corn and legumes; and soils between 150 and 200 pounds gave some response with corn but not with other crops."

From the Potash Problem in Illinois by Dr. R. H. Bray.

Three of the rock phosphate sales companies state their same prices will continue in 1944 while the fourth company's price increased 15c per ton.

"In Illinois the use of limestone has been emphasized by more than 30 years and its need is understood by most farmers. As a matter of fact, the liming program is getting ahead of the use of legumes, phosphate and potash. Limestone will not take the place of phosphate or potash for clovers and alfalfa." A. L. Lang.

WHAT IS INOCULATION

The purpose of inoculation is to cover the seed with tiny microscopic "nitrogen-gathering" bacteria which fix themselves to the roots in the form of "nodules." Because of these nodules the plant transforms nitrogen from the air into valuable proteins which are stored in the plant.

HOW MUCH IS NEEDED?

Each 25-bushel package of Soybean Inoculant is packed with a minimum of 187 billion bacteria of pre-determined strains. This is considered by nationally known testing laboratories as adequate for the best results.

SAVE MONEY ON INOCULANTS

Order Now!

Patrons who can estimate NOW their season's requirements of inoculants for legume crops can save 50c on each $2.50 package (the 25-bushel soybean size). Proportionate savings can be made on 5-bushel sizes also. This pre-season 50c discount applies only to orders placed during the month of March.

A QUALITY PRODUCT

Blue Seal "Grow Crop" Inoculants have been tested in nationally known and reliable laboratories. These tests have demonstrated that Blue Seal contains adequate numbers of these nitrogen-gathering bacteria of the proper strains to give the desired results.

A humus base is used to carry these bacteria — a base that has been carefully selected and properly processed to assure adequate moisture and aeriation. In this base the bacteria will live and grow and be ready for work when applied to the seed.

WHY THE SAVING?

This saving is made possible through large volume cooperative buying of the correct amount of material for this season's planting.

The old practice of returning unused and unsalable material to the manufacturer has been eliminated because, included in the manufacturer's price was the cost of accepting returned material.

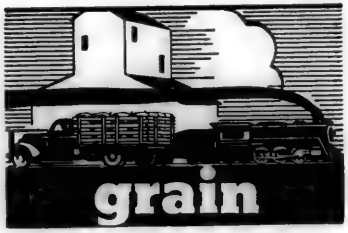
By our pre-season plan, your inoculant requirements are "tailor-made" to fit your crop needs with the least possible waste and a consequent saving to you. See your dealer today.*

*If you do not know who your dealer is, refer to page 19 of your January issue of the I.A.A. Record.

BLUE SEAL GROW-CROP INOCULANTS

ILLINOIS FARM SUPPLY CO., CHICAGO

Sold only by authorized distributors approved by County Farm Bureaus.



By G. H. Iffner

This department is devoting time and study to the possibilities of soybean processing cooperatives. Ten counties have indicated their interest in the project. Farm Bureau and local elevator plants have been under observation both in Indiana and Iowa.

A grain marketing conference was scheduled to be held March 3 in the Champaign County Farm Bureau with the following counties participating: Iroquois, Ford, Livingston, McLean, Champaign, Vermilion, Edgar, Douglas, Macon, DeWitt, Logan, Christian, Coles, Moultrie and Piatt. Three things are sought in this conference: (1) renewed interest in cooperative grain marketing on the part of the Farm Bureau and farmers' elevator leaders, (2) an increase volume of grain marketed through member elevators and the Illinois Grain Corporation, and (3) new member elevators in Illinois Grain Corporation.

Farm advisers in the Jacksonville area will meet March 10 in the Dunlop Hotel to study ways and means of improving cooperative grain marketing in that area.

There will be a few new managers at farmers elevators soon. O. J. Schwarzentraub, president of the Morton Farmers' Grain and Coal Company, reports that M. D. Rich, Morton, will succeed Henry Gunther. Rich has served on the board of directors of the Tazewell County Farm Bureau and as chairman of the county AAA.

Because of ill health, Paul Ehrlich is retiring at LaPlace, Piatt county, and the directors are looking for a successor.

Conditions of the times are causing more non-cooperative farmers' elevators to become interested in shifting to a cooperative setup as outlined in the Cooperative Act of 1923. It has been reported that elevator officials seeking information on how to get on a cooperative basis have been misinformed. To get the right information it is suggested that interested parties, (1) go to the County Farm Bureau and request advice from the legal department of the Illinois Agricultural Association, and (2) follow the outlined regulations carefully. It is not difficult to change over to a cooperative type of organization.

There were only two old line grain men in attendance at the annual meeting of the Farmers' Grain Dealers Association of Iowa at Ft. Dodge last month.

Bushnell Resumes Operations

Bushnell Producers, a unit of the Illinois Livestock Marketing Association, which ceased operations during the marketing jam in January, resumed operations Feb. 7.

All shipments are being accepted at the Bushnell unit and hogs are moving very well.

DeKalb Tops Shipments To Chicago Producers

Seventy Illinois counties shipped the equivalent of 16,294 single deck rail cars of livestock through the Chicago Producers during 1943, according to a report of D. L. Swanson, manager.

De Kalb county led all counties with 1110 cars and in second place was La Salle county with 1063, followed by Henry with 767 cars.

Other counties shipping more than 500 cars to the Chicago Producers were as follows: Lee, 634; Knox, 616; Bureau, 606; Iroquois, 592; Ogle, 547; McLean, 530; Stephenson, 530; Whiteside, 526, and Livingston, 525.

Livestock Leaders Hit Current Market Setup

OPA ceiling prices and WFA floor prices favor packers over livestock producers and their cooperatives, speakers declared at the annual meeting of the Bloomington Producers held in mid-February at the McLean County Farm Bureau.

H. W. Trautman, manager of the Illinois Livestock Marketing Association, pointed out that these price formulas have disturbed the market considerably. OPA retail prices, he said, were high enough so packers could pay more for hogs than they had been paying in the usual flow to market.

One reaction was that those packers interested in country buying, bought more hogs at country points and less in the terminals before the big flow of 1943 spring pigs jammed the markets. Since the support price now prevails, he said, it encourages packers to buy either at their own country buying points or in the terminals.

In addition, Trautman explained, the support price does not take into consideration the shrinkage, yardage and feed. The support price is $13.75 at Chicago and $13.45 for Bloomington, or a difference of 30 cents. Truck charges are 25 cents, insurance 5 cents, yardage 7 cents, commission 8 cents, feed 5 cents, and there is always a 1 or 2 per cent shrink.

L. E. Henninger, manager of the Bloomington Producers, reported a $2,500,000 business for 1943 with the cooperative handling 45,900 hogs, and a total of 60,519 head of all livestock, an increase of 10,140 head over 1942.

Board members re-elected were Carl A. Lage, Walter Risser, Burditt C. Kraft, Frank Hubert, Alden Sutter, W. F. Satterfield, Chris Warsaw, Byron Cline and Charles Disher.

February 21, 1944

NOTICE

Illinois Agricultural Association

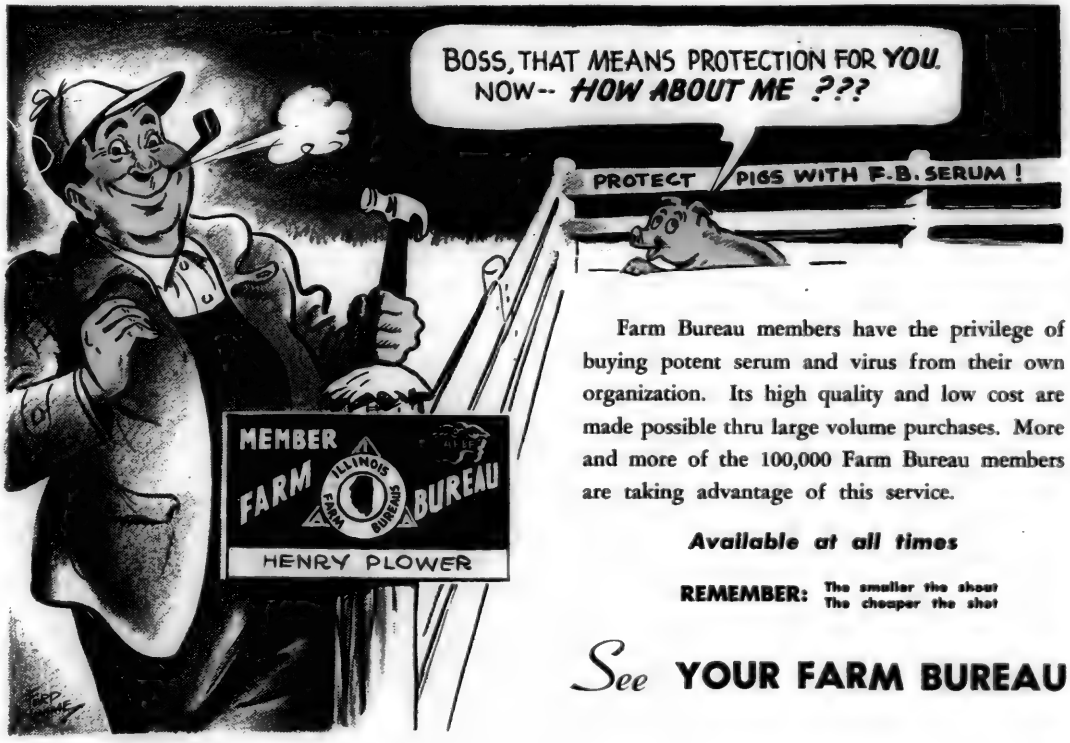
Election of Delegates

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the months of March and April, 1944, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During March, an annual meeting will be held in Boone County.

During April, the annual meeting of the Calhoun County Farm Bureau will be held.

PAUL E. MATHIAS,
Corporate Secretary



Farm Bureau members have the privilege of buying potent serum and virus from their own organization. Its high quality and low cost are made possible thru large volume purchases. More and more of the 100,000 Farm Bureau members are taking advantage of this service.

Farm and Home Week

(Continued from page 7)

advantage was reduced to 2 cents per hundredweight.

Ceilings on live cattle and carcass beef are at levels discouraging production of beef grading higher than good, Prof. W. E. Carroll, head of the department of animal husbandry, reported.

"War" beef, he said, can be produced for from 20 to 35 bushels of

Paul K. Perkins, secretary of the Edgar County Farm Bureau, looks over the timber exhibit at Farm and Home Week.

corn per head of cattle on feed as compared with the 50 bushels necessary to bring cattle to "choice" finish U. of I. studies show. He defined "war" beef as the meat from animals carrying the degree of finish required on carcasses that grade "good."

In the Farm and Home Week the panel discussions and sessions outside of the production field farmers revealed that they were giving considerable thought to post-war readjustments. Debates occurred in the panels on this subject. With most farm families having a son, daughter or some relative in the armed services, they are vitally concerned about making adequate provisions for the returning service men and women. Interest also was evidenced in improving rural schools and in the continued improvement in the standard of farm living.

Many voiced approval of the address of Paul G. Hoffman, chairman of the committee of economic development, and president of the Studebaker corporation. Hoffman declared that if we are to have full employment after the war two things are necessary: (1) bold plans with bold action by individual employers, and (2) policies of government, business, labor and agriculture that promote rather than restrict production.

Supplies of bale ties, nails, staples and pipe should be ample during 1944.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

FIFTY-FOUR county organization directors attended the first conference for organization directors to be held during Farm and Home Week. Other Farm Bureau leaders attended the conference and the organization dinners held during the week.

Panel discussion on the subject, "Getting the Member to See a Little Responsibility" centered largely around expressions that the member must be given an opportunity to express himself and given a job to do commensurate with his ability and experience in the organization.

C. L. Mast, Jr., IAA director of publicity, in discussing public relations declared that the job is probably no bigger today than in the past. The important thing is that we now recognize it, he pointed out. He added that good public relations must start at the grass roots and a good job must be done locally.

Otto Steffey, IAA board member and member of the public relations and organization committee of the IAA board, reported that farmers today are concerned about three things: They want (1) To win the war in the shortest possible time and with the least possible bloodshed. (2) To avoid the post-war depression. (3) To win the peace. "Farm organizations will have a tremendous influence in the early realization of the above objectives," he declared.

L. B. Hornbeck, district director of organization, asserted that the COD's job is to help every member to (1) know his organization; (2) participate in his organization, and (3) boost his organization.

Dr. D. E. Lindstrom, professor of rural sociology, U. of I., gave organization directors some valuable pointers on "What Makes An Organization Go."

Frank L. Rathbun, Mercer COD, reported success on keeping delinquents at a low point in telling of his experiences at one of the organization banquets during Farm and Home Week. By saving his gas coupons he was able to make a swing around his county of 121 miles and establish a record of 100 per cent paying membership. There were no delinquents on the rolls for a period of five days.

H. H. Glick, Wayne COD, reports an attendance of approximately 1100 at a new member meeting. All Farm Bureau members and their families were invited to attend to hear George Metzger, IAA field secretary. Glick also claims the distinction of being the first COD in the state to make his 105% dues income quota. He states that he is confident that the report for the last week in January carried him well over the total required.

Frank Augustus, seated at left, becomes Clark County Farm Bureau's 1000th member on Jan. 6. Thomas Drummond, organization director, is seated at the right. Standing, left to right, are J. M. Maxwell, president of the Clark Service Company, and Frank Welsh, Clark County Farm Bureau President.

Duane Kuntz, Warren COD and assistant farm adviser, has reported for duty at New York City as ensign in the U. S. Navy. A go-getting worker, Duane was very active in Rural Youth activities in Warren county. Always ready to carry his full share of the load, he will be missed from the COD ranks while he is working for Uncle Sam.

Madison County Farm Bureau under the leadership of Walton H. Faires, new COD, completed a membership campaign recently with 105 new members added to the rolls.

Al Merwin, Christian COD, reports 69 new members signed on their drive.

William Steinbeck of Grundy county reports 64 new members in a 4-day drive.

Coles and Montgomery counties reported splendid attendance at recent new member meetings.

This column leans heavily on contributions. Let's hear from you.

Lt. Eugene Stadel, former COD in Marshall-Putnam County Farm Bureau, and former assistant adviser and 4-H leader in Winnebago county, attended one of the organization sessions during Farm and Home Week. He congratulated the group on the attainment of the 100,000 goal and said that the accomplishment gave him added confidence in the future. Lt. Stadel is now stationed at Camp Ellis.

Unless apple growers order ahead now, fewer boxes can be put out. The total supply of new baskets and boxes is not equal to the anticipated demand of the large crop expected. Growers and packers should buy every available basket and box, beginning now.

A record of outstanding service was rounded out last month by B. B. Goodin, who resigned after 20 years as director of the DeWitt County Farmers Mutual Fire Insurance Company.

Give Them a Strong Grip on Life

When that box of pert, peeping, potential poultry personality arrives from the hatchery, one thing you can do to assure their rapid growth into healthy pullets and fryers is to feed them Blue Seal Chick Starter.

By starting them on Blue Seal, you really give them a strong grip on life, because they are getting only the best.

Blue Seal Chick Starter contains high quality ingredients only. The combination of proteins, minerals, and vitamins is in just the right proportions to do the most good. These high quality standards are maintained despite war-time conditions.

If you have not already done so, place your order now, so that your feed will be ready when your chicks arrive and you can give them a strong grip on life.

BLUE SEAL

Illinois Farm Supply Co.

608 S. Dearborn St., Chicago 5, Illinois

Illinois Home Bureau Federation past presidents cut a 20th anniversary cake. Left to right, Mrs. A. R. Rohlfing, Mrs. Homer Johnson, Mrs. Elsie W. Mies, Mrs. John Clifton, and Mrs. Will Parks. Mrs. Spencer Ewing, McLean county, the first president, was unable to attend. Mrs. Johnson was the third president.

Twentieth Anniversary

A SPECIAL and intensive study of rural schools in every county of the state was recommended by the Illinois Home Bureau Federation in its 20th annual meeting at Farm and Home Week. Such action was urged in resolutions "in order that the people may understand the problems confronting rural schools today and follow that understanding with legislation that is needed and desired. . ."

The Federation recommended that the work be done through cooperation with county Farm Bureaus and other county groups interested in rural educational problems.

Attendance at the 20th annual meeting was beyond expectations in consideration of transportation difficulties and the busy schedules of many of the homemakers. All but three Home Bureaus were represented and there were 126 voting delegates present. More than 350 attended the sessions.

Other points stressed in the resolution on "Our Community Assignment" included encouraging the schools to become centers of recreation for both youth and adults, particularly in a "save-our-youth" program.

"Realization of the present problems of juvenile delinquency should invoke the cooperation of our members in such recreation programs, working with church and school to supply leadership," Home Bureau women declared.

In the "Home Assignment" resolution emphasis was placed on gardening, elimination of food waste, home preservation and storage of food, home sewing and conservation of clothing.

In the field of national achievement, Illinois Home Bureau women pledged their work toward food production and the total war effort; their money in support of the war and the service branches; their time for such work as canning centers, surgical dressings, service centers, nurses aides, rehabilitation of returned veterans, and their straight thinking in the body politic.

New officers of the Illinois Home Bureau Federation, left to right, seated, Mrs. E. G. Eilers, secretary, and Mrs. Stanly Castle, president, both of Madison county. New directors, standing, left to right, Mrs. Arthur P. Gundlach, St. Clair county; Mrs. A. P. McIntosh, Macon county, and Mrs. Albert Klever, Stephenson county.

In another resolution, the Illinois Home Bureau Federation stated, "We declare our confidence in and shall give our support to the Illinois Agricultural Association, its leadership, its policies, its practices, all of which are as vital to us as are the policies and practices of our own organization."

Other projects on the 1944 Home Bureau program in addition to the school study include the Blue Cross hospitalization plan, which will enable any Home Bureau member in the state to enroll for this form of insurance; donation of funds for China relief, and supporting a campaign to purchase a Red Cross Clubmobile.

Incidentally, Illinois Home Bureau led all the other states in the China Relief fund in 1943. A total of $1977.45 was collected in Illinois with $1805.61 of this from County Home Bureaus, according to Mrs. R. W. Stamey's report.

President Earl C. Smith of the IAA, addressing an afternoon session of the Federation meeting, stressed the fine working relationship that has existed between the Farm and Home Bureau in Illinois and pledged continued cooperation of the IAA with the Federation. Smith briefly outlined the Farm Bureau's position on current legislative issues and gave particular attention to the current discussion of consumer subsidies. He also emphasized the need for localizing post-war planning and pointed out that people in the local communities could do much toward re-establishing the returning service man in peace time life.

Continued growth of Home Bureau membership was reported for Illinois with the Jan. 1, 1944 enrollment of 22,029, representing a net gain of 873 since July 1, 1943.

A 20th anniversary dinner was held in the First Presbyterian Church, Urbana, following the afternoon program and was attended by past and present Federation and County Home Bureau presidents, officers and guests. State presidents reviewed the early days of the organization and brought the story up to the present date. Mrs. Charles Sewell, administrative director of the Associated Women of the American Farm Bureau Federation, was guest speaker and praised the work of the state organization.

Illinois Home Bureau presidents from 1924 to 1944 are: Mrs. Spencer Ewing, McLean county, 1924-26; Mrs. Sabin, 1927; Mrs. Homer Johnson, McLean, 1928-30; Mrs. Elsie W. Mies, Champaign, 1930-34; Mrs. Leonard J. Killey, Warren, 1934-36; Mrs. J. V. Stevenson, La Salle, 1936-38; Mrs. John Clifton, Iroquois, 1938-40; Mrs. Will Parks, Rock Island, 1940-42; Mrs. A. R. Rohlfing, Fulton, 1942-44.

Mrs. Stanley Castle, Alton, was elected

president of the Illinois Home Bureau Federation for the coming year, succeeding Mrs. A. R. Rohlfing, Farmington. Mrs. Edwin G. Eilers, Edwardsville, was elected secretary, succeeding Mrs. Vivian Toncray. Both new officers are members of the Madison County Home Bureau.

Mrs. Castle served as vice-president of the Federation in 1941-42. She has been active in Home Bureau since 1935 when she served as organization chairman of Madison county. In 1936 she was elected the first president when the county formed a Home Bureau organization. Mrs. Castle is a member of the Illinois Rural Education Committee, the IAA Schools Committee, and for 22 years has been president of the board of the rural school in her district.

Mrs. Eilers is also a charter member of the Madison County Home Bureau and in her Edwardsville Unit A has held the offices of secretary, vice-president, recreational leader, and president — each for two years. She has been a leader of a girls 4-H club for seven years, teaching clothing and foods to an average membership of 14 girls. She is also active in Red Cross and church work.

Three new directors were elected at the annual meeting: Mrs. Albert Klever, Stephenson county, northwest district, succeeding Miss Pearl Barnes; Mrs. Arthur P. Gundlach, St. Clair county, southwest district, succeeding Mrs. A. R. McConathy; Mrs. A. P. McIntosh, Macon county, east central district, succeeding Mrs. Ralph Emel.

Rural YOUTH

By Ellsworth D. Lyon

Greetings, Illinois Rural Youth! This is my first appearance in the Rural Youth column. I shall look forward to meeting you in each issue of the Record in this way.

You have my deepest interest. The organization is yours and I am here to serve you.

As I have been finding my way around among you during this first month, I have been impressed more and more by the high importance of the work of the Rural Youth. It forms a most important link in the chain of activities which are effective in our life today.

You are standing with our nation and allies and backing other Rural Youth and their buddies who are in the various branches of the Armed Services. Through your serious purposes and joyful fun, you are keeping up home morale. By producing food, by doing other necessary work in the local community, by "buying bonds for bombers," and by writing thousands of letters to service men, you are making a most substantial contribution to the Nation.

We shall go forward together.

Wayne County Rural Youthers pitched in and helped the Farm Bureau with its new member meeting held in Fairfield Feb. 3. Rural Youth members served as ushers and provided courtesies for more than 1100 in attendance.

Four Rural Youth groups — DuPage, Clark, Brown, and Marshall-Putnam, during February reported War Bond and Stamp sales totalling $3314.50. In all but one of these reports, the purchases were for January. It is hoped that all groups will send in reports on January and February purchases by early March.

Program planning meetings were held during February in many of the counties by Rural Youthers. Planned programs mean better meetings. Better meetings mean active groups.

Herman Pierson, president of the Bureau County Rural Youth reports, "Six of our members gave a broadcast over WMBD, Peoria, on 'Post-War Agriculture.' Congratulations! The voice of youth is truly a part of the voice of our country.

Adams county had a good attendance for the January meeting, according to the report received from President Harold McConnell. "We graduated 11 couples who were married during the last year," he added. Were they with the June class, Harold?

Everyone at the annual Rural Youth banquet at Farm and Home Week seemed pleased with the name "Illinois Farm Youth" given to the pursuit ship in recognition of $75,000 in War Bond purchases. As one Rural Youther remarked, "The name certainly describes the source."

A warm greeting comes from A. E. Green, president of the Wabash County Rural Youth, with an invitation to attend one of their meetings. He writes, "We also wish you success in your new position and to assure you that we will do all we can to make your work pleasant."

Fulton County Rural Youth held their annual banquet and dance Feb. 3 at Fairview. Bernard H. Taylor was the principal speaker. Committee members responsible for the banquet were: recreation, Eldon Logan, Jerry Leeper, and Gordon Peabody; program, Joyce Wolf, Pearl Rusch, Verle Jackson, and Ralph Malmgren; decoration, Pauline Leonard, Mildred McMillan, Eleanor George Overcash, and Maralee Denny; menu, Hazel Ketcham, Betty Juricich, Berniece Sprecher and Mada Romine.

This medium B-25 bomber, similar to the one that blasted Tokyo and Rommell, has been named "Illinois Rural Youth," in recognition of the Rural Youth bond campaign carried on from April 1 to Sept. 30, 1943 by Illinois members which amounted to more than $180,000 in purchases. The goal for 1944 is $300,000.

In recognition of $75,000 War Bond purchases made by Illinois Rural Youth since Oct. 1, 1943, a pursuit ship will bear the name, "Illinois Farm Youth." Bond county delegation gave the winning title. Delegates, left to right, Duane Wise, Marian Britt, Delafern Durr, Lois Wise. Back row, Forrest Marcoot, who submitted the name, Lester Kleiner, Hubert Gruner, and Thomas Paine.

Visits with Farmers of S. America

By JOHN STROHM

Managing Editor, Prairie Farmer, and author of the new book, "I Lived with Latin Americans"

A Chilean housewife does her baking in an outside mud oven. A fire is built inside the oven to heat it up, and then coals are raked out and the dough is put into it to bake.

There may be a corn and feed shortage in the Middle West, but not in Argentina. Incidentally, their corn cribs are made from stalks of cane as you can see by this picture.

VISITS with farm families who live in South and Central America would make any Illinois Farm Bureau member swear that there's no place like "Home Sweet Home."

Down in Mexico, I visited Pablo's home. He called his hut a "rancho", although I'm afraid an Illinois farmer wouldn't have used it as a hog house. He had rolled rocks together for the walls and, with a few poles, attached a roof of straw. Windows and chimneys were conspicuous by their absence; the floor was of dirt. Pablo and Maria, his wife, and their five children lived in this one-room house. Frequently, the chickens and pigs wandered in through the open hole that served as a door.

In the 20 republics of Latin America, I found millions of homes like Pablo's.

The Latin American housewife has a hard time. In Ecuador, I visited another farm home — typical of that country — and saw the housewife cooking over an open fire at one end of the one-room house. There was no chimney so the smoke was so thick that it reminded me of the smokehouse back on the farm. She cooked in utensils of stone or iron, and a few were made from common gourds.

The housewife works in the field when there's work to do and she does much of the marketing. I've seen women pile 65 pounds of fruits or grain in baskets, balance the baskets on their heads, and then stride five to fifteen miles, barefooted, to the village market. Many of these women spin cotton into thread and weave their own cloth on crude, homemade looms. In the humblest hut, I've seen women weaving gorgeous fabrics which are sold in such exclusive department stores as Marshall Field's in Chicago.

The wooden plow is standard equipment, and the only iron part about it is the point. Oxen furnish horsepower. Cattle are expected to be triple-threat breeds — to furnish meat, milk, and power. (Only Argentina has many horses, and there a farmer with 160 crop acres will have 40 horses. They use eight where we would use four, and they turn them out at noon for eight more — primarily, because about the only feed a horse has is what it picks up along the road.)

Farm Bureau? No, with three or four exceptions, there are no farm organizations in these countries. And there are no 4-H Club or Future Farmers chapters. In many of the countries, if the boys and girls get to go to school three or four years, they are lucky.

Of course, some countries are progressive. Argentina, for instance. Because of a fine climate and soil, cattlemen can put 1100 pound prime steers on the market in from 24 to 30 months. And these steers do not get a pound of grain. They graze outside 12 months of the year. They run on alfalfa pasture, and are fattened on rye pasture and sorghum. Incidentally, prime beef in 1941 was selling for about 3½ cents a pound.

Argentina knows how to grow grain, too. I saw corn fields that had grown 25 crops in succession without a speck of fertilizer. And it was producing 50 bushels to the acre from open pollinated seed. But, all is not well on the pampas. Corn and wheat, because of the shipping shortage, has backed up on the farms. The Argentines are now burning wheat and corn for fuel. They have to import all of their coal in Argentina, but they have corn and wheat to burn.

Certain sections of other countries are progressive agriculturally, but, in the main, methods are pretty primitive. Of course, these farming cousins of ours south of the border are working under tremendous handicaps: Their ancestors came over looking for gold and glory, looked down upon farming, and, as a result, set a bad example. They have mountains and jungles which make transportation difficult. In certain sections of the Amazon jungle, Indians still use blowguns to shoot poison darts. And mountains, four miles high, make road building extremely difficult. Several of these countries have a great many more Indians than whites, and, finally, many of these countries lack the size and wealth to push programs of education, health and road building.

Any sound policy towards Latin America must be based on a sympathetic but realistic analysis of farm people and their agricultural resources. This is the foundation on which their progress must be built.

Yes, after seeing Latin America, I've decided that we don't quite realize just how good God is to Illinois.

Unless you're covered against windstorm loss!

TOTAL loss resulting from a windstorm costs as much to replace as a total loss from any other cause. Your windstorm insurance should equal your fire insurance for your own protection. Farmers Mutual is a safe and economical place to purchase windstorm insurance. It is a truly mutual company providing participating and non-assessable policies with state-wide distribution of risks.

Ask your Insurance Agent at the Farm Bureau office about our combined Fire, Windstorm and Extended Coverage policy for all farm property and the special fire protection available for standing grain.

MARCH 1 *is moving day*

All over rural Illinois, thousands of families will move March 1 to new farm homes, many in new communities. It's a fine time for OLD-FASHIONED FARM BUREAU NEIGHBORLINESS. Check these opportunities to be helpful.

1. When new folks move into your neighborhood, WELCOME THEM! If they are Farm Bureau members ask whether they've notified their county Farm Bureau of change of address. If they have moved from another county, ask if they have transferred their membership. If they haven't, assist them in doing so.

2. Invite ALL new neighbors — members or not — to visit your community gatherings, and to get acquainted with your Farm Bureau office and personnel. They'll appreciate your thoughtfulness.

3. If YOU move to a new county, notify your Farm Bureau of your desire to transfer membership. If only changing addresses in your present county, let your Farm Bureau know, so that mail will reach you promptly.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and education interests of the farmers of Illinois and the Nation, and to develop agriculture.

APRIL, 1944 **VOLUME 22 - NUMBER 4**

This Month

By Earl C. Smith

THE March issue of the IAA RECORD carried the voting records of those in public life representing the people of Illinois in the state legislature and in the Congress of the United States. Publication of this legislative analysis was in accordance with action taken by voting delegates of the Illinois Agricultural Association at an annual meeting several years ago.

This record of representatives, of course, does not cover all of the numerous bills which have come before the lawmakers of interest to agriculture. However, it does cover the main issues which measure the courage, statesmanship and non-partisan approach with which the representatives have discharged their responsibilities.

The men and women who are nominated in the April 11th primaries and who subsequently are elected to office next November will, in my opinion, carry a responsibility never before placed on the shoulders of the representatives of a free people. Problems yet to be solved in the successful prosecution of the war — determination of America's position at the peace table — our post-war foreign policy — reconversion to a peacetime economy — the great problems which lie ahead in maintaining a solvent government, without which we cannot hope to maintain our democracy — to say nothing of the fundamental and vital issues which challenge our very form of government and call for an early decision — these are some of the issues which will face the men and women seeking nomination at the April primaries. Upon their wisdom, devotion to their country, and their courage of convictions, in the deliberations and decisions they reach will largely depend the economic and political course this nation will take for many years to come. The making of these decisions calls for a measure of independent thinking, courage and statesmanship as never experienced heretofore in the legislative history of our country.

With the realization of the grave responsibility resting in the hands of our elected representatives, every citizen of voting age can well see how important it is that he exercise his right of ballot. The ballot is the foundation of democracy. Only to the extent that individual citizens exercise this privilege to the best of their judgment and ability after carefully considering the issues, the position taken on the issues by candidates for public office, and with little if any emphasis on party affiliation, can we hope to maintain constitutional government and secure legislation which will truly reflect the desires and wishes of the majority of United States citizens.

Throughout the years of my leadership in representing farmers' interests and rights, I have never suggested or implied how any individual might or should vote on individual candidacies; but I do make the broad appeal that support be given only those seeking office in these critical days who have openly and definitely committed themselves to the vigorous support and protection of the various independent branches of government as set forth in the fundamental laws and organic structure of the country.

"THE CITY KIDS HAVE NOTHING ON US AT REYNOLDS SCHOOL"

By CRESTON FOSTER

SHOULD farm boys and girls have the same chance as their city cousins to get a good high school education?

Most farm people would say "Yes" to this question — it's just a matter of figuring out how such an education can be provided with the means at hand. That the problem can be worked out in many different ways has been demonstrated by a number of districts. One of these is the Reynolds Community High School district in the lower end of Rock-Island county.

Today, in Reynolds, a community of 310, there is a four-year high school with 90 per cent of its average daily attendance of 209 coming from farm homes. They have a chance to enroll in classes ranging from soils and crops to Latin. A farm boy can learn how to repair a tractor motor or keep books. A farm girl can learn how to be a homemaker or a secretary. If a farm boy or girl wants to continue his education beyond high school, he has an opportunity to make such preparations. In short, students in this rural high school can learn how to earn a livelihood and become good citizens and leaders in their community. The tools for acquiring an education are available — it's up to the student to make use of them.

Like many other districts, Reynolds didn't build its system over night. There was just as much difference of opinion and feeling as exists in the organization of any district, and there were probably just as many mistakes made as in other similar ventures. But by working and planning and adding each year, a good school and equipment have come about without any undue hardships or burdensome tax on anyone.

For example, in 1934 when it was decided to put in an agricultural department, the district purchased a former sale barn located about four blocks from the school for $700. This building has proved to be ideal for farm shop work and classes. It is a modern one-story, concrete block structure, 36 by 120 feet, with concrete floors.

Drop in at this shop any school day of the week and you'll find farm boys making good use of their time. Some will be working on hog house construction, others will be painting and repairing farm machinery, overhauling motors, or building a four-wheel trailer. During other periods of the day you will find freshmen and sophomore students making soil test or studying soils and crops and animal husbandry. In addition to their class work, these boys also have production projects at home.

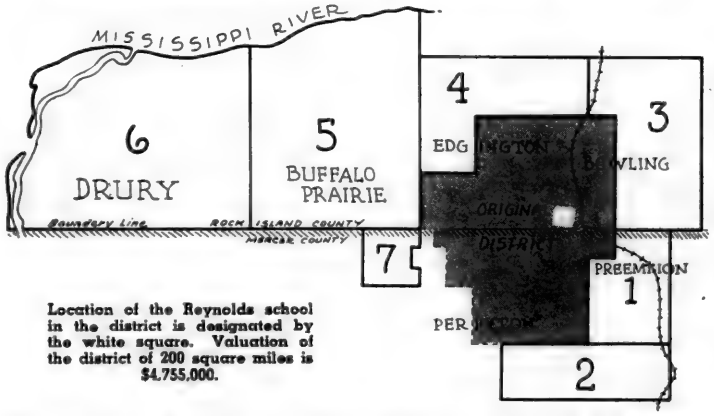
The farm shop is also equipped to offer industrial education, but this year because of the wartime demand for trained men in factories, the board was unable to secure an instructor and the work was curtailed.

Willard Long, the agricultural teacher, is as well-fitted to teach industrial arts as vocational agriculture, but his agricultural classes take all his time. He is an Iowa farm boy who farmed until 1937 and then went to Iowa State at Ames. While attending college he worked as a mechanic in a machine shop.

The home making department of the Reynolds school affords a three-year home economics program that is comparable to the program offered boys in vocational agriculture.

But these educational opportunities are not the only advantages that parents in the district appreciate. They especially like the idea that their children can attend a four-year high school and live at home. School buses take

A MODERN BUILDING SERVING A PROGRESSIVE COMMUNITY



Location of the Reynolds school in the district is designated by the white square. Valuation of the district of 200 square miles is $4,755,000.

This map shows the original Reynolds High School district and the areas which petitioned to come in and were accepted. Numbers indicate the order of joining.

A STORY OF PROGRESS IN RURAL EDUCATION

the students to and from school and eliminates loitering about town that often occurs when students drive into school.

Reynolds was organized as a four-year high school in the fall of 1931 and its attendance at that time was around 75 to 80. It was housed with the grade school in a building erected in 1877. In 1934, when a $16,000 auditorium and gym was built as a new unit in back of the old school, the enrollment had climbed to nearly 120. In 1935, the high school used the second floor and one room in the old school building, the stage in the new gym, a room at the north end of the stage, and the basement under the stage.

As enrollment continued to move upward it became necessary in 1937 to build a $50,000 addition to the new auditorium and gym. This gave the high school a complete and modern building. In 1938, enrollment was over 170 and the faculty was composed of eight teachers as compared with four in 1935.

Increase in enrollment during this period of growth came largely from non-high territory so that it was not surprising that in 1940, these districts petitioned to come into the Reynolds district and were accepted. These non-high students had been coming to the Reynolds school so that the people felt at home in the newly enlarged district.

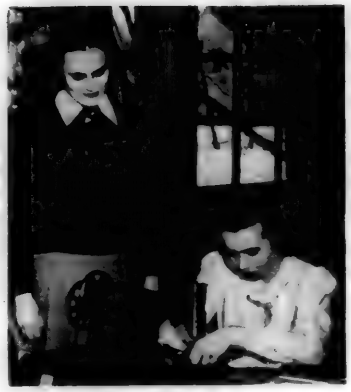
Have school costs increased in the Reynolds system? The answer is yes. However, it is interesting to note that the increase in per capita cost from 1933 to 1943 is not as great as the increase in the cost of things farmers buy during the same period. In addition, the taxpayer is getting considerably more for his money now than he did in 1943. Reynolds has a new school building completely equipped to offer courses in homemaking, commercial studies and other subjects, not to mention the shop and classroom facilities in the former sale barn. The faculty has been increased from 4 to 12 teachers.

It must also be remembered that school costs in Reynolds were at rock bottom in 1933. Since that time teachers salaries' and transportation costs have increased. The school began to operate buses in 1934. However, the school's financial condition is good. The $16,000 bonds on the auditorium and gym have been paid off and $8000 has been paid off on the $50,000 building bonds.

One of the best proofs that the Reynolds school is serving the people is the fact that farmers have purchased land when they could in the district in order to assure their children of a good schooling.

One of the few criticisms offered by the people is that a rental fee is charged for the use of school auditorium and gym for community meetings. The rental rates have been in accordance with the amount of light and heat used. At the present time the school board is working on a plan to make the building available at a more reasonable rate.

Four of the five board members of the Reynolds district are Farm Bureau members. Officers and board members are Charles P. Dunlap, president; R. C. Wait, secretary; George A. DeBord, Everett Gustafson, and C. S. Tittertington.



Miss Betty Anne McMillan, instructor in homemaking, supervises the work of Jean Carlson, daughter of Ernest Carlson, Mercer County Farm Bureau member.

The people of the district have done a good job in the selection of their principal, Fred Bridgford, who was hired in 1924. As one parent with children in school said, "Mr. Bridgford had a vision and also understanding of human nature as well as understanding of the kind of a school that was needed. He also is a good business man." Perhaps one of the reasons that Bridgford understands the needs of rural students is that he has a farm background and

But by working and planning and adding each year, a good school and equipment have come about without any undue hardships or burdensome tax on anyone.

For example, in 1934 when it was decided to put in an agricultural department, the district purchased a former sale barn located about four blocks from the school for $700. This building has proved to be ideal for farm shop work and classes. It is a modern one-story, concrete block structure, 36 by 120 feet, with concrete floors.

Drop in at this shop any school day of the week and you'll find farm boys making good use of their time. Some will be working on hog house construction, others will be painting and repairing farm machinery, overhauling motors, or building a four-wheel trailer. During other periods of the day you will find freshmen and sophomore students making soil test or studying soils and crops and animal husbandry. In addition to their class work, these boys also have production projects at home.

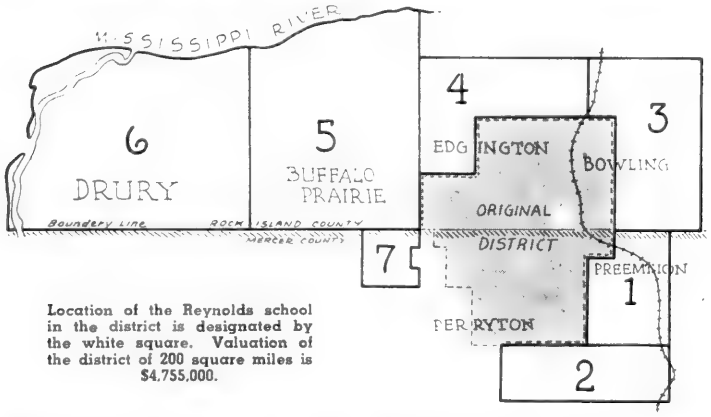
The farm shop is also equipped to offer industrial education, but this year because of the wartime demand for trained men in factories, the board was unable to secure an instructor and the work was curtailed.

Willard Long, the agricultural teacher, is as well-fitted to teach industrial arts as vocational agriculture, but his agricultural classes take all his time. He is an Iowa farm boy who farmed until 1937 and then went to Iowa State at Ames. While attending college he worked as a mechanic in a machine shop.

The home making department of the Reynolds school affords a three-year home economics program that is comparable to the program offered boys in vocational agriculture.

But these educational opportunities are not the only advantages that parents in the district appreciate. They especially like the idea that their children can attend a four-year high school and live at home. School buses take

A MODERN BUILDING SERVING A PROGRESSIVE COMMUNITY



Location of the Reynolds school in the district is designated by the white square. Valuation of the district of 200 square miles is $4,755,000.

This map shows the original Reynolds High School district and the areas which petitioned to come in and were accepted. Numbers indicate the order of joining.

A STORY OF PROGRESS IN RURAL EDUCATION

the students to and from school and eliminates loitering about town that often occurs when students drive into school.

Reynolds was organized as a four year high school in the fall of 1931 and its attendance at that time was around 75 to 80. It was housed with the grade school in a building erected in 1877. In 1934, when a $16,000 auditorium and gym was built as a new unit in back of the old school, the enrollment had climbed to nearly 120. In 1935, the high school used the second floor and one room in the old school building, the stage in the new gym, a room at the north end of the stage, and the basement under the stage.

As enrollment continued to move upward it became necessary in 1937 to build a $50,000 addition to the new auditorium and gym. This gave the high school a complete and modern building. In 1938, enrollment was over 170 and the faculty was composed of eight teachers as compared with four in 1935.

Increase in enrollment during this period of growth came largely from non-high territory so that it was not surprising that in 1940, these districts petitioned to come into the Reynolds district and were accepted. These non-high students had been coming to the Reynolds school so that the people felt at home in the newly enlarged district.

Have school costs increased in the Reynolds system? The answer is yes. However, it is interesting to note that the increase in per capita cost from 1933 to 1943 is not as great as the increase in the cost of things farmers buy during the same period. In addition, the taxpayer is getting considerably more for his money now than he did in 1933. Reynolds has a new school building completely equipped to offer courses in homemaking, commercial studies and other subjects, not to mention the shop and classroom facilities in the former safe barn. The faculty has been increased from 4 to 12 teachers.

It must also be remembered that school costs in Reynolds were at rock bottom in 1933. Since that time teachers salaries' and transportation costs have increased. The school began to operate buses in 1934. However, the school's financial condition is good. The $16,000 bonds on the auditorium and gym have been paid off and $8000 has been paid off on the $50,000 building bonds.

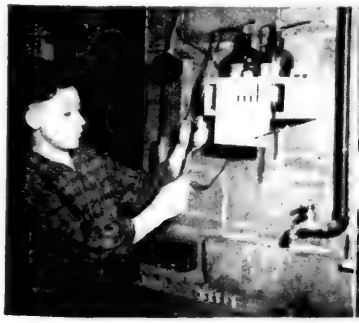
One of the best proofs that the Reynolds school is serving the people is the fact that farmers have purchased land when they could in the district in order to assure their children of a good schooling.

One of the few criticisms offered by the people is that a rental fee is charged for the use of school auditorium and gym for community meetings. The rental rates have been in accordance with the amount of light and heat used. At the present time the school board is working on a plan to make the building available at a more reasonable rate.

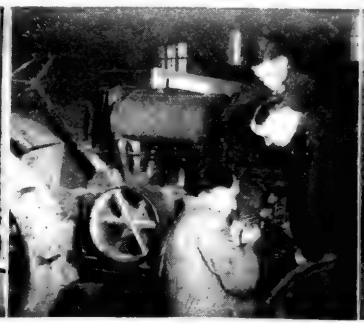
Four of the five board members of the Reynolds district are Farm Bureau members. Officers and board members are Charles P. Dunlap, president; R. C. Wait, secretary; George A. DeBoer, Everett Gustafson, and C. S. Turnington.

Miss Betty Anne McMillan, instructor in homemaking, supervises the work of Jean Carlson, daughter of Ernest Carlson, Mercer County Farm Bureau member.

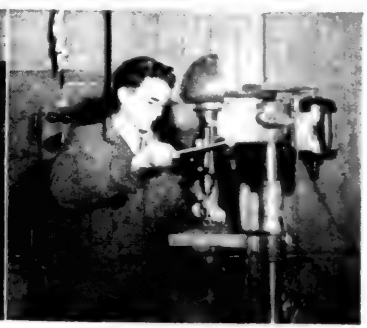
The people of the district have done a good job in the selection of their principal. Lloyd Bridgford, who was hired in 1924. As one parent with children in school said, "Mr Bridgford had a vision and also understanding of human nature as well as experience in the kind of a school that was needed. He is also a good business man. Perhaps some of the reasons that Mr Bridgford understands the needs of rural students is that he has a farm background.



Wendell Riexinger, Rock Island county farm boy, makes a soil test. Working on



a tractor motor are Willard Long, instructor, Bob Bestian, and Bob White. Bob



Parks, son of Mrs. Will Parks, of the IAA school committee, works a drill press.

SAVE FARM PROGRAM... AFBF URGES

AAA IS SAFEGUARD FOR POST-WAR FUTURE, THEIR BELIEF

TO COUNTERACT a growing sentiment in Congress favoring the suspension or junking of AAA as an unneeded aid to agriculture in wartime, AFBF officials went before the House appropriations committee early in March to urge retention of the farm program to promote soil conservation now and to insure an effective agricultural safeguard for the uncertain postwar future.

"The American Farm Bureau Federation," President Edward A. O'Neal told the committee, "led the long fight for equality for agriculture culminating in the enactment of the Agricultural Adjustment Act and allied legislation, which form the basis of the so-called national farm program.

"We have defended this program against its enemies and have sponsored numerous measures which have been enacted to perfect this legislation. We have fought aggressively for the necessary appropriations to make this program fully effective. We must now maintain this basic legislation and continue to perfect it in the light of experience and changing conditions."

AFBF recommendations to the committee were summarized by President O'Neal as follows:

Agricultural Adjustment Administration

1. That $300,000,000 be provided for soil-building and soil and water conservation practices for the 1944 farm program, including expenses, with a similar provision for 1945. (This is $10,000,000 more than recommended in the budget.)

2. Because of great national importance of soil building and soil and water conservation, we urge that every consideration be given in the farm program to obtain the maximum results in real conservation.

3. That duplication between the various programs be eliminated.

4. That all controls for all crops except tobacco continue to be suspended this year and the program, with this exception, be devoted entirely to soil building and soil and water conservation and to encouraging maximum output of the food and fiber required for the war effort.

5. That a payment be provided on a bushel basis with a minimum payment per acre for the production and harvesting of seed for soil-building crops, pastures and hay designed to produce an adequate supply.

6. Farmers now being familiar with these procedures, there is no need to maintain large staffs of employees at Federal, State and county levels for purposes of education and promotion. With the acute manpower shortage and the enormous volume of Federal expenditures coupled with the mounting Federal debt, it is vitally important to eliminate unnecessary government employees and needless expenditures in order to conserve our manpower and financial resources. In the interest of economy and efficiency and the conservation of manpower, and in the interest of maintaining public support for the farm program, therefore, we recommend:

(a) That the educational, informational and promotional work in connection with the conservation program be assigned to the agricultural Extension Services of the States and counties.

(b) That a provision be inserted in the Appropriations Act prohibiting use of funds for the employment of AAA of "Program Specialists" and "State Committee field men."

(c) That provision in the present appropriation law prohibiting the employment of State and county information employees, be continued and made effective.

7. That a provision be inserted in the Appropriations bill requiring the discontinuance by Government employees of all political activities, lobbying activities, and all other activities except those specifically authorized by Congress. Further, in order to enforce this provision, that this Act prohibit the payment of salaries to any full-time employees who engage in political or lobbying activities, and also provide additional penalties.

8. That the AAA be directed to discontinue distribution of fertilizer, limestone, seed and other commodities, and to arrange for the distribution of these commodities in connection with the grant-in-aid program, through bonafide farmer cooperatives and other established trade channels.

9. That the budget for administrative expense be reduced proportionately to the reduction in the work resulting from the above and other changes in the program. (AFBF pointed out that previous retrenchments ordered by Congress have been made almost entirely at the county and community levels without corresponding reductions at State and national levels, and that this was contrary to the intent of Congress. As a result, expense at the higher levels is now approximately one-half of that at the county and community levels where the real work and functions of AAA are carried out).

Reorganization of Farm Program

The AFBF witnesses, on instructions from the Board of Directors, reaffirmed their recommendation for a reorganization of the farm program originally adopted at the 1940 Baltimore convention. This resolution called for elimination of duplication and overlapping and for the coordinating and unification of AAA agencies in the hands of a five-man non-partisan board within the Department of Agriculture.

Crop Insurance

That crop insurance be reinstated on wheat and cotton with provisions requiring greater economy and improvements to make this program actuarily sound within a three-year period.

Food Distribution Administration

Expenditures of this agency are excessive and should be reduced to a reasonable amount.

Section 32 Funds

We favor the use temporarily of Section 32 funds to help finance the school lunch program, but oppose legislation for the permanent diversion of these funds for this purpose. (Basic purpose of this 30 per cent of custom receipts allocated to agriculture is to relieve agricultural surpluses).

Farm Wage Regulation

That we oppose the appropriation for this purpose and recommend provisions be inserted prohibiting use of any government funds to regulate farm wages.

Tenant Loans and Rehabilitation

We recommend that appropriations to the extent of justifiable need be provided for the fiscal year 1945 for the continuation of farm tenant loans and rural rehabilitation loans, pending the enactment of legislation reorganizing the entire farm credit structure, including both cooperative credit and direct government loans.

We believe that provisions should be made to effect further savings in administrative costs, eliminate unnecessary offices and personnel, and get rid of bureaucratic regimentation of clients.

We recommend that the Committee insert in the appropriation the same limitations as last year to prevent the use of these funds for promoting collective farming, cooperative farming, land colonies, cooperative loans, or purchase of stock in cooperative or membership in farm organizations.

REA Awards Received By 3 Farm Bureau Families

The first public presentation of national rural electrification awards for increased wartime food production through the use of electrical equipment was made during March to three Illinois farm families.

Awards were presented at a ceremony in Carlinville in early March to William H. Moore, Jersey county; Adolph Monke, Macoupin county, and Arthur Grassel, Montgomery county, all Farm Bureau members.

New Law Requires Coops To File Annual Reports

Cooperatives associations will be required to file informational returns with the commissioner of internal revenue by May 15, 1944, according to C. C. Chapelle, tax consultant for the Illinois Agricultural Auditing Association. This is required by the new tax law.

The May 15 deadline applies to cooperatives whose business year ends on Dec. 31. The returns for cooperatives whose business year ends on a date other than Dec. 31 are required to be filed on the 15th of the fifth month following the close of the fiscal period. Cooperatives whose business year ended before Dec. 31, 1943, will not have to file their first return until 1945.

Forms for the preparation of these returns are not yet available, but associations will no doubt be required to furnish the following information:

1. Balance sheet at the close of the period.
2. Income and expense accounts for the last fiscal period.
3. A copy of their original letter of exemption.
4. Amendments to the articles of incorporation and to by-laws since the date of granting of the letter of exemption.

The following information may be required:

1. Statement as to the payment of patronage refunds if the association is a purchasing or marketing organization.
2. Statement as to the necessity for the maintenance of reserves.

Name IAA Delegation To Country Life Conference

Three IAA board members and two staff members have been named to attend the American Country Life Conference to be held April 11-13 in the Hotel Sherman, Chicago.

From the IAA board will be Talmage Defrees, vice-president, and Albert Hayes, director from the 16th district. Staff members attending will be John C. Watson and L. H. Simerl of the research department.

Theme of the conference will be "Farm and Rural Life After the War." Special attention will be paid to the following problems: kind of farms after the war, living standards for rural people, educational standards for rural people, cooperative activities of farm people and world relationships that affect the American farmer.

Plans for the program have been formulated by a committee appointed by Dr. D. E. Lindstrom, U. of I. College of Agriculture. Members of the committee are Paul V. Maris, FSA, chairman; Carroll Streeter, vice-president of the association, and associate editor of the Farm Journal and Farmer's Wife, and Rev. Fr. George Nell, director of Co-op Parish Activities, Effingham.

Assistant Adviser Resigns

James C. Hoyt has resigned as assistant farm adviser in McDonough county. He had served as assistant farm adviser and organization director from June, 1938, to June, 1943, when he was employed as full-time assistant adviser.

The American Dental Association reports that less than 10 out of every 100 American children and less than 2 out of every 100 American adults have normally healthy mouths.

FARM BUREAU members have the privilege of merchandising their wool through their own organization. The Illinois Wool Marketing Association is one of 21 state and regional members of the National Wool Marketing Corporation. The National handled over 60,000,000 pounds of wool in 1943. This makes it the largest single handler of wool in the United States and gives it the necessary bargaining power for higher prices.

Make it possible for your organization to render still greater service. See your Farm Bureau and be a cooperator in 1944.

Market wool cooperatively—help your own organization to help you to better farm living

ILLINOIS WOOL MARKETING ASSOCIATION

Some of these board members are sons and relatives of former directors of the Varna elevator. Left to right, first row, Fred Arndt, W. A. Schwanke, president; Carol O. Johnson, secretary, and Mauritz Stromgren, manager. Back row, Jay Meyers, R. H. Petrich, vice-president, William Koch, and Willis Shanklin.

Varna Elevator Serves Community For 50 Years

THIS year marks the 100th anniversary of the cooperative movement. It was just a century ago that 28 flannel weavers got together in Rochdale, England, and formed a cooperative society to better their lot in life. These were practical men who drafted a practical program.

This year of 1944 also marks the 50th anniversary of another cooperative venture — the Farmers' Cooperative Association of Varna in Marshall county. It has established a record of the longest continuous service of any cooperative grain elevator in Illinois.

Thus as the founders of the Rochdale society were pioneers in the development of the cooperative movement itself, the first Varna elevator board members were pioneers in the grain marketing movement in Illinois. The 50-year history of the elevator covers all of the ups and downs that farmers experienced during the period of trying to get a fair return for their products.

On the first board of directors in 1894 — the board then numbered nine — were William Koch, Sr., president; C. F. Wright, secretary, father of A. R. Wright, assistant treasurer of the IAA; George Ball, J. W. Whetzal, L. Beckwith, Fred Kaatz, John McCuskey, Jacob Lenz, and John Shields. None of the first directors is living, but William Koch II, now serving on the board, is a grandson of the late William Koch, Sr., the first president.

When the Varna elevator first opened for business it had difficulty in getting bids from commission firms. It met and solved this problem and went on to solve others that were even more difficult. These pioneers learned the hard way.

Probably one of the things that kept Varna elevator going all these years is that successive board members were always ready to adapt the organization to changing times. In the period of 50 years there have been three changes made. In 1921, it was voted to change the name from Farmers Grain & Coal Company to the Farmers' Cooperative Association. The charter was amended and the capital stock increased to $25,000.

In 1931, action was taken to reorganize under the Capper-Volstead Act. In the fall of 1936, the by-laws were amended and it was voted to pay back to the patrons one-half cent per bushel on all grain sold through the elevator. Under the new setup, any patron who did not hold common stock at the time the patronage was declared received credit toward earning one share of common stock par value $10. After one share of stock was paid for the holder received his patronage refund in cash.

The determination to keep a cooperative elevator in the community to serve the farmers was demonstrated in 1935. On June 15 of that year the elevator at Varna burned to the ground. The next day the directors met and voted unanimously to carry on the business of the association. The board decided to continue to buy grain and ship it through a neighbor elevator, and a new $11,400 elevator was built in time to handle the new crop of corn that fall. During the summer of 1935, the board held 17 special meetings and two regular sessions to plan their operations. Board members have always evidenced their interest in managing the affairs of the cooperative by the outstanding records of attendance at regular sessions. In 1940 there was only one director absent from one meeting.

One board director also pointed out that the Varna cooperative has succeeded in its operations through adhering to the policies outlined by the Illinois Agricultural Association through its grain marketing department, and by observing what made other elevators succeed or fail. As a member of Illinois Grain Corporation, the Varna elevator marketed 65,000 bushels through it for the 7 months period ending in January 1944. The cooperative spirit that has made the elevator a success is also reflected in the Varna community. Not far from the elevator is one of the most modern high school buildings that is to be found in Illinois. Upon inquiry you will find that the people built this school with their own tax monies. When the village decided to install a water system, $4000 was raised at the first meeting. In the same progressive spirit all of the streets of the village have been asphalted. In the recent War Bond drive, the community went

(Continued on page 25)

Farmers' Cooperative Association of Varna built this structure after fire destroyed its elevator in 1935.

Country Plant Ownership Advocated by PMA Manager

PROGRESSIVE cooperatives are giving considerable thought these days on how they can improve their marketing machinery so that members can have a more stable market when the war ends.

At the annual meeting of the Pure Milk Association, which has a membership of 12,500 farmers in Illinois, Indiana and Wisconsin supplying milk to the Chicago milk shed, Arthur Lauterbach, manager, recommended that the cooperative build up its reserves so that it could own country cooling plant facilities and have control of the country end of the milk business.

Lauterbach also pointed out that the cooperative should have enough money put aside so that it could have spray powder units to handle the surplus milk, especially if there is a demand for whole powdered milk in the post-war period. Milk powder, he said, might become a real competitor with fluid milk unless the distribution cost on fluid milk is reduced.

"We don't want to own plants just to have something to play with," the PMA manager said, "but to handle our own surplus in the country." He pointed out that the Kansasville roller plant saved $40,000 by running a short time last year and making milk powder out of the surplus. "And if we had handled all our surplus last summer we could have saved $700,000," he added.

Main value of such facilities, Lauterbach said, is their worth as standby equipment. "When we can make more money by selling fluid milk in the Chicago milk shed, then we want to sell fluid milk, and that is what we are doing today."

PMA has already taken some steps in the direction of owning its marketing facilities. During the last year, the association operated six milk receiving plants, a small milk bottling plant in Chicago which supplies one-wagon distributors, and the skim milk powder plant at Kansasville.

As another means of providing market stability for producers in the post-war period, Lauterbach urged serious consideration of the surplus holding plan long advocated by the National Co-operative Milk Producers Federation — a combination of the practical principles of the old McNary-Haugen bills and of the ever-normal granary theory of the AAA.

"We must not be fooled into believing that Europe will need food long after the war is over; we will face an oversupply of food, possibly within two years after the war, and then prices will again decline unless there are rigid controls," he said.

"It is with deep regret," he added, "that I see Number One Post-War Planner Barney Baruch — whose post-war plans in World War I forgot about agriculture — has again come out with a report which ignores the need for understanding and planning for agriculture. This is discouraging to farmers."

Treasurer Walter Winn reported a new high in savings in the operations of PMA for 1943. Nearly $300,000 savings were made in plant operations, in sales of excess milk, skim milk powder manufacture, and in central office administration. The result is a year-end figure of $972,252 for the Association's net worth, after patronage refunds of $181,921 for the years 1929, 1930, and 1931.

Secretary Charles M. Cosgrove reported that Pure Milk members produced 1,439,353,827 pounds of milk duing 1943, for which they received net returns, after association deductions for marketing fee and plant investment — of $44,359,888.83, or an average of $3.082 per cwt. for milk containing 3.65% butterfat. This was an increase of $9,210,437.36 over returns for 1942.

Two resolutions calling for specific action to increase membership services were approved by delegates at the business session: (1) study of group medical and hospitalization insurance; and (2) study of revised membership agreement and of revised by-laws to simplify accounting procedure and to make possible accumulation of greater association reserves.

Other resolutions called for:

Release of protein concentrates to permit farmers to mix dairy rations on their own farms; removal of impediments to obtaining fertilizers; opposition to nationwide subsidies for consumers, and calling for public assistance for low income groups only upon basis of need; reduction of ration points for butter; opposition to efforts to destroy safeguards against fraud in marketing of butter substitutes; continuance of federal milk marketing orders to stabilize large fluid milk markets.

The following directors were unanimously elected to serve on the association board for the 1944-46 term: Lee Cartier, Whitewater, Wis., district 2; John Voelkering, Burlington, Wis., district 4; Walter Winn, Richmond, Ill., district 6; Harvey Norem, Newark, Ill., district 8; John P. Case, Naperville, Ill., district 10; W. M. Kimmelshue, Manteno, Ill., district 14; Fred Hiigli, Union Mills, Ind., district 16; Earl Whitaker, Elkhart, Ind., district 17; and W. E. Kline, Culver, Ind., district 18.

When Pure Milk Association members' wives came to the annual meeting they brought cake and cookies for the Chicago USO and Service Men centers. Three service men sample the wares before loading them for delivery to the centers. They are Pfc. Harry Tilbury, Pvt. Rudy E. Barton, and S 2/C Alvin H. Behrer. Cutting the cake is Mrs. Archie Crichton, Kane county PMA member, who originated the idea.

Junior Market Lamb Show Set For June 16, Chicago

Illinois and midwest farm boys and girls will exhibit market lambs, raised as 4-H and FFA projects, in the sixth annual Chicago Junior Market Lamb Show and Sale, Friday, June 16, at the Chicago Stock Yards.

The competition will be open to any boy or girl who is a member of a 4-H club or enrolled in vocational agricultural work in the rural schools.

Sixty cash pizes, totaling $250, are offered by the Union Stock & Transit Company.

Entry cards and prize lists may be secured by writing the Chicago Junior Market Lamb Show, Exchange Building, Union Stock Yards, Chicago. Entries will be accepted up to June 12.

The FARM FRONT ROUNDUP

DRAFT FORMS — All farmers and farm laborers subject to the draft are being required to fill out a new agricultural deferment form and file it with the selective service board. The new form is AQ44, which replaces the old form 401B used last year to list agricultural production units per man on the farm. The new forms will be mailed to registrants as soon as they are available to the selective service boards.

DRAFT MEETINGS — Ten regional meetings of draft boards and USDA war boards to discuss agricultural deferments were held in Illinois from March 21 through April 5. The meetings were called by Col. Paul G. Armstrong, state director of Selective Service.

FARM UNITS — A 50 per cent increase in the unit value of soybeans and an 18 per cent decrease in the unit value of corn for selective service deferment purposes has been authorized by selective service officials. The unit value on corn has been changed from .22 units per acre to .18 units per acre. The unit value on soybeans has been changed from .08 to .12 units per acre.

SOYBEAN PRICES — In order to insure greater production of soybeans, OPA has announced that the support price on the 1944 crop will be on the basis of $2.04 for No. 2 beans with moisture content not exceeding 14 per cent. This is a 10-cent increase over the previously announced support price. A ceiling price also has been set on 1943 beans on the basis of $1.86 for No. 2, 14 per cent moisture beans. The ceiling for the 1942 crop remains at $1.66 per bushel. Soybeans sold for seed for the 1944 crop, or for human consumption, or exported, are not covered by the new ceiling.

SOYBEAN DECREASES — According to a March report of the USDA, in Illinois, the largest producing soybean state, farmers' 1944 plans indicate a decrease of 3 per cent from the soybean acreage planted last year. Iowa plans an increase of about 10 per cent over last year, Indiana 1 per cent, and Ohio 4 per cent. Farmers in the North Central states, where about 78 per cent of the total soybean acreage is grown, expect to plant 11,391,000 acres, an increase of less than 1 per cent over last year.

MILK PRICES — WFA announced March 21 that it has suspended portions of the federal milk marketing orders which would have decreased producer returns for Class I fluid milk in the Chicago milkshed during the spring and summer months. The portion of the Chicago order which WFA suspended called for a drop of 20 cents a hundredweight during May and June.

DAIRY SUBSIDIES — Increase in subsidy rates in the "dairy feed payment program" has been announced by the WFA to cover the months of March and April. The new rate for whole milk is 50 cents per 100 pounds, a boost of 15 cents, and 8 cents per pound of butterfat, a raise of 3 cents.

FARM SLAUGHTERING — WFA has extended indefinitely the period in which farmers can slaughter hogs and deliver pork to others without a permit or license. Ration points still have to be collected. WFA's restrictions on farm slaughter of hogs and delivery of pork were first suspended for 3 months from Nov. 17, 1943 to Feb. 17, 1944. This period was then extended to March 17. Amendment 12 to Food Distribution Order No. 75, places no termination date on the suspension.

HOG SUPPORT PRICES — WFA announced March 18 that from April 15 to Oct. 1, the hog support price of $13.75 Chicago would apply only to hogs weighing 200 to 270 pounds. The price support is scheduled to drop to $12.50 on Oct. 1, and will apply only to hogs weighing 200 to 240 pounds.

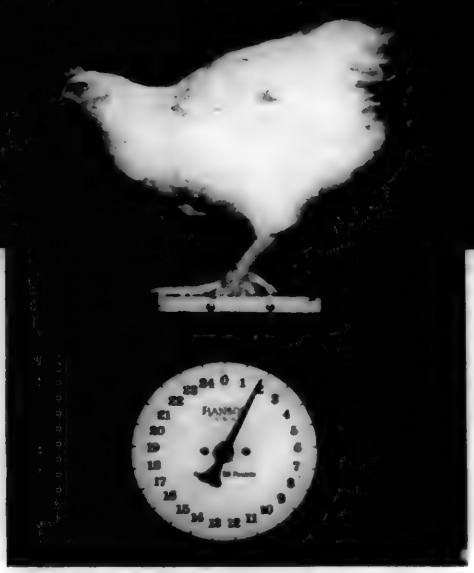
GASOLINE COUPONS — Starting April 1, five-gallon "R" coupons issued to farmers and other non-highway users will not be valid for buying gasoline at filling stations or other retail establishments. This means that after April 1 only those who buy their gasoline at bulk plants or authorized stations, or who have gasoline delivered into storage tanks on their own premises will use the "R" coupons. Non-highway users who get their gasoline at other retail outlets will use the one-gallon "E" coupons. Users of "E" and "R" coupons will be required to endorse the coupons. The name and address need be written only once on each strip or block turned in as a unit. Coupons presented separately have to be endorsed separately.

A GAS COUPONS — The eight A-11 gasoline coupons which became valid March 22 will still be worth three gallons each, but the period they cover has been extended until June 21 instead of May 21, according to OPA.

FARM TRANSPORTATION — Hauling of farm products and supplies this year will present critical problems, reports the WFA. Farmers are urged to keep their trucks, pickups, trailers and automobiles going by rigid maintenance of engines, transmissions and axle assemblies. Rubber tires will be one of the tight spots, not only for hauling vehicles, but also for tractors and other farm equipment. Recapping of tires must be employed extensively, WFA says.

NEW CAR ELIGIBILITY — OPA has issued three new rules on eligibility for new cars: (1) Raised from 40,000 to 60,000 miles the minimum milage an applicant's present car must have been driven before it can be considered unserviceable; (2) Made salesmen ineligible for new cars, and (3) Requested local boards to issue a purchase permit for a new car only to an applicant showing an immediate need for one.

Feed your chickens for Growth



SAVE MORE CHICKS

Your baby chicks are worth saving today. You need them and so does Uncle Sam. Give them a good start with Blue Seal Chick Starter. They will get the much needed vitamins, minerals, and proteins, to assure good health, rapid growth, and economical feed cost.

PRODUCE MORE EGGS

To keep your hens busy on a "full time" basis, feed them Blue Seal Laying Mash. This is a rich egg-producing feed that should be kept before your birds at all times. Scratch grains should be fed at the rate of 10 to 12 lbs. daily per 100 birds.

Grow them Sturdy

Balanced feeding during the growing period is particularly urgent this year. Failure to provide good growing feed has a "slow down" effect usually resulting in under-developed, poorly feathered birds with low resistance to disease and worms. Blue Seal Grow Mash is formulated to build strong frames, rugged bodies, good health, and vigor.

USE BLUE SEAL GROW MASH.

Grow them Quickly

Time is important too! We can translate time into pounds of meat and dozens of eggs by feeding Blue Seal Grow Mash. Start when chicks are six weeks old, changing from Chick Starter to Grow Mash gradually. Hand-feed scratch grains and maintain a good supply of grit and clean, fresh water.

Grow them Economically

Grow Mash cannot really be called an expense; it is actually an investment. Make an investment in plump, well finished cockerels and sturdy, healthy pullets that will be ready for egg production early and will be able to carry on at high levels throughout the season. Blue Seal Grow Mash will help you do this. To assure further economy, provide a good range where pullets can get ample green feed and sunshine. Another method—you can use Blue Seal 26% Poultry Balancer as a Growing Mash, fed either "cafeteria style" or by mixing 100 lbs. of Balancer with 150 lbs. of ground yellow corn and 50 lbs. of ground heavy oats.

ILLINOIS FARM SUPPLY COMPANY

608 SOUTH DEARBORN ST. CHICAGO 5, ILLINOIS

KERNAN, LASALLE COUNTY, HAS

COMMUNITY CLUB

They Have Good Times and Accomplish a Lot of Good

A RURAL community club claiming to be the oldest in Illinois will have to meet the challenge of the Community Boosters of Kernan, La Salle county. The Community Boosters organized in 1913, so that makes it just a little bit older than the La Salle County Farm Bureau, but don't get the idea that it's an old-timers club. The age range starts with the toddlers, who usually get restless during the business session of the program, and goes beyond the "life begins at 40" mark.

Refreshments are a major item on any Boosters' program and here are members of the committee in this division for one evening: Mrs. Irvin Funk, Mrs. Howard Smith, and Mrs. John Fekon.

In case you want to meet some of the prominent Farm Bureau leaders of La Salle county, your best bet is to attend one of the Boosters' regular meetings. You'll find E. E. Stevenson, who served as president of the La Salle County Farm Bureau for 21 years, and who is now president of the Illinois Grain Corporation, leading the songs. He was the first president of the Boosters and is still going strong. You'll find Mrs. Lucile Needham Stevenson, his daughter-in-law, in charge of the business meeting. She is a former president of the Illinois Home Bureau Federation.

Other notables to be found on the membership roster are G. R. Birtwell, treasurer of the La Salle County Farm Bureau; J. Ward Smith, charter Farm Bureau member and second president of the Boosters, and now a member of the state legislature; J. V. Stevenson, who served as president of the University of Illinois Dads Association; Elgy Birtwell, who for some years was president of the Ransom Farmers Elevator, one of the oldest cooperatives in the state, and many others. You'll find that most of the Boosters are either Farm or Home Bureau members.

How the Community Boosters happened to organize in the little crossroads center of Kernan, six miles east of Streator, is a story in itself. The late Clifford Vogelsang, a country school teacher who became state senator, had a lot to do with it. He was teaching the Maple Grove school and put on a program for the folks of the community. There were spelling bees and other events that proved popular with young and old and as a result they asked for more such meetings. As time went on the meeting place was shifted to the Kernan town hall. The next step was the purchase of a piano. After acquiring a piano, the members thought they ought to have a place of their own to house the piano. An abandoned church was purchased and renovated and the Community Boosters had a home. This seemed like an important chapter in the club's history as it meant considerable planning and work to pay for their home, but the Boosters felt they were well established.

Calamity visited the Boosters and their well-organized existence in 1931. Fire destroyed the remodelled church and members were forced to return to the Kernan town hall for their meetings. However, within a few months, work was started on a new Community Boosters club building on the church site. Members contributed work and materials, and soon a modern, fireproof, brick building was ready for occupancy. At the 30th anniversary in March, 1942, the last of the indebtedness on the building was cleared.

In the new building there is a large

Chicago Producers Fear Livestock Price Control Aids Processors, Hurts Farmers

NOBODY wants to deny a reasonable amount of profit to the processing industry or to the retail industry. That's why agriculture did not oppose the McKellar amendment to the Price Control Act which, in brief, assured fair and equitable profit margins to the processors.

But in actual practice, and under the direction of the OPA, the amendment has been taken to mean that even the most inefficient processor can buy livestock cheap enough to assure him a profit.

This point was brought home to livestock men attending the 22nd annual meeting of the Chicago Producers Commission Association by P. O. Wilson, secretary-manager of the National Livestock Producers Association.

"That is exactly the way it has been handled — selling your livestock cheap enough so that all processors will get a profit," Wilson told his audience.

Under such a setup, he continued, the only way that livestock producers can protect themselves is to see that the amendment is remedied when bills are drafted in the coming months to extend the life of the Price Control Act.

Wilson further pointed out that the financial statements of the packers for the fiscal year ending Oct. 31 showed that they did well enough even though they had to pay tremendously increased taxes.

"It is true," he added, "that some of them indicated that they did not do so well on hogs or cattle, but I have only one comment to make on that. If they did not do so well on hogs and cattle, they sure had a good year on lambs, and poultry and dairy products!"

Livestock producers talk over the year's business between sessions of the Chicago Producers' annual meeting.. Center is William Stockley, LaSalle county, and right, L. J. Quasey, Commerce Counsel for the Producers.

Wilson also gave the answer to the whole subsidy question — the same one that he gave to Mayor LaGuardia of New York in a recent conference.

. . . "If you can prove to me," he told the New York City mayor, "that the consumers of your city are not in a financial position to pay their grocery bill, I believe American farmers will join with their leaders and go with you to Congress and ask for a subsidy or a dole for your people; but we want it labeled what it is, a subsidy to the consumer, not a subsidy to the American farmer! That ended our subsidy discussion."

Questions popped up at a rapid rate during the afternoon discussion period of the annual meeting.

Here was a typical one put to H. M. Conway, director of research for the National Live Stock Producers Association: "Do you think the price of hogs will be lower this fall like the government says it is going to be?"

Conway answered, "It is impossible to make any definite forecast as to what action will be taken on the part of OPA. Frankly speaking, I do not consider that the lower floor will be effective even if it goes in. It is only a matter of time until the price ceiling will dominate the hog market, and I expect that to be true even next fall and winter."

Another question, "What can I afford to pay for 100-pound feeding pigs?"

Prof. E. T. Robbins' answer to this was, "A dime, and I expect you could pay 12 cents."

P. O. Wilson reported that in the first week of March the hogs not moving on the market were feeder pigs, particularly the light ones weighing from 70 to 80 pounds. The lighter ones were selling in the neighborhood of 8 cents, and on up to a dime. All of the marginal territory is very bad as far as feed is concerned, such as Oklahoma, Kansas and Nebraska, Wilson said.

One of the problems of immediate concern to livestock producers and feeders of Illinois is truck transportation, L. J. Quasey, commerce counsel, National Live Stock Producers Association, declared.

There is need, he said, for more intensive conservation of equipment during the coming months than at any time since Pearl Harbor. National tire quotas have been cut from 550,000 tires per month to 300,000 or less. There will be only about 81,000 new trucks available for civilian use in the whole country during 1944. The repair part situation is

Henry Wieland, secretary-treasurer, left, Beloit, Wis., and Henry Parke, DeKalb county, president of the Chicago Producers, report another year of successful business in cooperative marketing.

★

generally somewhat better than it was, but inability to locate parts and delay in securing them is still quite frequent. ODT district offices are ready to offer assistance on locating parts.

Quasey also cited the problem of keeping enough truckers to maintain transportation for livestock and other farm products and at the same time of meeting draft quotas. He said that livestock committees, ODT livestock advisory committees, the Farm Bureau, and the USDA war board in each county can help in this matter by cooperating with draft boards in seeing that proper information is compiled on truckers. He pointed out that not infrequently truckers are reluctant to seek deferment, notwithstanding the fact that the community might be left without any adequate livestock truck service.

R. C. Pollock, secretary-general manager of the National Live Stock and Meat Board, reported to producers on the work his organization has been doing for the armed services in the last three years in how to cut and cook meat. He showed a map of 200 to 300 Army camps where representatives of the Meat Board are working in the present fiscal year in cooperation with the Quartermaster Corps. This year the work is also being carried to 180 air bases and a program has been launched to include naval bases at the request of Army and Navy officials.

Annual reports of President H. H. Parke and Manager Dave L. Swanson showed that the Chicago Producers maintained a good record in 1943 despite many regulations which had an upsetting effect on the market. Although the Producers volume decreased from 22,294 cars in 1942 to 21,401 in 1943, a decline of 893 cars, the Producers handled 1/7 of all livestock on sale at the Chicago market.

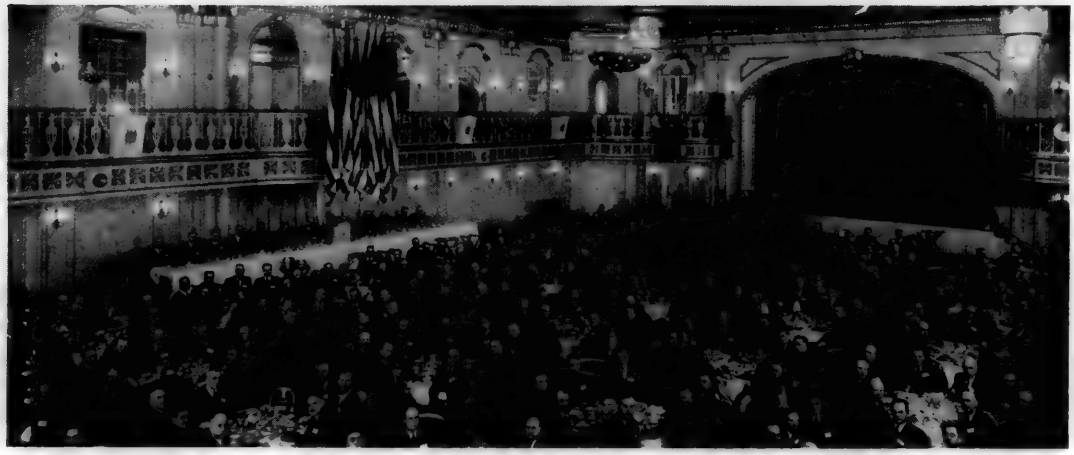
PRODUCERS HAVE THEIR BIGGEST YEAR



More than 300 members and farm leaders attended the 22nd annual meeting of the Producers in St. Louis, March 8. This picture was taken during the luncheon in the Gold Room of the Jefferson Hotel. During 1943, the St. Louis Producers transacted the largest volume of business in its 22 years of cooperative marketing. Cars handled increased 1368 over 1942.

MORE than two decades of successful cooperative live stock marketing at National Stock Yards, Ill., were signalized by the St. Louis Producers in its 22nd annual meeting March 8. More then 300 stockmen and farm leaders from 50 Illinois and Missouri counties were in attendance.

In welcoming members of the association, President Roy Burrus, Cass county, pointed out that the St. Louis Producers and its members were happy to contribute to the war effort in 1943 through the production and marketing of more than 900,000 head of cattle, calves, hogs and sheep valued at $37,000,000. The Producers last year, he said, handled the equivalent of 17,473 cars of stock, or the greatest volume in its history.

"If there is one thing that we have learned in these trying months for the live stock producer," Burrus said, "it is the need for still greater organization and maximum use of our resources. As producers we pledge continued support of the war effort; as a marketing agency we pledge efficient service and renewed vigor in our fight for 'fair play' for live stock growers and feeders. Your continued support will help us obtain these objectives."

In his annual report, H. D. Wright, manager, pointed to the splendid production job performed by farmers and stockmen in 1943 who succeeded in turning out an all-time high number of meat animals in the face of shortages of farm machinery and manpower.

●

"While the year will be remembered as one of record live stock production," Wright said, "it was also marked by increasing discouragement because of frequent government orders, regulations, etc. that resulted in a great liquidation of herds and flocks, particularly during the latter part of the year. The peak of agricultural production is probably past, inasmuch as we have had seven successive years of record crops which piled up feed and provided pasture for the nation's largest live stock production.

"Two great tasks face the country this year. The first is to devote to the winning of the war every effort and every resource that can be employed. The second is to make all possible preparations to facilitate reconversion to peace time work which will come as war demands on industry decline."

P. O. Wilson, secretary-manager of the National Live Stock Producers Association, who addressed the meeting, warned that this spring and summer will find the country faced with the most serious meat shortage in its history. This situation, he said, is a culmination of ill-advised government price control regulations. The effect in the live stock field has gone so far now that only special effort will assure adequate supplies of beef and pork next year.

"For some time," Wilson declared, "an apparent adequate supply of beef has been produced by liquidation and premature slaughter of cattle, but this year approximately 25 per cent to 30 per cent fewer cattle were put in corn belt feedlots. Also about 45 per cent to 50 per cent of these reduced numbers were put in only for a short turn and will be marketed by the end of this month. In areas outside the corn belt, comparatively few cattle are being fed this year.

As to hogs, Wilson said the general live stock liquidation is most marked in this class. This industry was encouraged into over-production primarily at the expense of cheap corn. Now it is being forced to a level of production that will be far short of producing the necessary pork requirements.

Other speakers included Prof. J. O. Christianson of the University of Minnesota, D. Howard Doane, of the Doane Agricultural Service, Inc., St. Louis, and Lt. Col. Stanley DenHerder of Scott Field, Ill.

Two Directors Named

Roy Burrus was re-elected director from Illinois and Tom Douglass of McBaine, was the director elected from Missouri to succeed J. Henry Brayton of Holliday. Remaining directors are: J. D. Fehsenfeld, Troy, Mo.; J. R. Fulkerson, Jerseyville, Ill.; W. E. Williams, Garland City, Ark.; Arthur Weber, Sparta, Ill.; Theodore Anderson, Montreal, Mo.

The board of directors named Burrus as president for another term. Theodore Anderson was named vice president and Fehsenfeld continues as secretary-treasurer.

THE OUTLOOK:

HOGS SAME NUMBER BUT FEWER CATTLE

C. H. Jackson, prominent Mercer county livestock feeder, is keeping his pork production plans about the same as 1943 and reducing his cattle operations this year. Here are some of his 95 sows that will farrow in June.

THE old-timers in the hog producing and feeding business are going to produce just about as much pork in 1944 as they did in 1943.

That's the way C. H. Jackson, well-known Mercer county livestock man, sees the picture for the coming year.

Jackson markets about 800 to 1000 hogs a year and he expects to carry on his plans about the same way this year. However, he has cut down his cattle feeding operations.

In mid-March Jackson had 102 heifers in his feed lot as compared with 500 he would normally be feeding. He also has about 78 head of steers which he brought in during the last of February to clean up silage that won't be used up by the heifers.

The 102 heifers are those left from 207 he bought last October through the Chicago Producers at $11.25 per hundredweight. They weighed around 700 pounds when he got them, and he marketed 105 of them during the first of March for $14.25 at an average weight of 938 pounds. He doesn't know how he will come out on this operation until he markets the remainder of the lot.

Jackson pointed out the only reason he is in the cattle business this year is to use up the roughage on his acreage. He plans to get about 250 500-pound steers June 1 and will grass part of them.

Before the present market situation developed Jackson used to feed calves, but under current margins he has turned to yearlings. He is still buying a good grade of feeders, however, as he believes that they make the most economical gains.

On his hog operations, Jackson hasn't altered his plans much from other years. He had 22 sows farrowing from Jan. 3 to 5 with 195 pigs, and 11 sows farrowing during the first of March with 104. There were 23 sows still to farrow in March and 95 sows are to farrow in June.

Jackson figures on having most of his pigs ready for market in six to eight months. Pigs farrowed last June went to market seven months later at average weights of 270 to 285 pounds. He usually has his pigs feeding in from three to four weeks, starting them in on hulled oats. He is using oats sparingly now, however, because they are too expensive a feed even for a pig starter.

At the present time Jackson is operating about 600 acres in Mercer county, having started out with 160 acres before the first world war. Through his livestock operations and the application of limestone and fertilizer he has built his corn yield up to more than 100 bushels per acre. Last year he had 180 acres in corn and 75 acres of Boone oats. Some of his land should go into oats this year, but with the demand for more corn, he probably will not increase his oats acreage this year. All of last year's oats crop was sold for seed. His rotation is two years corn, one year oats, and one year clover.

All of his land has been limed, even his pasture, and he has used 2-12-6 fertilizer on his corn.

"I've found that it pays to put back into the land what you take out," Jackson says.

Operations of C. H. Jackson's cattle feeding plant near Joy in Mercer county are reduced in 1944, but he is still making a substantial contribution to the country's meat supply. Loading up the feed bunks are Victor Eckert and Claude Duncan.

Farm Labor Tightens With Spring Season

Indications that the farm labor situation is becoming tighter as the spring season draws near are found in the reports coming to the emergency farm labor office of the agricultural extension service of the U. of I.

G. T. Swain, Kankakee county farm adviser, reported early in March that "the demand for farm help has taken a decided increase in the past week. The situation would be better if more farmers would obtain a house and order married men. We have now 11 openings for married men and 21 for single men, with just 3 married men available."

"Our supply of farm help seems to be exhausted and with orders for hired labor coming in daily, it appears our only available source of supply will be the victory farm volunteer workers," says D. M. Chalcraft, Boone county farm adviser.

Commission Takes Steps To Enforce Pension Act

LAST November the Illinois Public Aid Commission announced that it would take positive steps in enforcing those provisions of the Illinois Old Age Pension Act which make children responsible for the support of their parents. In other words, the Commission took the position that it would not continue to furnish allowances to old persons whose children were able to care for them.

The need for such a positive action by the Commission becomes evident in a comparison of Old Age Pension rolls in Illinois with those of other states. The Commission became responsible for the administration of this program last July. During that month, 146,563 persons received old age pension allowances. During that same month only 113,259 persons received such allowances in New York, where the children's responsibility provision of the state law is enforced.

In Pennsylvania, another state where children's responsibility was required, 89,786 persons received old age pension allowances last July. In Texas, on the other hand, where the law forbids inquiries concerning children's ability or willingness to assist parents, there were 181,898 persons on the old age pension rolls.

The Commission started this program the latter part of November on a test basis in six downstate counties and a district in Chicago. On the basis of its experiences in these areas, it introduced the program on a statewide basis on January 1, of this year. As the program involves the review of the needs of each recipient who has a child, it is not possible to state what its final results will be at this time.

Nevertheless, there are a number of indications that it is having a substantial effect on the state's Old Age Pension rolls. Of 2,553 cases on which reinvestigation is completed, allowances were discontinued for 1,205, or 47 per cent, because children were able to assume the full support of their parents. In addition, among those who were continued on the rolls, increased contributions toward their support were received in many cases.

In considering these figures, it must, however, be borne in mind that they represent the findings from the first cases covered in the review, which, generally speaking, were those in which there was most likelihood that the children were able to assume all or part of the cost of caring for their parents.

On the other hand the Commission reports there is evidence to indicate that this program has made many people aware of their responsibilities toward their parents with the result that they are assuming this obligation in advance of any action of the Commission. Thus, the Old Age Pension rolls in Illinois decreased by 1,022 in December, the first time in the history of the program that there was a decrease of more than 1,000 cases in a single month. According to the Commission, during January the number of persons on these rolls decreased by 1,789, and in February by 2,376.

There has also been a complementary drop in the number of applications for Old Age Pension allowances since this program was announced. Last October, 1,430 persons applied for these allowances. In November, the month in which the program was announced, the applications totalled 1,064. By December, when the program was being operated on a test basis, the number of applications had decreased to 974. Applications during January totalled 980, and by February they had dropped to 793.

The Commission states that their experience indicates children are ready to accept this responsibility. With individual and family incomes at an all time peak there should be fewer applications and certainly in many cases children who previously were not financially able to take care of their parents are now in a position to do so.

In a Commission study of 840 Old Age Pension cases cancelled because children of recipients were able to support their parents, it was found that in sixty per cent of the cases children willingly assumed this responsibility.

In twenty-six per cent of the cases cancelled, recipients failed to supply County Departments of Public Assistance with any information, indicating that they were not in need of help from the state. In only nine per cent of the cases cancelled did children refuse to accept their obligation for support of their parents.

Vote for Home Bureau

At a dinner meeting Feb. 3, a group of 21 representative women of Bond county voted unanimously in favor of establishing a Home Bureau in their county. A request has been sent to the U. of I. home economics department for the services of Mrs. Madge Little, home adviser at large, to help organize a unit.

14.3% of all Hog Feed IS WASTED!

The United States Department of Agriculture made a five year study on a typical hog farm and found that 14.3% of the total feed used was consumed by pigs that failed to reach market.

A pig farrowed dead represents a loss of 140 pounds of feed consumed by the sow. A hog lost by disease or accident at market time represents a cumulative loss of 970 pounds of feed.

Protect your pocketbook and your pigs against the most dreaded and costly hog disease, CHOLERA. Vaccinate at an early age with fresh, potent Farm Bureau serum and virus.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

"LIFE has afforded me no greater satisfaction than the joy I have derived from the slow, steady, and sustained gain in prestige which agriculture has made as our farm organizations have grown and developed.

"Yet, anyone who studies modern trends must be impressed with the fact that as the country grows, farmers are destined to become a smaller and smaller segment of the total population.

"That must inevitably mean that the impact of the pressure of other organized groups upon agriculture will be intensified. That pressure may not be by design, or out of hostility, but it will be there, nevertheless. Let us never forget the lessons of history which show that the downfall of many a nation was begun when the rulers yielded to the demands of consumers for cheap food.

"Farmers can protect agriculture's historic tradition of freedom and independence, and they can bring about national farm policies that will preserve the Nation's greatest source of wealth, the soil, for the welfare of future generations — they can do these things, I say, if they will join together to form organizations as strong, relatively, as the organization of other groups. There is no other way." (Statement by Edward A. O'Neal, AFBF president, in the pamphlet, "Will A Million Members Be Enough?")

After 45 sessions, serving 65 counties, the series of M-M meetings neared its scheduled close March 31.

However, counties where meetings had to be postponed, or in which they were not scheduled, may get some April or May dates. Contact Claar, Hornbeck or Moore.

Results are beginning to be apparent as counties set out on the programs adopted at M-M meetings. One outstanding fact is that county directors or organization committees have set challenging membership goals — higher than estimated in advance by IAA fieldmen in many instances. This indicates that farmers realize keenly that now is the time to build their organizations strong to meet the problems of war and post-war.

Employees, both of Farm Bureaus and the subsidiaries, have had excellent attendance records and have shown by their discussions that they fully realize their opportunity and responsibility in maintaining IAA membership above the 100,000 mark.

Braving icy winds on one of the worst nights this winter, the workers of Kankakee County Farm Bureau assembled 165 strong for an enthusiastic organization school. Membership reports from that county since that date indicate a most successful drive. Forty-nine new members were reported during the week the meeting was held.

Livingston County Farm Bureau held its new member meeting March 14 with 310 in attendance. Lee Fillingham Seaman 1/C, who has been in the Navy for two years, was present. He has continued to pay his membership dues during that time, and expects to return to the farm as an enthusiastic Farm Bureau member at the close of the war. G. H. Iftner, director of grain marketing for the IAA, was the speaker at the meeting.

Early reports from Richland County Farm Bureau's membership drive indicate 46 new members signed.

Lt. Gene Stadel, right, former COD in Marshall-Putnam county, attended the organization conference at Farm and Home Week. At left is J. Clint Miller, Winnebago COD.

Emmett Keim, St. Clair COD, completed his 105% dues income quota during the first week of February. St. Clair county can be proud of this attainment and the splendid increase in membership experienced in recent months.

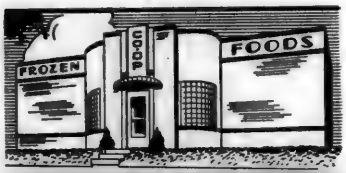
J. Walker Robbins, Champaign COD, reports that during the first 10 work days of March, 20 new members were signed and paid the full $15 in every case. Full dues were collected from 128 old members, and one-half dues from three others.

Greene, Macoupin, Randolph, Clinton, Washington, Coles, Kane, White, Lawrence, and many other counties staged special membership activity during March.

Will County Farm Bureau membership has increased more than 250% during the past 10 years, and now stands at more than 2000.

Negotiations have been completed by the board of directors of the Rock Island County Farm Bureau to purchase a two-story, red brick building in Moline as a new home for the Farm Bureau and its affiliates.

Board of the Ford County Farm Bureau also has bought a building four doors west of its present location in Melvin.



lockers

By Frank Gougler

THE COOPERATIVE LOCKER SERVICE OF MT. CARMEL has recently let the contract for the construction of a new locker building 35 x 60 feet, to be constructed of glazed hollow tile. This building will accommodate 726 lockers and provide ample chill room space and a special room for lard rendering and curing and smoking of meat. The cost of the building will be approximately $15,000 and a like amount will be expended for equipment. On a locker basis this will be approximately $45 per locker when completed.

KENDALL COUNTY COLD STORAGE LOCKER COMPANY has completed its expansion program and patrons now have the use of their lockers. This expansion program has provided for enlarging the plant at Yorkville, so that additional lockers could be installed, and provides for a larger chill room, as well as a larger and more complete room for rendering lard, curing and smoking meat.

Another unit of the association has been established at Oswego which provides for 250 lockers. This small county of nine townships has two complete plants, one at Yorkville and one at Newark, with branch plants at Plattville, Plano and Oswego. Total number of lockers in all plants now exceeds 1200.

RICHLAND AND COLES COUNTY FARM BUREAUS have under consideration the setting up of a locker plant in each county. If there is sufficient interest in Coles county, a plant will be located at Charleston. A committee of the Farm Bureau board has been named to make a survey of membership interest in this project. Richland county's interest centers around Noble. Here, too, the Farm Bureau has named a committee to work with local leaders in carrying the project forward.

STARK COUNTY operates three complete locker plants at Bradford, Wyoming and Toulon. Because of the great demand for lockers, the plants at Toulon and Wyoming have been enlarged and approval has been had from WPB for enlarging the Bradford plant. After expanding, each plant has over 600 lockers, making a total of more than 1800 for the county. All three plants are complete plants, including lard rendering and curing and smoking. All plants are governed by a board of directors of nine members, all of whom are Farm Bureau members, and Miss Kathryn Craig is county manager and bookkeeper. The locker association has issued 2000 shares of "B" stock to the Stark County Farm Bureau.

About 65 leaders from Illinois cooperative locker plants met in Chicago in March to discuss problems confronting locker boards and managers. The following major subjects were discussed:

George E. Metzger, IAA field secretary, outlined relationship policies which had

been worked out by the IAA business service committee and which were approved by the board of directors of Illinois Cooperative Locker Service. All present were in accord with these policies.

Price ceilings as applied to locker plant operations brought out considerable discussion. Locker plants had locker rentals and service charges frozen as of March 1942. The effective date for such ceiling prices went into effect on August 19, 1942. Most of our locker plants, because of higher costs of supplies and labor raised their charges before March 1942. Those that failed to do so now find it difficult to operate on a profitable basis and are interested in the procedure for increasing service charges and locker rentals.

Jay Simon of the Chicago OPA office and A. L. Frankel, district representative of the same office, addressed the meeting on the subject and outlined the procedure for securing price adjustments as follows:

1. Outline clearly and fully information showing for what services increased charges are desired and the amount of each increase.
2. Support such request with income and expense statements, profit and loss statements and balance sheets for the years 1941, 1942, and 1943.
3. Furnish information in regard to service charges and locker rentals made for like services by nearby competitors.
4. Prepare all supporting evidence in duplicate and outline fully by letter just what is desired.
5. File application for adjustment with nearest district office. The officers in charge and location of Illinois district offices are as follows:
   R. Biggert, 228 North LaSalle Street, Chicago; J. L. Hirschfield, Moline; A. W. Offill, Peoria; C. R. Davis, Springfield. These offices will furnish instructions as to method of procedure.

By L. L. Colvis

Annual meeting of the Illinois Fruit Growers Exchange and the Fruit Exchange Supply Company will be held April 18 in Carbondale.

As of March 18, the prospects for a 1944 fruit crop in the United States look favorable. This is the "on" year for apples. Tree numbers have gone down to less than 80 million in the U.S. These, however, could produce from 40 to 50 million more bushels than the short 1943 crop.

None of the principal peach producing sections of the country have been seriously hurt by low winter temperatures, and there is a possibility of a bumper peach crop. Early blooming, however, is increasing the danger of injury from spring frosts. Growers feel that the crop at present is hanging in the balance and will be determined largely by temperatures from now on.

The picture in Illinois is quite similar to that for the country as a whole. We should have a much better crop of apples than in 1943 and with favorable weather almost a full crop of peaches. It is true that peach buds have been killed in Pike, Calhoun, and Jersey county areas, but from Belleville and Centralia south in Illinois there has been no damage to date. Peach trees in the extreme southern Illinois are blooming now. This is somewhat earlier than normal.

We are informed by the OPA that price ceilings are planned for all fruits and vegetables for 1944. At just what point this ceiling will be established and how it will work has not yet been determined. At present there is a tendency on the part of OPA to use a system whereby the price of peaches to consumers will be at the same level regardless of the section of the country. This is assuming, of course, that fruit will actually sell at ceiling prices. If there is a full crop this may not actually happen because in that event the law of supply and demand will set the price probably somewhere below ceiling unless the ceiling price is established at too low a figure.

The container situation continues to look extremely unfavorable. Very few growers have been able to lay in a supply of wooden bushel baskets and in all probability there will not be enough made this year to pack a normal crop of fruit. Ceiling prices on baskets were raised effective March 13. The price is now $2.73 per dozen to the manufacturer f.o.b. his plant on trucklots or carlots of three hoop tub bottom baskets with star crown covers. This will mean that growers will be paying 25 cents or slightly more per basket by the time they get them to their farms.

Timber Pools Active

Considerable activity in marketing black walnut logs has been carried on during the last month by cooperative groups in various counties of the state to meet the need of material for gunstocks.

Champaign county is starting on its second pool after winding up operations on its first pool in which 47 farmers listed 1,097 trees for sale, measuring 97,000 board feet. This amount of lumber will be enough for 30,000 gunstocks. The high bid on this was $7652.

Under the arrangement used in the Champaign pool, all owners of walnut trees sign up to sell the standing trees, the buyer to send cutting crews, the county pool getting the cash for the entire pool before any cutting is done, the farmers getting their cash before logs are removed from their premises. The total expense of the pool is confined to mail and office work, as the extension foresters do not charge for their services to the pool.

McLean County Farm Bureau is now working on a walnut pool, and Piatt County Farm Bureau has approved a similar project. In DeWitt county, farmers are signing up in a third pool.

Three farmers in the Peoria area have sold enough walnut logs to stock about 3000 rifles, according to C. S. Walters, project forester for the eight-county Peoria area. No trees under 16 inches in diameter were cut, unless they were defective, Walters said, since the men are allowing the small sound trees to grow for future use.

In the Randolph Farm Bureau Co-op, during the six weeks ending in February, 18 members sold enough ash logs for handle stock to make more than $3000 for themselves. Of the 18 owners represented in the sales, only four called in any outside labor. The largest volume of logs was produced by Ernest and Dwight Fulton of over 17,000 board feet.

Ash logs, coming from some of the 60,000 acres of timber lands in Randolph county, are moving to market as a project of the Randolph Farm Bureau Cooperative. At left is Guy W. Hawkins, co-op manager, and at right Farm Adviser E. C. Secor.

(Sparta News Plain Dealer Photo.)

By G. H. Iffner

H. D. Berger, manager for many years of the Farmers Grain Company at Bluffs, Scott county, died Feb. 26 at Our Savior's Hospital in Jacksonville. Cooperative grain marketing lost a faithful supporter for Mr. Berger believed in giving Illinois Grain Corporation all of his patronage. Producers around Bluffs hope that the man who succeeds Mr. Berger will honor him by keeping the cooperative links unbroken in the chain of grain marketing.

Henry Birr, former manager of the Cissna Park Cooperative Grain & Coal Company, Iroquois county, recently assumed managership of the Blackstone Farmers' Grain Company, Livingston county.

Joseph A. Daniels, former chairman of Bond county AAA, will manage the Greenville Equity Union Exchange, Bond county.

The Godfrey Elevator Company, Madison county, is combing the area for a manager to relieve pinch-hitting H. B. Koeller, president, who is anxious to get back to his farm work.

The Alhambra Grain and Feed Company, Madison county, will be the first farmers' elevator in Illinois to operate a soybean processing plant. It has the priorities and the equipment is in order. Manager E. S. Apple has worked on the project for more than a year.

Twenty-one Illinois Farmers' Elevators celebrated their 25th anniversary during 1943 at Alhambra, Atwood, Bentley, Boody, Elmwood, Elwin, Foosland, Grand Ridge, Guthrie, Hammond, LaPlace, Maquon, Nokomis, Patoka, Paxton, Pierson, Piper City, Randolph, Seymour, Staley and Woodson. Not all of the above are truly cooperative organizations. However, a majority of the stockholders are farmers. Sixteen other farmers' companies organized during 1918 are no longer in existence. These elevators were located at Aledo, Atwater, Bongard, Brockton, Dundee, Fidelity, Heyworth, Huntley, Kankakee, Metcalf, Midway, Rumpler, Sharpsburg, Sciota, Thawville and Weldon.

The director of a southern farmers' elevator attended a district IAA marketing conference. He returned home and went into action. His elevator is changing from an old line type to a true cooperative type of organization. In the future, the patrons will get their share of earnings on a patronage basis.

Illinois Grain Corporation employees like to remember Dec. 31, 1943 as the day when farmers' elevators in Iowa booked 150 cars with them. That set a record for Illinois elevators to shoot at. In what year will they tie or exceed Iowa's record? An electric clock to the person who guesses the month and the year.

Illinois grain producers can help celebrate the 100th anniversary of the founding of the cooperative movement (Rochdale Society in England) by patronizing their local farmers' elevators. Farmers' elevators can celebrate the centennial by voting to become true cooperatives and showing appreciation to patrons via the patronage refund route.

"I would not mind my elevator becoming a true co-op if I did not have to keep those records," a manager said recently. That is not the way Roy Phillips at Nokomis sees it. "Those records are worth keeping," said Phillips, "and we can afford to hire a girl to keep them. See this ledger? — a complete record for every one of my patrons." Phillips has managed the Nokomis Equity Elevator to an enviable position by giving unequalled service and by creating opportunities for service.

Herbert A. Graham, honorably discharged from the Army, has been hired to work in the St. Louis office of the Illinois Grain Corporation. He was inducted into the Army June 7, 1941, and served in the Army Engineer Corps. In March, 1942, he was in Belfast, North Ireland, and after service in the British Isles, landed at Oran, Nov. 8, 1942 and saw service in some of the Tunisian campaign. He was hospitalized and returned to the United States on account of disability and honorably discharged Oct. 3, 1943.

A patronage dividend of $19,600 was approved at the 40th annual meeting of the Savoy Grain and Coal Company. This equals $1 an acre for the acreage represented by the co-op membership. The co-op handled 626,805 bushels of grain for the year and merchandise business amounted to $98,196. L. G. Johnston was re-elected president and Edwin Smalley was re-elected to the board. Holdover directors are A. E. Burwash, Henry Grein, Walter Fisher, Clark Wise and F. W. Jordan.

By Frank Gougler

Director D. L. Garber of PRODUCERS' CREAMERY of MT. CARROLL reports that his board has decided on the size and kind of new creamery to construct. It will be a brick-tile, one story structure, 35 x 105 feet. It will be built along the side of the present building and present operations will not be disrupted during construction. After the new plant is ready for operation, whole milk will be received and processed in it, while cream will continue to be received and processed in the old building. New equipment for the new building will consist of a boiler and stoker, a can washer, a plate cooler, receiving equipment, holding trucks and a large roller dryer for drying skimmilk. This dryer will have a capacity of 400 to 500 pounds of powdered skimmilk per hour.

John Sterchi, president of PRODUCERS' CREAMERY of OLNEY, reports that the stock selling campaign has practically been completed. Their expansion program contemplates the building of an addition to the plant 40 x 80 feet to provide additional storage space and serve as a garage for creamery-owned trucks. Manager Frank Mleynek states that additional space is needed in the milk department to handle the increased volume of milk. This will be provided through the enlargement of the present milk department by rearranging partitions and converting excess office space to the milk department. New equipment to be added consists of a new air-tight cream separator of 7000 pounds per hour capacity, 150 H. P. boiler and stoker, heat reclaimer system, can washer, receiving room equipment, milk storage tanks, and a 400 pound per hour roller dryer. This additional equipment will cost approximately $25,000.

In February, Manager Robert Erickson put out his first issue of "Producers News," a monthly publication which goes to patrons of the creamery. According to Manager Erickson the volume of butter manufactured at present well exceeds that of last year. Recently 11 new cream patrons and 25 new milk patrons have been secured. According to the "News", one of the best investments the board has made recently has been the renting of a garage. The creamery operates a fleet of 12 trucks which are stored and serviced in the garage. A mechanic is employed on a full-time basis and works from noon until 11:00 p.m. In this manner, when trucks start out in the morning, they are in tip-top shape and by being stored in a heated garage through the winter, they are not subject to mistreatment experienced by trucks that have to remain out in the cold.

Old-timer "Doc" Harland, who started as manager of the cooperative cream station in McDonough county years ago and has been a cream salesman for Producers' Creamery of Mt. Sterling since it began operations in 1936, has been confined to his home for two months due to an attack of pneumonia. Other drivers are taking care of his routes during his illness.

During January and February of this year, reports Manager Gourley, the PRODUCERS CREAMERY of CARLINVILLE handled more milk and cream than during the flush months of May and June last year. Because of this increased volume, it has been necessary to purchase a new 300 gallon stainless steel pasteurizing vat, a stainless steel pre-heater and a larger stoker for the boiler. During January, 24 new patrons were secured and 35% more patrons were served than during January of last year.

PRODUCERS CREAMERY OF PEORIA is moving ahead with its plans for the building of a plant at Henry and at Havana. Stock is being sold to finance the project and sites are being considered. The Henry plant will serve Marshall-Putnam, Stark, Bureau, Woodford counties. La Salle may be included, depending on the action taken by producers of that area. The Havana plant will serve Mason, Menard, Cass, Fulton and Tazewell counties. Both plants will afford diversified outlets for producers' output as they will be equipped with roller dryers for the making of skim milk powder.

The zero hour for invasion could, in all likelihood, be the same zero hour for getting the crops in the ground this Spring . . . these crops which will feed our victorious armies in 1944-45.

At the zero hour, our men, munitions, and supplies must be at the right place—at the right time—in the right amount. On the farm it's the same story with gasoline, tractor fuels, motor oils, and greases.

WHEN the weather man gives the signal, 158,000 tractors will rush into farm fields in Illinois, and in so doing, will consume 3,160,000 gallons of fuels daily. One big bombing raid over Berlin will consume about the same amount. Surely our demands for petroleum this Spring will be terrific. Military needs come first; Agriculture's requirements are second; and civilian needs come last. We are told there will not be enough to go around.

It is, therefore, our suggestion that you keep your farm fuel storage filled at all times on the regular route call of your serviceman so that you can keep an adequate supply on hand during your farm work season.

Specify "Magic Aladdin" or "Kleer Motor" gasoline or "T-40" tractor fuel, whichever your needs require. Each is "tops" in its particular field.

Ask your BLUE SEAL SERVICEMAN or any of the 66 County Service Companies affiliated with

ILLINOIS FARM SUPPLY CO.

608 SOUTH DEARBORN STREET • CHICAGO 5, ILLINOIS

MOTOR OIL

Be sure you have enough on hand to carry you through the season. "Blue Seal," "Master," and "Penn Bond" are today the same top quality lubricants that tractor farmers have preferred for years.

BLUE SEAL GREASES

Check your supply of greases. Your serviceman has the correct types of grease for all farm equipment requirements.

BLUE SEAL ANTI-RUST

We suggest that you become acquainted with the advantages of using Blue Seal Anti-Rust after each field operation this Spring. Blue Seal servicemen can now supply you with this new product which will assist in keeping your equipment rust-free and ready for use.

Food Program Stresses Home Canning For 1944

BECAUSE the OPA has credited Victory gardeners and home canners for the sharp point reductions in March on three of the most popular canned vegetables, more emphasis is placed now on plans for home food preservation this summer.

Homemakers who follow recommendations given recently at the National Home Food Preservation Conference will find help in canning better quality products, reducing food spoilage and preventing accidents.

Homemakers are warned against oven canning because of danger from explosions and danger of underprocessing due to the slow rate of heat transfer from air and uneven heat distribution in the oven.

The steam pressure canner correctly used is recommended for processing of all low-acid vegetables and for such products as meat, poultry and fish.

The boiling water bath method, in which jars are completely covered with boiling water throughout the processing time, is recommended for home canning of tomatoes, tomato juice, rhubarb, fruits and fruit juices. It is not recommended for vegetables, other than tomatoes, nor for meat, fish and poultry products because of the danger of spoilage and possible food poisoning.

The open kettle method, in which the food is completely cooked in an ordinary kettle and then packed into hot sterilized jars and sealed immediately, is not recommended for tomatoes, fruits, nonacid vegetables, meat, poultry and fish. This method is generally satisfactory for jams, jellies and preserves. It is disapproved for fruits and vegetables because of the danger of contamination before the jar is sealed. It is disapproved for low-acid products because the heat treatment is insufficient to guard aginst spoilage and possible food poisoning.

Canning is but one of several satisfactory methods of food preservation, and should be undertaken only where proper equipment for recommended canning methods is available. Otherwise, reliance should be placed entirely on other methods of preservation, including storing, freezing, dehydration, brining or pickling. These methods, too, must be properly carried out in order to be effective and safe.

Here are the present indications for home canning supplies for 1944.

Glass jars and closures — all the types of home canning jars and closures available on the retail market last summer will again be manufactured for 1944 canning. In addition permission to make the standard size Mason size zinc lid with porcelain lining has been granted.

Rubber rings — in 1944 they will be made of reclaimed rubber and synthetics. No crude rubber will be available for this purpose this year. The wartime rings require somewhat different handling from those available in pre-war years, and manufacturer's directions should be followed carefully.

Here are the 1944 officers of the Illinois Home Advisers' association. Front row, left to right, Miss Marian Sympson, Tazewell county, president; Miss Elizabeth French, Bureau, secretary. Back row, left to right, Miss Mildred McBride, Vermilion, treasurer; Mrs. Helen Volk, Lee, first vice-president; Miss Mary Strubinger, Madison, second vice-president.

(U. of I. Photo.)

Mrs. Scott Hardy, Macon county, reupholsters a 100-year old chair which she brought to a recent leader training school in the Macon County Farm Bureau building. This chair is the fifth piece of the suite which she has reupholstered.

(U. of I. Photo.)

Women Learn How to Make New Furniture From Old

Reupholstery is taught step-by-step in the leader training schools conducted in various sections of the state by Miss Dorothy J. Iwig, specialist in home furnishings, University of Illinois College of Agriculture. The reupholstering is only one of many projects in the home furnishing program. This program is being carried on this year in more than 60 Illinois counties.

Women who attend the training schools assist later with similar work in their local communities.

A combination of discussion, demonstration and workshop methods is used in the reupholstering school. Leaders are asked to bring furniture for reupholstering and the tools needed for the job. Materials such as webbing, padding and twine are estimated in advance and the order placed with the home adviser. Each leader pays for the material used. An effort is made to have several types of furniture brought to the schools so that varied problems will be brought to the attention of the leaders.

Usually every piece of furniture is completed by the end of the class with the exception of the upholstery fabric covering which can easily be put on at home.

New Home Adviser

Miss Evelyn White of Monmouth, a former Warren county 4-H member and a graduate of Bradley Polytechnic Institute in home economics, is the new home adviser in Jo Daviess county. She succeeds Miss Erlene Barron who resigned because of ill health.

Fifty Years of Service

(Continued from page 8)

over its quota. The elevator cooperated in all these community projects with work, donations and loans.

Right now the Varna elevator board is thinking about the future of its cooperative. Some of the members are talking about ways and means of getting more young people interested in the business. Some members are also talking about having terminal facilities on the river. They would like to see other cooperative elevators in the area work with them on the grain marketing problems that may arise in the future.

In 1943, the Varna elevator marketed 339,804 bushels of grain for $362,588.49, and did more than $18,000 worth of business in merchandise and coal. Net operating income for the year was $8,435.08. A one-cent per bushel patronage refund was declared on 1943 business as has been the practice since 1938.

Community Club

(Continued from page 12)

auditorium with regular theater seats and a stage that is fully equipped to accomodate any play or dramatic presentation. The basement serves as a large recreation room with facilities for the preparation of refreshments, which always climax an eventful social program.

Perhaps one of the major reasons that the club has progressed is because it has maintained a well-balanced program, meeting both the educational and recreational needs of the people.

Overall the program of the Boosters is devoted to all progressive movements for the good of community life. The building serves as a natural community center with many of the rural schools holding their programs in the large auditorium. The Boosters sponsor 4-H clubs, hold harvest festivals, promote church affairs and encourage activities in the interests of the war effort. A Red Cross unit meets once a week and members contribute liberally of their time, effort, and money to USO, bond and scrap drives. A service flag occupying a prominent place on the auditorium stage, shows 50 boys and girls from the community in the services of their country. A World War I service flag has 17 stars. Much of the neighborly discussion consists of the exchange of news about sons and daughters who are serving on the fighting fronts.

Here in the Kernan community, substantial citizens are keeping alive the best of American traditions for future generations.

REYNOLDS COMMUNITY HIGH SCHOOL

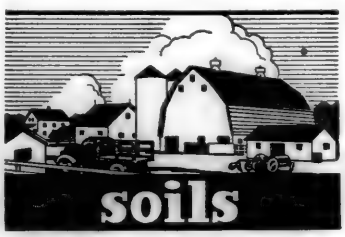
(Continued from page 5)

This is the former sale barn bought for $700 and used as a farm shop and vocational agriculture classroom. The shop is located only four blocks from school.

Buses line up in front of the Reynolds school as classes are dismissed. Part of the new building can be seen at the left.

The old building which the high school shared with the grade school hides the front of the new building.

grew up in Mercer county. He studied at Knox College and the state University of Iowa and has done considerable graduate work.



By John R. Spencer

If all farmers in Illinois who want rock phosphate could get it this year, the tonnage would set a new high record. The production of both rock phosphate and superphosphate will be larger this year with demand still far in the lead.

During February, many of the northern Illinois quarries were not in operation due to necessary repair work and others for installation of additional crushing equipment to increase agricultural limestone output.

At the annual meeting of the Midwest Limestone Institute all of the quarry operators attending were concerned about (1) the increasing labor shortage, (2) the mounting demand for agricultural limestone, and (3) how they could obtain maximum production at each of their plants.

"During World War I, the emphasis was on the production of cereals. Today in World War II, the emphasis is on meats, dairy products, eggs, fats and oil. . . To meet the present emergency, farmers should make every effort to provide their soils with all the plant food that present limited supplies will permit." Middle West Soil Improvement Committee.

The new quarry set-up at Cordova in Rock Island county is now in operation and has been producing agricultural limestone since early in March.

"The year 1943 (when all figures are assembled) will probably show the greatest production of food, feed and fibre in the history of the State." J. B. Andrews, U. of I. College of Agriculture.

EDITORIAL

What Do You Think?

CONCLUSIVE proof that farmers must be fully organized if they are to have equal representation with industry and labor is to be found in the report on post-war adjustment policies filed by Bernard Baruch, New York banker, with War Mobilization Director James F. Byrnes.

As far as farmers are concerned, the most startling fact about Baruch's report is that agriculture is given no consideration in the government's first official survey of post-war policies for America.

The Baruch report is quite comprehensive in dealing with industry. It recommends fulfillment of all government contracts for war materials, payment for all goods, allocation of all materials on hands, and financing for re-conversion to peace-time production.

Labor is given similar consideration in the report. Recommendation of plans for providing jobs for workers is contained in the survey.

These plans are laudable as every thinking citizen realizes that full employment and prosperous industry are necessary to post-war re-adjustment if a repetition of the aftermath of the first world war is to be averted.

But what are the post-war plans for agriculture? Are farmers going to have to sit back and see farm commodity prices plunge to bankruptcy levels as they did after the first world war? Farmers can well remember those years after 1918. While they suffered staggering losses, war industries had their contracts protected and labor shared in the benefits.

Farmers, although better organized at the outbreak of the second world war than in the '20's, still found themselves in a secondary position as compared with industry and labor. When America entered the second world war, industry secured cost-plus contracts and organized labor was given maintenance of membership guarantees.

On the other hand, farmers were shoved around between the OPA and the government food agencies. Rules were changed in the middle of the game. Some even called farmers war profiteers because they sought to establish parity prices for their commodities. While ceilings were withheld from soaring wages, price levels on farm commodities in some instances were established at below parity. While consumer income was at an all time high the farmer was told he could not have parity in the market place because it would lead to inflation. At the same time a program of consumer subsidies was inaugurated by the government to reduce the price of food at the retail counter. The farmer could well see what such a policy would mean in a post-war period. If producers of agricultural commodities could not receive parity when consumer income was at an all-time high, what chance would he have to receive a fair price when payrolls declined.

Manufacturers of war materials received consideration for their essential workers through draft deferments, but agriculture was not considered an essential industry until many skilled workers had left the farm for war factories and the armed forces. With less labor available, farmers were further told that they would have to get along with less new farm equipment and repair parts.

Some of these inequities have been altered, but action was taken only after organized agriculture had made a concerted attack to secure their correction.

That's the record to date. Possibly in consideration of these facts, farmers should not be surprised at the failure of the Baruch report to consider agriculture in any post-war plans. Some might say that the government support programs for various agricultural products, which are supposed to continue for a certain period after the war is ended, are sufficient guarantee for the farmers. However, there is this undeniable fact — any overall post-war plan that ignores as an important segment of our economy as agriculture, is doomed to failure. Industry and labor cannot prosper and our whole economy cannot be stable if agriculture is forced to beg for crumbs at the post-war conference table.

There is only one way that agriculture can maintain its self-respect. Agriculture must become fully organized so that it can have an equal voice with industry and labor. Attainment of this objective is even more vital to the future welfare of America than it is to the farmer as an individual.

Fruits of Cooperation

YOUR Farm Bureau membership entitles you to participate in the many valuable business services provided through the cooperative Farm Bureau subsidiaries. Quality products — better service — and substantial savings are the direct, tangible fruits of cooperation which are being realized by thousands of Farm Bureau members throughout Illinois.

These business services have been set up to meet the needs of Illinois farmers. Farm Bureau members built them — Farm Bureau members own, control and operate them. They all have one common aim and that is to provide Farm Bureau members quality products at the lowest possible cost.

Your county service company has a complete line of farm supplies including petroleum products, paints, feeds and other items. Your general and special insurance agents have a complete insurance program of life, casualty and property insurance to offer you. Hog cholera serum and virus and other biologics are available at the Farm Bureau office.

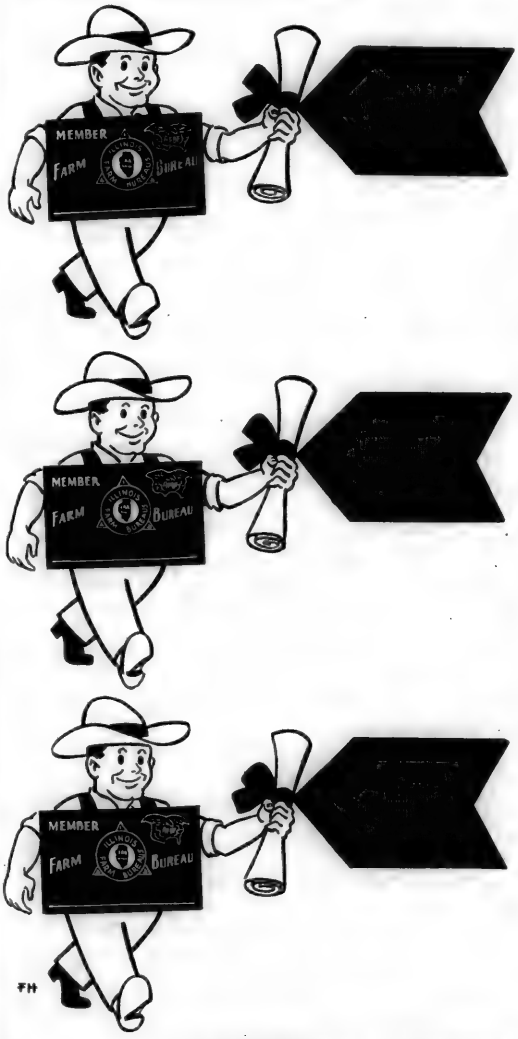
Volume purchasing — efficient management — and loyal Farm Bureau membership support have combined to build strong, substantial state and county cooperatives capable of serving the needs of the farm people of Illinois. Profits of these business services are returned to the Farm Bureau members of Illinois in proportion to their patronage.

You may secure further information about these services and the savings they will bring you from your county Farm Bureau office — you will find that it *pays to be a Farm Bureau member.*

Mr. Farm Bureau Member:

ONLY YOU CAN HAVE THIS LOW COST PROTECTION!

SPONSORED and controlled by and for the Farm Bureau members in Illinois, Farmers Mutual Reinsurance Company is truly mutual, providing participating and non-assessable policies with statewide distribution of risks.



108 MILLIONS of fire insurance throughout the 102 counties of Illinois signifies the faith of the members in this cooperative company.

★ ★ ★

109 MILLIONS of windstorm insurance and 18 millions of extended insurance coverage are other milestones in the development of this strong financial structure which provides participating and non-assessable policies.

★ ★ ★

16 THOUSAND Farm Bureau members purchased 50 millions of hail insurance on growing crops during 1943. On March 15, 1944 over 363 thousand dollars was returned to these 16 thousand Farm Bureau members as a result of the participating feature of this company's policies.

The Row Ahead..

Close to the good earth, he handles it well, with faith that hard work and the aid of a good growing season will produce an abundant crop to sustain his nation at war.

The row ahead is straight and well marked. He can see the end, and at the same time view the heights and depressions on the way. He is confident of his ability to keep the rows straight, and gives his effort, time and attention to that end. They will serve as evidence of a job well done when viewed through the eyes of his neighbor.

But he thinks of a bigger job, a job of winning the war, of winning the peace, of establishing the kind of a post-war social and economic order to which he wants his son to return and in which he will live, and of avoiding a post-war depression. In this job the way is not so well marked, and the end is not in sight. But, again, he believes that the way can be found with the cooperation, the best thought and the hard work of he and his neighbors, and in that belief he has joined hands with 100,000 and more in the Farm Bureau movement in Illinois.

600 FARM BUREAU MEMBERS BOUGHT LIABILITY POLICIES LAST MONTH!

NO WONDER FARMERS BUY IT—

Look at the protection they get!

1 *General Liability Protection* — The policy provides protection against claims of persons not employed by the insured who sustain injury by reason of the insured's negligence. It covers all farming operations, including the use of farm tractors, personal activities of the insured, and liability for injuries sustained around the home of the insured. Limits are $5000 for one person — $10,000 for one accident. Property damage limits, $2000. Higher limits if desired. (A typical farm accident covered by this policy is an animal getting out on the highway and injuring some person, or damaging a motor vehicle.)

2 *Farm Employers Liability Protection* — The policy provides protection up to $5000 for claims made against the insured by injured farm laborers, including domestic servants. It provides up to $10,000 where more than one is injured in the same accident. (Higher limits if desired.)

3 *Medical Expense Payment* — If an employe is injured, the policy pays for reasonable and necessary medical, hospital, dental, surgical, ambulance, registered nurse service and medical supplies — up to $250 for one accident, and up to $500 in case of death of the employe. This coverage is also available to certain members of the family, for a small extra charge.

See your local Farm Bureau insurance agent for further details.

This policy is for FARM BUREAU MEMBERS ONLY

MAY, 1944 **VOLUME 22 - NUMBER 5**

Report Findings of IAA Studies On Soybean and Fertilizer Plants

REPORTS of studies on soybean processing plants, fertilizer mixing plants, and livestock marketing featured the annual spring meeting of Illinois Farm Bureau leaders April 7 at Springfield.

Because of the inability of farmers to get soybean meal in adequate quantities, county Farm Bureaus have been seeking assistance from the IAA in gathering information on the possibilities of setting up local soybean processing plants, George E. Metzger, IAA field secretary, said in making a report on studies conducted by an IAA committee on this subject.

Problems to be faced in entering the soybean processing field were cited in the report as follows:

The marketing of oil is a major problem. If several plants are erected, it is possible that the quality of oil coming from the respective plants will not be uniform in quality. It is also possible that the quality produced by any one plant would not be sufficient to enable it to market the oil efficiently after the war, when foreign oils will most likely come into competition with locally produced oils.

It is therefore recommended, in the event local processing units are built, that a statewide overhead corporation be set up, financed in part by local processing companies, which would be responsible for the sale of oil, possibly the refining of oil, and to provide an outlet for any excess meal that might be manufactured by local plants. These local and state cooperatives would be set up on a patronage basis, with dividends eventually flowing back to the grower of beans and the user of meal.

Study also reveals that the solvent type of processing unit appears to be the most efficient. The small unit solvent plant is still in the experimental stage and it is quite certain that few, if any, priorities will be granted for the building of such units until they have been perfected to the point where they may be considered outside of the experimental stage.

Other recommendations of the report were that such plants should be owned locally and financed by the sale of stock widely distributed among farmers and that in most cases they be operated under a separate corporation. It was also recommended that such corporations should be tied in with the usual controls, including "B" stock, etc., and that plants be located where there is sufficient bean acreage to justify soybean processing units and sufficient livestock to utilize a large per cent of the bean meal produced.

Entering the processing field should only be done after a careful study and surveys of local conditions, the report stated, so that the County Farm Bureaus, which might promote the project, would have full information concerning the possibilities of success in this venture.

The report presented to the leaders on the fertilizer situation indicated that rather substantial savings might be made with mixing plants properly located and connected with an economical and dependable distribution service.

Studies which have already been made by the IAA indicate that a fertilizer mixing plant should be located near a reliable source of superphosphate. There are two areas in the state which seem to be proper places for fertilizer plants. In these two areas, the freight rate structure is favorable, and water transportation is available, truck lines and livestock trucks going from these areas to the country are available. Through the Illinois Farm Supply Company, a splendid distribution outlet is available. Fertilizer should be distributed by truck as nearly direct from the fertilizer plant to the farm as is possible.

The cost of a fertilizer mixing plant

MAY, 1944 VOLUME 22 - NUMBER 5

Report Findings of IAA Studies On Soybean and Fertilizer Plants

R

will vary from $7 to $10 per ton of yearly output. Priorities are possible at the present time for sufficient steel for the construction of modern fertilizer plants.

There is a pretty fair opportunity of securing necessary machinery for such plants. Supplies of superphosphate can probably be secured and a supply of nitrogen is available. Potash will probably be a scarce material for the coming year and possibly for a longer period.

A report on the six district marketing meetings sponsored by the IAA this spring revealed that four general recommendations came out of the sessions:

1. Complete a study of the possibility and feasibility of establishing local meat slaughtering and packing plants.

2. Study the possibility and feasibility of extending our cooperative livestock marketing agencies, or coordinating them, in such a way as to exercise greater bargaining power in the sale of livestock through the control and distribution of volume.

3. To study the possibility of securing stocker and feeder livestock through agencies already established, or agencies to be established, that would put the buyer of such feeder livestock in a better bargaining position than he seems to possess now, buying his feeders through established sales agencies.

4. That the foregoing studies be made and conducted by a committee selected and established in a manner similar to the IAA school committee, and that these studies should be gotten under way promptly.

The leaders adopted a motion at the Springfield meeting favoring a resolution of Jo Daviess County Farm Bureau asking for the discontinuance of daylight saving time. The motion was adopted with the provision that abandonment of daylight saving time would not be sought if facts showed that such action would hamper the war effort in any way. It was pointed out that Congressman Cannon had already introduced a bill seeking the return of standard time.

IAA Livestock Marketing Fieldman Added to Staff

Merle S. Koch 46, Adams county, has been hired as a fieldman in the Illinois Agricultural Association's livestock marketing department to work in district No. 3 which covers 18 counties in west central Illinois. He takes the place of Guy W. Hawkins who resigned in December, 1943.

Koch has been a farmer-stockman in Adams county for a number of years and has been active in Farm Bureau work. He is a former member of the board of the Adams County Shipping Association.

AFBF Gives Views to GOP

FARM BUREAU recommendations on a basic farm program were presented before an agricultural committee of the Republican party April 3 in Chicago, along with the suggested plans of other major farm organizations.

Presentation of the Farm Bureau recommendations was made by Earl C. Smith, president of the IAA, and vice-president of the AFBF.

Here are a few of the major suggestions regarding essential national farm policies:

1. Maintenance of adequate reserve supplies of basic soil crops, with price supports, including mandatory commodity loans.

2. Improvement and extension of the Marketing Agreements program to do as much for non-basic crops as is done for basic crops.

3. International trade policies designed to restore and maintain a fair share of the world market for exportable farm surpluses.

4. A soil conservation program, to be guided and administered by the Land Grant Colleges.

It was further suggested that full administrative responsibility for all types of agricultural commodity programs be vested in a national bi-partisan board, members to be appointed by the President, with advice and consent of the Senate.

The Farm Bureau statement also asked for the preservation of the cooperative features of the Farm Credit System with more authority and responsibility given to local associations, and relief and rehabilitation and emergency credit consolidated in one division of the Farm Credit System, the whole to be administered by a bi-partisan board.

It was also strongly recommended that complete responsibility for price control over food and fiber be placed in the hands of a single agency, the War Food Administration.

It was recommended that price ceilings should be established at levels that will encourage maximum production. Consumer food subsidies and roll-backs were condemned.

Other recommendations included:

That adequate funds should be included in federal aid legislation for the development of secondary and feeder farm-to-market roads. Any program for federal highways should not be developed at the sacrifice of rural roads, and should be so routed as to serve existing market centers and not disrupt established farm markets.

That land suitable for farming which has been purchased by the government should be sold as soon as possible after the war. This land should be offered to the original owner, and then if not purchased in a reasonable time, it should be put up for public sale and sold to private individuals in units suitable for the operation of family size farms.

The AFBF "Guide to Postwar Planning" was attached to and made part of the statement of the Farm Bureau to present the AFBF policy as to postwar affairs.

CCC Made Sole Buyer of Corn in 125 Counties

In a move to secure 80 million bushels of corn currently needed by plants manufacturing war products, the WFA announced April 25 that for the following 60 days the Commodity Credit Corporation would be the only legal buyer of corn from 125 counties in Illinois, Indiana, Iowa, Nebraska and Minnesota.

Only exception to this rule in the designated counties will be where feeders are able to present evidence of emergency and immediate need for corn. They may apply to county AAA committees for authorization from WFA to purchase and transport an amount necessary to make his inventory equal to a 30-day supply.

At the same time, WFA announced that county and community AAA committeemen would begin an immediate check on farms in the designated counties to determine the amount of corn available for purchase by the CCC and to arrange for shelling and transportation services.

Farmers who offer their corn for sale in the designated counties will receive ceiling prices with the government standing the cost of shelling and hauling.

On April 24, a meeting of county AAA committeemen of Illinois and Indiana was called in Bloomington. Addressing this meeting Maj. Walter C. Power of the Army service forces appealed to farmers to provide more corn needed for war materials. Corn products are needed, he said, for making ammunition, food, clothing and medical supplies. Glucose made from corn is used in intravenous feeding of badly wounded soldiers and the supply is threatened because of the corn shortage.

Purchasers of corn made by the CCC

will be handled through local elevators.

Corn owned by feed mixers can be used by them in the manufacture of mixed feeds in an amount not in excess of that used during the corresponding period in 1942-43. This provision was scheduled to become effective May 1.

Economic Stabilization Director Vinson, Price Administrator Bowles and WFA Administrator Jones jointly stated on April 24 that there would be no increase in the selling price of corn from the 1943 crop.

Illinois counties affected by the order are: Bureau, Cass, Champaign, Christian, DeWitt, Douglas, Edgar, Ford, Fulton, Grundy, Iroquois, Kankakee, Kendall, Knox, LaSalle, Lee, Livingston, Logan, McLean, Macon, Marshall, Mason, Menard, Morgan, Moultrie, Peoria, Piatt, Putnam, Sangamon, Scott, Stark, Tazewell, Vermilion, Will and Woodford. These are the same counties that were affected by previous 35 and 60 per cent set aside orders.

Labor Shortage Liable to Cut Farm Production

With the shortage of farm equipment, feed and agricultural labor, it will be extremely difficult to maintain 1944 agricultural production at the levels of 1943, in the opinion of the research department of the Illinois Agricultural Association.

As labor grows scarcer, the production of livestock, milk, poultry, eggs, fruits and vegetables will be cut most.

The shortage of labor or feed may force farmers to market large numbers of livestock during 1944 and 1945. Such a movement would increase the supplies of meat available for civilian and military consumption. This would be a desirable situation if the sale of livestock coincides with the greatest need for meats. On the other hand, it would be a very unfortunate occurrence if a greater need for meats should develop at a later date.

The production of primary agricultural products appears to have reached a peak in 1942. It is true that government figures show that agricultural production in 1943 was slightly greater than in 1942.

However, a large part of the so-called 1943 "production" was in reality sales of farm products produced in previous years. It represented sales of livestock, poultry and dairy products produced from feed raised in 1942 and previous years.

In 1943 the production of food grains in the United States was 22 per cent below the 1935-39 average.

In 1943 the production of truck crops and fruits was 9 per cent below the average of the same five prewar years, while the production of sugar crops was 20 per cent below the 1935-39 figure. The only significant increase in food crop production in 1943 was in potatoes.

The production of feed and of food crops requiring relatively small amounts of labor is not likely to be greatly reduced by a shortage of labor in 1944. Unfavorable weather conditions, however, would cut the production of such crops severely.

The attitude of the military agencies and of the highest civilian officials in the government seems to be that although the need for food and industrial products is very great, the need for man power for the armed forces is even greater. It is likely, therefore, that both agriculture and industry will be forced to release some of its manpower to the military forces.

Eleven members of the Tazewell County Rural Youth brought more than two tons of waste paper to the Farm Bureau in their January drive. Paschal Allen furnished the truck and Rural Youthers sorted, tied and loaded the paper.

S.I.N.U. President Dies; Had Outstanding Record

An outstanding citizen and educator was lost to Illinois with the death March 27 of Dr. Roscoe Pulliam, president of Southern Illinois Normal University.

Death was attributed to kidney and heart complications said to have been caused by a shrapnel wound received in World War I when Dr. Pulliam served as a private in France with the famed Rainbow Division of the AEF.

Dr. Pulliam had been greatly interested in the work of the Illinois Agricultural Association's school committee in studying rural school problems and some months ago had appeared before the committee to give it the benefit of his experiences in the field of education.

Born on a farm in St. Clair county, Dr. Pulliam knew all the problems of farm boys in Southern Illinois attempting to get an education.

One of the major achievements of Dr. Pulliam's career was the fostering and planning of legislation which gave Southern Illinois Normal University a 25-year building and expansion program. Plans have been drawn for a new university layout of buildings and land purchased for the expansion.

He carried on a determined fight in the legislature to make the Normal a liberal arts college. This work advanced the Normal from a Teachers College to a University.

Decker Joins Survey

Dr. George C. Decker, new entomologist of the State Natural History Survey and the Illinois agricultural experiment station, began work in March.

Dr. Decker, replaces the late Dr. W. P. Flint who died last June 3.

Dr. Decker formerly was associate professor of entomology in the Iowa agricultural experiment station, Iowa State College, Ames. At one time he was with the state board of entomology of Georgia and was regional supervisor for the U.S. Bureau of Entomology and Plant Quarantine in the grasshopper control program involving several Central states.

Timber Co-op Buys Mill

Randolph county timber cooperative recently purchased a small portable sawmill from an operator in Effingham county. The mill has a capacity of about 5000 board feet of lumber per day.

TRI-CITY HIGH

THREE DISTRICTS COMBINE TO IMPROVE STANDARDS

"...I WAS recommended for radio and sound man at my Navy interview. My schooling in science, mathematics and music was the best help."

Behind these few words from a letter written by a high school graduate to his former classmates is the story of an outstanding educational program developed by a rural high school in a reorganized district.

The writer of the letter is a graduate of Tri-City High School located in Buffalo, a community of 400 near Springfield in Sangamon county. Buffalo is within approximately one mile of the geographical center of a reorganized school district which comprises 93 square miles.

Before the reorganization seven years ago there were three high schools serving the same area. Buffalo had a four-year high school with an enrollment of 44; the village of Dawson had a small three-year school with an enrollment of 33, and the Mechanicsburg community had a three-year school with 31 students.

Faced with a problem of declining enrollments, progressive leaders of the three communities decided it would be logical to merge and build a modern school plant at Buffalo as the center of the new district.

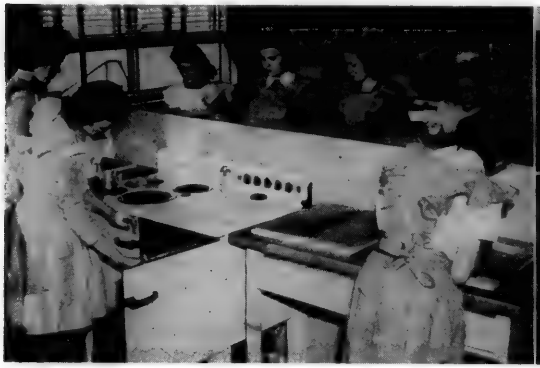
The new district was organized in the spring of 1937 and the old high school buildings were used until the fall of 1938 when the new building at Buffalo was opened with an enrollment of 150. The three former high school buildings then became available for the elementary schools of the three villages and provided additional and much needed space.

Three buses provide transportation for the students, one each for Buffalo, Mechanicsburg and Dawson. The district has owned its own buses since 1940 and finds it much more satisfactory than contracting for such services. Per pupil cost of transportation is $29.26 which includes the $15 reimbursement from the state. Ninety per cent of the students are on the bus less than an hour. There are good concrete and improved roads serving the district.

Before the formation of the Tri-City district, all three of the schools were offering English, Latin, algebra, geometry, history and general science; two were offering commercial subjects and biology and only one was offering physics and a unit in agriculture.

Today the boys and girls attending Tri-High have considerably more educational opportunities and all the advantages afforded in any four-year high school of similar size in the state. The school has nine teachers, including the principal.

Of particular value to farm boys is the school's agricultural department. Three units are offered in this field. At the annual meeting of the Illinois Association of Future Farmers of America in April at Urbana, the Tri-City chapter was selected as the outstanding in section 12. This section includes 20 chapters in Cass, Logan, Menard and Sangamon counties.



Girls of Tri-City High School find their homemaking laboratory a pleasant place in which to work. At the right above Miss Rosemary Holm trains future contest winners Wesley Veach, Betty Schnirring, Eileen Mohan, and Ann Ayers.

A MODERN RURAL SCHOOL PLANT

By CRESTON FOSTER

Body-building exercises are an important part in the Tri-City physical education program. They are supplemented by the study of hygiene, physiology, and first aid.

☆

Here are just a few of this year's activities of the FFA chapter at Tri-City: testing 50 cows monthly for a dairy herd improvement association of the county; planted a 600-tree windbreak on the school grounds; tested, mapped and recommended treatment on 700 acres of soil; maintained 6 test plots on pasture improvement; collected 47 field seed samples for test during January; tested home water supply in cooperation with state sanitary laboratories; ordered cooperatively 50 bags of certified northern grown seed potatoes and 60 fruit trees; bought a $100 War Bond and conducted a 35-ton scrap drive. The boys themselves own $3900 in War Bonds and Stamps.

The 37 boys in the agricultural classes have 47 projects with a March 1 value of $4900. During 1944, these FFA boys will produce more than 40 tons of pork.

Adult classes also were sponsored by the Tri-City High School during the winter months and more than 70 farmers were reached in the discussions and studies.

Tri-City is also noted for its music activities, having won the Sangamon county music contest in three years out of six. It has had representatives and winners in district, state and national music meets and the students are also proud of their band.

Tri-City has placed high in the county speech contests and recently tied for first place in the county freshman speech competition.

An outstanding physical education program is being carried on for boys and girls. Boys have classes five days a week, three of which are devoted to gym work and the other two to hygiene, physiology, and first aid. Pre-induction physical conditioning exercises have been stressed the last few years. There is also keen competition for places on the school's baseball, basketball and track teams.

In the girls' physical education program, emphasis is given to hygiene and folk dancing as well as the regular body building exercises.

One of the advantages afforded in a

(*Continued on page 25*)

Tri-City's farm shop is a busy place as these pictures indicate. In picture No. 1 the "mighty man" at the anvil is Murl Tyron. Picture No. 2 shows Howard Thompson making tests for a Sangamon county dairy herd improvement association. Picture No. 3 finds Donald Kirby and Charles Carpenter applying clamps to a wagon bed built by Kirby.

TRI-CITY HIGH

THREE DISTRICTS COMBINE TO IMPROVE STANDARDS

"...I WAS recommended for radio and sound man at my Navy interview. My schooling in science, mathematics and music was the best help."

Behind these few words from a letter written by a high school graduate to his former classmates is the story of an outstanding educational program developed by a rural high school in a reorganized district.

Three buses provide transportation for the students, one each for Buffalo, Mechanicsburg and Dawson. The district has owned its own buses since 1940 and finds it much more satisfactory than contracting for such services. Per pupil cost of transportation is $29.26 which includes the $15 reimbursement from the state. Ninety per cent of the students are on the bus less than an hour. There are good concrete and improved roads serving the district.

Before the formation of the Tri-City district, all three of the schools were offering English, Latin, algebra, geometry, history and general science; two were offering commercial subjects and biology and only one was offering physics and a unit in agriculture.

Today the boys and girls attending Tri-High have considerably more educational opportunities and all the advantages afforded in any four-year high school of similar size in the state. The school has nine teachers, including the principal.

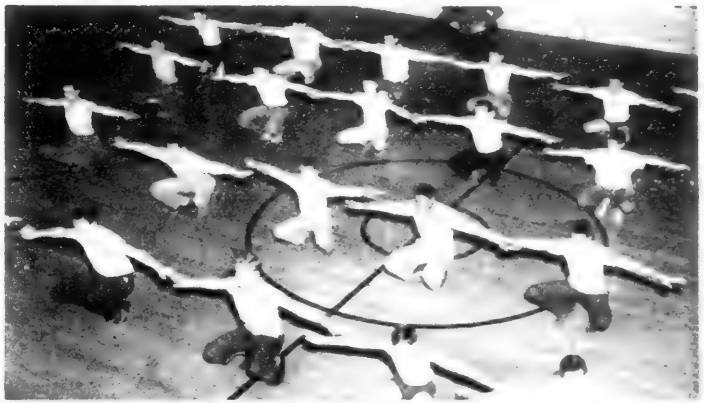
Of particular value to farm boys is the school's agricultural department. Three units are offered in this field. At the annual meeting of the Illinois Association of Future Farmers of America in April at Urbana, the Tri-City chapter was selected as the outstanding in section 12. This section includes 20 chapters in Cass, Logan, Menard and Sangamon counties.

Girls of Tri-City High School find their homemaking laboratory a pleasant place in which to work. At the right above Miss Rosemary Holm trains future contest winners Wesley Veach, Betty Schnirring, Eileen Mohan, and Ann Ayers.

A MODERN RURAL SCHOOL PLANT

By CRESTON FOSTER

Body-building exercises are an important part in the Tri-City physical education program. They are supplemented by the study of hygiene, physiology, and first aid.



☆

Here are just a few of this year's activities of the FFA chapter at Tri-City: testing 50 cows monthly for a dairy herd improvement association of the county; planted a 600-tree windbreak on the school grounds; tested, mapped and recommended treatment on 700 acres of soil; maintained 6 test plots on pasture improvement; collected 47 field seed samples for test during January; tested home water supply in cooperation with state sanitary laboratories; ordered cooperatively 50 bags of certified northern grown seed potatoes and 60 fruit trees; bought a $100 War Bond and conducted a 35-ton scrap drive. The boys themselves own $3900 in War Bonds and Stamps.

The 37 boys in the agricultural classes have 47 projects with a March 1 value of $4900. During 1944, these FFA boys will produce more than 40 tons of pork.

Adult classes also were sponsored by the Tri-City High School during the winter months and more than 70 farmers were reached in the discussions and studies.

Tri-City is also noted for its music activities, having won the Sangamon county music contest in three years out of six. It has had representatives and winners in district, state and national music meets and the students are also proud of their band.

Tri-City has placed high in the county speech contests and recently tied for first place in the county freshman speech competition.

An outstanding physical education program is being carried on for boys and girls. Boys have classes five days a week, three of which are devoted to gym work and the other two to hygiene, physiology, and first aid. Pre-induction physical conditioning exercises have been stressed the last few years. There is also keen competition for places on the school's baseball, basketball and track teams.

In the girls' physical education program, emphasis is given to hygiene and folk dancing as well as the regular body building exercises.

One of the advantages afforded in a

(Continued on page 25)

Tri-City's farm shop is a busy place as these pictures indicate. In picture No. 1 the "mighty man" at the anvil is Murl Tyron. Picture No. 2 shows Howard Thompson making tests for a Sangamon county dairy herd improvement association. Picture No. 3 finds Donald Kirby and Charles Carpenter applying clamps to a wagon bed built by Kirby.

Frank Lambrich, left, Wayne County Farm Bureau member, and Farm Adviser L. B. Kimmel, discuss the current egg market. Lambrich has been selling to a hatchery.

30c Dozen "Minimum For Production" — Poultrymen

IT TAKES at least 30 cents a dozen to stay in the egg production business with feeds at their current price levels.

That's the general opinion expressed by Wayne county producers and they ought to know because the county ranks in second place in the state in egg production and first in the number of chickens on farms.

There are not so many large laying flocks in Wayne county, but every farm has some chickens and the receipts from poultry and eggs represents an important part of the farm income. With some of the land unproductive for corn, wheat, clover, etc., Wayne county farmers turn to eggs, chickens, milk and cream for increased income.

It is not surprising therefore that the recent collapse in the egg market hit farmers in Wayne county harder than in some other areas of the state. Eggs dropped as low as 18 to 20 cents a dozen during the last week in March as compared with 32 and 35 cents a year ago when feed prices were lower.

Here are a few reactions of Wayne county farmers and their wives received in interviews during early April:

"When prices go below 30 cents that's ridiculous," said Mrs. Homer Fleenor who has a laying flock of 250 Barred Rock-New Hampshire Reds hybrids. "Our price went as low as 20 cents on March 28, and you can't feed chickens at that level. If egg prices stay down there are going to be a lot of flocks going to market. I don't know what agency is to blame, but it's a bad situation."

Mrs. Fleenor also reported that she paid $2 per 100 more for her pullets this year than she did last year when egg prices were higher. She had contracted ahead for her chickens and the drop in the egg market didn't affect the price.

The price of pullet chicks didn't drop as much in Wayne county as in other counties because one large hatchery failed to open this season due to the labor shortages, and this reduced the supply. However, the price on roosters dropped as low as $2 when the egg market declined.

Mrs. Jerome Molt expressed a pretty general sentiment of her neighbors when she said. "We were promised 30 cents a dozen by the government, but we haven't got it." Mrs. Molt and her daughter, Ellen, handle the poultry business on the farm and keep pretty good records on their income and expenses. Ellen reported that currently they are doing little better than breaking even on the cost of feed and other production items.

This is the experience of the Molts even though they received a premium of 8 cents a dozen over the local market price by selling eggs to a hatchery. Since the middle of March a number of hatcheries have discontinued buying eggs. The Molts have a laying flock of 215 Barred Rocks and production has been running around 10 to 11 dozen per day.

Mrs. Ernest Gregory who has a laying flock of 150 also believes that it takes at least 30-cent eggs to break even. "Laying mash is high and so are other feeds when you compare them with egg prices. I know because we had to buy some corn the other day."

Frank Lambrich, who has a fine flock of 265 Minorcas, has been able to get a premium by selling his eggs to a Decatur hatchery, but even with that he finds the outlook discouraging. However, he points out that after a producer has set up equipment and spent some years in the poultry business, he can hardly afford to sell his flock.

Other Wayne county producers, however, who haven't bought their chicks indicated that they would cancel their orders unless the market improved. None were impressed with the government support price of 26 cents a dozen announced early in April. When this announcement was made, egg prices in Wayne county rallied to 24 and 25 cents.

One suggested that it might have been better if the government had stayed out of the egg and poultry market altogether.

Mrs. Jerome Molt, Wayne county, says, "We were promised 30 cents a dozen by the government for our eggs, but we haven't received it on our local markets." Helping her mother prepare a shipment of eggs is Ellen Molt.

Producers Dairy Worker Dies After Plant Blast

One person was fatally injured and four were hurt by an explosion of undetermined origin in the basement of the Producers Dairy Company plant in Springfield April 18.

Mrs. Evelyn Tarr, 37, a laboratory worker, and wife of the Producers plant manager, received severe body burns and died several days after the accident.

Four others who were injured by the blast included Mrs. Virginia Cryder, Ezra May, Fred Blakely, and Carl De Frates. May and De Frates suffered serious burns to their eyes caused by releasing of ammonia gas in a condensing machine.

FRUIT GROWERS PLAN COLD STORAGE

IF CURRENT plans materialize, the Illinois Fruit Growers Exchange at Carbondale will have a modern cold storage building of 60,000 bushel capacity in which patrons can store apples this season.

Proposal to construct such a plant adjacent to the present Fruit Exchange building was made at the annual meeting of the cooperative April 17 at Carbondale by the board of directors. It received the hearty approval of the 200 growers present as it was pointed out that adequate storage facilities were not available in that area of the state.

Work is being started immediately on the preliminaries to construction. Realization of the project, as A. O. Eckert, president of the Exchange pointed out, depends on the support and participation of growers in financing the building. "That is the cooperative way," Eckert declared. "Without actual grower participation, the building will not be constructed."

Since non-critical materials are expected to be used in the construction, it is believed that priorities can be secured for the building.

Cost of the building was estimated at $80,000 and the board expressed the opinion that it could be made to pay for itself in 10 to 12 years. The concrete and brick structure is being designed so that new units can be added later. After initial costs and reserves are taken care of, provisions would be made for patronage refunds.

Construction of a cold storage plant would mean an expansion of services to members and would be in line with anticipated future developments in the marketing of fruits and vegetables.

This is an architect's sketch of the proposed cold storage building which the Illinois Fruit Exchange is considering for apple storage at Carbondale.

Of immediate value to apple growers, the storage facilities would also offer future possibilities in the pre-cooling of peaches and might well be an initial step in the sharp freezing of fruits in Southern Illinois.

Proposed plans for the new structure call for completely modern equipment. Modern conveyor belts would take the baskets of apples from trucks or railroad cars and transport them to storage rooms on the first and second floors of the 46 by 160-foot building. This would be labor-saving, in that the grower or trucker would not need to bring extra help to unload, and Exchange employees inside the building could handle the actual stacking of baskets. Ceilings would be of such a height that overstacking could not occur. Temperature controls would insure the correct coolness of the storage room at all times so that the apples would have the best preservation.

Space is provided in the tentative plans for offices and for a cooling room. Loading platforms for trucks are provided at the front of the building and for railroad cars at the rear. The building would face the hard road just west and south of the present building.

Manager L. L. Colvis and President Eckert explained that the Fruit Exchange board had made a considerable study of the proposed project and had visited some of the best modern storage plants

Some 200 attended the annual meeting of the Exchange. In picture No. 1 are C. L. Cope, charter member of the Exchange, and Mr. and Mrs. C. L. Biggs, Union county. In picture No. 2 are Mrs. A. O. Eckert, Exchange President Eckert, Mrs. Talmage Defrees, and Vice-President Defrees. In picture No. 3 are Les Broom, Pulaski-Alexander farm adviser; Ted Davis, and P. E. Johnston, U. of I. labor staff, and Arthur Foreman, Pike county grower.

in the Michigan fruit belt. These observations and studies revealed the successful operation of storage facilities by other cooperatives.

Reports of F. G. Anderson, secretary-treasurer; Colvis, and Howard Swartz, sales manager, presented at the annual meeting showed excellent progress in all departments, both of the Exchange and its subsidiary, the Fruit Exchange Supply Company.

The balance sheet as presented by Anderson revealed a net income for the Exchange in 1943 of $11,716.42. New worth increased to $45,301.06.

The Fruit Exchange handled 238,083 packages of fruit and vegetables during 1943 as compared with 161,000 in 1942. This Illinois produce was sold in 25 states and gross returns amounted to $788,441.36. Volume goals set up at the beginning of 1943 were surpassed or equalled in every case except strawberries, where a short crop occurred. One of the developments of the year was the increase in miscellaneous items, such as spinach, green beans and pears.

As an additional service to fruit and vegetable growers, the Fruit Exchange has obtained the services of Fred Culp of Mound City who will serve as field man. He is a native of Southern Illinois and has spent nearly all of his life in the area. Recently he has traveled several states for a food products company.

Fred Culp

Volume of business handled by the Exchange Supply Company amounted to $152,000 in 1943 as compared with $81,000 in 1942 and $61,000 in 1941. Business already transacted this year indicates that a new high volume will be attained in 1944. Patronage dividends distributed at the annual meeting amounted to $8000, almost double the patronage of $4200 in 1942.

Growth in the volume handled by the Fruit Exchange in 1943 is accounted for by the increasing number of growers who have decided to use its facilities and to market their fruit cooperatively.

In addition the entire crop of the Edgar County Strawberry Growers Association was marketed through the Exchange, the Tri-County Association has actively cooperated with the Exchange, and a close relationship has been established with the Murphysboro Fruit Growers Association.

Lawrence Drake, director of the research marketing department of the Kroger Company and guest speaker, predicted that one of the postwar trends in fruit marketing would be consumer packaging, with the grower packing his fruit at the orchard or packing shed, and the consumer buying the fruit in that same package.

"Have a brand, and sell it to the consumer as a hallmark of quality," he urged. "Make grading pay you by following it through to the consumer."

Drake also reported on the experiments conducted in cooperation with the Exchange, and the U. of I. on the marketing of tree ripened peaches last year. He reported that tests showed that consumers wanted riper peaches and were willing to pay more for them than less ripe fruit.

Alvin O. Eckert, Belleville, was re-elected president of the Exchange; Talmage Defrees, IAA vice-president, was re-elected vice-president of the Exchange; F. G. Anderson, Anna, was re-elected secretary-treasurer.

Three directors were elected at the annual meeting: Arthur Foreman, Pittsfield, and H. E. Hartley, Centralia, were elected to succeed themselves for three-year terms, while Trevor Jeffries, Texico, was elected to succeed Nelson Cummins, Dix, who has been in the U. S. Navy for two years. Other directors of the Exchange are Chester R. Boland, Paris; Robert Endicott, Villa Ridge, and F. D. McGuire, Makanda.

Fred Blackburn, Marion county, was named to the board as farm advisers' representative succeeding E. A. Bierbaum, Union county farm adviser. A new farm advisers' representative is named each year.

Farmers Favor Plans For Health Facilities

Rural people generally are in favor of the establishment of a plan for medical care whereby persons of moderate incomes can budget their health expenses.

This was the opinion voiced by the majority of those in attendance at the National Rural Health Conference sponsored by the Farm Foundation April 11 to 13 in Chicago.

Attending the conference were representatives of the major farm organizations who met with representatives of the hospitals, medical profession and government agencies. Dr. Henry C. Taylor, director of the Farm Foundation, stated that the first request for such a conference was received from the American Farm Bureau Federation.

It was generally agreed at the conference that the health facilities for rural areas are not equal to those available in the cities. This is partly due to the low income of the people in many rural areas and in part to the sparseness of population in other areas. Both of these factors make it difficult for farm people to obtain adequate hospital and medical services.

It was recognized by the majority at the conference that it appeared that some form of governmental aid, or equalization was necessary to provide proper medical and hospital care for people in the low income classes, and also for those in moderate circumstances in the areas of sparse population.

Farm organizations' representatives generally held that the local governmental units, rather than national government, should provide the necessary public assistance.

A large scale federal program was opposed on the basis that the controls would be in Washington rather than with the people concerned, and that too much of the money would be lost during its journey from the local tax payers to Washington and back to the local communities.

Among the Farm and Home Bureau representatives attending the conference were Mrs. Stanley Castle, Mrs. Raymond Sayre, Mrs. Charles W. Sewell, Paul Mathias, and L. H. Simerl.

OPA Announces 1944 Canning Sugar Setup

Sugar for home canning will be made available to consumers at the same rate as last year and in much the same way, according to OPA.

As previously announced, five pounds of sugar for home canning may be bought with sugar stamp 40 in Ration Book Four. The remainder — a maximum of 20 pounds of sugar per person — will be granted on application to local ration boards.

Ration boards will mail upon request application Form R-323. In some communities these applications may be secured at the post office. The application must supply the names of the persons for whom sugar is requested, including the name of the person who is making the application, and the number of pounds of sugar the family needs for canning and making fruit spreads.

Spare stamp 37 from Ration Book Four must be attached to the application form for each person applying for sugar. After the ration board approves the application, it will mail coupons or certificates for the amount of sugar requested.

While there is a limit of 25 pounds per person for canning, no restrictions are put on the amount of sugar that may be used for each quart of finished fruit as in former years.

PREVIEWS

Based on the forthcoming production by the
ILLINOIS SWINE FEEDING PLAN

War-time shortages have affected the normal distribution of Blue Seal Hog Supplements. There is still need for conservation and allocation. Despite shortages, our Land Grant Colleges have continued their investigations and research. Present war-time difficulties have given them an opportunity to re-emphasize the fundamentals of good nutrition and modern feeding practices.

The "Illinois Plan" described in another part of this publication is a forward looking program developed from findings at the Illinois Agricultural Experiment Station.

The Blue Seal feed distribution program is a project sponsored by farmers through their own cooperative agencies. It is quite natural, therefore, that we follow the leadership of our College of Agriculture in formulating our swine feeding program for the future.

BLUE SEAL SOW SUPPLEMENT

This will be a 35% protein supplement to be fed to sows when they are "with pig" (gestation period) and all through the nursing period. Although only ½ to ¾ of a pound of this supplement per sow per day is required during gestation and only 1 to 1½ pounds per day during nursing period, the beneficial effects will be shown in fewer runts and stronger litters.

BLUE SEAL PIG SUPPLEMENT

Good, rich mother's milk in ample quantities is, of course, best for young pigs. Yet, as the pigs get older, their requirements increase, while the mother's milk production decreases. This is the most critical period. As many as 1 out of 3 pigs die during this period because their ration does not help them to get a firm grip on life. That is why it is important to have the pig well started on Blue Seal Pig Supplement. This supplement is rich in proteins, vitamins, and the essential minerals. When pigs are two weeks old, a creep should be provided where they can go at will to satisfy their needs until they reach 75 pounds.

BLUE SEAL HOG SUPPLEMENT

This supplement will replace the present Blue Seal Hog Balancer. There will be some minor changes in formulation. It is intended for self-feeding in dry lot to be fed to hogs from 75 pounds to 225 pounds, or market weight. This is an excellent, well-formulated protein mixture with simple minerals added. The vitamin concentrates are omitted because they are not needed during the fattening period.

BLUE SEAL PASTURE SUPPLEMENT

This supplement won many friends when it was first introduced in 1942. It is a high protein mixture of 44% and contains no alfalfa meal. It is intended to be self-fed on pasture. Obviously, this feed cannot be available until tankage and soybean meal become more abundant.

As stated above, these supplements in the new Blue Seal Swine Feeding Program are not yet available. However, we suggest that you have your Blue Seal serviceman keep you informed.

Based on the forthcoming production by the

BLUE SEAL

ILLINOIS FARM SUPPLY COMPANY • CHICAGO

MAY, 1944

The FARM FRONT ROUNDUP

TRACTOR TIRES — Only when rear wheel tractor tires are worn beyond the recapping stage can ration boards issue a farmer a certificate to purchase a new tire. According to information received by OPA from the Rubber Director, requirements for rear wheel tractor tires and for other farm implements will far exceed the best production estimates until September or October. Building large tires for tractors, bombers, trucks, etc., requires high grade manpower of which there is a shortage. A second factor contributing to the tractor tire shortage is that while the synthetic rubber program is well underway there have been months when it was behind schedule. This has necessitated setting up a priority schedule for available supplies. On this priority schedule, bomber tires come first, truck tires second, and farm tires third. In view of this situation, the WFA has also urged farmers to withhold appeals for conversion of tractors from steel wheels to rubber tires.

TIRE INSPECTIONS — O P A abandoned its passenger tire inspection program April 20. Only tire inspection now required is when a motorist makes application for permission to buy a new tire. Motorists are advised, however, to keep tire inspection records to submit with renewal applications for gasoline rations.

FACTORY TIRE "SECONDS" — New Passenger tire "factory seconds" were reclassified into Grade III effective April 17. New passenger tube "factory seconds" at the same time were made available without ration certificates. "Factory seconds" have a price ceiling 25 per cent less than that for perfect new passenger tires.

GRAIN STOCKS — State and federal departments of agriculture reported 180 million bushels of corn on farms in Illinois as of April 1, compared with 209 million bushels on that date a year ago. Current stocks of corn amount to 44 per cent of the 1943 production, indicating that since Jan. 1 farmers have sent 134 million bushels of corn to market or used it in the feedlot. Corn consumed in the last three months amounts to a third of the 1943 crop and represents "the largest disappearance for this period on record." Farm stocks of soybeans, at 12 million bushels, were smaller than a year ago but the third largest quantity in seven years of record.

POWDERED MILK — As of May 1 the WFA reduced the set aside on roller-drier skim milk from 75 to 50 per cent of the monthly production for government purchase. Government stocks of this product, in relation to war needs, are now sufficient to permit a larger percentage to be sold commercially for U.S. civilian use.

MILK CONSERVATION PROGRAM — Quotas limiting the sales of fluid cream and fluid milk by-products will be adjusted during May and June to help assure the utilization of milk produced during these two months of peak production, says the WFA. Milk dealers affected will be permitted to sell 100 per cent as much cream and milk by-products as they sold in June 1943. Prior to May these sales were limited to 75 per cent.

DAIRY EQUIPMENT — No relaxation of restrictions on dairy equipment and machinery manufacture can be anticipated until military requirements are on the decline, according to a recent announcement by the WPB.

CATTLE ON FEED — According to a recent government release, the number of cattle on feed for market in the 11 Corn Belt states on April 1 this year was about 23 per cent smaller than a year earlier. Number of cattle on feed in Illinois was reported at 80 per cent of April 1, 1943.

FARM LABOR — A BAE report reveals people working on farms April 1 numbered 9,080,000 — or about 3 per cent lower than for the same date last year; and the general level of farm wage rates was at an all-time high.

GASOLINE RATIONS — OPA April 6 amended its ration order 50, effective April 11, to permit preferred mileage for representatives of farm organizations operating to increase the production of food. Travel of representatives which was previously subject to the B ceiling will be limited only by the mileage they need to carry out the purposes of their organizations. These purposes are: (1) Assisting farmers in increasing their production of food; (2) Organizing or assisting farmers' cooperatives engaged in cooperative marketing of the products of their farms or cooperative buying of supplies, livestock or equipment necessary for the operation of their farms; (3) Organizing or assisting farmers in the cooperative use of farm livestock, machinery or equipment.

6 Million Dollar Borer Damage In State for '43

The European corn borer caused a loss of 33 million dollars to the 1943 corn crop grown in the northeastern part of the United States, according to estimates of the USDA from a survey conducted in cooperation with state agricultural experiment stations.

Of this amount, more than 27 million dollars loss occurred in corn harvested for grain, and 5½ million dollars in sweet corn. The estimate of borer damage is almost double that of 1942.

Greatest damage in any state occurred in Indiana where the loss was chiefly in field corn and totalled about 11½ million dollars. The second largest loss was in Illinois and amounted to about 6½ million dollars.

Meal Allocation

Seventy-five per cent of Illinois' April allocation of 7248 tons of oilseed meal was scheduled for distribution to county AAA committees for small feed mixers and dealers, and 25 per cent for larger feed mixers, according to Lee M. Gentry, state AAA chairman.

Here is just a small portion of the 107 workers who turned out for the Fulton County Farm Bureau membership drive and later signed 173 members.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

EVERY FARM BUREAU member will be pleased to know that the membership in the Illinois Agricultural Association stood at approximately 105,000 members as of April 1, 1944. This represents a most gratifying increase since November 18 when it was announced that we had climaxed our 100,000 campaign by exceeding that goal.

Many individuals and many county Farm Bureaus have made outstanding contributions that have gone unmentioned in this column. It is regrettable that such recognition cannot be given in every instance, and information as to such accomplishments will always be appreciated. Send it in!

The American Farm Bureau Federation is now inaugurating a program with a Million Farm Bureau members in the United States as a long time goal. The immediate goal is "100,000 more in '44", which should be exceeded by a good margin. County Farm Bureaus in Illinois will be given their individual goals in the Million Member program in the immediate future. It can be predicted now with the splendid increase above indicated that Illinois can be expected to do its part.

Annual AFBF Midwest Training School will be held June 19, 20, and 21 in the Wisconsin Hotel, Milwaukee, Wis.

The committee of 65 made a record in membership acquisition during March in Greene county when 82 members were signed, according to L. R. Lee, COD. The membership, according to the latest report, stands at 969—only 31 short of the goal of 1000. By the time this issue of the RECORD is off the press, the goal may be reached. On April 1, a year ago, the membership was 758.

Our hats are off to Fulton county! In a recent membership campaign some 173 new contracts were secured. During the last of March the membership figure was reported at 1378 and Fulton County Farm Bureau expects to reach 1400 at an early date. J. S. ("Scott") Rowley, Canton, was top man in the drive with 24 memberships.

Miss Helen Coughlin of Highland township, Grundy county, is the daughter of one of the early members of the Farm Bureau and in a recent membership campaign served as chairman in her township. She not only drove one of the cars, but helped to sign six new members in one day.

Leo Sharp, Macoupin COD, reports a successful March drive with 100 new members signed. A system similar to that used in the Madison county campaign was used with prospect letters mailed to 300 persons. In several of the townships, the organization workers signed all of the prospects who had received letters.

Kankakee County Farm Bureau's recent campaign brought in 87 paid-up memberships, five post-dated, and seven signed with the promise to pay at the office, according to W. W. Holmes, COD.

Bureau County Farm Bureau's recent membership drive brought the total number of new members signed since Nov. 1, to 252. This is 188 per cent of the county's new membership quota. C. A. Markman, COD, reports that letters sent to prospects prior to the campaign were of considerable aid. At Bureau's recent "MM" meeting the following goals were set: 1800 members by Oct. 1, 1944, and a membership of 2168 by Oct. 1, 1945. The latter represents 75 per cent of all potential members in the county.

Moultrie county closed a week's effort recently with 33 new members, reports Tom Wright, COD.

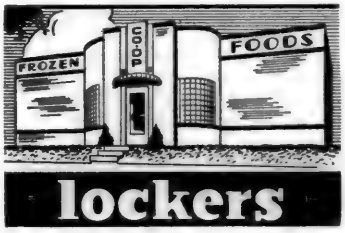
Clay, Richland, Shelby, Champaign, Jasper, Macon and Crawford counties have conducted new member meetings on an area basis with reported attendance from 300 to 1400.

Recently receiving the title of "Stem Winders", are the following who have reported one new member for each working day since Oct. 1: J. Walker Robbins, Champaign county; Thomas Drummond, Clark; C. H. Mills, Cook; Lee Mosher, DeKalb; William Steinbeck, Grundy; Clarence Johnston, Iroquois; W. W. Holmes, Kankakee; Earl J. Hays, LaSalle; L. R. Culp, Livingston; A. B. Culp, Macon, and Frank R. Loucks, Will.

Edgar county scores again! H. Zeiss Gumm, COD, reports more than 900 in attendance at a recent reception for new members.

Richland county closed a well-organized campaign March 23 with 83 new members.

At the right is J. S. Rowley, Canton, who signed 24 of the 173 new members in the recent membership drive in Fulton county. Left is Kenneth L. Flake, COD.



By Frank Gougler

President G. A. Lichtenwalter of the Shelby Locker Service recently announced that his association is going to expand its locker plant from its present capacity of 458 lockers to 746.

Manager Clarence Veech reports that he has sufficient names on the waiting list to more than fill the added 288 lockers.

In addition to providing space for the new lockers, another room of 12 by 13 feet is being prepared for a curing room. This will facilitate the handling of cured meats and lard rendering.

Monday night, April 17, more than 75 farmers and their wives met in the Mowea-

Explain "Illinois Plan" For Efficient Feeding of Swine

By Dr. B. W. Fairbanks*

(Editor's Note: Dr. Fairbanks, in this article, does not give any formulas. However, it can be assumed that each of these supplements will have a protein level of at least 35 per cent, with a satisfactory apportionment of concentrates made up of animal and vegetable proteins, sources of which should be determined by availability, quality and price. These supplements will also contain simple minerals and the essential vitamins needed for growth.)

HERE in Illinois the use of home-grown corn supplemented with protein supplements is the fundamental principle of economical pork production. Any time a pork producer or feeder has to buy any appreciable amount of his carbohydrate feeds in sacks, his program cannot be said to conform to the most profitable practices.

When all phases of the swine feeding program are examined, it is evident that only four protein supplements are required. This series of four supplements make up the *"Illinois Plan"* which meets the requirements of the Corn Belt farmer. Moreover, it is in agreement with the most recent findings of the Illinois Agricultural Experiment Station.

SUPPLEMENT NO. I

A protein supplement to be fed during the *gestation* and *lactation* periods. While the same supplement is formulated for both periods, the feeding instructions will be somewhat different for each period.

Feeding Instructions:

During the *gestation* period, feed ½ to ¾ pounds of protein supplement per head per day. If the sows are self-fed during the gestation period, grind and mix corn, oats, and legume hay to which is added 10 per cent of Supplement No. I. If sows get too fat, the legume hay should be increased; if they are not maintaining satisfactory flesh, reduce the amount of legume hay.

During the *lactation* period, feed about 20 per cent of Supplement No. I. This amount should be adequate under all conditions by either the hand-feeding or the self-feeding method.

Approximately 125 pounds of Supplement No. I will be required per sow during *gestation*. During the *lactation* period, a sow will require approximately 100 pounds of this Supplement.

SUPPLEMENT NO. II

A protein supplement to be fed in the *creep* to pigs from two weeks of age until they weigh 75 pounds. This is a very critical time, and such a protein supplement should be formulated with great care.

Feeding Instructions:

Self-fed Supplement No. II *free-choice* with shelled corn in a pig creep beginning when the pigs are two weeks of age. If hand-feeding is followed, mix 100 pounds of Supplement No. II with 150 pounds of coarsely ground cereal grains. Continue feeding Supplement No. II until pigs weigh 75 pounds.

Using Supplement No. II, 100 pounds will take care of four pigs during this period on pasture. If the pigs are in drylot, they will require 100 pounds for each three pigs.

SUPPLEMENT NO. III

A protein supplement for *growing-fattening* pigs (drylot feeding) to be fed from weights of 75 pounds to market. If the pigs have been properly fed up to 75 pounds, the finishing out to a market weight of 225 pounds is, comparatively speaking, a non-critical period.

Feeding Instructions:

After pigs have reached 75 pounds in weight, change to Supplement No. III. Self-feed this supplement *free-choice* with shelled corn.

With hand-feeding, feed one pound of Supplement No. III per head per day if they are in drylot. It will require approximately 100 pounds of Supplement No. III for each pig for this feeding period, if fed in drylot. If fed on pasture, it will require 400 pounds for each five pigs.

SUPPLEMENT NO. IV

A protein supplement to be fed to growing fattening pigs *on pasture*. Such a supplement would not contain alfalfa meal. It is, at the present time, commercially impracticable because of the protein shortage. The protein content of such a mixture would *exceed* 35 *per cent*, which has been currently set for protein supplements for swine under the Government Industry Voluntary Agreement.

This pasture supplement is mentioned now to make this program complete in any swine feeding plans for post-war days. Until such time, Supplement No. III can be used in its stead, hand-feeding under pasture conditions at the rate of 100 pounds of Supplement No. III to 600 pounds of grain for the period when pigs weigh between 75 and 125 pounds. After this, the ratio can be reduced to 100 pounds of Supplement No. III to each 12,000 pounds of grain. This amount will suffice for the weight period of from 125 to 225 pounds.

*Professor of Swine Husbandry, U. of I. College of Agriculture.

Supplement No. 4 in the Illinois Plan is designed to be fed to growing-fattening on pasture. Such a supplement would not contain alfalfa meal.

---

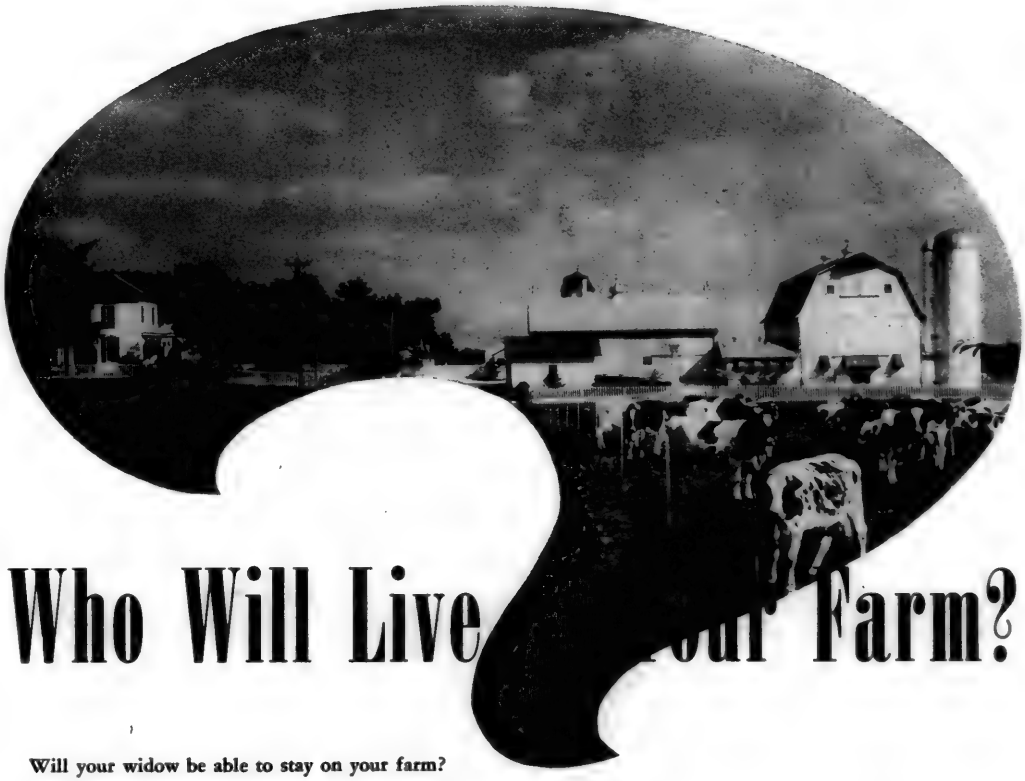
qua High School, Shelby county, to consider the forming of a cooperative to buy a 292-locker plant in Moweaqua and a 187-locker branch plant at Macon, six miles from Moweaqua.

Macoupin Locker Service has priorities to build its third locker plant at Shipman. An existing building has been secured and contracts have been let to equip it with 350 lockers. Construction of the Shipman unit will make three complete plants in Macoupin county.

Satisfactory reports on the sale of stock and locker rentals for a plant to be located at Charleston are being received from Coles county. The Farm Bureau hopes to secure at least 500 applications.

Jackson County Locker Service has approval for a 725-locker plant to be located in a large, unused room of the Producers Creamery of Carbondale.

Pulaski-Alexander Locker Company has let a contract for a building which will accommodate more than 500 lockers, according to L. E. Lingenfelter, president.



Who Will Live on Your Farm?

Will your widow be able to stay on your farm?

All of us like to think that our families will continue to live on "the old farm." But a lot of farmers fail to assure their families of the home that they have built for them.

One-third of all the farm homes in Illinois are mortgaged. When their owners die, some of these farms are going to be sold — because the widow and her children won't have the money to finish paying off the mortgage. Many another farm will be sold because the only way the widow could raise cash to pay taxes and debts was through the sale of land and equipment.

Have you made certain that these things will not happen to your family? Will they have your farm land to provide them with a living?

A Country Life Home and Family Protector policy is a guarantee that your farm will be left to your family, mortgage free. Through life insurance you can provide an income for your widow, or ready cash for emergencies. Why don't you find out how you can provide this protection? You will be surprised at the low cost. Get in touch with the insurance agent in your county Farm Bureau office, or fill out and mail the attached coupon. This information will be supplied to you free and without obligation.

Country Life Insurance Company

Explain "Illinois Plan" For Efficient Feeding of Swine

By Dr. B. W. Fairbanks*

(Editor's Note: Dr. Fairbanks, in this article, does not give any formulas. However, it can be assumed that each of these supplements will have a protein level of at least 35 per cent, with a satisfactory apportionment of concentrates made up of animal and vegetable proteins, sources of which should be determined by availability, quality and price. These supplements will also contain simple minerals and the essential vitamins needed for growth.)

HERE in Illinois the use of home-grown corn supplemented with protein supplements is the fundamental principle of economical pork production. Any time a pork producer or feeder has to buy any appreciable amount of his carbohydrate feeds in sacks, his program cannot be said to conform to the most profitable practices.

When all phases of the swine feeding program are examined, it is evident that only four protein supplements are required. This series of four supplements make up the *"Illinois Plan"* which meets the requirements of the Corn Belt farmer. Moreover, it is in agreement with the most recent findings of the Illinois Agricultural Experiment Station.

SUPPLEMENT NO. I

A protein supplement to be fed during the *gestation* and *lactation* periods. While the same supplement is formulated for both periods, the feeding instructions will be somewhat different for each period.

Feeding Instructions:

During the *gestation* period, feed ½ to ¾ pounds of protein supplement per head per day. If the sows are self-fed during the gestation period, grind and mix corn, oats, and legume hay to which is added 10 per cent of Supplement No. I. If sows get too fat, the legume hay should be increased; if they are not maintaining satisfactory flesh, reduce the amount of legume hay.

During the *lactation* period, feed about 20 per cent of Supplement No. I. This amount should be adequate under all conditions by either the hand-feeding or the self-feeding method.

Approximately 125 pounds of Supplement No. I will be required per sow during *gestation*. During the *lactation* period, a sow will require approximately 100 pounds of this Supplement.

SUPPLEMENT NO. II

A protein supplement to be fed in the *creep* to pigs from two weeks of age until they weigh 75 pounds. This is a very critical time, and such a protein supplement should be formulated with great care.

Feeding Instructions:

Self-fed Supplement No. II *free-choice* with shelled corn in a pig creep beginning when the pigs are two weeks of age. If hand-feeding is followed, mix 100 pounds of Supplement No. II with 150 pounds of coarsely ground cereal grains. Continue feeding Supplement No. II until pigs weigh 75 pounds.

Using Supplement No. II, 100 pounds will take care of four pigs during this period on pasture. If the pigs are in drylot, they will require 100 pounds for each three pigs.

SUPPLEMENT NO. III

A protein supplement for *growing-fattening* pigs (drylot feeding) to be fed from weights of 75 pounds to market. If the pigs have been properly fed up to 75 pounds, the finishing out to a market weight of 225 pounds is, comparatively speaking, a non-critical period.

Feeding Instructions:

After pigs have reached 75 pounds in weight, change to Supplement No. III. Self-feed this supplement *free-choice* with shelled corn.

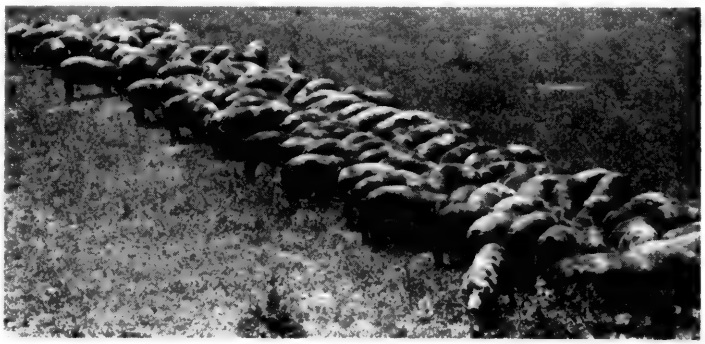
With hand-feeding, feed one pound of Supplement No. III per head per day if they are in drylot. It will require approximately 100 pounds of Supplement No. III for each pig for this feeding period, if fed in drylot. If fed on pasture, it will require 400 pounds for each five pigs.

SUPPLEMENT NO. IV

A protein supplement to be fed to growing fattening pigs *on pasture*. Such a supplement would not contain alfalfa meal. It is, at the present time, commercially impracticable because of the protein shortage. The protein content of such a mixture would *exceed* 35 *per cent*, which has been currently set for protein supplements for swine under the Government Industry Voluntary Agreement.

This pasture supplement is mentioned now to make this program complete in any swine feeding plans for post-war days. Until such time, Supplement No. III can be used in its stead, hand-feeding under pasture conditions at the rate of 100 pounds of Supplement No. III to 600 pounds of grain for the period when pigs weigh between 75 and 125 pounds. After this, the ratio can be reduced to 100 pounds of Supplement No. III to each 12,000 pounds of grain. This amount will suffice for the weight period of from 125 to 225 pounds.

*Professor of Swine Husbandry, U. of I. College of Agriculture.



Supplement No. 4 in the Illinois Plan is designed to be fed to growing-fattening on pasture. Such a supplement would not contain alfalfa meal.

NEWARK FARMERS GRAIN COMPANY

Operates Own Railroad

Newark elevator's own locomotive moves a car up for loading. It's pretty convenient to have your own engine available for switching at any time of the day.

William Thorsen, operator of the "one-man railroad" is probably one of the busiest engineers on any rail line as he is the switchman, fireman, brakeman, etc.

With great puffs of smoke and steam, No. 4 moves out of its exclusive "roundhouse" ready for a day's work.

IT ISN'T very often that you find a grain elevator with postwar plans for rebuilding railroad tracks and roadbed. That's because there are few elevators like the Newark Farmers Grain Company of Kendall county owning and operating a rail system complete with a 42-ton locomotive.

The Newark elevator has received nationwide publicity on its "one-man" railroad, but it's no longer a novelty to the farmers of the neighborhood. Old No. 4, as the stubby switch engine is known, is a familiar sight as it runs over a two-mile route through creek bottom lands between Newark and Millington.

At the century old village of Millington on the Fox river, cars of grain from the Newark elevator are switched on to the main line of the Burlington. On the return trip to Newark, No. 4 brings back cars of coal and lumber.

The man in the cab of No. 4 is Bill Thorsen who is engineer, fireman, freight agent, brakeman, switchman, maintenance and section crew, all in one. Manpower shortages have yet to be a worry to this railroad.

Thorsen always has a "clear track" as his is the only locomotive running on this exclusive railroad, but operates at a conservative speed — about 10 miles an hour — because he doesn't want to take a chance on a wreck.

During the early spring thaws the roadbed is inclined to be soft and occasionally there has been an unavoidable derailment. However, with the aid of a hand jack, Thorsen has always managed to get his iron horse back on the rails. Between runs Thorsen travels over the line in an old Model T Ford equipped with handcar wheels and makes any necessary repairs.

After the war Thorsen may be able to step up the speed of his locomotive because at the last annual meeting of the Newark elevator in February the board decided to set aside $5000 for rebuilding the roadbed. Over the years the board has found rail transportation to be a highly satisfactory method of handling grain and it plans to keep the line in operation.

While the railroad has brought considerable attention to the Newark elevator outside of the immediate territory, the grain producers of the area know the cooperative for the service it has given them for more than a score of years.

At the close of 1943 the Newark elevator had a net profit of $25,000. Of this amount, $15,000 was returned to farmers in the form of patronage dividends and the remainder was set up in reserves to further strengthen the cooperative's financial position. Capital stock of the elevator now amounts to $27,300. During 1943 the elevator paid back $36,300

in patronage dividends, $25,000 of which was in cash and $11,300 in stock. This covered a six-year period 1937-1942 inclusive. The elevator reorganized on a strictly cooperative basis in 1934 and has long been a member of Illinois Grain Corporation.

There were some interesting reactions from a few patrons when the first patronage dividend was declared. They wanted to know why they were getting dividend checks. After the cooperative setup was explained to them they naturally were enthusiastic about this type of marketing.

When some of the first patronage dividends were paid in the form of capital stock credits to those who did not hold a share of stock, there were some who were a little skeptical about owning such stock. They thought it might make them liable in case the elevator needed money. Their reluctance disappeared when they received the second patronage dividend in the form of cash, and interest on their capital stock.

These few and isolated examples were not at all typical of the general membership, but they do demonstrate that the story of cooperative marketing still needs to be told over and over again.

It also demonstrates that a successful cooperative like the Newark elevator doesn't bloom over night, or that large groups of farmers suddenly decide they want to market their products cooperatively. It usually starts with a few men who have an idea. These pioneers then have to sell the idea to their neighbors. In many cases this turns out to be a hard selling job. In addition the pioneers often have to dig down into their own pockets even after the original stock is sold to keep the venture going during the early years.

The Newark elevator was started in 1916, shortly after the Illinois-Midland railroad built the two-mile line from Newark to Millington. Some $9000 in stock was sold to build an elevator and during the early years the elevator paid the railroad $15 per car for hauling grain.

In 1922 the elevator signed a 20-year lease on the railroad. About a year or so ago the elevator bought out the stock of the railroad and became sole owner. It is undoubtedly one of the few rail systems owned by farmers. Used to trading horses, these farmer board members have learned considerably about the business of railroading and selling and trading locomotives.

Along in 1923 the Newark elevator bought an adjacent lumber and coal yard for $9000. Some $6000 additional stock was sold at that time.

Today the Newark elevator board can look back on the lean years and be thankful they were not easily discouraged. Volume of grain handled has been increasing every year and the list of patrons has been growing steadily. The 754,836 bushels of grain handled in 1943 represents a gain over 1942 of 110,370 bushels. Merchandise sales of lumber, fencing, coal, feed, salt, and seed amounted to nearly $62,000 in 1943. This was a slight decrease from 1942 and is accounted for by a drop of $19,000 in the sale of lumber and fencing due to wartime conditions. All other merchandise departments showed gains.

Here are the men who not only run an elevator, but a railroad as well. Left to right are: Harvey Norem, H. B. Peterson, Oscar Thompson, Vernie Anderson, Arthur Hanson, Clair Johnson, E. E. Anderson, and Manager Roy Holverson.

President of the Newark cooperative is Harvey Norem, who has served on the board for 24 years and as president for 15. He is also on the board of the Pure Milk Association. E. E. Anderson, secretary, has served since 1926; H. B. Peterson, vice-president, since 1933; Oscar Thompson since 1931; Arthur Hanson since 1939, and Vernie Anderson for the last several years. Roy Holverson has served as an able and efficient manager since 1926.

Farm Earnings Up 2 Percent But Trail Factory Wages

LATEST official government reports show that prices paid to farmers for farm products advanced 2 per cent during the twelve months ending with March 1944, according to the research department of the Illinois Agricultural Association.

During the same time prices paid by farmers for farm and home supplies increased 8 per cent. Farm wage rates increased about 22 per cent in the last 12 months for which figures are available.

The cost of living in urban areas advanced about one per cent during the 12 month period, according to the U. S. Department of Labor.

Notwithstanding the fact that many inexperienced workers were added to factory pay rolls during the year, the average weekly earnings of factory workers increased by 11 per cent. During the same time the total non-agricultural income increased by 17 per cent.

This indicates that the incomes of the non-factory worker groups, which includes many white collar workers, have had income increases in excess of those granted to factory workers during the last year.

Pay rolls in bituminous (soft) coal mining show an increase of 25 per cent, and pay rolls in anthracite (hard) coal mining an increased 22 per cent. Coal output, as indicated by coal car loadings, increased 11 per cent during the same time.

It is interesting to compare recent prices and cost with those prevailing in 1929, the most prosperous year on record for industry and labor generally.

The cost of living in urban areas is now about one per cent higher than in 1929. The index of retail food prices is also up one per cent. Factory employment, however, is 57 per cent greater and factory pay rolls are 172 per cent greater than in 1929.

The total income of all industrial workers (including railroad, mine and factory workers) is about 136 per cent higher than in 1929.

Prices paid by farmers for farm and home supplies are 13 per cent above 1929 levels while prices received by farmers for agricultural products are 32 per cent above the 1929 figure. Agricultural production in 1943 was 29 per cent higher than in 1929.

Braham Resigns As Farm Adviser in Will County

Leonard W. Braham, farm adviser in Will county for 16 years, has resigned his position in order to accept a new post of general manager of the Will County Cooperatives, according to H. J. Schroeder, president of the Will County Farm Bureau and also of the Will County Cooperatives.

John H. Brock, McHenry county farm adviser for the past nine years, has been hired to succeed Braham. He is expected to start his new job in Will county about June 15. Brock, a native of Kankakee county, was graduated from the U. of I. College of Agriculture in 1926, was a member of the dairy extension staff at the University for four years, and farm adviser in Bond county for four and one-half years.

Farmers Have To Dec. 15 To File '44 Tax Returns

Although many farmers have received declaration forms for income and victory tax for 1944, they are not required to file their declarations until Dec. 15, unless more than 20 per cent of their gross income is from sources other than farming, reports J. B. Cunningham, associate professor of farm management, U. of I. College of Agriculture.

A mistaken estimate does not make the farmer subject to penalty unless he underestimates his tax by more than 33-1/3 per cent and unless this remains uncorrected as of Dec. 15.

New Farm Adviser

Leslie B. Broom, former Williamson county farm adviser, has been employed in the same capacity in Pulaski-Alexander counties. He succeeds T. L. Davis who is now a district supervisor in the Farm Labor Program.

A graduate of the Missouri College of Agriculture, Broom farmed for one year after graduation and then taught school for five years. He later entered extension work in Missouri and came to Williamson county in 1941.

New Assistant Adviser

Kankakee Farm Bureau has hired H. Martin Hopps, Bureau county, as assistant farm adviser and to help with the farm labor program.

A graduate of the University of Illinois in 1940, Hopps spent two and one-half years in the Army Air Corps before receiving a medical discharge.

Dried beans are an inexpensive source of iron for the body.

Kansas Farm Bureau Head Dies After Heart Attack

Dr. O. O. Wolf, president of the Kansas State Farm Bureau Federation, and a member of the board of directors of the American Farm Bureau Federation, died suddenly April 7 following a heart attack.

Dr. Wolf became president of the Kansas Farm Bureau in January, 1934, and in December of the same year was elected to the AFBF board. He served continuously in both positions since that date. For many years he was secretary-treasurer of the Producers Commission Association at Kansas City, and secretary of the Midwest wool Marketing Association. He was a member of the board of the Central Bank for Cooperatives at the time of his death.

He was a charter member of his county Farm Bureau and served for 13 years as president. A graduate veterinarian, Dr. Wolf started farming soon after graduation from the Chicago Veterinary College and practiced his profession only as a sideline to farming activities.

To produce 100 bushels of corn, the soil must deliver 150 pounds of nitrogen, 23 pounds of phosphorus, 72 pounds of potassium and 5,000,000 pounds of water.

"WONDER IF I CAN CALL ON HIM *this year?"*

THE year you neglect safeguarding your pigs is the only one in which you will ever suffer any real loss thru hog cholera.

Farm Bureau serum is fresh, potent, and if used on every litter while still young, will save your profits.

REMEMBER: THE SMALLER THE SHOAT THE CHEAPER THE SHOT

KEEP FUEL STORAGE FILLED

When the weatherman gives the signal, 158,000 tractors will be working in farm fields in Illinois and consuming 3,160,000 gallons of fuels daily. It takes a lot of men, trucks, and time to satisfy the critical fuel needs on farms. Your best protection, therefore, is to keep your fuel storage filled at all times. Let your petroleum serviceman fill your tanks or drums on each regular route call.

BLUE SEAL "MASTER" MOTOR OIL

BLUE SEAL "Master" Motor Oil is best suited for heavy duty service in farm tractors. This oil is top quality, gives safe lubrication, contains an additive which gives it the ability to keep a motor clean, dissolves motor sludge, gum, and carbon. For a clean, well lubricated motor, insist on BLUE SEAL "Master."

BLUE SEAL GREASES

BLUE SEAL greases are popular with the Illinois power farmer. LUCO LUBE and ALUMINATE GUN have been the pacemakers for a decade and now the new HI-TEMP BEARING and HARVESTER GUN GREASE are available to round out this excellent line of quality farm greases.

EDISON SPARK PLUGS

Save gas, time, and money. Check your spark plugs before you start the season. Be sure you have the proper heat range for your tractor model and the fuel you use. Clean the plugs and adjust their gaps. If you need replacements, ask for EDISON's. They are engineered for modern motors.

BLUE SEAL BATTERIES

Before your present battery fails, arrange to obtain a new BLUE SEAL "Magic Power" battery. Here you get high quality, modern construction, and long battery life, with economy.

BLUE SEAL ANTI-RUST

Farm machinery is surely worth saving today, and BLUE SEAL ANTI-RUST will help you in the battle against rust. This product is easy to apply, gives a protective coating over metal surfaces, resists heat, cold, rain, snow, and sleet and is easily removed. Protect your plow shares, discs, etc., between jobs. Available in 10-pound, 25-pound, and 100-pound containers.

SOYOIL PAINT

Bring Spring inside, too—use SOYOIL SEMI-GLOSS enamels for interior walls, woodwork, and ceilings and SOY-NAMEL for your kitchen and bathroom. You have an excellent choice of colors in these high quality paints at reasonable prices.

BLUE SEAL FLY SPRAY

Guard against disease and discomfort among your cows. Use Blue Seal Fly Spray regularly. It repels and kills flies and other insects, thus enabling the cows to produce more milk.

for sanitation and disease control:

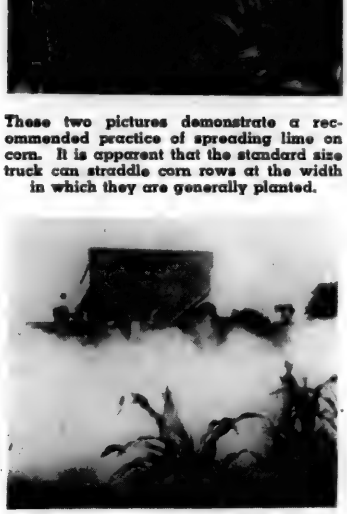
By John R. Spencer

The practice of spreading agricultural limestone on growing corn is one which should be more generally followed. Most trucks are built so that two rows of corn can be straddled without injury to the corn plants unless they have attained sufficient growth to be harmed by the truck chassis. The soil packing action by the tires is only temporary and is broken by the next cultivation.

The application of limestone on growing corn (1) receives a good mixing with the surface soil by cultivation and (2) will have nearly a year's time for neutralizing acid soil before clover is seeded in small grain following corn. "Limestone should be applied six months, and preferably a year, before clover is seeded. . ." U. of I. agronomy department. Also (3) it lengthens to some extent the time available for getting in limestone during the crop season.

A limestone distributor in Christian county is enthusiastic over this cornfield practice and has good results. Last year this concern distributed more than 20,000 tons of limestone in eight months after their unloading facilities and storage bins were erected at Taylorville. The goal for 1944 is a 40,000-ton total.



These two pictures demonstrate a recommended practice of spreading lime on corn. It is apparent that the standard size truck can straddle corn rows at the width in which they are generally planted.

A limestone company in Kendall county has installed a new jaw crusher in the pit for the primary breaking with conveyor to the mill house for secondary crushing and screening as in past operations. The production of agricultural limestone was expected to start in April. It was reported that sufficient trucks for hauling and spreading are available in the area.

Price increases allowed recently by OPA to the six quarries in Cook county bring the price of agricultural limestone, with one exception, to $1 per ton. The exception is 90c price at one quarry.

A recent meeting at Chicago attended by college agronomists from ten middle western states, fertilizer manufacturers, and government officials recommended the continuance of the grade reduction program for the 1944-1945 season starting July 1. This is a reduction in numbers of analyses or combinations of mixed fertilizer to about 15 for Illinois from the 60 odd available before the war period. This, however, is not new to Illinois farmers as there were only a limited number of analyses available in the spring and summer of 1943. The fewer numbers of grades or combinations results in less confusion to the grower with no impairment of field results on crops and increases fertilizer factory output by better utilizing the short labor supply.

"A few of the commonest causes of infertility may be briefly reviewed. There can be no doubt that the principal one throughout Great Britain is shortage of lime or, what comes to the same thing, soil acidity. . . Few new developments will do more to improve the fertility of our soils than the general use of relatively coarse ground limestone on acid soils." E. M. Crowther, Rothamstead Experimental Station, Rothamstead, England.

Women drivers on limestone spreading trucks are making their appearance in Whiteside and Lee counties to aid in this essential work.

By Frank Gougler

Manager Virgil Johnson of Producers Creamery of Galesburg reported that during the first four months of the present fiscal year — October, November, December, and January — 44 per cent more milk was handled than in the same period a year ago.

During the winter months some of the milk received was sold to local markets for the bottle trade, but as production increases less is being sold in this manner and more is being separated. The sweet cream is churned into Prairie Farms butter and the skim milk is made into powder.

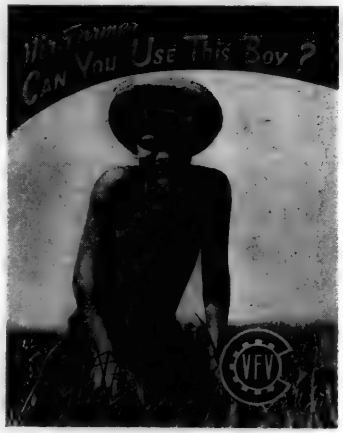
Recent new members secured by the Galesburg Producers number as follows: Knox county, 14; Henry county, 11; Warren county, 7, and Mercer county, 2, making a total of 34.

Expansion program of the Producers Creamery of Peoria is well under way in the north area of the territory covered in the project. During April, a stock selling campaign has been underway in five counties, and in all but one the sales are far in excess of the original quotas.

Sufficient capital has been raised, in the opinion of the board, that the management has been authorized to secure the services of an architect to make plans and draw up specifications for the new plant.

The board of directors has taken an option on a piece of property in Henry in Putnam county as a site for the building. Tentative plans call for a two-story brick building, 50 by 100 feet.

One of the requirements necessary for securing priorities to build and equip such a plant is to assure WPB that sufficient milk can be secured in the territory to make a million pounds of skim milk powder annually. This requires 12½ million pounds of milk. Milk production in the area is approximately 200 million pounds. Herds in this area average five cows per farm with a production of 25,000 pounds of milk.



This picture appears on the cover of the bulletin put out by the emergency farm labor program staff telling Illinois farmers of the Victory Farm Volunteer program.

BECAUSE of the increasing shortage of experienced farm help, it is estimated by officials of the Illinois emergency farm labor program that 12,000 more farm jobs will be filled by boys and girls from the Victory Farm Volunteer ranks in 1944 than in 1943.

An April report of the farm labor staff for Illinois showed unfilled orders for 1699 year round workers. Of this number, 770 were for married men, and 929 for single men.

On the basis of these figures, it is expected that more than 36,000 farm jobs will be filled during the year by approximately 30,000 boys and girls between the ages of 14 and 18.

Rural YOUTH

By Ellsworth D. Lyon

Reports from 24 counties show Rural Youth bond purchases as of April 20 to total $49,461.90. If all reports could be obtained, the total undoubtedly would be considerably larger.

Knox county ranks first in bond purchases reported with $5,468.75; Warren is second with $3,755.75; McLean is third with $3,675, and Tazewell is fourth with $3,381.25.

Plans for May activities in Kankakee county include a bowling party. The theme, "War-Time Marriages" was presented in April by a Rural Youth member and the home adviser.

McLean county recently featured a panel discussion on a theme dealing with marriages and the choice of residence.

President Lucille Denby of Macoupin county writes of their carnival: "We took in $370 and gave $275 to the Red Cross. It was fun and good activity for the club." Washington county reports a contribution of $50 to the Red Cross — the result of a waste paper collection project in which 16-2/5 tons of paper was collected. Brown county has contributed $20 and Wayne and Randolph each $25 to the Red Cross.

Mac Shauman of Warren county says, "We are having very good attendance at our meetings. We had about a dozen new members enrolled last meeting." Included in the program was a "very interesting discussion on 'Marriage in War-Time'".

"March Winds" was the theme of the March meeting for White county. Everett Strum, president, says that some interesting tall stories blew out of the meeting. Wayne county has put on a similar program with success.

Norman Rickenberg, president of Randolph County Rural Youth, reports an interesting talk at the last meeting by a former missionary, Rev. Muehl, his theme being "Ramblings in China".

Clark county set a bond quota which was double that of last year and has already gone beyond the half-way mark. This group is now making a drive for new members.

Tazewell county is finding ways of presenting Rural Youth to the people of their county. President Franklin Allen said recently, "We have led recreation for the Peoria Youth Rally and gave a demonstration of square and folk dances before the Delavan Rotary Club, and lead the recreation in the 4-H Rally in Morton.

Adams County Rural Youth has a steady attendance of 40 to 45 each month according to President Harold McConnell. Circuit Judge Fred Wolfe addressed a recent meeting. The May 23rd meeting is to be a hay ride party at Columbus.

Fulton county Rural Youth members recently enjoyed a costume party in "Sadie Hawkins" style. There are approximately 60 active members in the group.

Several members of Rural Youth groups of Edgar and Livingston counties have become blood donors to the Red Cross.

Members of Rural Youth groups of the following counties have taken part in radio broadcasts during recent weeks: Woodford, Bureau, Peoria, Livingston, Fulton and Tazewell.

Homer Blunier, president of Woodford County Rural Youth, states that on April 13 "a box social was held with a grand time by all". This was guest night with all county seniors as guests. Mr. Ralthe, from the Regional Research Laboratory in Peoria, discussed the work that the Research Laboratories are doing to help win the war.

The Rural Youth of Warren county is getting behind the salvage, paper and tin can drive which is being sponsored throughout the county in May.

Knox county had an attendance of 240 at its annual banquet. Was it the main course — oysters — which attracted such a large attendance? At the regular April business meeting Dr. Raye Ragan of the First Methodist Church in Galesburg, spoke to the group on "Racial Problems".

Winnebago county held its annual banquet March 31. Farm Adviser Henry Brunnemeyer was present as were Everett Phelps (with Mrs. Phelps) and Clint Miller, Farm Bureau members and leaders as well as "perpetual" Rural Youthers. They spoke briefly and brought the greetings of the Farm Bureau.

The two Rural Youth clubs of Ogle county held a county-wide banquet March 30. The attendance was good in spite of the snow drifts. Good-natured bantering and pleasantries by the various speakers from the two groups inspired witty replies which caused much laughter and developed an attitude of good will.

Other counties reporting well attended annual banquets are: Pulaski-Alexander (with pot-luck style and an abundance of food), Saline (many parents present), Christian (various Farm Bureau leaders attending), Wabash (with visitors from Wayne and White counties).

Montgomery County Rural Youth is planning its annual dinner for May.

DeKalb Rural Youthers are able to attract large numbers to their meetings by sending out "snappy" cards with appropriate drawings and messages calling all members. Also, those who are able to do so, provide "rides for gasless gals and guys."

Brown county is mailing out "The Little Brindle Breeze", a monthly newspaper, to members who are serving in the armed forces — 51 at present. Mamie Spiers, president, reports: "Our April meeting was one of the smallest on record, but the weather man was playing tricks and kept many of our members away. Mr. Price, agricultural teacher at the local high school, was present and gave an instructive talk on "Sanitation in the Raising of Livestock".

Cook county is to be congratulated on a new project — the publication of the "Ruralite," a news letter of the Cook County Rural Youth. The reason for the "Ruralite" is stated in the first issue: "To keep in touch with the members in the armed forces." This group recently held its fifth annual banquet with W. B. Peterson, director of distribution, Illinois Farm Supply Company, as speaker of the occasion.

Agnes Morton, president of Macon County Rural Youth, writes that plans are under way for the annual banquet to be held in June. She says that since Decatur is the Soybean Capitol, their banquet is to be held there and is to be built around the soybean. Plans are also developing for a May breakfast.

Draft Plans for Annual 4-H Camp June 25 to 28

Plans have been made to take care of 300 4-H club members at the East Bay camp at Lake Bloomington, June 25 to 28.

Room will be provided for 300 members of 4-H clubs in 12 central Illinois counties.

L. J. Hager, Marshall-Putnam farm adviser, has been named camp director; H. D. Van Matre, Iroquois farm adviser, dean of boys; Miss Marian Sympson, Tazewell home adviser, dean of girls, and Miss Jesse Campbell, Livingston home adviser, secretary.

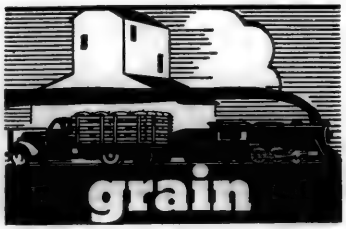
ILLINOIS FARM SUPPLY COMPANY, Chicago



By G. H. Iftner

Anton Powers, formerly manager at Covell Farmers Grain Company, McLean county, has accepted managership at the LaPlace, Co-Op Grain Company, Piatt county. Paul Erlich, former manager at LaPlace, has retired to Bloomington because of his health Powers was succeeded at Covell by W. P. Gittinger, formerly an assistant at Meadows Elevator, McLean county.

There are a number of vacancies among farmers' elevators and prospective managers can help out in this manpower problem by contacting the director of grain marketing for the Illinois Agricultural Association.

J. C. Kennedy, manager of the Sciota Farmers Elevator, McDonough county, reports that his elevator is "very much in existence." It paid a 10 per cent dividend last year and right now the feed volume is approximately $4000 per month. This column made an error when it reported the elevator not in operation.

Cliff E. Bray, elevator manager at Trenton, Clinton county, was scheduled to enter the Navy early in April.

Ralph Allen, Tazewell county, former board member of the Illinois Grain Corporation, says that the primary objective effort is to get things done in the home, on the farm, in the community, and in the nation that will promote the general welfare. Degree of success in reaching the ultimate objective, according to Allen, depends on the amount and quality of member participation. This, to us, sounds like a fundamental cooperative principle.

The addition of new members is possible in any farmers' elevator that wants to give new members a chance to participate in earnings as a reward for patronage. The Ferrin Equity Exchange, Clinton county, each year sends out several paid-up stock certificates of $100 representing accrued earnings of patrons. A little extra work? Yes. Worth it? Ask Manager Hugo. The elevator has 142 members, many of them having earned a second share of stock through the patronage dividend plan.

Twelve years before the Savoy Grain and Coal Company of Champaign county became a true cooperative the board of directors recommended reorganization. Stockholders voted against the proposal because the stock was worth more than two for one. It took 12 years of effort on the part of the directors to bring about reorganization on a cooperative basis. Stockholders now feel as though they get more money — stock dividends plus patronage — than they received formerly on stock alone.

Farm Bureaus have an increasing responsibility in the promotion of cooperative marketing in view of changing conditions.

There are many reasons. Here are some of them:

1. Farm Bureau members who now furnish from 60 to 80 per cent of all the grain flowing through farmers' elevators have a right to share in the earnings of the local marketing agency. They have a right to expect efficient management and operation so that there will be earnings to share.

2. There is a net profit in every transaction that takes place from the time the grain leaves the local elevator until it reaches the consumer. Producers have a right to share in these net savings. The only way they can share in them is for the local elevator to become affiliated with the state-wide marketing agencies which are in a position to collect these earnings. The state-wide agency passes the dividends back to the local elevators and the local elevator passes them on down the line to the producer, providing it operates as a cooperative.

3. Farm Bureaus are more or less obligated to see that the members who sell grain get more of the consumer's dollar. This can be done only through cooperative channels. Farm Bureaus are further obligated to see that members have the opportunity to buy feed and supplies at the low dollar, quality considered. The experience of cooperatives has proved that the patronage refund route is the right direction to pursue.

In return cooperative elevators have a right to expect cooperation, patronage and loyalty from Farm Bureaus and from the 105,000 Farm Bureau members in the state.

One reason for inoculation of seed to insure top production is demonstrated here. The dark area to the left shows soybeans grown from inoculated seed, and at the right from uninoculated seed.

A downstate report says, "The manager now owns 50 per cent of the stock of our 'Farmers' Elevator', and therefore it cannot be considered a farmers' elevator any more."

Another report states, "The independent operator at our station now owns close to half the stock of the 'farmers' elevator'. It is natural to suppose that he would block any attempt to reorganize under the cooperative laws."

Our conclusions in the above cases are: the men who cornered the stock were wide awake; directors and stockholders were off duty, and farmers in the two instances have lost their cooperative elevators for all practical purposes.

A cover crop for every acre means good soil longer, and good soil means greater production.

Predicts Few Changes in Wool Program for 1944

Illinois Wool Marketing Association's program for handling 1944 wool will be about the same as last year's, according to S. F. Russell, secretary-manager.

The Commodity Credit Corporation has been made the sole purchaser of domestic wool for 1944 as in 1943 at ceiling prices.

Advances to be paid by county wool pools will be: 35 cents per pound on clean medium wools, 25 cents on fine and fed wools and 20 cents on rejects.

Wool is to be assembled through county pools, controlled by the county Farm Bureaus and handled through their subsidiaries, such as Producers Supplies, marketing organizations, etc.

County wool pools will receive, weigh, make cash advances, and store wool until it is shipped to the warehouses of the National Wool Marketing Corporation in Boston.

Illinois Wool Marketing Association has contracted for its supply of bags and twine and these will be available for purchase by county wool pools.

CCC has raised the commission rates that wool handlers, dealers and buyers can charge on the 1944 wool clip, but the Illinois Wool Marketing Association is keeping its commission charges at the same rate as last year.

By marketing wool through their own cooperative, producers will be assured of accurate weights and grades and top prices for respective marketings.

YMCA Observes Its 100th Anniversary During 1944

A service organization that has grown step by step with the development of American industrial communities until today it is the world's oldest and largest agency working for the welfare of youth has this year reached its 100th anniversary.

The Young Men's Christian Association, whose familiar red triangle has become a symbol of service in 66 countries and throughout every state of the union, observes its centennial year in 1944.

Today during World War I, the YMCA is finding one of its greatest fields of service among soldiers, sailors, and marines wherever they may be in this world at war.

The YMCA is one of the six national agencies comprising the USO, operating in every battle area around the globe.

A man who maintains a protected woods is making his contribution to water conservation in his neighborhood.

Home Bureau Asks Funds For Two War Projects

AN APPEAL was made during April to all County Home Bureaus in Illinois by Mrs. R. W. Stamey of the Illinois Home Bureau Federation to place the full support of their membership behind the 1944 campaigns for United China Relief and the Red Cross Clubmobile. Mrs. Stamey is Federation chairman for these two projects in the state which are sponsored by the Home Bureau's national organization, the Associated Women of the American Farm Bureau Federation.

"Our County Home Bureaus were very generous in contributing to China Relief in 1942 and 1943, but there is still a great need for relief to the gallant people of China," Mrs. Stamey reports.

"Our money gives aid to the women and children in China by supplying medical care in hospitals equipped by us. Our support has a very substantial monetary value and means much in the relief of suffering in China.

"Another project this year is the Red Cross clubmobile. It is a vehicle outfitted with a doughnut machine, coffee urn, newspapers, magazines, writing materials, and in many instances a victrola with records or a 16 mm moving picture outfit.

"It is operated by three American Red Cross girls and a trained mechanic. These clubmobiles are driven to isolated spots where service men are on duty far from the club centers in the largest cities. They also go to many air fields where they serve doughnuts to returning bomber crews. They drive as close to the fighting front as is possible and are a link to home for the boys. They have proven to be a big boost to morale.

"Yes, they do come high — $3,500 original cost and $21,000 a year to operate, but home makers all over the United States will have an opportunity to cooperate in this undertaking. Clubmobiles are now operating in Great Britain, Australia, North Africa, Italy, Sicily and India and will no doubt be operating in other outposts by the time our contributions are made.

"Will you get this information to your units asking their cooperation in these two worthy projects? As your contributions come to me I will send them immediately to Mrs. Charles Sewell, administrative director of the Associated Women of the AFBF.

"A full report of each county's contribution will be given at the 1945 annual meeting of the Illinois Home Bureau Federation."

Mrs. Stamey's address is rural route No. 1, Urbana, Ill.

Safe Home Program Draws 7758 Families In State

There are 7,758 families in 41 Illinois countries enrolled in the 1944 safe homes program sponsored to reduce home accidents which last year killed 33,000 Americans.

Miss Gladys J. Ward, home management specialist, University of Illinois College of Agriculture, reports that this year's enrollment is a good increase over last year, when some 5,000 families in 60 counties were registered. Awards based on county safety reports will be made at the end of the year.

McLean county with 739 families registered leads in 1944 enrollment figures. LaSalle county with 550 is second.

Last year — the first for the program — Mason county won the award for having the largest number of enrolled families reporting no accidents. Lake county was honored for having the lowest per cent of accidents among families enrolled.

The program is sponsored by the extension service, University of Illinois College of Agriculture, the Illinois Home Bureau Federation and the National Safety Council.

Eggs poached in milk are delicious. The use of milk not only increases the food value, but it also adds to the flavor and delicacy of the eggs.

Vegetables should always be scalded before packaging for freezer locker storage. Scalding destroys enzymes and aids in retaining flavor, color, and nutritive value.

Cases for storing silver should be red, gray, green or tan in color rather than white. The sulphur in bleached material may cause tarnish.

Here is the board of the Wayne County Home Bureau that is carrying without the aid of a home adviser. Left to right are Mrs. Edgar Koontz, Mrs. Raymond Lyons, treasurer; Mrs. Roy Fearn, vice-president; Mrs. Mabel C. Brock, president; Mrs. Guy McKibben, secretary; Mrs. Alonzo Bowyer, Mrs. L. B. Kimmel, and organized in April, 1942. Absent is Mrs. Geo. Felix.

Wayne Home Bureau Keeps Going Without Adviser

Wayne County Home Bureau is looking for a home adviser, but until it finds one the board of directors is performing an oustanding job in keeping the organization intact and in maintaining a real program.

At the annual meeting April 6 in the Fairfield High School, Home Bureau members of the county re-elected the board to continue the supervision of activities.

The Wayne County Home Bureau was organized April 1, 1942, and Miss Ruby Elliot, now Mrs. Lowell Young, was secured as home adviser. Mrs. Young left Dec. 1, 1943, to join her husband who is in the Army and stationed in Texas. Since that time the Home Bureau Federation and the Nawithout a home adviser.

The women who have on the excutive board of the Home Bureau ever since it was organized are Mrs. Mabel C. Brock, president; Mrs. Guy McKibben, secretary; Mrs. Alonzo Bowyer and Mrs. O. A. Towns. Other board members are Mrs. Raymond Lyons, treasurer; Mrs. Roy Fearn, vice-president; Mrs. George Felix, Mrs. L. B. Kimmel and Mrs. Edgar Koontz.

Tri-City High

(*Continued from page 7*)

high school the size of Tri-City that is not available in smaller schools is the grouping of students in classes according to their abilities. For example, all freshmen have an opportunity to enroll in elementary algebra. At the end of the first semester, those who fail are placed in a class of practical mathematics. If they pass the second semester of this course they receive credit for the first semester's work in algebra.

Larger enrollment also makes it possible to teach home making, commercial subjects and sciences and to sponsor extra-curricular activities such as art, dramatics, public speaking and other cultural subjects.

The new school building, situated on 17.2 acres of land, is well adapted to the modern needs of a rural high school. It contains a combination library-study hall, well-equipped classrooms, science laboratories, special laboratories for agricultural and home making, a room in which students may eat their lunches and which is equipped to serve as a cafeteria some time in the future, commercial room, clinic room, shower and locker rooms, and gymnasium-auditorium for athletics, physical education, dramatics and community meetings.

Cost of the building was $138,000 and equipment cost was $15,000.

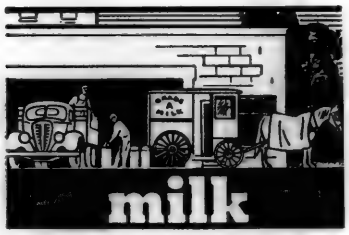
People of the district formerly served by three separate schools now look upon the Tri-City school as a real community center. Various organizations use its facilities for a meeting place including the Farm Bureau, women's clubs, Red Cross, etc. The school has been host to the Sangamon county literary, music and track meets and basketball tournaments.

Of the seven directors on the board, there are two each from Buffalo, Dawson and Mechanicsburg, and one from Buffalo Hart. All are farmers.

Per capita cost of operation for the last school year was $144.12, about the same cost as experienced in the three smaller districts. Educational fund rate is $1 and building fund 50 cents. Assessed valuation of the district is $2,684,231.

Homemakers who are planning to brighten their homes for the coming of spring will be interested in a pamphlet "Refinishing Furniture" prepared by Miss Dorothy J. Iwig, home furnishings specialist, U. of I. College of Agriculture.

Detailed instructions are given for the three main steps needed in the refinishing process — removal of old finish, preparation of surface for new finish and application of new finish. The pamphlet may be secured from the home adviser or by writing the College of Agriculture.



By Wilfred Shaw

The recent death March 21 of Alex P. "Archie" McPhedran of Ogelsby removed a pioneer Illinois advocate of cooperative milk marketing.

Mr. McPhedran was one of the most sincere and capable leaders in cooperative milk marketing activities in Illinois over the past 20 years. He was one of the original organizers of the La Salle-Peru Milk Producers in the early twenties and served continuously as its president until his health required less active participation.

Mr. McPhedran was also one of the organizers of the Illinois Milk Producers Association and served as its president from its original organization date in 1933 until his health prevented his continuance in this office. While he had not been active in either organization for a few years his interest had remained as keenly in this movement as ever.

Mr. McPhedran's whole-hearted belief and devotion to farm organization was not confined to milk marketing but was also exemplified in his support and membership in the Farm Bureau and Illinois Agricultural Association. The development and accomplishments of cooperative milk marketing and the Farm Bureau in Illinois were always a source of great pride and satisfaction to Mr. McPhedran.

Illinois cooperative milk marketing associations and the Farm Bureau will miss the kindly, energetic, and able "Archie" McPhedran.

Pure Milk Association of Chicago in April purchased the milk receiving and cooling plant at Sharon, Wis., formerly operated by a local cooperative group. The milk received at this plant is Grade A milk produced by PMA members. Acquisition of this plant is in keeping with PMA's program of expanding its country plant operations in the Chicago milk shed. PMA now owns and operates the following country milk receiving plants in Illinois — Lisle, Hinchley, Chicago, and St. Charles (leased). In Wisconsin — Kansasville Sharon and Salem. The Kansasville plant is equipped with a dryer. A portion of the operations of the Chicago plant is the bottling and sale of milk in Chicago.

The Sangamon Farmers Milk Cooperative of Springfield recently employed George Cantrall as manager of that association. Cantrall was born and reared on a farm in Sangamon county and recently has been engaged in dairy work in Springfield. The Sangamon Farmers Milk Cooperative is the milk bargaining association for producers supplying the Springfield market.

An eight-county meeting was held March 22 in the Public Library at Carmi, attended by the county farm advisers, representative milk producers, and milk distributors of eight southeastern Illinois counties. This meeting was called to discuss the serious milk price situation in that section of the state and to plan a way and means of correcting the inadequacy and inequities in milk prices to its producers and also of retail character between the counties and cities in this area as compared with adjacent areas in Indiana and southwestern Illinois. A committee was elected composed of county farm advisers, milk producers and milk distributors from the area who have been meeting and who are preparing an area petition for milk price changes and relief, for submission to the Chicago O. P. A. Regional Office for their action.

A hearing was scheduled at 10 a. m., April 28 in the City Hall in Rock Island by the dairy & poultry section of the WFA to consider proposed amendments to the Quad Cities milk marketing order which have been submitted jointly by the Quality Milk Association and the I & I Milk Association. The amendments proposed have to do with the present order method of pricing Class IV milk and also procedures in the classification of milk purchases.

The following are the blended prices received by producers supplying the respective Illinois markets. All are March prices for 3.5% milk f.o.b. dealers platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.41
Canton	2.55
Champaign	3.00
Chicago	3.09
Danville	2.27
Decatur	2.70
DeKalb	2.74
Freeport	2.77
Galesburg	2.65
Harrisburg	2.60
Jacksonville	2.40
Kewanee	2.55
LaSalle	2.68
Moline	3.08
Peoria	2.89
Pontiac	2.40
Quincy	2.36
Rockford	3.07
Springfield	2.60
St. Louis	3.44
Streator	

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis delivered f.o.b. dealers platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for February unless otherwise noted:

Baltimore	$3.85
Boston	3.84
Chicago (70 mile zone) (March)	3.09
Denver	2.87
Detroit	3.57
Evansville	2.98
Indianapolis	3.31
Kansas City	3.59
Milwaukee	3.00
New York (201-210 mile zone)	3.89
Pittsburgh	3.58
Seattle (March)	3.10
St. Louis (March)	3.44
St. Paul (March)	2.97
Washington, D. C. (Dec.)	4.06

EDITORIAL

A Case of Cooperation

ILLINOIS Fruit Growers Exchange, an IAA affiliate, is an interesting case in point for the farmer who is considering cooperative marketing. It is interesting not because the Exchange handles fruit and vegetables, but because the benefits it is bringing fruit growers are comparable to the potential benefits of cooperation in every branch of agriculture.

Efficient Selling

Consider briefly a few facts: the Exchange finds a market for Illinois fruit in 25 states, selling each lot for its members at the *time* and *place* where price is best. Its volume has grown nearly three times in two years since reorganization. It earned a $12,000 profit for its members in 1943 in addition to rendering all this service.

Volume Buying

The Fruit Exchange Supply Company, a subsidiary, was able, by utilizing early planning and volume buying, to furnish fertilizers, insecticides, and orchard supplies *as needed* to over 500 growers, in spite of wartime shortages. And it paid out $8,000 in patronage dividends last year. Volume of business grew from $61,000 in 1941 to $152,000 in 1943.

Earns Confidence

A nation-wide market, full current information, instant service, assurance of getting needed supplies: these are some of the things achieved cooperatively by the farmers of the Illinois fruit belt. *Could the individual, working alone, do as well?*

Today the Fruit Exchange, with the confidence and support of individual growers and county and local associations of fruit men, faces the problems of the future.

Apple Storage

One of them is adequate cold storage, especially for apples. Facilities of that kind, in truly modern form, are scarce. The Exchange, with the approval of its membership, expects to build such facilities at Carbondale. This will pave the way for future processing of peaches and strawberries, as well as meet the apple growers' immediate need.

Consumer Demand

Another problem is postwar selling of fruit. Consumers will be demanding riper fruit, better packaging, and other improvements. A market research expert said at the annual meeting April 18, "The housewife wants fresh peaches, in consumer-size packages. She is ready and willing to pay for them. How to give her what she wants is up to you."

Cooperation Pays

What can the individual grower do about such problems? Little enough, usually — but in cooperation with his fellow-orchardists, working through a strong, well-managed organization, he can find the answers. It is not extravagant to predict that the solution to these and other questions of today and tomorrow will be found by the Illinois Fruit Growers Exchange.

Applies to You

"But I'm a livestock man . . a dairy man . . or a grain man," you say.

Yes, but *cooperation is a way of doing business, and what it demonstrates in one branch of agriculture it can show in every other commodity field.*

Working together is the means by which farmers earn more, save more, and prepare to meet their problems.

Plan Your Postwar Future

NOW is the time for far-thinking farmers to plan their individual postwar future. It is a time to reduce debts and get rid of mortgages, so that postwar operations will be less affected by "overhead."

It is a time to accumulate liquid reserves of cash and war bonds. The money in banks to farmers' credit is not all profit — it represents depreciation that cannot be made up now because of wartime shortages.

It is a time to outline plans for building, improving and conserving the soil.

It is a time to set aside ample funds to repair and reconstruct depreciated buildings, fences, tile lines, and other farm improvements, and to replace worn-out machinery.

Thoughtful farmers, remembering the debacle of 1921, are not going into debt to buy land. They are not anticipating that current price levels "will last forever." They are getting their financial houses in order, to meet whatever the postwar period may bring.

In so doing, they are also laying definite plans for the boys who will return from the armed forces. They will be in a position to constructively use this manpower which will be necessary if we are to avoid mass unemployment and disastrous breaks in farm commodity prices.

Leaders in Safety

COOK county has been named by the state club office as reporting the most outstanding 4-H safety work in Illinois during 1943. Congratulations are in order.

In a period of destruction, it is heartening to see that Illinois farm girls and boys, not only in Cook, but in many counties, have carried on projects on this vital subject.

Safety is rightly a topic of primary concern, even in wartime. More so, perhaps, in wartime, because of the heavy losses that accidents impose, not only in terms of human suffering, but in lost time, lost production, and delayed victory.

Safety First is a challenge to every farm family!

YOU CAN'T STOP HAIL-

BUT YOU CAN PROTECT YOURSELF FROM *crop income loss!*

Hailstorms never give advance warnings. They can strike anytime . . . anywhere. There is no guarantee that hail will not level your fields — ruin your growing crops.

Don't Take a Chance!

The only way for you to be on the safe side — every minute — is to insure your crop income against shrinkage or total loss due to hailstorm destruction. This is the kind of protection Farmers Mutual offers you — at low cost! Safeguard the investment of your time, money and labor by protecting your crop income with hailstorm loss insurance.

★ ★ ★

Participating Policy— Non-Assessable!

The cooperative principle on which the Farmers Mutual operates provides extra savings through dividends. Yet you never pay more than the one low guaranteed premium. The resulting low cost makes it possible for you to economically purchase ample protection for your crops. The Farmers Mutual is a legal reserve mutual, owned and operated for the sole benefit of its policyholders. It is an Associated Company of the Illinois Agricultural Association, and its insurance coverage is available only to Farm Bureau members. There is a local representative in your county Farm Bureau office.

"BILL, you should get full coverage insurance on your car. It will cost you about $10 or $12 each six months — of course there's a small policy fee, but you only pay that once in a lifetime.

"Like I've told you — the Illinois Agricultural Mutual Insurance Company belongs to Farm Bureau members. We own it and we control it. Its only purpose is to give us the best possible casualty insurance at the lowest net cost. That's why we policyholders have been getting some pretty big special dividends which substantially reduce the cost during these times when we aren't driving so many miles.

"Another thing I like about the company is that you know the fellows who do the adjusting. When I had my accident last summer I wasn't afraid of getting skinned.

"Why don't you call our General Agent at the Farm Bureau office or see the special agent in our township. They've got the blanks and can fix you up in a hurry. Ask about the employer's liability policy too — I wouldn't be without it."

See your local Farm Bureau Insurance agent for further details

The Illinois Agricultural Association Record

The Illinois Agricultural Association RECORD is published monthly by the Illinois Agricultural Association at 1501 W. Washington Road, Mendota, Ill. Editorial Offices, 608 So. Dearborn St., Chicago, Ill. Entered as second class matter at post office, Mendota, Illinois, September 11, 1936. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1935. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 608 So. Dearborn St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578 and undeliverable copies returned under Form 3579 to editorial offices, 608 So. Dearborn St., Chicago, Ill.

Director of Information, C. L. Mast, Jr.; Editor, Merrill C. Gregory, on leave of absence with the United States Army; Assistant editor, Creston Foster; Director of Advertising, C. M. Seagraves, on leave of absence with the U. S. Navy.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and education interests of the farmers of Illinois and the Nation, and to develop agriculture.

This Month

By Earl C. Smith

WE ARE entering a presidential campaign year during a period of war. This naturally makes it more than usually important that calm, clear and independent thinking be exercised by farmers generally and by those representing their interests.

Historic political prejudices must be left in the background. American ideals and American interests must have first place in our attitudes and considerations.

Political platforms, and more particularly the statements of candidates for high positions of public trust in the months ahead must be analyzed carefully.

One of the major purposes and responsibilities of a farm organization is to see that farmers' interests are properly represented at all council tables where matters of public policy affecting agriculture both directly and indirectly are in the making.

Farmers of the nation have a big stake in the agricultural platforms which will be adopted by the two major political parties at their respective national conventions within the next few weeks.

History has a way of repeating itself. As in other years in advance of political conventions some political leaders, and particularly those outside the farm belt, appear to minimize the importance of adopting clean-cut and understandable agricultural planks or promises necessary to maintain policies of government essential to sustain agriculture on a satisfactory basis.

Following a policy of many years standing, your leaders will be present at both national party conventions to present the Farm Bureau's position on national issues which affect agriculture, and will make definite recommendations in keeping with the policies laid down by Farm Bureau delegates at annual meetings of the American Farm Bureau Federation.

Upon invitation from the Preliminary Republican Platform Committee, officers of the American Farm Bureau Federation presented a detailed statement of recommendations on April 3. On page 6 of this issue of the RECORD is printed a full text of this statement, which embodies the fundamentals of the recommendations which will be made to the official platform committees of the Republican and Democratic parties at their respective forthcoming national conventions.

It is recommended that Farm Bureau members study this statement so that they may become thoroughly familiar with the position of their organization on basic agricultural policies.

It is important that the rank and file of Farm Bureau members in Illinois use their influence in urging representatives of the respective parties to fight aggressively for the adoption of sound agricultural planks by their convention delegates.

When opportunity affords, it becomes the responsibility of leadership to see that the official position of the Farm Bureau is properly presented on the state as well as the national level to both political parties at the same time their platforms are being planned or drafted.

On Friday, May 12, in response to an invitation of the Illinois Republican Platform Committee, I presented the official position of the Illinois Agricultural Association regarding major agricultural issues, and urged that these recommendations be adopted by the State Republican Platform Committee. I emphasized the importance of Illinois delegates to the national convention, as representing a great agricultural state, of becoming particularly aggressive in using their influence to secure a national agricultural plank which truly represented the desires of farm people and which would meet the needs of the nation in looking forward to a stabilized agriculture in the difficult postwar period.

I also urged that the Illinois Republican platform endorse the "Gateway

Amendment" to the state constitution and pointed out that if a constructive attitude were not taken to allow for a classification of property for taxing purposes, which is not possible under the present revenue article of the constitution, we may find ourselves in a very serious position in trying to meet the tremendous financial obligations in the years ahead.

Township Honors Youth In Service of Country

Dix township in Ford county had one of the biggest turn-outs of farm people in many years at a program May 8 in Elliott honoring 120 young men and women who are in the military services.

The Farm Bureau units of Guthrie and Elliott in Dix township decided early in the year that they wanted to pay tribute to farm and village young people who are serving their country around the world. Arthur Noland, chairman of the Elliott unit, and Arthur Berck of the Guthrie unit, started in January to make plans for recognizing the unselfish service and devotion of the personnel in uniform.

As the result of hard committee work and thoughtful planning by the officers, the parents and friends of all the young people assembled at the Village Hall in Elliott, 300 strong in a beautiful tribute to the memory of the men who had made the supreme sacrifice, Howard Noland, and Billy Burdette, and to the two prisoners of war from the group, Fred Zander and Edward Freise.

The stage setting for this occasion was one of beauty with the service flag of 120 stars forming the background and spring flowers and the American flag in the foreground. The program participants sat in "V" lines from the service flag.

High point of the program was the dedicatory address of Rev. R. M. Luedde of Gibson City, who called attention to the five points of the service stars on the flag, indicating that they stood for the service man's affection for home, friends, community, country, and God.

The service flag was purchased with funds contributed by friends of the young people represented by the stars.

Illinois Farmers Ship Corn to War Industries

According to a report made by AAA officials on May 18, midwestern farmers have pledged nearly 50 million bushels of corn for use in war industries.

On that date state AAA officials showed 49,250,068 bushels had been offered for sale in the 125 designated counties since the government purchase plan went into effect April 26.

Illinois has pledged 20,465,000, Iowa, 21,937,035, Nebraska, 3,852,680, Minnesota, 2,094,053, and Indiana, 901,000.

Leroy M. Smith, north central regional AAA director, said that as soon as sufficient corn is delivered, or put under contract to meet essential needs of processors until the 1944 crop comes in, the freeze order can be lifted.

Sangamon Principal is Hired on Staff of IAA

John K. Cox, principal since 1938 of the Tri-City High School, Buffalo, Sangamon county, has been employed by the Illinois Agricultural Association to be in general charge of studies of rural schools and rural school problems. He was scheduled to begin work June 1.

John K. Cox

Mr. Cox for the immediate future will devote most of his attention to the problems of rural schools and will carry a large part of the responsibility for research and field contacts relating to these school problems.

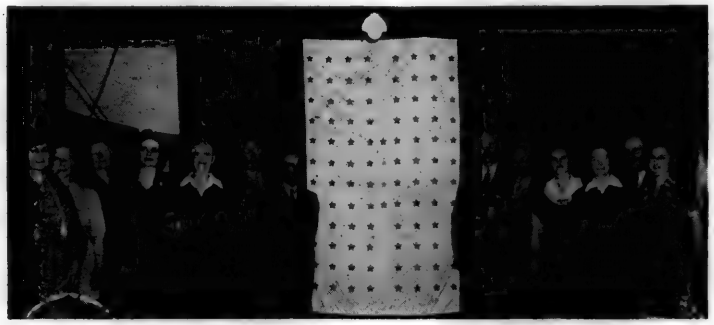
Mr. Cox was reared on a farm having been born July 8, 1905 at Burgin, Ky., 30 miles south of Lexington. He received his bachelor and master degrees at the University of Kentucky, and attended summer school at Northwestern University.

His teaching career started at the Crab Orchard High School, Ky., where he served as an instructor and coached athletics for one year, 1928-29. He held a similar position in the high school at Kenney from 1929 to 1933, and then was hired as principal of the high school and superintendent of grades at Buffalo. When the district was reorganized in 1938 he became principal of the Tri-City High School in Buffalo.

For two years prior to January, 1944, Mr. Cox was president of the Sangamon County Principals' Association and now is president of the Sangamon County Teachers' Association of 800 members.

Mr. Cox has been a Farm Bureau member for 11 years and has had his life, household and car insurance with the Farm Bureau insurance companies during that period. He has served on committees of the Mechanicsburg unit of the Sangamon County Farm Bureau, and has played on unit and County Farm Bureau all-star softball teams. He was on the team for men over 35 years of age which went to the finals of the Sports Festival the last year that the event was held.

He is a member of Phi Delta Kappa, honorary educational fraternity, and other church and professional organ-



Here are the members of the committee planning the recognition ceremony for the young service people of Dix township, Ford county. Left to right: Mrs. F. A. Farmer, Mrs. C. E. Colwell, Mrs. Arthur Noland, Mrs. Mildred Anderson, Mrs. Grotis McGuire, Mr. McGuire, Arthur Berck, Arthur Noland, Eugene Fisher, Mrs. Arthur Berck, Mrs. Homer Johnson, H. D. Triplett, farm adviser, and Mrs. Delmar Underwood.

izations. His hobbies are gardening and athletics.

The new IAA staff member is married and has two children, John Lewis, 7, and Marian, 9. Mrs. Cox was formerly Caroline Schafer of St. Clair county.

Illinois Republicans Announce Farm Plank

Editor's Note

As the RECORD *goes to press we have received the 1944 Illinois State Republican Platform. Following is the Agricultural Plank. It follows closely the recommendations of the Illinois Agricultural Association on basic agricultural policies.*

"We recognize that an efficient prosperous agriculture is essential in the building of a better America in the postwar years. Agriculture must be free from all unnecessary restraints. All production is for the general welfare and for all consumers.

"Agriculture is a basic industry; its prosperity is inseparably linked with national prosperity. In order to have an adequate national income, it is necessary that agricultural income be maintained at a parity with industry and labor in order that new wealth that agriculture provides each year shall go into the channels of trade at a profit to its producers.

"The Republican Party of Illinois will continue an aggressive support of the principles and policies necessary to provide for a sustained and prosperous agriculture in both the state and nation.

"We favor a program to assure the nation of adequate supplies of food and fiber to meet normal demands and any emergency and to assure the farmers of policies that will keep excess supplies from depressing the current price levels of commodities below a point necessary to give farmers their fair share of the national income; commodity loans on a sufficient number of basic farm commodities necessary to keep excess supplies from depressing current agricultural prices or lowering substantially the total value of agricultural production; a segregation of our surplus raw material production, above proper reserves, for use in trade with other nations, in emergency relief and for the development of new industries; encouragement for the increased industrial use of agricultural products and for continuous development of new and different uses; constant search for new crops adaptable to supplant at least a portion of present crop production where unusable surpluses are produced; the extension of plans for the conservation and development of our land resources by the practice of soil erosion control and improved soil building practices; the encouragement of all sound measures for improving the marketing, processing and transporting of farm products into the channels of consumption; the creation and development of credit agencies under cooperative farmer control, rather than under bureaucratic direction."

Farm Advisers Didn't Always Travel by Car

Observance of the 30th anniversary of the agricultural extension service this year is bringing back old memories to Illinois farm advisers.

One of these is C. A. Hughes, Cook county farm adviser, who is rounding out 28 years of service. It was back in 1916, two years after the Smith-Lever Act was passed, that Hughes began work as a county agent in a little mountain county of West Virginia.

C. A. Hughes, Cook County farm adviser, has these old saddle bags to prove that he started in extension work before autos became popular.

Hughes recalls that for three years he rode a horse from Monday morning until Friday evening over the county, and he still has the old saddle bags and leather leggings that were a integral part of his equipment.

In these saddle bags, Hughes used to carry a couple of clean shirts, a soil tester, and some bulletins. He called on the farmers in the day and had a meeting in some school house at night.

One of the biggest meetings that Hughes held in a mountain community was the result of someone spreading the word that Charles Evan Hughes from the Supreme Court was to be the speaker.

Reared in Mattoon, Coles county, Hughes was graduated from the University of Illinois in 1914 and after serving as a county agent in West Virginia came to Illinois in 1919 as farm adviser in Menard county. In 1925 he went to Monroe county, and in 1938 to Cook county. In the latter county, Hughes probably has the widest variation in kinds of farming. The agricultural area of the county is divided in two sections with a width of a county between. While the two main interests are in dairy and vegetables, the farm adviser is called upon to furnish advice on subjects ranging from rabbits to mushrooms.

This issue of the IAA RECORD will go into homes of 108,000 Illinois farm families, breaking all previous circulation records.

As Farm Bureau membership has steadily grown within the state, and with it the circulation of the RECORD, many adjustments have been necessary in order to comply with the government's paper conservation program. In laying plans for the balance of the year we faced the alternative of combining two issues of the RECORD during the summer months, or of substantially reducing the number of pages of each of the remaining issues of 1944. At the May meeting of the board of directors of the Illinois Agricultural Association, approval was given to combine the July and August issues, so your next RECORD will be received the latter part of July.

IAA Recommends Action To Ease Market Glut

DURING May, the Illinois Agricultural Association continued to aggressively seek government action to ease the hog marketing glut in the terminal markets.

On April 28, President Earl C. Smith urged Marvin Jones, War Food Administrator, to extend government price supports to hogs weighing in excess of 180 pounds, effective May 15. The government price support program prior to May 15 covered hogs weighing from 200 to 270 pounds.

In the wire to Jones, Smith said, "Serious, if not desperate congestion in supply of hogs developing at all internal markets, and reports disclose packers buying hogs below 200 pounds at indefensible prices rather than cleaning up hogs of weights carrying government price support.

"Representative producers and representatives of farmers on internal markets, including Chicago, St. Louis, Peoria, Indianapolis and Springfield, in conference today, unanimously recommend you authorize immediate announcement of making present price supports effective on hogs weighing in

(*Continued on page 22*)

THE POSITION OF THE AFBF ON BASIC AGRICULTURAL POLICIES

* * * * * * * * * * * * * * *

The following is a complete statement presented by the American Farm Bureau Federation to the Republican platform committee in April. It embodies the fundamentals of the recommendations which will be made to the official platform committees of both the Republican and Democratic parties at their forthcoming conventions.

* * * * * * * * * * * * * * *

ON behalf of the American Farm Bureau Federation, which represents 700,000 farm families, or about three million farm people in forty-three States and Puerto Rico in its membership, we commend the action of the Republican Committee on Agriculture in seeking the views of farm organizations with respect to national policies affecting agriculture. We respectfully submit the following statement and recommendations:

I

Preservation of Constitutional Government

We reaffirm our faith in the constitutional, representative, democratic form of government as the best for the United States of America. Our nation is blessed with a magnificent heritage of freedom — freedom of speech, freedom of worship, freedom of enterprise. The American way of life has encouraged and rewarded the qualities of initiative, enterprise, resourcefulness, frugality, hard work, and self-denial, and has made America the land of opportunity in the eyes of the entire world. Under the American system, we have attained average standards of living that are unmatched anywhere.

We realize that during this period of world conflict we must have greater central direction of our war effort, but we view with grave concern the continuing efforts being made, under the guise of the war, to centralize greater authority in the Executive branch of the Government, and to permit flagrant abuse of administrative powers.

Among these alarming trends are: the delegation of excessive and unduly sweeping legislative powers to the Executive branch; usurpation of additional powers by Government officials through strained interpretations of the statutes; nullification of Congressional enactments and policies by administrative orders and regulations; proposals to confer upon the Executive sweeping authority to suspend Acts of Congress; vast volume of Executive orders, regulations, and directives; creation of vast new agencies, clothing them with far-reaching powers over the lives, liberties, and daily activities of citizens, and over agriculture, industry, and business — by Executive order out of general war powers, without specific authorization by Congress; propaganda by subversive groups and others, obviously intended to discredit Congress in the eyes of the people and persuade them to yield to further grants of dictatorial powers; enormous "blank-check" appropriations without sufficient control and accounting to the legislative branch; and almost unlimited authority to transfer bureaus or to create entirely new bureaus and clothe them with vast powers.

We view these trends as a serious threat to democracy and freedom in this country.

While our armed forces are fighting for democracy on the battlefronts of the world, all freedom-loving citizens must be alert and active to preserve our form of representative, constitutional Government and save our American system from being replaced with some form of state socialism or some other form of totalitarian government.

II

Taxation and Fiscal Policies

The rapidly soaring national debt is a matter of profound concern to every citizen. It is imperative that drastic steps be taken to restore sound fiscal policy, to reduce governmental expenditures wherever possible without crippling the war effort, to eliminate useless bureaus and excessive employees, to curtail extravagance and waste, and thereby prevent a debt burden which would endanger our democratic form of government. We favor stricter control of governmental expenditures by Congress and the adoption of tax policies which will help prevent inflation and pay currently as large a part of the war cost as is practicable. The tax burden should be equitably distributed so that all citizens will pay their fair share of taxes based on ability to pay and equality of sacrifice, and so as to derive the maximum revenue without destroying individual initiative or crippling free enterprise.

III

Essential National Farm Policies

It is imperative to provide a basic agricultural program which will enable agriculture to maintain maximum war-time production and to readjust to peace-time requirements, to regain and maintain its fair share of world markets, to strengthen and improve marketing machinery and outlets, to preserve soil fertility, to maintain a fair balance between farm prices, industrial prices, and wages, and to assure farmers a fair share of the national income.

We aggressively support the following measures as the basic features of such a program:

1. Simplification and improvement of machinery to enable farmers to maintain substantial reserve supplies of basic soil crops, and consistent with such reserve supplies, to adjust annual production in line with market demand, so that prices of such commodities may be stabilized on a basis of

(*Continued on page* 20)

TWO FEED MIXING PLANTS BOUGHT BY HENRY-STARK SERVICE CO.

ON MAY 1, Henry-Stark Service Company purchased two feed mixing plants and elevators at Osco and Orion in Henry county. These plants were formerly owned by Wakey Brothers who have been operating them for the past 13 years. By this purchase the service company acquires the former owners' trade name, their protein bases, and their good will, plus all physical assets. Henry-Stark now finds itself serving Farm Bureau members as grain marketer, grain supplier, feed manufacturer, feed merchandiser.

Quoting the board of directors in their recent announcement in the *Henry County Farmer*, it was explained that "Under the present plans of your board, the operation of these plants will be continued in much the same manner as they have been operated in the past. This will apply to both the feed mixing and grain handling. Patrons of these plants may be assured that present local mixed feeds will be continued so that their feeding programs may continue with the least possible interruption during this transition period."

Henry-Stark Service Company now also becomes distributor for Blue Seal feeds in Henry county. They have been distributing Blue Seal feeds in Stark county for the past three years. Through this Blue Seal franchise, they will distribute the regular line of Blue Seal high protein supplements.

Henry-Stark Service Company in this venture becomes a pioneer in setting up a new type of program for local feed manufacturing. The Henry-Stark Service Company board has entered into a manufacturing agreement with the Illinois Farm Supply Company to locally mix Service Brand feeds. The fundamental purpose of this is to establish a high quality local mixing service with the same laboratory controls and manufacturing supervision as is enjoyed by big mills. The formulae of Service Brand feeds have been prepared by the Formulation Committee of the Illinois Farm Supply Company.

Here's how the Service Brand feed program will work. Let's suppose that we are going to make a growing mash. We will start with 200 pounds of Blue Seal "Pre-Mix" which is a precision-made product comprising animal proteins, trace minerals, and essential vitamins. This is the vital part of any feed and requires expert handling to assure balanced nutrition. To this the local company adds the correct proportions of soybean meal, bran, middlings, ground No. 2 yellow corn, ground No. 2 white oats, and feeding limestone.

To some it may appear that the Blue Seal and "Service Brand" feeds programs may be in controversy. Someone may ask: "Which is the better?" There can be no one answer to this question because much depends on the personal preferences and the feeding programs of individual buyers. Some feeders (poultrymen particularly) may prefer to have their feed prepared in a large, modern mill, the formula including a wide

(*Continued on page* 14)

Feed mixing has been one of Wakey's services and it will be continued and expanded to include a comprehensive "Service-Brand" program.

Ross Wakey, right, makes final check of inventory before turning the plant over to A. Grossman, manager of the Henry-Stark Service Company.

Here is the elevator and mixing plant at Osco, Henry county, recently purchased by the Henry-Stark Service Company from Wakey Brothers.

SPRING FLOODS AGAIN DAMAGE CROPS

FOR the second consecutive crop year, and in some cases the third and fourth, many farmers of Southern Illinois are faced with the loss of another good wheat crop, clover seedings, and the expense of putting their farms back in shape for planting 1944 crops.

Recurrence of flood damage to small grains is particularly discouraging because of the increased value of crops.

In mid-May, Howard Leonard, state director of the department of agriculture, estimated that recent floods ruined 90,000 acres of growing crops at a total loss of 5 million dollars. He said approximately 250,000 acres of Illinois farm land had been flooded with 75,000 acres of wheat and 10,000 acres of oats destroyed.

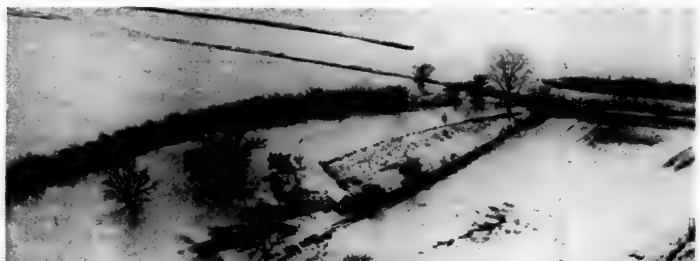
Last year's flood was more general throughout the state, covering an estimated 1,264,320 acres. Considerable livestock and machinery were lost in 1943. This year the floods came earlier, and the farmers in the danger areas remembered last year's experience and moved their equipment and livestock ahead of the levee breaks.

A survey among some of the counties that suffered the heaviest losses brought the following summaries from farm advisers:

E. C. Secor, Randolph county, estimated about 40,000 acres flooded in his county, but damage was not as serious as in 1943. Not much damage was done in the Kaskaskia River bottom. Practically all of it was in the Mississippi bottoms. People moved out ahead of the floods this year and not a single tractor was lost. As soon as the water recedes and the land becomes dry enough plowing and planting will start.

A number will plant corn until too late, then will continue to plant beans.

One Jackson county farmer figures his 100-acre stand of wheat wasn't a total loss when it was covered by flood waters. Bill Guetterslau traded in his second successive crop loss for a haircut in a Murphysboro barber shop. His brother, Arthur, traded his 50 acres of wheat for a shave.



An air view in the vicinity of Prairie du Rocher, Randolph county, shows how the Mississippi River poured over Illinois and Missouri farm land.

It is estimated that 50 to 60 per cent of the land that gets out from under water within a reasonable time will be planted in either corn or beans. The limiting factor, since this is the second or third year for most in the bottoms, will be finances. Damage was done to some of the 8000 to 10,000 acres of wheat, 4000 acres of barley, and 1000 acres of alfalfa.

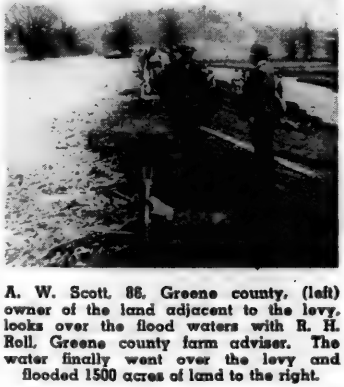
B. W. Tillman, farm adviser, reported approximately 15,000 acres of valuable crop land in St. Clair county along the Mississippi River inundated. About three-fourths of this is in wheat which is a complete loss. Damage is estimated at $700,000.

Greene county experienced the second disastrous flood in less than a year's time in April and May. A survey showed a total of 2275 acres of farm land suffered damage from overflow water of the Illinois River. In 1943 it was 30,000 acres. It is believed, according to R. H. Roll, farm adviser, that most of 625 acres of wheat and other the flooded acreage will be replanted to soybeans and corn around the first or middle of June. Due to excessive rains, Greene county farmers were only able to get about 60 per cent of their oats acreage seeded.

C. T. Kibler, Jersey county farm adviser, reported that their principal flood trouble came from the back waters of the Missouri River. About 3000 acres of small grains and alfalfa were destroyed by flood waters and approximately 4000 other acres which may not be planted until late, if planted at all.

On May 18, Edgar S. Amrine, Monroe county farm adviser, reported that water was receding in the flood area to the point where farmers could soon get back to the homes. Some 550 farm properties were inundated and 60,000 acres of land covered with from 2 to 7 feet of water. More than 30,000 acres of wheat was lost in addition to 15,000 acres of other crops. Some 20,000 acres of intended corn plantings were delayed for at least 30 days.

Amrine also said that "farmers are in a much worse condition than last year due to loss of two good wheat crops and the use of surplus funds last year to get back into production and the expense of repairs, loss of pastures



A. W. Scott, 86, Greene county, (left) owner of the land adjacent to the levy, looks over the flood waters with R. H. Roll, Greene county farm adviser. The water finally went over the levy and flooded 1500 acres of land to the right.

and clover seedings. Many had not expected a recurrence in their life time of the 1943 flood, and some are beginning to wonder what the future holds for them."

J. G. McCall, Jackson-Perry farm adviser, estimated 55,000 acres of farm land flooded of which 35,000 is crop land with 12,000 acres of it in winter wheat, winter barley and spring oats. On May 19 some farmers in the area were starting work in the fields and there was considerable exchange of labor and equipment.

Practically every farm in the upland within 10 miles of the flooded area has some livestock on pasture. Milk cows are being farmed out in the hills for their keep. Farmers of the valley are anxious to get back to their farms, but are handicapped for the lack of finance and fear of a recurrence of the flood as of last year.

The farmers south of Grand Tower in Jackson county have suffered from the flood for three years in succession due to the breaking of the Big Muddy Levee. The rest of the farms inside of the levee have suffered two losses in succession while the farms lying outside of the levee have had four tough years of it.

Union county had 39,000 acres of its land flooded of which 22,000 acres was crop land. Some 7000 acres of wheat, 2000 acres of barley, and 2000 acres of alfalfa were destroyed. Work is being carried on to repair levee breaks before the June rise. Farmers will plant about 25 per cent more corn than planned before the flood and also will increase soybeans and emergency hay crops.

Livingston county also had some high water damage in an area east of Pontiac along the Vermilion River. Other parts of the county had land flooded because tile lines clogged up and failed to carry off excess water, R. C. Smith, farm adviser, reported.

T. W. May, Madison county farm adviser, reported 4321 acres of farm land flooded by overflow waters of the Mississippi. Some 3215 acres of wheat were inundated. As the waters recede, farmers are exchanging labor and machinery to work the drier fields first. Field work in mid-May was five to six weeks behind schedule.

Workers in all of the flood areas praised the work of the state militia, Red Cross, Coast Guard, Army engineers and other agencies. The work of these agencies averted much serious damage.

Leslie B. Broom, Pulaski-Alexander farm adviser, reported that the farmers of these counties suffered property loss of approximately $678,000 from the floods. "The fact that they have been hit two years straight without a chance of recuperating from their losses makes the situation rather critical," he pointed out. However, indications are that there will be no serious movement from the areas. Most everyone is planning to go ahead with their operations. Most of the alfalfa, wheat, and small grain acreage will be planted to corn and soybeans. Loss on wheat, barley and alfalfa crops which were well advanced is estimated at $385,000.

COUNTY COMMITTEES STUDY RURAL SCHOOLS

CONSIDERABLE progress is being made in many counties of the state in the formation of County Farm and Home Bureau committees to study local rural school problems, according to a survey made in May.

Of 54 County Farm Bureaus reporting on a questionnaire asking the status of their rural school studies, 28 counties indicated that committees had been formed, and in some cases preliminary discussions had been held. Sixteen other counties reported that committees were planned. In the remainder of the 54 reporting, action had not been taken by the Farm Bureau boards. There are perhaps other counties that have formed committees, but did not report before the RECORD went to press.

Counties in which committees had been set up included: Adams, Bureau, Champaign, Clay, Douglas, Edgar, Edwards, Ford, Greene, Jackson-Perry, Jo Daviess, Knox, Lee, Livingston, Macoupin, Madison, Marshall-Putnam, Mason, McDonough, Mercer, Moultrie, Piatt, Pike, Richland, Schuyler, Scott, White, and Winnebago.

The 16 counties reporting that committees were being planned include: Bond, Clark, Coles, Cook, DeKalb, Grundy, Henderson, McHenry, McLean, Ogle, Peoria, Sangamon, Stark, Vermilion, Whiteside, and Woodford.

Clark county reported that three school districts in the county had recently been reorganized into one, and that the preliminary report of the IAA school committee was used in the discussions preceding the reorganization.

Mercer county's committee reports that it has gathered statistical data and is looking forward to a suitable date for a general meeting.

Jo Daviess county committee has made a comparative study on school finances and enrollment, and the committee has held two meetings.

According to scattered reports received by the IAA school committee, its progress report has been well received throughout the state by rural people and by educators.

Members of the department of education and psychology of the Illinois State Normal University, Normal, commended the progress report in a letter to the committee.

Here are some of the general comments from the letter: "We are in hearty accord with the general tone of the report and its forward-looking attitude toward rural education in Illinois. We certainly agree that most rural people want good schools for their children. We emphatically believe that rural areas are entitled to good schools and that those schools should be adapted to the needs of the children they are to serve.

"We further agree that the majority of one-teacher and many secondary schools should be much larger than at present and should provide a greatly enriched curriculum including the subjects of physical education, health, music, industrial arts, home economics, business education, agriculture, as is so well brought out in the report. . . Certainly the control of rural school education should remain in the hands of capable rural people, selected from enlarged community districts. We share with the members of the committee who prepared the report a faith in those who make up the rural population of Illinois."

The progress report of the IAA school committee is intended to serve as a guidepost and stimulant to the study and discussion by local people of the school problems in their respective communities. Suggestions from committees making these local studies are expected to aid the IAA committee in making its final report and recommendations at the annual meeting of the IAA in November.

Valuable assistance in the study of rural school problems in the state is expected from John K. Cox, former principal of the Tri-City High School of Buffalo, Sangamon county, who has joined the staff of the IAA. He will be available to assist County Farm Bureaus in their studies of rural school problems.

ADMINISTRATION OF PRICE CONTROL NEEDS OVERHAULING

Official Position of American Farm Bureau Federation on Price Control Legislation and OPA Presented to House Banking and Currency Committee by President Edward A. O'Neal

The American Farm Bureau Federation has aggressively advocated legislation to control inflation ever since the beginning of the present emergency. The record shows that we advocated effective controls over industrial prices, farm prices, and wages during hearings on the Emergency Price Control Act of 1941 and during hearings on the Stabilization Act of 1942.

We wish to reiterate, with increased emphasis, our former position on this very important issue. However, we believe that the administration of the price control program has been faulty in many instances, and we believe that the intent, as well as the plain terms of the law, has been violated and is being violated, and I wish to protest in the strongest manner possible against such violations.

The Stabilization Act of 1942 definitely directs that farm prices shall be adjusted to meet changing conditions. I quote from the Act:

"*Provide further,* That modification shall be made in maximum prices established for any agricultural commodity and for commodities processed or manufactured in whole or substantial part from any agricultural commodity, under regulations to be prescribed by the President, in any case where it appears that such modification is necessary to increase the production of such commodities for war purposes, or where by reason of increased labor or other costs to the producers of such agricultural commodities incurred since January 1, 1941, the maximum prices so established will not reflect such increased costs: . . . *Provided further,* That in fixing price maximums for agricultural commodities and for commodities processed or manufactured in whole or substantial part from any agricultural commodity, as provided for by this Act, adequate weighing shall be given to farm labor."

This language is very specific and mandatory in character. There can be no reasonable doubt but that Congress intended to require that ceilings on agricultural commodities or products thereof must be adjusted from time to time to whatever extent necessary to get the necessary production and to offset farmers' increased labor costs and other costs since January 1, 1941.

In defiance of the clear wording and plain intent of this provision of the law, the administrators of the price control program have failed to make these price adjustments. Maximum farm prices have been imposed on some cases below levels which would reflect parity prices to farmers. In other cases ceilings have been imposed below the support prices which the War Food Administrator determined were necessary to get adequate production. In other cases ceilings have been imposed below levels necessary to offset farmers' labor costs and other costs since January 1, 1941.

We therefore respectfully urge that Congress, in extending price control legislation, take adequate steps to safeguard farmers and other citizens against such mal-administration of the act.

We therefore respectfully recommend the adoption of an amendment which would forbid the imposition of any penalty on any person for the sale, heretofore or hereafter, of any agricultural commodity at a price which is no higher than the price which would reflect to the producers of such commodity the price required by Section 3 of the Act of October 2, 1942, including the modifications which are required by that section for the purpose of securing increased production and offsetting farmers' increased costs.

The purpose of this amendment is to protect farmers and others from arbitrary discriminatory orders and regulations which are not in accord with the provisions and intent of the statute. At present they are virtually helpless to get effective redress of such grievances.

Instead of adjusting price ceilings to provide for increased costs of production, the OPA has embarked on a consumer subsidy program which, in my opinion, was never contemplated by Congress when it passed this legislation. The American Farm Bureau Federation strongly favors legislation to require the gradual elimination of consumer subsidies, and the lifting of ceiling prices to compensate for the amount of subsidy withdrawn.

It is our contention that the best assurance of fair prices to the consumer is abundant production. Experience proves conclusively that whenever fair support prices have been provided to encourage abundant production, farmers have responded by producing amazing volumes of the commodities involved, with the result that prices have gone down. The outstanding instances involve such staple foods as potatoes, pork and eggs. Last year at this time, there were serious shortages of all three of these products. Today all are so abundant that government agencies have taken definite steps to encourage greater consumption so that current stocks may be eased up. Scarcity was changed to abundance by the simple process of offering farmers prices high enough to encourage increased production. And in every case, prices to the consumers have fallen, in spite of government efforts to support them.

There has been no undue rise in farm prices. Many have commented on the percentage increase in farm prices since the 1935-39 period. The fact is that farm prices were only 83 per cent of parity during this period. They had a long way to go before they reached fair exchange value. Therefore the percentage rise in farm prices is extremely misleading. While farm prices have been above parity by 11.5 per cent, for the previous twenty years they averaged 22.3 per cent *below* parity.

Because of the impressive results obtained through adequate support prices, we favor amending present price control legislation so as to include the principle of the McClellan-Eastland milk control bill as amended, which would require periodic reviews of ceiling farm prices after public hearings and proper investigation, and the adjustment of ceiling and floor prices to whatever extent may be necessary to secure the needed production.

Against the wishes of the overwhelming majority of farmers, administrators of price control have held consumer food prices down through the subterfuge of subsidies, justifying that procedure with the excuse that it was needed to prevent inflation. We maintain that the amount saved to the consumer by subsidies has not been enough to constitute a factor of any consequence whatever as far as inflation is concerned. Further, we maintain that consumer subsidies are not needed, since consumer expenditures for food at present amount to the smallest percentage of their incomes than at any previous time in all our history. In addition, the cost of the subsidies is automatically added to the public debt, and the original cost will be very much enlarged by the time it has been finally paid off. This policy simply transfers the burden of part of the current food bill to the future taxpayers of this country. Congress has repeatedly voted against consumer subsidies, and I trust that you gentlemen will lend your suport at this time to an amendment to the present law, providing for gradual elimination of all consumer food subsidies.

Turning now to another phase of the price control program, I must report that farmers are extremely bitter over the delay and confusion and inequities which have accompanied the inept administration of the law. We believe that prevailing dissatisfactions could have been avoided if administration of the program had been centered in the War Food Administrator. Dividing the authority among two or more agencies simply does not work out effectively in programs of this kind. At times when speed and efficiency were paramount considerations, administration of farm price control has been characterized by delay and inefficiency. Such things are particularly galling to farmers at a time when they are really and truly working beyond their powers of endurance to make their contribution to the war effort. Remember that the average age of farm operators is 55 years. Universally, they have been overtaxing their strength in their efforts to produce the last pound of food and fiber which they and their families are capable of producing. I am sure that all of you realize that their difficulties have been seriously intensified by shortage of manpower and farm equipment. They feel that many of the agencies affecting their business have been manned by people who simply do not understand the problems of agriculture. I feel that I speak for the vast majority of farmers, there-

NOW is a good time to IMPROVE the appearance of YOUR FARMSTEAD

SOYOIL No. 5 Outside White House Paint

Thousands of farm homes in Illinois have been protected and made more beautiful with this famous Soyoil #5. This is a quality paint containing white lead, zinc oxide, and titanium pigment. Its balanced formula affords maximum protection and long life.

SOYOIL No. 90 RED BARN PAINT

Improve the appearance of your barn and sheds with this most popular barn paint in Illinois. #90 Red Barn Paint contains red iron oxide and is an economical quality paint that gives excellent coverage. It can be used also over brick, concrete, or metal surfaces where maximum durability is desired.

ROOF COATING

Protect your roof with Farm Supply Asbestos Roof Coating. This material gives maximum coverage and protection. Available in either black or green. Use roofing brush.

BRUSHES

Brush quality has been affected by war-time shortages. However, we do have some brushes available for outside work as well as inside. These brushes are made up of a mixture of horse hair and fibre. You may be interested in the new synthetic bristle. In some cases pre-war quality Soyoil brushes are available on a rental basis—Investigate!

PAINT BRUSH CLEANER

Since good brushes cost money and they are not easily replaced, you will find this paint brush cleaner a wonderful aid in preserving good paint brushes.

Your Crop Dollars Will Buy More SOYOIL Paints

Farm income is at the highest level since 1929. There is plenty of cash in the country. Farsighted farm owners are increasing the value of their farm investments and making farmsteads more attractive by painting with Soyoil Paints.

CONFUSION IN LIVESTOCK, FEED SITUATION TRACEABLE TO FAILURE TO HEED FARM BUREAU PROGRAM

By L. H. SIMERL

Director of Research and Taxation for the IAA

UNWISE government regulations and market operations, pursued over a period of three years in opposition to Farm Bureau recommendations, have been the primary cause of the congestion of livestock markets and the acute shortage of grains and other feeds in recent months.

We are now in a most critical stage of the war. The grain accumulated through the commodity loan program, which was supposed to be saved for use in emergencies, has long since been dissipated. On the other hand, the need for grain and feed is now greater than ever before, and is expected to increase even more.

Now corn processors have large orders for alcohol and other war essentials — and little or no corn. Many farmers have partly finished hogs or cattle in the feed lot — and no feed. Other farmers have already been forced to sell their livestock.

For three years the Farm Bureau has advocated a policy which would have prevented this unfortunate situation. Let's look at the record.

When it became apparent, in the summer of 1940, that the American farmers would be called upon to furnish food for hungry people in war-torn lands, the IAA urged government officials to recognize the importance of corn in the nation's food program, and to consider the advisability of increasing corn acreage allotments for the next year. However, no adjustments were made in the allotments for 1941.

In the first part of 1941, the United States Department of Agriculture launched a great drive for increased food production. Government officials called for a much larger output of hogs and dairy and poultry products.

The Illinois Agricultural Association, realizing that this increased production would soon deplete reserves, urged government officials to increase 1942 corn allotments by at least 15 per cent. The Department of Agriculture, however, announced in September that the 1942 corn allotments would be approximately the same as those in 1941. Several months later the 1942 corn acreage allotments were increased by 8 per cent.

The administration definitely adopted a cheap feed policy beginning in 1941.

The first step was the sponsoring of legislation which provided for the release for feeding purposes of wheat grown on acres in excess of wheat allotments. This was intended to start a rapid use of wheat and corn reserves. It did just that.

Representatives of the Farm Bureaus in the mid-western states, meeting at the University of Illinois in July 1941, unanimously adopted a resolution opposing the release of wheat grown on excess acres for feeding purposes.

In August 1941 the position of the Illinois Agricultural Association was expressed editorially as follows:

"Prices of corn, wheat and livestock are fast approaching satisfactory levels and the adoption of any amendment to the present law that would throw into abnormal relationship wheat and corn in the feed lot, or would otherwise demoralize relationships or price levels, should be overwhelmingly defeated."

During the next several months Earl C. Smith, president of the IAA, warned repeatedly of the dangers in the cheap feed policy which was being followed by the government. Writing in this magazine just two years ago he said, "Producers of livestock should not fail to recognize that if feed grains are deliberately held to a price substantially below parity that it will pave the way for comparable weakening in the support of price levels of their products when supplies commence to depress price levels."

In June 1942, the American Farm Bureau Federation sent a letter to every member of Congress. In part this letter read, "Responding wholeheartedly to the government's plea for increased food production to win the war, farmers are producing the greatest supplies of food on record. The increased production of milk and milk products, for example, has in many areas far exceeded the capacity to absorb the supply; and as a result, milk is being wasted and farmers are suffering heavy losses. A large number of cheese factories in the Middle West and other areas have closed down or have been forced to greatly reduce their operations in the last few days and evaporated milk outlets have also been curtailed because of the government's inability to absorb accumulated supplies.

"We fail to see any consistency in the government's efforts to release feed grains below parity when the supply of the products of feed grains already exists in excess of consumer demands and government's ability to purchase. This inconsistency is particularly true when we remember that the surpluses under control were intended to meet emergencies. . . . . ."

In July 1942 representatives of the mid-western Farm Bureaus, meeting in Madison, Wisconsin, again expressed their opposition to the sale of wheat at low prices for feed.

The following month another warning was given editorially in this publication. "Feed grain supplies are being used up far more rapidly than they are being produced. During the six months ending July 1, about 25 per cent more corn was used than the average amount used during the first six months of the preceding four years. At this rate the total disappearance of corn for the year ending next January 1 would be 2.9 to 3.0 billions of bushels.

"As compared with these consumption figures, the average production of corn during the last five years, all of which have been favorable seasons, has been less than 2.6 billion bushels. On a percentage basis, corn is being used 12 to 15 per cent faster than the average rate of production during the last five years. . . . . .

"Much attention has been centered on wheat stocks as a reserve of feed. The carryover of wheat on July 1 was about 630 million bushels and the new crop is estimated at 904 million bushels.

"Of this huge amount, 700 million bushels will be needed for normal domestic uses and 200 million more for normal domestic stocks and reserves. Thus, only some 600 million bushels are available for extraordinary uses such as manufacture into alcohol and rubber, as a substitute for corn in live stock feed, and as a reserve against crop failure in this country, and for export to starving people in other countries either during or after the war.

"It is apparent that feed grain supplies are being used up much more rapidly than they are being produced, and that wheat can replace corn only to a limited extent. Any legislation or administrative rulings which tend to depress the price of corn and other feed grains will increase the rate of feed consumption.

"This will hasten the day when the production of live stock, milk, and eggs must be curtailed on account of a shortage of feed. . . . .

"In the interests of the national welfare it appears highly desirable to prevent too rapid an increase in the feeding of corn to live stock, and consequent rapid depletion of feed supplies. To prevent this, the price of corn should be allowed to advance to its normal relationship with the price of live stock and live stock products."

At the IAA annual meeting held in Chicago in November 1942 it was noted that livestock feeding margins were being maintained on an abnormally wide basis. Realizing that the inevitable results of this would be an over-supply of livestock, depressed livestock prices and a shortage of feed, the board of delegates adopted a resolution condemning government efforts "To deliberately hold the market prices of basic farm commodities below parity through the release of government stocks at less than parity prices."

The Farm Bureau continued to oppose the cheap feed policy, but the government persisted in its short-sighted program. By April 1943 the feed situation was acute. Writing for the IAA RECORD L. J. Norton, Professor of Agricultural Economics at the University of Illinois, summarized the situation as follows:

"The real cause of the difficulties in connection with protein supplements and of the more basic difficulties we are facing in connection with feed grains is our price policy. By keeping feed prices cheap and by allowing livestock prices to rise to higher levels, we are encouraging a wasteful use of supplements and feed grains.

"It is an axiom of military operations that adequate reserves are needed for use at critical times. The same is true of long-time economic operations. It is poor generalship to use up reserves too fast and we are now engaged in rapidly using up our feed reserves with national policies contributing to this end. . . . . ."

Referring to the wheat situation Dr. Norton said, "We have a large reserve supply of wheat although sales at 85 per cent of corn parity caused a rapid use of the 125 million bushels authorized by Congress for sale as feed from Commodity Credit Corporation stocks. Moreover, consumption of wheat as flour and in alcohol manufacture is increasing and we will need a large supply of wheat to feed Europe as we open it up to our trade. By and large the only foodstuffs which can be used for large-scale relief of the food situation are bread grains. We have no surplus of other products above our home and lend-lease needs. So far as feeding wheat is concerned, our stock of wheat ought now to be considered as a reserve for emergencies rather than being forced into use by low prices as has been the case during the last 12 months. Therefore, the sales of wheat for feed at 85 per cent of the corn parity should not be resumed. . . . . .

"The only practical solution of this problem is to cease the present policy of keeping feed prices too low in relation to the prices that have developed on livestock and livestock products. This might check some of the marginal expansion in livestock production, but it is better to have somewhat less production in the near future than to have real shortages at a later date."

By May 1943 available supplies of corn were so small that the government was forced to resort to arbitrary orders in an effort to force corn to market. In an official hearing on one of these orders President Earl C. Smith said, "Any review of the present crisis resulting from limited corn supplies in many areas of the country forces one to the conclusion that the unfair and impractical ceilings placed upon corn some time ago are primarily responsible for the present situation."

President Smith advised the government officials to revise price ceilings so that corn prices would be placed in their natural relationship to livestock prices. This advice was not accepted.

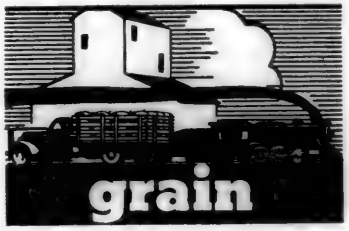
Eventually the government was forced to make some modifications in its policy. Each new government regulation created new problems. One order called for another. Washington officials were kept busy devising, issuing and attempting to explain the new regulations and their amendments.

Some of the orders provided temporary relief. However, since none of them corrected the basic difficulties, which was too low prices for grain and feed, the situation has grown steadily worse.

Some of the corn-using industries were forced to close because of a lack of corn. At this writing they have resumed operations, but are not assured of being able to continue. Many live stock producers have either gone out of the business, or are greatly reducing their operations.

In the light of the record it is apparent that the present shortages of corn, and the acute problems associated with it, are due to (1) the neglect on the part of those in responsible positions to increase corn acreage allotments in 1941 and 1942, (2) the diversion of unexpectedly large quantities of corn to non-feed uses, and (3) the maintenance by government action of abnormal price relationships between corn and livestock and livestock products.

The most unfortunate thing about all of this is that it could have been avoided if those in positions of responsibility had heeded the advice of Farm Bureau leaders and other practical farmers.



By G. H. Ifner

Ursa Farmers Cooperative Company, Adams county, was first among the member elevators of Illinois Grain Corporation to sign the new membership agreement. Raymond Leeper is president; R. K. Sickles is manager.

George Besore, manager of the Lenzburg Farmers Cooperative Grain Company, St. Clair county, was confined to a St. Louis hospital with pneumonia and complications during April and a part of May. He is back on the job now.

Managers and secretaries of farmers' elevators in the cash grain area and in the districts served by Illinois Grain Corporation's offices have shown intense interest in income tax problems, the filing of informational returns and kindred subjects. A number of meetings have been held by this department with C. C. Chapelle, tax consultant of Illinois Agricultural Auditing Association, in charge. Meetings were held at Tuscola, Pontiac, Bloomington, Monticello, Melvin, Watseka, Peoria, Taylorville, Edwardsville, Jacksonville and Mendota.

On May 29, more than 40 member elevators had signed and returned the new membership agreement. The remaining outstanding agreements will come in during June. New membership work should be in order after that date.

Interest in cooperative soybean processing has not diminished. Leaders are taking time to study the situation thoroughly so that when we move we will move in the right direction. Morgan county has raised $100,000 and can raise another hundred thousand if it is needed.

Two Feed Plants

(*Continued from page 7*)

variety of ingredients and the feed ready for use, and these patrons are willing to pay a little extra for these advantages. There are other feeders who, in grain surplus areas, prefer to take advantage of the organization's large buying power on other supplements such as soybean meal and mill feeds, to be mixed with local grains. They may find it to their financial advantage to use the "Service Brand" feeds.

Service Brand formula feeds are registered with the State of Illinois, Division of Foods and Dairies. Their analyses are guaranteed by the Illinois Farm Supply Company and the Henry-Stark Service Company. Their uniform high quality is assured through a supervisory service by the Illinois Farm Supply Company whereby the ingredients in each batch are laboratory-tested. The Henry-Stark board is of the opinion that this is the kind of service that farm people want. Through it they may purchase their high protein Pre-mix with vitamins and essential minerals through their own state purchasing association and then add locally the grains and grain by-products. What is more they may do this without the high cost of two-way freight charges, high labor costs, and many of the frills of over-done advertising and selling.

As stated by A. O. Grossmann, general manager, "The business will be handled on a cooperative basis similar to our petroleum division. Profits will be refunded to Farm Bureau patrons after operating costs and reasonable reserves are taken care of."

With a look to the future, Grossmann further said, "Members who may find it inconvenient to use this service because of the distance involved have the assurance of the board of directors that the feed service will be expanded as soon as a reasonable supply of protein ingredients is available."

Kenneth Smith, member of the field staff of the Illinois Farm Supply Company, is temporarily assisting Henry-Stark Service Company in the supervision of their feed manufacturing program. Smith has had considerable experience. His first connection with the organization was with the Mid-State Supply Company in Peoria county, and he had a large part in its early development of the Blue Seal direct-to-the-farm service. Later he became manager of the feed department of the Shelby County Livestock Association at Shelbyville, at which point he developed a very successful feed department including a custom-grinding and mixing service which served Shelby and Effingham counties.

. . . "AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

WHEN people try to live by getting more out of the land and out of each other than they give back, the community sickens and may die. But it has been shown that when they take care of the land and each other, they are likely to find eventual security through this stewardship of their physical and human resources.—Arthur Raper.

Those planning to attend the annual AFBF Midwest Training School, June 19, 20 and 21 in Milwaukee, are advised to make their hotel reservations directly with the Wisconsin Hotel, headquarters for the sessions.

Record membership acquisition for any fiscal year was enthusiastically pledged by COD's and others attending the district meetings held at Galesburg, Champaign and Mt. Vernon, May 3, 4, and 5. It was the central feature of these meetings, closely followed in emphasis by a sober realization that membership maintenance programs must be restudied, improved, and put into effect.

Fieldmen Moore, Hornbeck, and Claar, speaking at the respective meetings on "Keeping in Tune with the Times" pointed out that we have signed 12,000 members so far this fiscal year and that one of the obligations of the COD, if he is truly to be "on the beam of 1944" is to continue his personal and other organization work during the balance of the year, if 1000 new members a month are to be signed and the 18,000 goal attained.

This means a personal production of at least 10 new members a month, the speakers stressed. They laid emphasis, too, on careful planning, both in regard to freeing time to do organization work and in making it effective by arranging calls so that a maximum number can be made in the time allotted. "Plan your work and work your plan" was the tested, proved formula which all of the fieldmen stressed. They observed — with real insight — that some of us were not "in tune with the times" during the second quarter, because those who did have drives got splendid results from them.

Lee Roy Hays, assistant farm adviser and COD in Logan county, resigned his position effective May 20, and will enter the armed services in the near future. Our congratulations and best wishes to Lee Roy.

Voyle C. Bennett, Carmi, COD for White county for eight months, died suddenly April 6. Many of you will remember meeting Mr. Bennett during the sessions of Farm and Home Week, which was the last organization meeting he attended. He had been in ill health for several months.

Harry Bryson, Iowa Farm Bureau Federation organization director, reports that paid membership in Iowa on May 15 stood at 72,322, leaving them only 2678 short of the 75,000 goal which he predicts will be on the line by June 1. Illinois extends congratulations to our neighboring state on this splendid accomplishment.

F. W. Tieken, Ford COD, reports that the 1000th member in the Ford County Farm Bureau was signed by Grotis McGuire April 22. A good maintenance program, plus the signing of 214.28 per cent of the county's new member quota during the first 7 months of the year, has made this accomplishment possible.

The recent membership campaign in Richland county, which netted almost 100 new members, was under the leadership of Otto Shafer, whom we welcome back as COD and general agent of insurance.

Lee Lybarger, well known as the aggressive president of the Clay County Farm Bureau, has servered that connection and is now COD in Douglas county. We welcome Mr. Lybarger to the organization forces, and extend best wishes for success in the field where his talents and experience will serve him well.

Word has been received in this office that Whiteside County Farm Bureau has adopted the ambitious goal of 2050 members to be attained by Sept. 30, 1945.

A number of new member meetings are still being held in the state with splendid attendance. Most recently held were Fulton, Jasper, Lawrence, and Clark counties.

Spring membership drives are being stated in a number of counties in the southern district. Final reports are not in as yet, but it is understood that good drives were put on in Jackson-Perry, Clinton, and Gallatin counties during the closing days of April.

Here is a report from J. F. Yaeger, director of state field services, Michigan Farm Bureau. "We are happy to announce that practically every County Farm Bureau is over its 1944 goal, and that the state goal of 24,000 has been exceeded by 2309, making a total to date of better than 26,000 families in the Michigan State Farm Bureau at the end of the first three months of this year."

Machinery Output Lags

In mid-May WPB Chairman Donald Nelson reported that farm machinery production had been lagging because of military demands but now is proceeding at a very high level.

He estimated that by June 30 production will have reached 90 per cent of schedule.

The lag in production schedules was 17 per cent at the end of March and had been cut to 13 per cent by the end of April.

Saved for Future Use

THROUGH CONTOUR FARMING, thousands of Illinois farmers are preventing loss of their farm land by soil erosion. At the same time, this method of scientific farming is increasing their production by as much as 15 per cent. Through conservation of natural resources these farmers are making certain that they will get a good return from their farm acreage, both today and in the future.

* * *

At the present time most farmers are enjoying a period of increased income. By investing a portion of this income in life insurance they can make certain that no matter what the future brings, their family living will be stabilized.

Life insurance provides farmers with a three-way service: 1. It acts as a backlog in time of low prices — the cash and loan values being readily available for emergency use. 2. It guarantees to a farmer that his family will have a definite cash income in case of his death. 3. It can provide a cash income for retirement.

Through life insurance, farmers have the privilege of establishing their own social security program. Through Country Life Insurance Company — their own life insurance company — Farm Bureau members have the privilege of getting the best in life insurance service at the lowest possible cost. There is an insurance agent in the county Farm Bureau office, and his services are available without obligation.

This is a Farm Bureau Service

ILLINOIS DAIRY FARMERS

TAKE ACTION JUNE 1-15 TO PREVENT POST-WAR PRICE CRASHES . . .

Dangers lie ahead — dangers that threaten to cut down the size of your milk and cream checks. Face these facts now:

No after-the-war market is yet in sight for the ten billion pounds of extra milk now being produced for wartime needs.

Because of wartime rationing of dairy foods housewives are forming hard-to-break habits of using imitations and substitutes as replacement products.

Dairy food surpluses, followed by price crashes, are sure to happen unless post-war demand for dairy products is built up to wartime production.

You — and millions of other dairy farmers — know that it will take united and aggressive action to head off surpluses and price crashes after the war. You know, too, now is the time to make ready to meet the challenge of the post-war period. Dairy farmers across the nation are mobilizing now to prevent chaos, confusion and depression after the war — mobilizing now in raising a post-war advertising and research fund to be used through their own organization — *the American Dairy Association.*

With this Post-War Mobilization Fund the dairy farmers of America will be ready to take nation-wide Advertising, Promotion and Research action to increase the consumption of *milk, butter, cheese, evaporated milk, ice cream* and *powdered milk.* This will help prevent surpluses — this will stop butterfat and milk price crashes.

AMERICAN DAIRY ASSOCIATION IS "VOICE OF DAIRY FARMER"

Controlled by dairy farmers, through their chosen representatives — three from each state — who serve without pay. It's your campaign to protect your dairy investment —to safeguard your cream and milk income! The money is used to pay for national advertising, merchandising and research on behalf of all dairy products and your dairy industry.

Support Your Industry And It Will Support You!

The twenty-three milk marketing cooperatives which are members of Illinois Milk Producers' Association and the ten member creameries of Illinois Producers' Creameries are cooperating with Dairy Products Promotion Inc. of Illinois and the American Dairy Association in a program to promote the welfare of the dairy industry.

Funds to carry on this program of nation-wide advertising, promotion and research to increase the consumption of dairy products are raised by milk and cream check deductions of a cent a pound on butterfat marketed June 1 to 15. This figures approximately *10 cents per cow per year.*

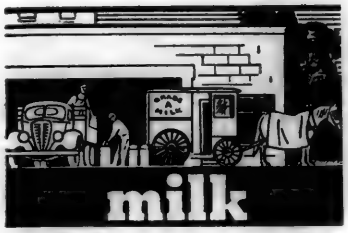
Illinois Milk Producers Association and Illinois Producers Creameries

are cooperating with Dairy Products Promotion Inc. of Illinois and the American Dairy Association



By Wilfred Shaw

June Dairy Month is to be observed this year as it has been for many years in the past. However, this year June Dairy Month is not to be a sales promotion program as it has been in previous years. Instead the observance of Dairy Month will stress the importance of increased production of milk and of the nutritional value of dairy products. The observance of June Dairy Month is sponsored by the National Dairy Council with producers and handler groups cooperating as in the past.

Funds for the American Dairy Association's 1944-1945 program are to be obtained by a one cent per pound butterfat deduction upon milk and cream marketed during the period June 1-15 in Illinois and 17 other principal dairy states throughout the United States. The producers' contribution to this program of the American Dairy Association, upon the one cent per pound of butterfat marketed during this 15 day period, will cost an average of about 10 cents per cow per year. The American Dairy Association carries on a program of promotion for the dairy industry in merchandising, advertising, and research. The funds in Illinois are collected by Dairy Products Promotion, Inc. which is the Illinois affiliate of American Dairy Association.

The Office of Price Administration has announced the following permissive producer and retail price increases in milk for the following Illinois cities:

Springfield, effective May 8. Price to the producer for 4% milk $3.05 per cwt. with a butterfat differential of 5c per tenth of a per cent added above 4% and 4c per tenth of a per cent deducted below 4%. No change in retail prices.

Decatur, effective May 12. Price to the producer for 4% milk $3.05 per cwt. with a butterfat differential of 5c per tenth of a per cent added above 4% and 4c per tenth of a per cent deducted below 4%. No change in retail prices.

Jacksonville, effective May 23. Price to producer for 4% milk $3.05. Butterfat differential 4c per tenth of a per cent to be added or deducted above or below 4%. Retail price of quarts of bottled milk increased from 13c to 14c.

The rates of government dairy production subsidy payments have been announced on milk and cream shipments made by producers through March 1945, provided Congress provides the administrative expense.

The amount of the subsidy is as follows for Illinois, Iowa, Missouri and Indiana:

May through August 1944 — 35 cents per cwt. on milk, 6c per lb. butterfat on cream.

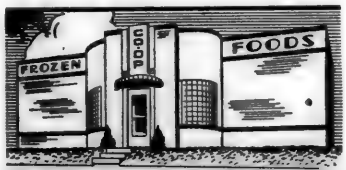
September through March 1945 — 60 cents per cwt. on milk, 10c per lb. butterfat on cream.

The following are the blended prices received by producers supplying the respective Illinois markets. All are April prices for 3.5% milk f.o.b. dealers platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.44
Canton	2.75
Champaign	2.75
Chicago	2.98
Danville	2.45
Decatur	2.70
DeKalb	2.74
Freeport	2.72
Galesburg	2.65
Harrisburg	2.60
Jacksonville	2.40
Kewanee	2.55
LaSalle	2.69
Moline	3.01
Peoria	2.89
Pontiac	2.40
Quincy	2.36
Rockford	3.02
Springfield	2.60
St. Louis	3.25
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis delivered f.o.b. dealers platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for March unless otherwise noted:

Baltimore	$3.85
Boston	3.73
Chicago (70 milk zone—Apr.)	2.98
Denver (April)	2.87
Detroit	3.63
Evansville	2.98
Indianapolis	3.28
Kansas City	3.58
Milwaukee (April)	3.00
New York (201-210 mi. zone)	3.77
Pittsburg	3.52
Seattle	3.10
St. Louis (April)	3.29
St. Paul (April)	3.01
Washington, D. C. (Dec.)	4.06



lockers

By Frank Gougler

During the past four years Mr. and Mrs. Herr of Jacksonville have operated a locker plant at Waverly, Illinois, Morgan County. Recently Mr. Herr entered the service and Mrs. Herr has been teaching in Jacksonville. Under their circumstances they felt it best to sell the plant. Because of their many year's interest in Farm Bureau activities it was their desire to see it taken over by a cooperative.

Accordingly the Farm Bureau organized the Waverly Locker Company and the following temporary board of directors and officers have been selected: S. P. Campbell, president; Elmer Huyear, vice president; J. C. Tummons, secretary; Byron Sheppard, treasurer; and Carl Duewer, director.

The plant is located in a new brick building 38 x 56 feet including a separate brick building at back for curing, smoking and rendering. It also has a slaughter house. At present 380 lockers are installed and additional room can be refrigerated so the building will accomodate 500 lockers.

The plant was purchased by the Board for $22,500. The capital for purchasing the plant has been raised through the sale of stock. It was taken over June 1. At present applications for a manager are being considered.

Randolph County Farm Bureau has organized the Randolph Locker Service. This new organization has plans underway for establishing one or more plants in the county.

At present promotional work is being carried on in the Steelville community. Already a sufficient number of lockers have been rented to assure a 300-locker plant at Steelville. The board thinks a goal of 500 can be reached.

The project is being financed through the sale of stock.

The County Locker board is composed of the following members: Louis Uchtnamm, president; Ernest Fulton, vice president; Harold Runge, secretary-treasurer; Louis Guebert, Howard Hecht, Elmer Uchtmann, B. L. Neager.

The last two named directors are also members of the Randolph County Farm Bureau board.

Manager Harold Brackett and the directors of the Producers Creamery of Carbondale are having a large spare room in the creamery converted into a modern locker plant. When completed it will accomodate more than 700 lockers.

The total cost of this project will be between $20,000 and $25,000. The unit will be a complete plant in every respect. An additional building, large enough for curing, smoking and rendering lard will be constructed outside the creamery building proper.

The room that is being converted into the locker plant was formerly used for storing trucks. A new building will be built to house trucks and for servicing of trucks.

The creamery will furnish the locker plant with heat, water, lights and power, and space for office management and bookkeeping.

U. of I. Offers Course In Farm Appraisal Work

A farm appraisal case-study course is scheduled for July 10 to 22 under the joint sponsorship of the U. of I. College of Agriculture and the American Institute of Real Estate Appraisers, according to W. L. Burlison, head of the college department of agronomy and chairman of the local committee on arrangements.

The course will consist of a minimum of 30 hours of lectures, actual detailed and thorough appraisal of farm properties, field trips, group conferences, etc. No university credit will be given, but examinations will be given at the end of the course for all who wish to qualify for membership in the American Institute of Real Estate Appraisers.

There is still a fair supply of shallow well pumps, but deep well pumps are more critical. Supplies of both, however, will be greater than in 1943.

Price Control

(*Continued from page* 10)

fore, when I urge that entire responsibility for farm prices, for rationing and for distribution of farm products be centered in one agency, the War Food Administration, an agency which they believe is manned by individuals who have a sympathetic understanding of their problems.

The wholesale elimination of point rationing which has taken place within the last few days is a case in point. This action was taken as a matter of urgent necessity, with respect to meat at least, and we are not objecting to it. We recommended months ago, when the heavy run of hogs began, that pork be made ration-free. If action had been taken then, the present congestion of distributive channels would not have developed in such acute form, and many of the difficulties would have been avoided. We greatly fear that the sweeping action that has been taken may lead the population into false sense of security as to food. We should remember that the weather is the greatest single factor in crop yields, and that a poor season in 1944 could easily bring about a stringent, if not critical food situation within another year. We believe that this situation could have been handled far more judiciously than it has been handled, if the authority had been centered in the War Food Administration.

Another case in which farmers feel that a program has been hampered by administrators who do not understand the farmers' problems is that of farm machinery. We simply cannot understand why rigid production quotas are reserved for some manufacturers when they are not able to produce the full amount of their quotas, while other manufacturers who have met their quotas and have the labor and materials to produce far more are not permitted to do so. Furthermore, regulations compel all manufacturers to spread their production out over a specified period, instead of permitting them to manufacture at top speed until their quotas have been reached. Such administrative regulations are hard to understand at a time when the entire world needs all the food that can be produced, and at a time when additional farm machinery would ease the burden of already overworked farm people.

Since price is a guiding factor in production, it is extremely important that floor prices be announced well in advance of planting time so that producers may make their plans accordingly. Vexatious delays in making such announcements have been a source of irritation to farmers.

The policy of maintaining inflexible price ceilings has also been very unpopular with farmers, particularly the producers of such perishables as fruits and vegetables. During practically every season, the production of some crops is reduced by one-half or more as a result of a late freeze, a flood, an early freeze in the fall, or other disaster. Since the individual farmer's income is the result of volume multiplied by price, it is apparent that a producer's income can be halved if price floors and ceilings are rigidly maintained in disregard of such developments. It must be apparent to any unprejudiced observer that low consumer prices are maintained in such instances at the expense of the farmer. If the administrators of the program would follow the plain terms of the law, they would adjust prices as a matter of equity to the farmer in all such instances.

In view of the fact that OPA has refused repeatedly to make adequate adjustments in price ceilings to take care of these emergency situations, we favor an amendment to the law requiring the price administrator to promptly review price ceilings whenever unavoidable losses occur as a result of floods, freeze, drought, etc., and give due consideration in such adjustments to losses resulting therefrom.

There is a super-abundance of cotton, yet because of OPA regulations, cotton manufacturers have been forced out of production of certain lines of low-priced cotton goods. That curtails the demand for cotton, with the result that the farm price has dropped below parity. Any realistic consideration of the problem by the OPA could have averted this difficulty.

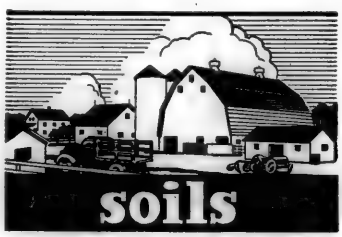
Furthermore, it is a matter of common knowledge that support prices have not been maintained in many cases. The demoralization in egg prices which followed the unprecedented production of recent months is a flagrant case. Farmers increased their production in response to appeals to their patriotism by government officials, and in response to definite assurance of price supports. When the government failed to carry out its part of the bargain, farm people and particularly farm women considered its failure a breach of faith. Such unfortunate experiences can only result in reduced production and impaired morale on the part of farmers and their families. I repeat, it is my conviction that many of the difficulties such as the above could have been avoided if all the authority for farm price programs had been placed in the hands of the War Food Administrator.

Under the law, as it is now worded, it is difficult, and in some cases impossible, for citizens to get adequate redress in the courts against unfair and discriminatory actions of the OPA. There have been many complaints also of arbitrary and flagrant abuses of administrative power.

We earnestly urge that the existing legislation be amended to curb administrative violations of the law by the issuance and administration of regulations and orders, to require prompt action by the OPA upon complaints filed by aggrieved parties, and to give aggrieved persons adequate right of redress of their grievances through the courts. We cannot emphasize too strongly the importance of this action.

One of the fundamental rights of every citizen is the right to prompt court action in cases where the freedom and economic welfare of the individual has been interferred with through government action. This right should not have to be surrendered at a time of national emergency.

Now a further word on consumer food subsidies. What are the administration's arguments for food subsidies? There is only one real argument. It is that if food prices are raised the wages of workers must be raised. The government's own figures show that the wages of workers have gone up much further and faster during this war than farm prices. Admittedly, increases to adjust farm prices still would leave these prices far below the increases given labor. Admittedly, also, increased expenditures for food by consumers out of increased purchasing power would be anti-inflationary instead of inflationary. Then why does the administration insist upon subsidies? The reason is plain. This administration is unwilling to resist the demands of labor. It does not intend to resist labor's demands. Therefore, it continues to give labor wage increases and at the same time to pay part of labor's grocery bill, through subsidies. It pays a part of the grocery bill of all consumers and at a time when consumers as a group are better able to pay for their food than at any other period of record. The problem of low-income groups cannot be solved through food subsidies. It is simply observed to give food subsidies to all citizens on the theory that a small minority of the population has been unable to secure advances in wages. The only way to solve the problem of underpaid workers is through adequate wage increases. Furthermore, the administration, by fantastic propaganda, has tried to persuade consumers that adjustments in farm prices would mean sharp increases in food costs. Subsidies defeat both the letter and spirit of the anti-inflation program. They not only violate the law, but they are inflationary. They increase the national debt. They cannot be defended save as a means of favoring one class against another. I am sorry to say that agriculture and labor have drawn further apart within the past few years. It is a tendency which will prove costly to both groups. Administration policies have been primarily responsible for this divergence and I am sorry to say that some labor leaders have insisted upon fastening war-time subsidies on agriculture without ceasing to campaign for wage increases. I again plead with Congress to take a firm stand against the un-American policy of passing on to future generations a part of the legitimate food bill of the people, rich and poor alike, at a time when consumers are better able to pay fair prices than ever before in history, and at a time when people generally are eating better than they ever did before in history.



By John R. Spencer

"Meeting the Needs for the 4F's" is the title of a soil building article and does not refer to men for selective service. Maximum production of foods, feeds, fiber and fats (the 4F's) can be reached only when the soil is well supplied with organic matter and there is an adequate and well balanced supply of the essential plant food elements available to crops, such as nitrogen, *phosphorus, potash* and calcium.

Nine samples of rock phosphate have been tested recently in spot sampling by the IAA soil improvement department. Pick-ups are made from rail cars or dealers storage with analyses made by the Applied Chemistry testing laboratory at Urbana to ascertain if quality guarantees are being delivered Illinois farmers.

According to the National Fertilizer Association 104,520 tons of commercial fertilizer were used by Illinois farmers in 1943. Indiana farmers used 396,000 tons in the last year — Wisconsin 178,500 tons, — Iowa slightly less than 60,000 tons and Missouri 150,000 tons. All five states show substantial increases in tonnage used over the previous year, in fact the largest increases in consumption in recent years have occurred in the Midwest. The steady rise in tonnage during this war is in marked contrast to the downward trend during World War I which resulted from the cutting off of imports of certain materials from Europe.

Another effect of the cold wet weather has been to delay greatly the spreading of limestone which usually is quite large in the spring months of the year.

The New

BLUE SEAL

ILLINOIS FARM SERVICE SUPPLY COMPANY

SYNTHETIC

IS NOW AVAILABLE

IF you are a "B" or "C" book holder, you are eligible for a Grade I tire certificate which will allow you to purchase new Blue Seal Synthetic passenger tires if you need them. Synthetic rubber passenger car tires render satisfactory service when they are operated with care and at a modified speed. Most tire injuries can be avoided by simple care.

1 MOUNT CAREFULLY

FOLLOW THESE STEPS—

a. Lubricate both tire beads inside and outside with vegetable oil soap. Apply soapstone to the tube before mounting.

b. Inflate tube to barely round out (not stretched)—then insert it in casing.

c. Mount tire in regular manner applying one tire bead at a time.

d. Inflate tire until both tire beads are properly seated.

e. After beads are seated on rim, *deflate* tube completely and *reinflate* to recommended pressure.

2 INFLATE PROPERLY

Be extra careful to use proper air pressure. This is more important with synthetic tires. Have all five tires inflated every week. Examine regularly for cuts and bruises, be sure wheels are properly balanced and aligned. Cross switch tires at regular intervals.

3 DRIVE CAREFULLY

Drive only when it is absolutely necessary. Keep under 35 m.p.h. Take it easy. Start, stop and turn slowly and keep away from curbs, ruts, holes, rocks and bumps.

Position of AFBF

(*Continued from page 6*)

fair-exchange value with industrial prices and the wages of labor. An effective system of price supports, including mandatory commodity loans, is essential to justify the maintenance of such reserve supplies and to assure stability of price levels.

2. Improvement and extension of the Marketing Agreements program to assure producers of non-basic farm commodities prices at comparable levels.

3. International trade policies designed to restore and maintain a fair share of the world market for exportable farm surpluses.

4. An effective and efficient soil conservation program, to be guided and administered by the Land Grant Colleges within the respective states.

We recommend that full administrative responsibility for all types of agricultural commodity programs be vested in a national bi-partisan board, members of which will be appointed by the President, with the advice and consent of the Senate, and to hold office for substantial terms and on staggered basis. Experience has proven that it is extremely difficult to formulate one rigid pattern for a farm program, and apply it effectively everywhere in this country. For this reason, we are convinced that an effective farm program must be flexible, with the authority for making decisions as to details centered largely at state and local levels.

We recommend further that every proper aid and encouragement be given by Government to legitimate farmer-owned and farmer-controlled cooperative organizations.

IV
Farm Credit

The American Farm Bureau Federation believes that a cooperative system of farm credit is essential to the well being of agriculture. It is believed, however, that Federal funds now available to The Farm Credit System should gradually be supplanted by cooperative capital and correspondingly cooperative control should supplant Government control.

The cooperative features of the present Farm Credit system should be strengthened by giving more responsibility and authority to the local cooperative credit associations. The government capital now in the system should be retired in an orderly way through mandatory annual payments in amounts that would not disturb the necessary functions of the institutions.

We recommend the adoption of new farm credit legislation which among other things would provide for the consolidation of all governmental agricultural credit under the administration of an independent bi-partisan board. The so-called "soft credit" for relief agencies should be consolidated into one unit and function under the direction of this board, and funds for this purpose should be constantly under the control of Congress.

V
Transportation

We insist upon the maintenance of highly efficient, economical systems of transportation under private ownership, with only such reasonable regulations where it is in the public interest, to assure fair and reasonable rates and services; provide adequately for safety; encourage rather than restrict sound and orderly development in operation; provide reasonable freedom and flexibility in management in fixing rates, and in adopting economies in operations, including consolidations, eliminations, and improvements in services and in methods; eliminate discriminatory rates or regulations against any commodity or region; and provide relative treatment of different types of transportation so as to preserve the inherent advantages of each.

Adequate funds should be included in Federal aid legislation for the development of secondary and feeder farm-to-market roads. Any program for Federal highways should not be developed at the sacrifice of rural roads, and should be so routed as to serve existing market centers and not disrupt established farm markets.

VI
Price Control

The American Farm Bureau Federation has consistently favored a strong and aggressive price control program. We believe that any effective plan to control prices must be equitably applied to industrial commodities, wages, and farm prices. The American farmer realizes the danger of inflation and is fully aware of the fact that he was the chief sufferer during the deflationary period which followed World War I.

We believe that the administration of all price control laws pertaining to food and fiber should be in the hands of a single administrator. This type of administration is necessary in order to have a coordinated production, marketing, and price program that can be administered to meet the ever-changing conditions within the farming industry.

We favor the establishment of price ceilings on agricultural products only where necessary and workable. We believe, however, that the prices should be established at levels that will encourage the maximum production which is so vitally needed for the war effort. Abundant production is one of the best means of preventing an advance in prices. Established prices should be announced far enough in advance to permit the farmer to make his production plans. After having once been announced, ceiling prices or floor prices should not be lowered during the production and marketing period. Reduction of prices below the announced levels has caused great loss and much confusion in various parts of the nation. If the nation is to be adequately supplied with food and fiber, it is imperative that the governmental price commitments be fulfilled. We insist that the mandates of Congress be adhered to in administering price control laws.

The American Farm Bureau Federation is opposed to consumer subsidies and roll-backs. The records show that consumer income is at an all time high and that the proportion of the consumer's income required to buy food is lower today than at any time on record. Lower food prices through consumer subsidies increase the excessive buying power in the hands of the people. Payment of subsidies from the federal treasury increases the national debt, which necessitates additional borrowings, and thus increases the possibilities of credit and monetary inflation. We believe that in the long run consumer subsidies increase rather than decrease the likelihood of severe inflation.

VII
Reconversion

We favor the establishment of an over-all War Demobilization Committee under the supervision of Congress, this agency to have the general supervision of the demobilization program, including the termination of war contracts, the disposal of war plants, equipment and supplies, and all other problems dealing with this vital question.

We favor the speedy reconversion of war plants to the production of peacetime goods, as rapidly as war conditions will permit. Every reasonable effort should be made to prevent unnecessary delays and unemployment during the reconversion period. Governmentally owned war plants should be sold to and operated by private capital.

We feel that the vast amount of material and supplies now owned by the military forces should be disposed of in such a manner that a reasonable proportion will be available to the

farmers of the nation. Since the unprecedented need for food will likely continue for a while after the war, we believe that trucks and other military equipment should be made available to farmers immediately upon the cessation of hostilities. The farms of the nation are also in need of better housing and farm buildings. Consideration should be given to the practicability of using some of the surplus war material to improve rural housing facilities.

Land suitable to farming which has been purchased by the government should be sold as soon as possible after the war. This land should be offered to the original owner, and then if not purchased in a reasonable time, it should be put up for public sale and sold to private individuals in units suitable for the operation of family size farms.

We believe that it would be doing the returning veterans a disservice if they were encouraged to locate on small farms or poor land as a means of rehabilitation. Any plan of resettlement for returning veterans should be on an economically sound basis, and should not require a permanent subsidy or permanent government supervision. In the light of the experience after World War I, we believe that all federal resettlement programs should be carefully scrutinized, to see that the participants have a reasonable chance of succeeding in their farming operations. We are opposed to programs which tend to make agriculture the dumping ground for the unemployed from the city. Returning veterans should be encouraged to continue their education and also to develop vocational skills of all kinds.

VIII

Postwar Planning

The position of the American Farm Bureau Federation on postwar planning is outlined in detail in the folder entitled "A Guide to Postwar Planning" which is reprinted below.

A GUIDE TO POSTWAR PLANNING

By the Board of Directors of the American Farm Bureau Federation
Adopted at Quarterly Meeting, Sept. 3, 1943

I. We favor the United States of America assuming its rightful share of the responsibility for cooperation with other nations in:

1. Holding aggressor nations in check after the end of the war.
2. Maintaining world trade policies that will give opportunity to all nations to obtain the materials necessary to maintain a sound peacetime economy, and
3. Providing the opportunity for political and economic freedom for all people; —

to the end that a just and lasting peace may be maintained among the nations of the world.

II. We favor extending aid to the people of the war-ravaged nations to relieve human suffering, but in every case, in order to avoid misunderstandings and unfortunate consequences, we should make certain that no commitment is made which our nation within reason cannot fulfill. The primary objective should be to assist them in their rehabilitation plans and programs so as to enable them to help themselves in meeting their own needs insofar as they desire and request such assistance.

III. We favor domestic policies that will assure full production and full employment, which will result in constantly rising living standards for all groups. To attain this objective, an equitable balance in purchasing power among all groups must be maintained.

We believe that this can best be accomplished by industry, labor and agriculture through voluntary adoption of price and wage policies based on a philosophy of abundance. Only if each group will do its part to formulate and carry out such a program, can they effectively protect the general welfare against the development of extremely paternalistic policies on the part of Government.

IV. We recognize that as civilization becomes more complex, government must assume new functions, but we insist—

That our historic constitutional form of government with its balance of powers among the Legislative, Executive and Judicial branches be reverently observed and jealously guarded;

That the continuation of successful democracy demands that individuals and groups shall assume the greatest possible responsibility for the solution of social, political and economic problems.

To the extent that governmental aid is necessary, it should be carried on as far as possible by governmental units closest to the people, and where federal action is required, such powers should be administered as far as possible through agencies locally responsible and which can adapt such programs to local conditions.

Too great reliance upon governmental action alone will inevitably destroy our democratic institutions and lead us into some form of stateism with the accompanying loss of our freedom. Government should be the servant and not the master of the people.

V. We favor the adoption of monetary and credit policies, domestic and international, that will encourage and facilitate maximum production, distribution, and consumption of goods and services, on a fair-exchange basis.

VI. We favor adjustment or removal of foreign and domestic barriers so as to facilitate the maximum exchange of goods and services between nations, and between groups in our own country, to the end that maximum employment and production may be achieved throughout the world.

VII. We favor every legitimate and necessary aid by private industry, labor and agriculture in cooperation with government, to provide opportunity for profitable and satisfactory employment for men and women demobilized from the armed forces and war plants.

We favor the speedy reconversion of privately-owned industrial plants to the production of peacetime goods. Agricultural land, industrial plants and unneeded inventories owned by the government should be disposed of as rapidly as practicable on terms and conditions that will make the maximum contribution to our peacetime economy.

VIII. We believe that fiscal and tax policies should be adopted that will retard inflation, that will be as nearly as possible on a pay-as-you-go basis and will encourage the system of free enterprise. We urge that prompt action be taken to put into operation a definite program for the retirement of the public debt as rapidly as economic conditions will permit.

IX. Public educational opportunity must be enlarged for the youth of America and for its adult population as well. To the extent Federal assistance is needed it should be limited to financial grants, without Federal control, to the states on the basis of need with local and state governments responsibe for performing this function.

The educational system must aid our citizens in the function and use of organization in behalf of their individual and general welfare.

The dignity of agricultural pursuits must become more widely respected. Urbanism must not be pitted against ruralism, for each is dependent on the other. The country and small-town youth of America must have equal opportunity with urban youth.

X. We favor an intensive attack on the problems of better medical and hospital care for all groups. This is particularly necessary in rural areas. In general, we favor action on this problem by the voluntary organization of cooperative health and hospital associations. We stand ready to cooperate with the medical profession and other groups in the solution of this problem.

XI. Neither agriculture, labor, nor industry can solve their own problems without giving due consideration to the problems of the others. The goal of full production and full employment through private enterprise can only be attained through their cooperation and their support of nation-wide policies and plans directed toward the good of all instead of each striving to obtain a position of monopolistic advantage. We therefore urge that all possible efforts be made by industry, agriculture, and labor to promote better relationships and more effective cooperation between these great economic groups for the common welfare. We call on all groups to join in conference to sincerely seek the solution of our mutual problems in the interest of the nation as a whole.

XII. Our national agricultural policy must include a constructive soil conservation program and mechanism to assist farmers to adjust production to changing conditions, to assure abundant supplies of food and fiber for domestic and export needs, and to maintain economic balance between agriculture and other segments of our national economy. Eventual destruction of our soil wealth, which would be followed by national disintegration, will be inevitable unless farm products can be traded on a fair-exchange basis for the goods and services produced by other groups.

XIII. Our post-war planning must be done on a democratic basis. Government agencies may furnish information but the people should make the decisions on plans. We therefore urge that Congress, as the elected representatives of the people and the policy-making body under our Constitution, at once assume its proper responsibility in cooperation with the Executive department in all post-war planning, both national and international, by the Federal Government.

We favor the establishment by Congress of a Joint Congressional Commission to study these post-war problems, to consult with representatives of all groups in the Nation, and to submit definite recommendations to Congress.

Because of the difficulty in getting bombs of the larger sizes delivered to farmers for use in pest control, we suggest using a product which we consider . . . . . .

Better than a BLOCKBUSTER to Kill Flies!

BLUE SEAL FLY SPRAY

Here's the way Blue Seal Fly Spray is effective:

IT KILLS. Blue Seal contains two effective ingredients that kill flies by contact. Many different types of materials and formulae were tested in Illinois dairy barns by cooperating farmers in our search to determine the most effective killing agencies and formulae. We have them now in Blue Seal Fly Spray

IT REPELS. These barn tests prove also that Blue Seal Fly Spray has powerful knock-down and repellent property. By spraying the cows at night and in the morning a half hour before milking time, its effectiveness will last through the day.

IT'S SAFE. Blue Seal kills flies, but it is harmless to animals and humans. Its highly refined petroleum oil base assures easy spraying, prevents dirt collection, will not mat the hair nor irritate the skin.

For Household Use—

For a household use, use Blue Seal Fly Killer. Fly Killer is especially prepared to effectively kill and control flies in the home and milk house. You can use it without fear of tainting food or milk. It will not stain wall paper, clothing, curtains, or drapes. It is harmless to humans, kills flies, ants, roaches, bed bugs, mosquitoes, and any other insect pests.

See your Blue Seal Serviceman. • *Reserve your season's supply today.*

ILLINOIS FARM SUPPLY COMPANY

IAA Recommends —

(*Continued from page 5*)

excess of 180 pounds, effective May 15.

"Plight of many farmers desperate and we respectfully urge immediate action."

On May 8, Jones announced that he was immediately announcing that all butcher hogs between 180 and 200 pounds would be included a temporary support in the government price support plan effective May 15.

With this action of the WFA, President Smith appealed to farmers to withhold from market hogs weighing under 200 pounds. He said that by withholding lighter hogs now their present owners could be assured of the price support of $13.75 per hundredweight, Chicago basis, when hogs reached 180 pound weights, thus relieving farmers from tremendous losses they were incurring as the result of indefensible prices packers were paying for light hogs.

During the first of May, the OPA also removed all ration points on all meats, with the exception of beef steaks and roasts. When this order was announced, President Smith in a press release pointed out that the Farm Bureau as early as last November urged that all ration points be taken off pork, in order to bring about an effective demand for the greatly increased pork supplies, and had continued to urge such action from time to time.

"Farmers have long insisted," President Smith said, "that action should be taken to permit the excess pork supplies to flow to consumers rather than to glut the markets and overflow storage capacities. Such market gluts have resulted in losses to producers on all hogs not falling within the comparatively narrow weight limits covered by government price supports."

Fifth War Loan Drive Scheduled for June 12

The Fifth War Loan Drive will be launched in Illinois June 12. The Bond Drive chairman in each county has been assigned a quota for his particular county.

Each county has an agricultural chairman, who will in turn select township people to aid in this drive. It is hoped that each county drive will be so organized that it can be completed in three or four days. Individuals are urged to contact the volunteer workers in his township in order that time, gasoline and tires may be conserved.

Illinois quota in the Fifth War Loan Drive is $1,107,000,000, with $204,000,000 of this in series "E" bonds.

Why PIGS LEAVE HOME

Maybe they hear from neighbor Jones' pigs about the swell feed, good pasture and clean, well kept quarters he gives 'em. After all, your modern method is a far cry from the old days when "pig" was a synonym for uncleanliness.

Today's progressive farmers take special care of their hog investment from farrowing to market time.

AND they make sure their labor isn't wasted, by vaccinating while young with fresh, potent Farm Bureau Serum.

REMEMBER: **THE SMALLER THE SHOAT THE CHEAPER THE SHOT**

See Your Farm Bureau

FERD HIMME

Exchanging ideas at the Rural-Urban Women's Conference in Washington, D. C., left to right are Mrs. Sherman Ives, representing the National Grange; Mrs. Elsie Mies, Urbana, of the Associated Women of the American Farm Bureau Federation, and Mrs. Oswald B. Lord, New York, representing the Junior League.

Country, City Women Exchange Their Views

COUNTRY and city women have about the same basic problems. That's the general conclusion reached at the mid-May Rural-Urban Women's Conference arranged by Mrs. Charles Sewell, administrative director of the Associated Women of the American Farm Bureau Federation, in Washington.

Representatives of virtually all of the leading women's organizations attended the conference. Few formal speeches were made, the bulk of the program being devoted to panel discussions and informal, unrehearsed statements by anyone who had anything on her mind.

Mrs. Elsie Mies, Champaign county, president of the Associated Women, who presided at the conference, described the results of the meeting as "a long stride forward toward more friendly and sympathetic understanding between country women and city women."

From the city women's viewpoint, perhaps the highlight of all was the dinner session at which four Farm Bureau women gave their city cousins a picture of modern country living and rural institutions.

Mrs. W. C. McLeod, a tall, handsome grandmother from Madisonville, Ky., told how she had learned to drive a tractor in order to help take the place of her son who had enlisted in the armed forces. She said the hired man on the 260-acre farm is soon to be inducted.

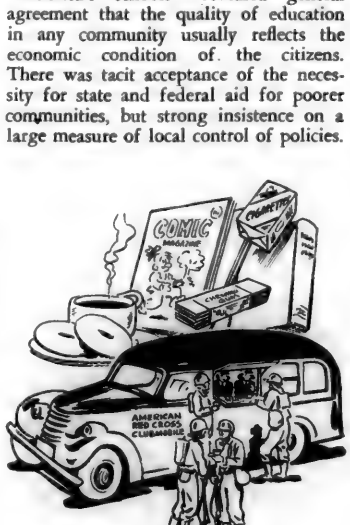
Mrs. Raymond Sayre of Iowa, midwest regional director of the Associated Women, described a country kitchen and what goes on there. The talk was largely of overshoes and mud, chilled pigs behind the stove, cream separators and baby chicks.

Mrs. M. L. Reeder of Utah told of the rehabilitation program of the Church of the Latter Day Saints, with its storehouse of more than 300,000 bushels of wheat contributed by members, all of whom contribute something in the way or commodities to help out the less fortunate. Basic aim of the program, she said, "is to help people help themselves."

Mrs. Paul Palmer of Missouri told of the country church in her own community in which six generations of her own family have worshipped, and of the profound influence that the institution has had in shaping and maintaining a satisfactory community life.

Problems of health, education, and citizenship occupied the bulk of the time during the two-day meeting.

No conclusions were drawn and no resolutions passed, but the panel on "America's schools" revealed general agreement that the quality of education in any community usually reflects the economic condition of the citizens. There was tacit acceptance of the necessity for state and federal aid for poorer communities, but strong insistence on a large measure of local control of policies.



Champaign County Woman New Publicity Chairman

Mrs. Ruth G. Gordon, a member of the Champaign County Home Bureau for the last 15 years, has been named publicity chairman for the Illinois Home Bureau Federation.

Mrs. Gordon has served as a unit chairman, 4-H club chairman, and from 1925 to 1937 served as president of the Champaign County Home Bureau. Her husband, Glenn Gordon, has been secretary of the Champaign County Farm Bureau for a number of years.

Mrs. Gordon has two sons in the service, Lt. (j.g.) Glenn, Jr., a Navy pilot who has been on coastal patrol duty and who will soon be piloting a bomber, and Donald, a sergeant who is training to become a bombardier in the Army Air Corps. Both were attending the University of Illinois when they enlisted, and were paying their college expenses from money earned in their 4-H projects.

Home Bureau Women Keep USO Cookie Jar Filled

Finding that the cookie jar at the Urbana USO center is nearly always empty on Mondays, the Mayview unit of the Champaign County Home Bureau has decided to supply six dozen cookies on the first and third Mondays of each month.

Three women are selected to bake six dozen cookies for each of the two Mondays of the month, and as she delivers her cookies she files her recipe with the unit chairman so that members looking for new recipes will have a list from which to make a selection.

Here's one listed as the "Boys' Favorite Oatmeal Cookie Recipe"; 1½ cups of sugar, 1 cup of shortening, 3 eggs, 1 cup of sour milk, 1 cup of raisins, 2 cups of oatmeal, 2½ cups of flour, 1 teaspoon of cinnamon, 1 teaspoon of soda, ½ teaspoon of salt. Mix in order given and drop by teaspoonfuls on lightly greased baking sheet and bake 12 to 15 minutes at 400 degrees.

Home Bureau Membership Shows Consistent Gains

Recent months have seen gains in Home Bureau membership in a number of counties of the state.

High county gains for a period of one month reported recently include: Cook, 35; Moultrie, 28; Wabash, 27; Stark, 22, and Lake, 21.

Home Bureau membership in Illinois on Jan. 1, 1944 showed 20,885 active cooperators and 1114 associate cooperators.

Rural YOUTH

By Ellsworth D. Lyon

Rural Youth "bonds for bombers" drive had moved up to the encouraging figure of $65,651.70 by May 20. Faithful and careful reporting of all bond purchases should enable the Rural Youth of Illinois to reach the goal of $110,000 by June 30 for the purchase of the ambulance plane — first project for 1944.

Macon County Rural Youth in its May meeting heard an informative address given by an Army Lieutenant who had recently returned from one of the fighting fronts. He spoke of being transported from the front lines in an ambulance plane of the type which the Rural Youth of Illinois are sponsoring.

Tazewell County Rural Youth which ranked second place in the state last year in the sale of bonds, has a catchy slogan to aid its campaign for 1944. It is "Try to buy more war bonds for T. R. Y." This group is working not only for T. R. Y., but for Rural Youth throughout the state and for our men in the services through this bonds for bombers' program. A picnic is being planned for the afternoon of June 25 to be held at Mineral Springs Park, Pekin.

Morgan County sends its Newsletter "The Morgan county Rural Youth Rambler" each month to 40 service men throughout the world as well as to former members. This group held its annual spring banquet and dance in April. Representatives were present from Brown, Christian, Fulton. Kane, LaSalle, McDonough and Pike counties.

Kenneth Wilson, president of Montgomery county, had the privilege of introducing the dean of farm advisers in Illinois, A. E. Snyder, at the eighth annual banquet May 17. The banquet was attended by 110 Rural Youthers and Farm and Home Bureau leaders.

Bond county had Vice-President Talmage DeFrees of the Illinois Agricultural Association as speaker at its fourth annual banquet May 9. His theme was "Roads of Adventure and Romance."

Brown county featured a "Torches for Freedom" program May 8 with 55 attending. "Three recent weddings lost us four members," says Mamie Spiers, president. Brown county responded with 12 volunteers for the mobile blood donor unit visiting Quincy in May.

The Rural Youth of Bureau county plan to donate blood to the blood bank June 27.

Kane county will hold a semi-formal dance June 9, at the Hampshire gymnasium. Betty Teeple sends this interesting news: "A new Rural Youth group has been organized in the county, and for the first two meetings there has been a grand turn out."

Plans are under way for a Rural Youth festival including Carroll, Stephenson, Ogle, Lee and Whiteside counties. It is to be held in either July or August, according to Lawrence E. Woessner, president of Carroll county.

Lawrence county plans a "big and glorified hay ride and wiener roast for June meeting. All Rural Youth members are welcome," says Clair A. Piper, president.

Eleanor Fulton, secretary of Randolph County Rural Youth, reports an attendance of 90 at the 10th annual banquet May 1. She further reports, "I think our 10th annual banquet was quite a success and everyone enjoyed the evening." This group is planning a hay-ride party and weiner roast for their June meeting.

Thelma Sturgeon presided at the annual banquet of the Edgar County Rural Youth May 16. Miss Clareta Walker's message in the form of a poem was well received.

Dorothy Rhodes, secretary of Peoria county sends a full and well written report of the May meeting. Some outstanding features of the evening were: A donation to the Red Cross, the showing of the movie by Mr. Neal, assistant farm adviser, on safety entitled, "A Stitch in Time," the reading and amendment of the constitution, and the making of plans for a debate on "Marriage in War Time." Twelve new members were reported at the meeting.

James Wehrly, president of the Greene county group, reports that the annual banquet was held on the date of the regular meeting in April. At the May meeting Miss Marian Ashford led a discussion on "The Woman's Land Army."

President Richard Cline's recent report of Clark county says, "New members are still coming." This county held election of officers at the April meeting. Flag identification and flag etiquette were the subjects of talks given by two members of the club.

A former Rural Youther, Les Frankland, now in the service and who has been in the Aleutian Islands spoke at the May meeting of the Edwards county Rural Youth.

Glenn Eisenbrandt, 18, Will county, received this plaque May 18 in St. Louis in recognition of winning state honors in the national 4-H rural electrification contest in 1943.

W. E. Green, president, Wabash county, reports that its recreational leader, Mary Pole, is leaving in June for the Army Nurse's Corps.

The May meeting of Macoupin county was a very successful guest-parent night with 113 people in attendance.

Lucille Denby, Macoupin's president, began work as assistant to Mrs. Sunny Schroeder Benson in the recreational phases of Rural Sociology Extension at Urbana. Vice-President Emma Pcoklington will take over the duties of president.

Winnebago county's May meeting was a guest night.

Whiteside county held a skating party in April. At the May Rural Youth meeting Mrs. Anshus, who left Norway two days before the invasion, gave an address on that country.

Henry county enjoyed a barn dance May 2, and Ruby Kleinau reports it was a "great success."

Plane built by North American Aviation Inc.

Here is the pursuit ship named in recognition of the $75,000 War Bond purchases made by Illinois Rural Youth in the last quarter of 1943.

Exchanging ideas at the Rural-Urban Women's Conference in Washington, D. C., left to right are Mrs. Sherman Ives, representing the National Grange; Mrs. Elsie Mies, Urbana, of the Associated Women of the American Farm Bureau Federation, and Mrs. Oswald B. EDITORIAL

Farmers are Indignant!

Farmers are indignant over what they rightfully feel is an indefensible situation in the hog market. The Illinois Agricultural Association has time and again urged that adequate steps be taken by the government to fulfill its commitments to hog producers. Some adjustments have been made but the fact remains that practices which are being followed by the buyers of hogs are resulting in serious losses to producers.

President Earl C. Smith summed up the situation in his recent address before the Illinois Bankers Association in Chicago when he said: "Farmers have done a better job in producing food than the government has done in meeting its commitments to them.

"It was in response to urgent appeals of the government that farmers greatly increased hog production. They were promised support prices which have not been fulfilled in practice.

"For weeks we have witnessed the purchase of hogs outside government support weights at indefensibly cheap prices, and at the same time, hogs within the support weights of 180 to 270 pounds are left in the pens from day to day to shrink, become stale, and in some instances, die, with serious losses to hog producers.

"Packers are not justified in driving the average drove cost of hogs to the lowest level of two years, because subsidies which the packers receive from the government on all hogs slaughtered offset any adjustments which were made in retail price ceilings.

"I am fearful that advantages taken by buyers during recent weeks, together with the neglect of government to take steps in seeing that its commitments are fulfilled, will result in a breakdown in production and shortages in the months ahead as a result of these shortsighted and unjustified policies."

Where Cooperation Has Paid

During recent months, the IAA RECORD has called editorial attention to many opportunities which Farm Bureau offers its members to benefit from cooperation. Old and new members alike should become familiar with and support their marketing cooperatives and the cooperatives set up to help them buy cooperatively.

Among the Farm Bureau-sponsored cooperatives is Illinois Producers' Creameries, with its ten member creameries located at strategic marketing points in the state.

These cooperative creameries came into existence after farmers had found that cream marketing presented problems that the individual could not solve — problems of price, quality control, and service.

They came into existence after an attempt to go halfway, that is, to pool cream and sell it to old-line creameries, had failed to produce the desired results, namely, to get a price for butterfat more nearly in line with the Chicago 90-score butter market and to stop price discriminations on cream from certain parts of the state.

A decade of operation has produced outstanding results. Many farmers in Illinois who have cream to sell — whether or not they have been patrons of one of the Producer creameries—receive from 4 to 6 cents a pound more for their butterfat in the relation to the Chicago market than they did before these cooperatives came into the picture. On 1000 pounds of butterfat that is a gain of from $40 to $60 per year.

Farmers have found that it pays to process and market their own butterfat. Prairie Farms butter has become a standard of quality in the state, just as Producer prices have vitally affected the price situation. Every dollar put into stock in the creameries is on the average worth $1.98 in assets today.

Better service — the twice-a-week pick-up in insulated trucks, the accurate and impartial weighing and testing by the farmers' own employees — these and many other benefits have come as these creameries have developed.

In the wartime market, with price control, susidies, and a host of government regulations, and with the increased demand for whole milk, the boards of Producer Creameries have proved themselves able to cope with the new problems. Today we have the creameries diversifying operations, producing powdered milk and cheese, and thus laying a foundation for a more flexible and adaptable service in the future.

Now is the time for farmers to build strong cooperatives—to give their *full* support to the marketing agencies they own, control and operate. In the final analysis, the success or failure of cooperatives depends largely upon whether or not they receive the active cooperation of the farmers they are set up to serve, providing, of course, that they have proper management and are performing a needed service.

If you have cream to sell — if you believe in cooperation, consider the record of Illinois Producers' Creameries, and the advantages to you of dealing with and through your own successful marketing cooperative.

Support the 5th War Loan Drive

The Fifth War Loan Drive begins June 12. There is hardly need at this stage in the great conflicts in which our men are fighting to call attention to the fact that huge sums of money are required to properly equip them with the weapons of modern warfare. There is hardly need to point out that much of this money must come from loans to the government in the form of War Bonds.

Most of us know by this time that this is what war means. We know we have a war to win, that millions of young men and women are fighting or preparing to fight to bring about a victory which it is hoped will bring a lasting peace.

However, it is well that we recognize that only next to the importance of maintaining a substantial tax structure to pay currently insofar as possible the cost of the war, is the purchase of war bonds by individuals.

From the standpoint of individual security, there are two reasons aside from patriotic duty why everyone should subscribe for as many bonds as they are financially able to buy. The first is that the larger the proportion of bonds purchased by individuals, the less danger there is for a disastrous inflation. The second is that bonds purchased now will be a source of ready cash when they mature, or before, if the need arises.

Not a few farmers are inclined to agree with the professor who, after listening to a discussion on how a postwar depression was to be avioded, said dryly that "maybe it isn't necessary to have a depression after a prolonged period of inflation, but it sure is customary."

Maybe it's a little old fashioned to lay away a good sized nest egg for a rainy day, but the majority of farmers, having gone through a score or more of pretty lean years after the last war, know it's just good horse sense and will give the Fifth War Loan Drive their full support.

Farmers are Indignant!

Farmers are indignant over what they rightfully feel is an indefensible situation in the hog market. The Illinois Agricultural Association has time and again urged that adequate steps be taken by the government to fulfill its commitments to hog producers. Some adjustments have been made but the fact remains that practices which are being followed by the buyers of hogs are resulting in serious losses to producers.

President Earl C. Smith summed up the situation in his recent address before the Illinois Bankers Association in Chicago when he said: "Farmers have done a better job in producing food than the government has done in meeting its commitments to them.

"It was in response to urgent appeals of the government that farmers greatly increased hog production. They were promised support prices which have not been fulfilled in practice.

"For weeks we have witnessed the purchase of hogs outside government support weights at indefensibly cheap prices, and at the same time, hogs within the support weights of 180 to 270 pounds are left in the pens from day to day to shrink, become stale, and in some instances, die, with serious losses to hog producers.

"Packers are not justified in driving the average drove cost of hogs to the lowest level of two years, because subsidies which the packers receive from the government on all hogs slaughtered offset any adjustments which were made in retail price ceilings.

"I am fearful that advantages taken by buyers during recent weeks, together with the neglect of government to take steps in seeing that its commitments are fulfilled, will result in a breakdown in production and shortages in the months ahead as a result of these shortsighted and unjustified policies."

Where Cooperation Has Paid

For Your Country — For Your Future

Give Your Full Support to the Fifth War Loan Drive

Illinois farmers have, in the face of tremendous obstacles, answered the call of their government for unprecedented production of agricultural products. They have met and far surpassed production goals which will forever stand as evidence of their all-out effort in the cause for which so many are called upon to give their lives. They know this war must be won — they know that everyone must do his part to finance it — and they will support the 5th War Loan drive to the limit of their ability.

WHY ARE SO MANY FARMERS BUYING EMPLOYERS AND GENERAL LIABILITY INSURANCE?

1
Because it Gives Them PROTECTION

AGAINST claims made by injured farm employes, including domestic servants. Because, even though farm employers do not come under the Workmen's Compensation Law, they may be held legally liable if, through their negligence, an employe is injured. Protection is provided up to $5000 for injuries to one person, and up to $10,000 for accidents involving injuries to more than one person. (Higher limits are available for an extra charge.)

2
Because it Protects the FARMER

AGAINST claims made by persons not employed by him, but who are injured by reason of his negligence. It covers all farming operations, including use of farm tractors, personal activities of the insured, and liability for injuries sustained around the home of the insured. (Typical farm accident: Animal getting onto the highway and injuring some person or damaging a motor vehicle.) The coverage provided is up to $5000 for one person, and up to $10,000 for accidents involving injury to more than one person. (Higher limits are available if desired.)

3
Because it Protects their EMPLOYES

AGAINST having to pay excessive medical bills in cases of an accident while working. The policy provides payment for all reasonable and necessary medical, hospital, dental, surgical, ambulance, registered nurse service, and medical supplies. Payment is made up to $250 for each employe injured in an accident, and up to $500 in case of death. The limit payable on one accident is $2500. (For a small extra charge, this protection can also be made available to the father, brother, and son of the injured.)

WHAT ABOUT COST?

For a farmer with one employe, on a year-around basis

The Initial Payment would be:

1. Policy Fee (Paid only once)	$ 5.00
2. One Year's Advance Cash Premium Deposit ($5.00 for each six months of labor, estimated to be employed by insured during a year)	10.00
Payment each six months thereafter:	$15.00
1. Flat charge	$3.00
2. Charge for each month of farm labor actually employed by insured during the past six months (50c per month)	3.00
ACTUAL COST FOR SIX MONTHS	$6.00

(The difference between the "Actual Cost" and the "Advance Cash Premium Deposit" is refunded if the policy is not renewed.)

A Farmer with two year-around employes would make a $20.00 Advance Cash Premium Deposit and pay $9.00 each six months thereafter.

For further details in regard to rates, protection, and manner of reporting extra, as well as regular labor, see the Insurance Agent in your County Farm Bureau Office.

An Incentive From the Front

(*An Editorial*)

Early last month president Earl C. Smith received a V-mail letter from Major Roland S. Slater of Peoria, who has been a Farm Bureau member for ten years and who is at present the commanding officer of a field hospital serving Chinese troops "somewhere in China".

It was not an unusual letter in itself — a thank-you note for the excellent service the Illinois Agricultural Mutual Insurance Company is rendering and an observation as to what a good Farm Bureau could do in China — but the fact that Major Slater and thousands of other men in uniform are interested enough to take time off from their war duties to write about affairs back home provides a challenge to all of us on the home front.

This is a challenge not only to do the particular job we are doing the best we know how, but also that we use whatever influence we may have as individual citizens to maintain our free institutions, which will continue to permit and encourage individual initiative and free enterprise so that when the war is won and the men and women of our armed forces return to the country for which they are now fighting, they will find that America is still the "land of the free and the home of the brave", and that the government of the United States is still the "government of the people, by the people, and for the people".

Surely there is also a strong challenge to individuals, organizations and the government to lay sound, workable, down-to-earth postwar plans now to provide gainful employment for returning members of the armed forces.

Recommend Subsidy Ban on Non-Bracket Hogs

Recommendation that all subsidies to processors and packers be discontinued on all meats from hogs that are purchased below floor prices was recommended at a meeting of 50 hog and livestock producers from 10 midwest states during the Midwest Farm Bureau Training School at Milwaukee in June.

This and other recommendations to alleviate the chaotic hog market situation were contained in a resolution of the producers which was adopted by the conference body. The statement adopted unanimously was:

"We strenuously object to the governmental regulations which have brought about present chaotic conditions in the hog markets resulting in millions of dollars of losses to American farmers.

"In order to alleviate this condition, and promote the general welfare of the industry and the nation, we recommend the following:

"1. All subsidies to processors and packers should be immediately discontinued on all meat from hogs that are purchased below floor prices and the American Farm Bureau Federation is requested to investigate the feasibility of seeking action necessary to recovery by the federal government of all subsidies which have been paid on hogs so purchased in the past.

"2. Packers buying hogs below the ceiling price should have an amount of their subsidies deducted equal to the amount that cost of their purchases fall below the ceiling prices.

"3. Support prices should be extended to include all weights of marketable hogs on a graduated scale gradually reducing as weights increase or decrease from the existing bracket weights.

"4. All purchasers of hogs for slaughter including order buyers and traders should be required to comply with price floors.

"5. Instead of lowering the floor price under hogs as provided in present regulations the existing floor price should be continued at its present level adjusted for increased costs.

"6. If ceiling prices are continued they should be adjusted for increases in the cost of production and should be at such levels above the various floor prices as would permit such reasonable fluctuations as seasonal supply and demand may indicate."

Problems of the beef cattle industry were discussed but since the conference of hog and livestock producers was called primarily to consider problems of the swine industry, no detailed recommendations were prepared. It was recognized that the joint livestock committee, of which the American Farm Bureau is a member, had in recent weeks presented resolutions to alleviate the cattle situation. Their recommendation included a provision for getting more cattle moving through feed lots by increasing the price on the two top grades of beef. Therefore, the swine conference approved of this action by the joint livestock committee.

WHY ARE SO MANY FARMERS BUYING EMPLOYERS AND GENERAL LIABILITY INSURANCE?

1

Because it Gives Them PROTECTION

AGAINST claims made by injured farm employes, including domestic servants. Because, even though farm employers do not come under the Workmen's Compensation Law, they may be held legally liable if, through their negligence, an employe is injured. Protection is provided up to $5000 for injuries to one person, and up to $10,000 for accidents involving injuries to more than one person. (Higher limits are available for an extra charge.)

2

Because it Protects the FARMER

AGAINST claims made by persons not employed by him, but who are injured by reason of his negligence. It covers all farming operations, including use of farm tractors, personal activities of the insured, and liability for injuries sustained around the home of the insured. (Typical farm accident: Animal getting onto the highway and injuring some person or damaging a motor vehicle.) The coverage provided is up to $5000 for one person, and up to $10,000 for accidents involving injury to more than one person. (Higher limits are available if desired.)

3

Because it Protects their EMPLOYES

AGAINST having to pay excessive medical bills in cases of an accident while working. The policy provides payment for all reasonable and necessary medical, hospital, dental, surgical, ambulance, registered nurse service, and medical supplies. Payment is made up to $250 for each employe injured in an accident, and up to $500 in case of death. The limit payable on one accident is $2500. (For a small extra charge, this protection can also be made available to the father, brother, and son of the injured.)

WHAT ABOUT COST?

For a farmer with one employe, on a year-around basis

The Initial Payment would be:

1. Policy Fee (Paid only once)	$ 5.00
2. One Years Advance Cash Premium Deposit ($5.00 for each six months of labor estimated to be employed by insured during the year)	10.00
	$15.00

Payment each six months thereafter:

1. Flat charge	$3.00
2. Charge for each month of farm labor actually employed by insured during the past six months (50c per month)	3.00
ACTUAL COST FOR SIX MONTHS	$6.00

The difference between the "Actual Cost" and the "Advance Cash Premium Deposit" is refunded if the policy is not renewed.)

A Farmer with two year-around employes would make a $20.00 Advance Cash Premium Deposit and pay $9.00 each six months thereafter.

FARMING... *and the* NATIONAL ELECTION

THE official statement of the American Farm Bureau Federation was presented to the Republican Party by Earl C. Smith, president of the Illinois Agricultural Association and vice-president of the American Farm Bureau Federation. Mr. Smith appeared before the platform committee as a whole on the morning of June 23rd for a brief summary statement and in the afternoon before the agricultural sub-committee where the statement was presented in full and discussed with committee members.

In his opening remarks to the general platform committee, Mr. Smith said:

"Mr. Chairman and members of the Platform Committee of the Republican Party: Our Committee comes before you not as Republicans or as Democrats, but as representatives of farm people. I do not hesitate to say that farmers are becoming increasingly concerned over statements appearing in the press, and sometimes quoting men in public life, which are assuming that the farm vote of this section of the country is already in the Republican bag. Such an assumption is not correct.

"Farmers are becoming increasingly independent in their political views and attitudes. They will watch carefully the pronouncements of this convention and the interpretation placed upon its platform by its candidates. This will be equally true of the other major party convention which convenes some three weeks hence.

"The time alloted will only permit me to deal very briefly with a few matters of major and direct interest to farmers, although it should be recognized that there are few, if any, matters of public policy that do not affect the interests of farm people."

The July-August issue of the IAA RECORD goes to press July 10. On this and following pages is printed the agricultural plank adopted by the Republican Party at its national convention in Chicago June 27, together with the official statement of the AFBF which was presented to the Republican Party on June 23 and which will be presented to the Democratic Party later this month.

The next issue of the RECORD will carry the agricultural plank adopted by the Democratic Party at its national convention which convenes in Chicago July 19.

THE AFBF OFFICIAL POSITION ON AGRICULTURE

THE United States must cooperate with other nations, within constitutional procedure and without sacrificing our national sovereignty in holding aggressor nations in check and in developing policies on trade, monetary stabilization, and postwar rehabilitation that will insure future world peace. Our democratic constitutional form of government and high Christian ideals must be preserved.

Farmers are now insistent and will continue to be even more insistent upon the adoption of national policies that are necessary to maintain the largest possible production and consumption of the products of both agriculture and other industry. Such mass employment and production of goods can only be assured when the nation realizes the inescapable relationship of interests between the farmer and the consumer — the man in the country and the man in the city.

National welfare and prosperity require a stable, prosperous agriculture. Consumer interests and national safety require the production and carry over of large surplus supplies of basic soil crops. These surplus supplies must be segregated and controlled so as to remove their otherwise depressing effect upon current price levels. This is a national responsibility and demands policies to assure government cooperation with producers of given basic soil crops in maintaining such control. Policies must also be maintained which will permit the adjustment in production of any given crop when surplus supplies reach maximum limits. We recommend:

1. Definite assurance to provide and maintain policies of government necessary to achieve these purposes, including commodity loans.
2. Improvement and extension of marketing agreements as provided in existing law.
3. Continuation of necessary price supports for non-basic commodities.
4. An effective and efficient soil conservation program with authority for determining policies centered at the state and local levels under the supervision of the Land Grant Colleges.
5. Every proper aid and encouragement should be given by the government to bona fide farmer-owned and farmer-controlled cooperative organizations so as to hold to a minimum government functioning in the handling of farm commodities.
6. All activities of government having to do with farm commodities should be administered by a bi-partisan board.
7. New farm credit legislation should be enacted which will strengthen the cooperative features of the Farm Credit Administration and place the supervision of all governmental and semi-governmental rural credit agencies under a bi-partisan board.
8. For the duration of the war, all price control programs should be administered in such a manner as to encourage maximum agricultural production. Price floors should be announced far enough in advance to permit farmers to make their production plans and must be maintained throughout the entire marketing period.
9. Food subsidies are indefensible and should be eliminated.
10. An efficient and competitive transportation system under private ownership must be encouraged at home and abroad. Farm-to-market roads must be an important part of this program.
11. We favor the development of adequate health and educational programs necessary to equalize the opportunities of all children and improve public health. These will require some federal aid, which should be strictly limited to grants-in-aid, and should be administered wholly within the States. We are unalterably opposed to the federalization of medicine or central government domination of education.
12. Reconversion should be handled in a democratic manner under the definite policies outlined by Congress. Disposal of farm commodities should be handled in such a manner as to avoid disruption of market prices.
13. Unnecessary governmental expenditures should be eliminated. The tax structure should be designed to produce the maximum revenue and retire the national debt as rapidly as conditions will permit, without discouraging individual initiative and free enterprise. A national monetary authority should be created with the primary responsibility of stabilizing the value of our currency and maintaining an equitable balance of purchasing power between the various segments of our economy.

THE FARM PLANK OF THE REPUBLICAN PARTY

We salute the American farmers, their wives and families for their magnificent job of wartime production and their contribution to the war effort, without which victory could not be assured. They have accomplished this in spite of labor shortages, a bungled and inexcusable machinery program, and confused, unreliable, unpractical price and production administration.

Abundant production is the best security against inflation. Governmental policies in war and in peace must be practical and efficient with freedom from regimentation by an impractical Washington bureaucracy in order to assure independence of operation and bountiful production, fair and equitable market prices for farm products, and a sound program for conservation and use of our soil and natural resources. Educational progress and the social and economic stability and well-being of the farm family must be a prime national purpose.

For the establishment of such a program we propose the following:

1. **A Department of Agriculture under practical and experienced administration free from regimentation and confusing government manipulation and control of farm programs.**
2. **An American market price to the American farmer and the protection of such price by means of support prices, commodity loans, or a combination thereof, together with such other economic means as will assure an income to agriculture that is fair and equitable in comparison with labor, business and industry. We oppose subsidies as a substitute for fair markets.**
3. **Disposition of surplus war commodities in an orderly manner without destroying markets or continued production and without benefit to speculative profiteers.**
4. **The control and disposition of future surpluses by means of (a) new uses developed through constant research, (b) vigorous development of foreign markets, (c) efficient domestic distribution to meet all domestic requirements, and (d) arrangements which will enable farmers to make necessary adjustments in production of any given basic crop only if domestic surpluses should become abnormal and exceed manageable proportions.**
5. **Intensified research to discover new crops and new and profitable uses for existing crops.**
6. **Support of the principle of bona fide farmer-owned and farmer-operated cooperatives.**
7. **Consolidation of all government farm credit under a nonpartisan board.**
8. **To make life more attractive on the family-type farm through development of rural roads, sound extension of rural electrification service to the farm and elimination of basic evils of tenancy wherever they exist.**
9. **Serious study of and search for a sound program of crop insurance, with emphasis upon establishing a self-supporting program.**
10. **A comprehensive program of soil, forest, water and wild-life conservation and development, and sound irrigation projects, administered as far as possible at state and regional levels.**

Morgan 4-H Members Do Real Bond Selling Job

Boy and girl 4-H club members of Morgan county deserve a salute for their outstanding contribution to the war effort in selling $185,950 in War Bonds during the Fifth War Loan Drive.

According to W. F. Coolidge, farm adviser, who served as chairman of the Rural Bond Drive in Morgan county, the girls' 4-H clubs sold $101,925 and the boys' 4-H clubs $84,025, as of July 6.

The competition was keen as the 4-H club members served as solicitors for the sale of bonds in the rural area. When the preliminary final reports were checked, Coolidge reported that the Snappy Workers Club with Miss Alice Schone of Chapin as leader sold $30,425. Second high girls' club was Concord Girls' Club with $20,425, with Mrs. Otto Nicke as leader. Arnold Girls' Club was third with $11,000. Mrs. Hilding Mattson is the leader of the latter club. Mrs. Homer Ferreira, leader of the Waverly Girls' Club, reported $10,775 in the sale of War Bonds.

High ranking boys' club was the Victory Club with Roy G. VanGundy, Chapin, as leader and its sales amounted to $20,425. North Side Victory Club with Rollin Martin as leader sold $12,600. Kinman Club led by William Cully sold $9425, and East Side Juniors led by W. C. Carter sold $9225.

The Berea clubs combined and sold $21,850. Mrs. Harold Stewart is the leader of the girls' club and Donald Houston leads the boys' club.

Farmers Battle Chinch Bugs; Hoppers are Next

As the IAA Record went to press July 10, farmers in central counties of the state east of the Illinois river from McLean in the north to Fayette in the south were fighting to control chinch bug infestation from causing further heavy damage to their crops.

As farmers used creosote barriers to stem the insect invasion, after exhausting the supply of dinitro dust, Dr. George C. Decker, entomologist of the State Natural History Survey at Urbana, warned them to be on guard against grasshoppers.

The same drouth condition that was favorable to chinch bugs in the heavily hit area of the state is also conducive to the development of grasshoppers. There already has been some damage to alfalfa, and grasshoppers have made their appearance on the edges of soybean and corn fields. Dr. Decker said that they have had no reports of high mortality among small grasshoppers and as the insects become larger it will take more rain to reduce the numbers. He advised use of poisoned bait and suggested farmers consult their farm advisers for detailed information.

The chinch bugs centered their attacks and created the greatest damage in Logan, Menard, Sangamon, Morgan, Christian, Piatt, Macon, DeWitt, Moultrie, Shelby, Coles, Cumberland, Effingham, Fayette, Jasper, Richland, and a surrounding fringe of counties.

The USDA authorized free distribution of approximately 200,000 gallons of creosote in Illinois to combat the chinch bug infestation and it was secured in bulk lots at Chicago, St. Louis and Granite City.

About 400 tons of dinitro dust were used in establishing barriers in Illinois before the supply of material was exhausted.

Dr. Decker said that it was too early to make an estimate of the damage to crops by chinch bugs, but in some areas portions of corn fields were destroyed, and in some cases oats and barley fields were plowed under after suffering heavy damage. The reduction in wheat was estimated as slight as the crop was pretty well made before the infestation occurred.

In regard to corn borers, Dr. Decker said that while temperatures were high enough to hasten their emergence, one encouraging factor was that the wet weather had delayed corn planting this spring and as a result the moths had to lay their eggs on small corn and other vegetation. The mortality rate, of corn borers in such a condition he pointed out, is high.

Almost 100 farmers from Franklin and Hamilton counties attended the tour to Dixon Springs Experimental Station June 14. They rode in truck, bus — walked a good many miles — and returned home feeling it was a day well spent.

YESTERDAY . . . $7.50 PER ACRE FARM LAND

By CAP MAST

IF YOU want a real thrill — one that will keep you talking about what you've seen for quite a spell — one that will make you do some thinking and stir your imagination — make it a point to see what's going on at the University of Illinois, College of Agriculture, Dixon Springs Experiment Station 'way down south in Pope county, Illinois.

I say *see* what's going on advisedly because seeing is believing down there in the Illinois Ozarks.

Volumes of circulars — bulletins and statistics are available which perhaps in one way or another tell the story of much that is being demonstrated at Dixon Springs, but nothing is so convincing as the actual experience of seeing poor, hilly, eroded land grown over with sassafras, broomsedge, persimmons, scrub oak and a goodly crop of weeds — land which was purchased for about $7.50 per acre — transformed into profitable grassland agriculture.

Here's a birdseye description of the Dixon Springs Experiment Station. It is located on lands owned by the United States. About 5000 acres are available to the University of Illinois through an agreement with the Forest Service of the United States Department of Agriculture.

The station is administered by a committee of Dean H. P. Rusk, Professor W. L. Burlison and Professor W. G. Kammlade. The station superintendent is genial, plain spoken R. J. Webb, a native of southern Illinois and a graduate of the University of Illinois College of Agriculture.

Searching for and demonstrating practical answers to problems of soil improvement, pasture production and management, and the utilization of these pastures by cattle and sheep is the chief stock in trade of the Dixon Springs Station. The experiment station of the Soil Conservation Service, located on the project, is a cooperating agency but is also carry-

DIXON SPRINGS EXPERIMENT STATION DEMONSTRATES HOW IT CAN BE DONE

TODAY . . . PRODUCTIVE GRASSLAND FARMING

L. E. Gard, above, assistant soil conservationist, explains work going on at the Dixon Springs soil conservation experimental station. One test shows that on a 7 per cent slope where corn is grown continuously, the top 6 inches of soil would be gone in 42 years. But with grass and legume pasture, even grazed closely, it would take 22,000 years to lose the 6 inches of top soil. The station's flock of 1000 sheep are dipped three weeks after shearing in this concrete sheep dip.

F. A. Stewart, assistant chief in farm management, U. of L. in experimental plots showing effect of limestone versus no treatment on barley.

ing on independent studies of factors that are important in soil and water conservation.

A gain of 168 pounds per acre per year achieved with sheep on grass-legume pasture when grazing is regulated as against 4 pounds gain per acre per year when grazing is unregulated on pasture treated or untreated. A bluegrass pasture which last spring turned 187 pounds of meat from heavy stocking of beef and sheep. These are just two of the interesting experiments which will make you an enthusiast for Dixon Springs.

To see the many experiments and demonstrations under way you need some transportation as well as your "hiking boots" for they are spread out over the 5,000 acres. There are more than 400 small experimental plots for testing varieties of pasture grasses and legumes and of other crops under different degrees of soil fertility and management. Pasture studies are being made on more than 40 large plots or fields. About 500 acres of bottom lands are utilized mainly for the production of winter feeds, chiefly corn and corn silage, but some of these areas are used for very early pastures — seeded to rye after removal of the corn crop.

Livestock? — There are 250 head of Hereford Cows — 90 heifers — 60 steers — 15 bulls and the 1944 crop of 200 whiteface calves. Sheep operations include about 1000 western breeding ewes with their 800 lambs. Purebred Hampshire Shropshire and Southdown rams are used with Hampshires preferred.

The Turkey range produces about 2000 birds a year.

Best way to get a first hand picture of the scope of the Dixon Springs activities is to participate in one of the county tours. Several have already been held but here's a list of those planned for the balance of the summer:

July 24 Johnson and Pulaski-Alexander

(*Continued on page 25*)

Scattered over the 5000 acres are several ponds. All have fences around them to keep the livestock out. Water is piped to watering tanks or troughs below the dams.

Everyone enjoyed the barbecued lamb sandwiches served in the shelter house at noon while a welcome shower poured down outside. Left to right: Franklin-Hamilton Farm Adviser, W. C. Anderson; James Hayes, Bill Fisher and Floyd Kerns, Franklin county farmers; G. C. Smith, Pope-Hardin farm adviser.

R. J. Webb, station superintendent, explains pros and cons of concrete trench silo in use at Dixon Springs. It's 8 feet wide at bottom, 14 feet wide at top and 125 feet long. Holds 350 tons of silage.

Last stop was the drinking fountain. When a farmer is thirsty he wants a drink so — six thirst quenchers are provided.

Illinois Democrats Adopt Farm Plank

"We recognize agriculture as the basic industry of America. We remind the farmers of their desperate condition under Hoover 10 cent corn, 40 cent wheat and 3 cent hogs.

"We commend President Roosevelt for the wise farm measures enacted under his administration which have aided the farmer on the way to economic independence. We insist upon the continuation of corn loans and support prices as insuring the farmers place in the economic sun. We urge broadening of marketing agreements and we endorse the reciprocal trade agreement program of Honorable Cordell Hull, a great American statesman.

"History alone will fairly and adequately appraise the far reaching sound and efficient soil erosion and conservation plan of President Roosevelt which has saved millions of acres of valuable farm land in America.

"We stand for the principles of the Farm Credit Administration as the best means of helping small and tenant farmers to their rightful market economy."

Navy Gunner Helps Dad Get Corn, Beans Planted

There's a little different feeling when you're perched on the seat of a tractor instead of in the turret of a Navy torpedo bomber, but an Illinois youth who is a veteran of Pacific flights finds that he still gets a kick out of planting soybeans and corn.

That's what Aviation Machinist's Mate Second Class Clark E. Wise, Jr., son of Champaign County's Farm Bureau president reports.

Clark E. Wise, Champaign County Farm Bureau president, finds that his son, Aviation Machinist's Mate Second Class Clark E. Wise, Jr., has learned something about motors. Looking on are two brothers of Clark, Jr., Jim and Dick.

Wise got a 30 days' leave just in time to help his father plant corn and soybeans. Clark E. Wise, Sr., who is farming a 320-acre farm was doubly glad to see him.

Describing the sensation of working as a gunner in the turret of a Grumman Avenger, Wise says, "You don't get exactly frightened, you just sort of wonder how you are going to come out."

Wise was in on the strikes on Palau, New Guinea, and the second attack on Truk. Before being sent to carrier duty he spent seven months as an aerial mechanic in the New Hebrides. He joined the Navy in July, 1942, after being graduated from high school. He took his boot training at Great Lakes and his mechanical training at Navy Pier, Chicago. From there he went to Jacksonville, Fla., for operational training. He was assigned to Navy air group five in March of this year.

Wise returned to duty the last of June.

Annual meeting of the Producers' Crop Improvement Association will be held Aug. 25 in the Piper City auditorium, according to an announcement by L. R. Downs, general manager.

Figure Corn Deliveries Will Reach 29 Million

With the corn freeze order terminated June 23, the state AAA office on July 1 reported that the final total of corn expected to be delivered by Illinois under the order was 29,640,208 bushels.

Other figures for the state released by the AAA office were: pledged corn delivered, 12,075,790 bushels; total pledged, 21,385,382 bushels; unpledged corn delivered, 6,669,175 bushels; corn contracted, June 20, 4,710,769 bushels.

Total corn expected under the order from the 125 counties in Illinois, Iowa, Nebraska, Minnesota, and Indiana, was estimated at 67,345,193 bushels.

New McHenry Adviser

W. H. Tammeus, farm adviser in Bond County since October, 1941, was scheduled to start work as farm adviser in McHenry county July 15. He succeeds John H. Brock, who also came to McHenry county from the position of Bond county farm adviser in 1935.

Brock resigned his position as McHenry county farm adviser July 1 to serve as farm adviser in Will county.

Midwest Co-ops Join Hands To Manufacture Plant Food

FOUR mid-west cooperative associations have joined hands in developing a modern plant food manufacturing program.

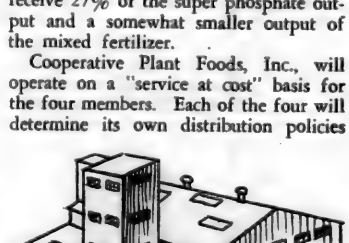
This new organization will be known as "Cooperative Plant Foods, Inc." Its four members are Illinois Farm Supply Company, Indiana Farm Bureau Cooperative Association, Inc., Wisconsin Cooperative Farm Supply Company, and Midland Cooperative Wholesale of Minnesota.

The War Production Board has authorized the allocation of materials for new plant construction for the building of facilities for the manufacture of super phosphate and additional plant food mixing facilities. This plant is located at Hartsdale, Ind. which is just south of Chicago near the Indiana-Illinois state line. This new organization plans to invest $425,000 in these facilities and expects to have them in full operation by the end of this year.

These facilities will provide an annual output of 20,000 tons of super phosphate in addition to 30,000 tons of mixed fertilizers. These quantities will obviously not be sufficient to meet the full requirements of any of the four states, but they will bring much relief because they will supplement existing sources of supply.

The board of directors of Illinois Farm Supply Company recently authorized an investment of $85,000 as the part of IFS in Cooperative Plant Foods, Inc., and will receive a share of the output in like proportion to the investment. Through this apportionment, Illinois will receive 27% of the super phosphate output and a somewhat smaller output of the mixed fertilizer.

Cooperative Plant Foods, Inc., will operate on a "service at cost" basis for the four members. Each of the four will determine its own distribution policies



This is an artist's sketch of the Hartsdale plant formerly owned by the Indiana Farm Bureau Cooperatives, Inc., and recently purchased by Cooperative Plant Foods.

within its own territory. To get this new cooperative going, Fred Herndon, president, and G. W. Bunting, director of purchasing, represented the Illinois Farm Supply Company as incorporating directors. The other incorporating directors are M. J. Briggs and Frank Beall of Indiana; W. A. Bergeron and A. H. Roffers, Midland; Curtis Hatch and J. C. Green, Wisconsin.

According to Herndon, this new development has come about because of the increased demand for plant food and also because of the inadequacy of the present manufacturing facilities, both private and cooperative. Herndon says the new program will permit the farmer to have what he wants, either straight plant food ingredients such as super phosphate, or mixed materials such as high analysis grades which have been available heretofore.

Herndon said, "Within the last five years, the commercial fertilizer tonnage in Illinois has more than doubled. Illinois farmers used better than 100,000 tons in 1943, and 1944 will, in all probability, top that figure with demand continuing to grow."

This demand, according to Herndon, comes from the fact that more and more Illinois farmers are supplementing their soil management program to meet the soil needs brought on by hybrid corn. He wished to make it clear, however, that there was no thought on the part of Illinois Farm Supply Company, nor Cooperative Plant Foods, Inc., to push this program too fast, as these ingredients and mixed fertilizers are used as *supplements*, and every effort, he emphasized, will be used by the organization to continue its support of the Illinois Plan for permanent soil fertility using limestone, legumes, and good soil management practices as recommended by the U. of I. College of Agriculture Extension Service. He points out further that for the past year the Illinois Farm Supply Company has been collaborating with representatives of the Illinois Agricultural Association, University Extension, and Farm Advisers Association in developing an acceptable plant food policy for Illinois.

Herndon believes that Illinois participation with Cooperative Plant Foods, Inc., is just the beginning. From all indications, Illinois farmers are going to increase their use of supplements for their soil, and more than likely a larger and larger percentage of this type of material will move through cooperative distribution channels because of their policy of vigilantly safeguarding quality, rendering better service, and their tremendous influence in lowering the cost of distribution through means of large volume buying and patronage dividends.

Set Up Statewide Company To Market Bean Oil, Meal

A further step toward farmer-owned and directed soybean processing units was taken at the regular monthly meeting of the Illinois Agricultural Association board of directors when it authorized the establishment of an IAA statewide affiliate, the Illinois Milling Company.

With a number of counties contemplating the building of local soybean processing units as priorities on materials are secured, the Illinois Milling Company was authorized for the purpose of marketing the oil and any excess meal produced by the affiliated county units. Business advisory service also would be afforded by the state company as well as direction in establishing uniform systems of office procedure and accounting. It is also contemplated that the statewide company would be able to furnish engineering service to the county member units through the hiring of a qualified man with background and experience in operating soybean processing units. Relationship of the state company to the county units would be somewhat similar to that existing between the Illinois Producers Creameries and the member creameries throughout the state.

First county unit to be established is the Morgan Milling Company, which has been organized by the Morgan County Farm Bureau. The Morgan unit has purchased a 12-acre tract of land on the Chicago & Alton Railroad, southeast of Jacksonville. Plans are under way to construct a plant with a solvent type extractor of 10 ton per day capacity, concrete storage bins of 75,000 bushel capacity, and other necessary buildings. The Morgan Milling Company has solicited more than $100,000 of capital through sale of class "A" preferred stock, 6 per cent cumulative.

The Illinois Milling Company has been incorporated with the board of directors made up of the chairmen of the IAA standing committees, and H. P. Joy, president of the Morgan Milling Company.

As more member county processings units are set up, it is contemplated that the board of directors of the statewide company will consist of representatives from the local units with some representation from the IAA board. The board of the Illinois Milling Company at present consists of Mr. Joy; Talmage Defrees, Smithboro, IAA vice-president, and chairman of finance; Otto Steffey, Stronghurst, organization-information chairman; K. T. Smith, Greenfield, public relations chairman; Lyman Bunting, Ellery, business service chairman; and A. O. Eckert, Belleville, marketing chairman.

W. F. Coolidge, Morgan county farm adviser, and H. P. Joy stand on building site of Morgan Milling Company.

Rock Island Farm Bureau Moves Into Its New Home

Rock Island County Farm Bureau was scheduled to move into a new home on July 7 at the corner of 16th Street and 19th Avenue in Moline. The Farm Bureau offices have been located at 1852 16th Street.

Many modern features have been incorporated into completed office space for the Farm Bureau and its affiliates in the newly remodelled building. The main entrance is of Bedford limestone. Just inside the entrance are two attractive fluorescent lighted display cases. In the main lobby are built-in display cases, bulletin board and comfortable chairs.

The finish throughout is light buff walls with light green woodwork.

Office space in the new home will be occupied by the Farm Bureau, farm adviser's office, Rock Island County Producers Supplies, IAA Insurance Service, Blackhawk National Farm Loan Association, Blackhawk Soil Conservation District, Monmouth Production Credit Association, and Rock Island County Farm Labor Office.

Seven hundred land owners of Wayne county were signed up in 15 days for the organization of a soil conservation district, reports L. B. Kimmel, farm adviser.

The FARM FRONT ROUNDUP

WHEAT LOANS — WFA announces that wheat loans averaging nationally $1.35 a bushel at the farm will be made by the CCC on the 1944 crop. Last year the average was $1.23. The new loan rate is 7 cents above the earlier loan rate announced for the 1944 crop. The rate is 90 per cent of parity.

FARM MACHINERY — WPB has issued two directives designed to increase farm machinery production. One directive removes quota restrictions from small manufacturers permitting them to produce such amounts of farm machinery, equipment and repair parts as they can make entirely from surplus materials or materials obtained with an AA-4 preference rating. The second directive sets up a reserve of 15,000 tons of carbon steel and proportionate amounts of other controlled materials under third quarter allotments to be used in farm machinery manufacture. Machinery manufacture, however, is still limited by manpower and finely machined parts such as ball bearings, brass bushings and similar critical material.

INNER TUBES — OPA announced June 30 that all new inner tubes will be removed from rationing as of July 1, and the passenger tire quota for July and August has been set at 1,950,000 for each month, the largest since rationing began. However, OPA warned that in spite of this allotment, it will take several months to meet the needs of "B" and "C" card motorists. "A" car motorists probably won't get new tires until early 1945.

REPAIR EQUIPMENT — Seeing a fast-increasing need for rebuilding and reconditioning farm tractors, automotive vehicles and other engines, WPB has relaxed restrictions on the manufacture of many types of automotive maintenance equipment.

TRUCK TIRES SHORT — ODT reports there will be a shortage of heavy and medium duty truck tires for replacement purposes during July, August and September.

USED CAR CEILINGS — On and after July 10 persons selling used passenger cars will be required to sell at controlled prices.

TRACTOR OUTPUT UP — WPB on June 12 reported that since July 1, 1943, a total of 199,678 wheel tractors have been produced. For the week ending May 27, a new high production rate was established with 6098 units produced.

SMALL ARMS SHELLS — WPB reports there should be substantial deliveries of small arms ammunition to dealers throughout this summer. WFA officials emphasized that farmers and ranchmen who need ammunition for the control of predatory animals are among the few groups to whom dealers are authorized to sell without special permission.

FERTILIZER PROSPECT — WFA reported June 22 that farmers may get an increased supply of fertilizer for use in 1944-1945 if they order and accept delivery early. Here's expectations on supply: potash, 21 per cent more than in 1943-44; superphosphate, 25 per cent more than last year; nitrogen, more than was actually used this season.

RELEASE MILK CANS — WFA has announced that milk cans will not be rationed after June 30. Farmers and dairies beginning July 1 will be able to purchase new milk cans for handling milk and milk products without purchase certificates.

ARMY TRUCKS — Several thousand surplus Army trucks have been placed in specific, critical agricultural uses under a new procedure involving cooperation between state and county AAA committees and regional offices of the Treasury Procurement Division. However, the number of Army trucks currently being released is so small that relatively few persons who need trucks for essential agricultural purposes are able to get them.

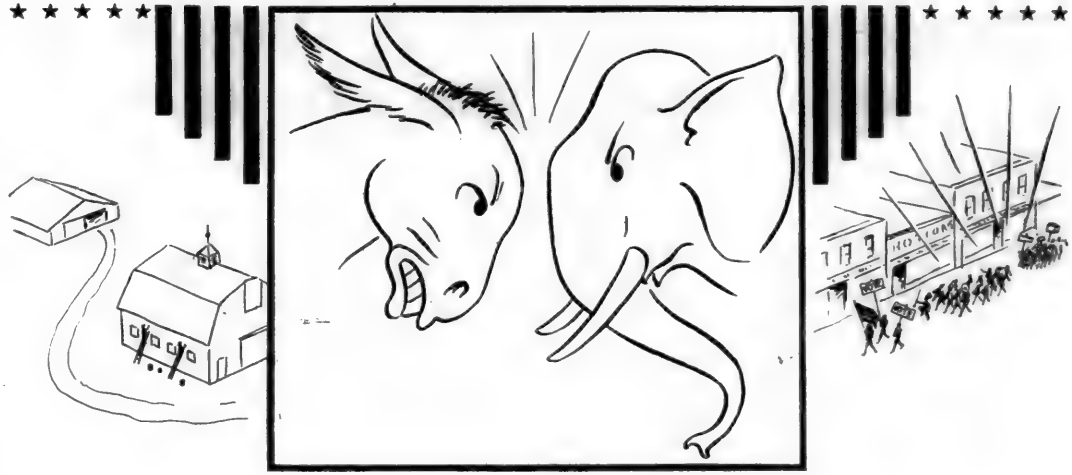
GAS RATIONS — OPA has announced that there will no change in present gasoline rations as a result of third quarter allocations.

FARM SUPPLIES — WPB has amended priority regulation 19 to aid farmers in obtaining available supplies necessary for farm operation. Under the amendment, dealers are required to give farmers preference in the purchase of certain items, upon written certification of the farmer that they are needed in farm operation. The new regulation covers a list of 300 items. Among the more important ones listed are: hay stacker cable, fire extinguishers, flashlights, funnels, grinders for sharpening tools, harness repair tools, concrete mixers, metal fence posts, tire pumps, fly screen, building blocks, Portland cement, insulating materials, lumber substitutes, roofing and siding, field drain tile, truck and machinery jacks, and tire pressure gauges.

WHEAT GOAL — A national goal of 67 to 70 million acres of wheat for harvest in 1945 has been announced by War Food Administrator Marvin Jones. This compares with an estimate of about 67 million acres planted for this year's wheat crop, and with 55 million acres in 1943.

FARM SLAUGHTERING — Effective May 25 all restrictions on the farm slaughter of livestock and delivery of meat were removed by the WFA. This revoked the requirement that farmers had to have a permit to slaughter livestock and deliver meat to persons not living on the farm.

EGG OUTPUT — WFA announced June 17 that the peak of egg production had passed and there was little likelihood forced sales of carload lots to feed mixers would have to be continued.



YOU don't have to be a POLITICIAN to use a lot of RED PAINT. While they are *painting the town*, you can *paint the barn*. You won't have to resort to WHITEWASH either. With SOYOIL No. 5, you too can live in a WHITE HOUSE.

SOYOIL No. 90 RED BARN PAINT and SOYOIL No. 5 WHITE HOUSE PAINT are two of the most popular and most used paints on Illinois farms. But there are many other fine paints in the SOYOIL line . . . . paints for every purpose — walls, floors, porches, implements, and screens — also varnish, floor wax, and paint cleaner.

WHAT THE FARMER IS THINKING

. . . ABOUT ECONOMIC TRENDS AFTER THE WAR

By CRESTON FOSTER

AS farmers work around the clock, with the hope of seeing an early end to the war, they are also turning their thoughts to some of the adjustments and problems which they must meet to win the peace.

Many of these problems and considerations were recognized in the discussions at the Midwest Farm Bureau Training School in Milwaukee in mid-June attended by some 700 Farm Bureau leaders from 12 midwestern states.

One of the best summarizations of what farmers are seeking was contained in a resolution adopted by the group in the closing sessions:

"Farmers are now insistent and will continue to be even more insistent upon the adoption of national policies that are necessary to maintain the largest possible production and consumption of the products of both agriculture and other industry. Such mass employment and production of goods can only be assured when the nation realizes the inescapable relationship of interest between the farmer and the consumer—the man in the country and the man in the city.

"The people of this generation have witnessed a swing from monopolistic practices of big business and sweat shops of labor, to an equally, if not more serious abuse of power by certain leaders of labor. These wide swings must be stopped. What organized farmers are thinking and wanting is not a return to the old deal. They are becoming increasingly alarmed over trends of the new deal. What they want and are going to fight for is an honest deal."

This resolution embodies the position of the Farm Bureau as expressed by Earl C. Smith, president of the IAA, and vice-president of the American Farm Bureau Federation, during the conference session in which the views of labor, consumers, and agriculture were presented by the representatives of the respective groups.

In this discussion Smith declared that "first, and overwhelming everything else, is the uncompromising desire of farm people to bring this present world conflict to a successful conclusion at the earliest possible moment."

The IAA president also pointed out that the long range and permanent problems of farmers lie in the field of taxation and fiscal policies of government. "We need," he said, "a permanent and constructive program of rural credit and policies necessary to assure a reasonable balance between the prices of products of farmers and the products of other industry."

President Edward A. O'Neal of the AFBF also stressed the need for a true economic balance between agriculture, business and labor in his address to the convention banquet. To achieve this balance, President O'Neal declared that it was necessary that agriculture build a strong organization to have equal representation with labor and industry. He warned that "there are many individuals, agencies, organizations and institutions in this country which do not like to see farm people strongly organized and united for aggressive action."

Farm Bureau leaders were in agreement with two points made by C. E. Warne, president of the Consumers Union, and Walter Reuther, vice-president of the CIO United Automobile, Aircraft, and Agricultural Workers Union who addressed the convention. These points of agreement were the desire for a complete military victory and the need for abundant production in both agriculture and industry with a high level of national income in the postwar world.

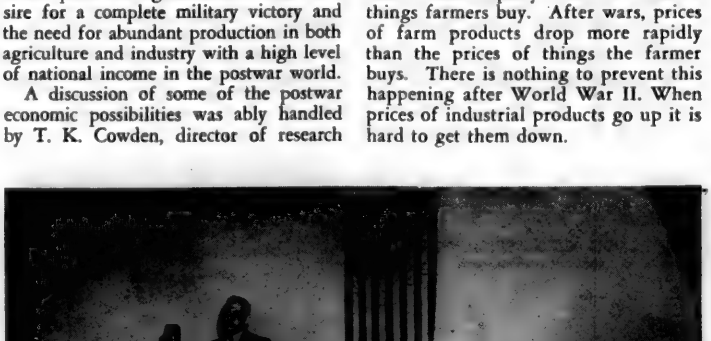
A discussion of some of the postwar economic possibilities was ably handled by T. K. Cowden, director of research for the AFBF. Said Cowden: "We got the highest prices in the two years after the end of the first world war and in the spring of 1920 prices dropped. It is probable that this experience will be repeated after this war. My opinion is that general agricultural prices will not stay at present levels unless the general price level rises.

"It takes more than a bill of Congress to guarantee fair prices. It doesn't take much to wreck a market. Look what happened in eggs."

Cowden also warned that after the war we are going to have high taxes and that in the search for tax sources there will be pressure to increase real estate taxes.

In regard to the price of land, the AFBF economist declared that the rate of increase of land values is the thing to watch. This rate is becoming alarming and the situation could become dangerous. However, he added, a favorable factor in the picture is that the total indebtedness on land has decreased. If we have a repetition of the land value inflation of the first world war period it would make our postwar problems much worse.

During war periods, he said, the prices of farm products usually increase more rapidly than the cost of things farmers buy. After wars, prices of farm products drop more rapidly than the prices of things the farmer buys. There is nothing to prevent this happening after World War II. When prices of industrial products go up it is hard to get them down.



George E. Metzger, IAA field secretary, discussed "Maintenance of Membership" at the Wednesday morning session of the Midwest conference at Milwaukee.

Some other factors to be considered in adjusting our postwar outlook, according to Cowden are:

In the first world war about 25 per cent of our economy was engaged in war. Today 50 per cent is devoted to the war effort. This means there are more readjustments to be made.

There are 21½ million persons in the armed services, war factories and government agencies, or one out of every three of our 61 million employable people will have to find a different occupation after the war is over.

At the end of the last war we had a debt of 26 billion and to date in this war it amounts to 185 billion dollars.

After this war, he said, we are not going back to the normal that some think of as 1928-29. "We are going to a new and better normal." But, he added, both chaos and ruin are also within our grasp, depending on how we meet the future. He emphasized that if we are to have world cooperation we will also need to have world trade.

Cowden declared that he had a broad faith in our nation — a faith in our ability to produce not only materials but to produce better doctors, better teachers, etc. "We probably will have unemployment, strikes, and farm prices will not be as high as we like, but somehow when we look back 10 years from now I feel that we will have made some advances."

Two major projects of the AFBF discussed by R. B. Corbett, secretary-treasurer, were the commodity groups being planned, and the Farm Bureau's recommendation for a national fertilizer program.

Corbett reported that in March the AFBF approved a plan for setting up five commodity departments for livestock, dairy, poultry, fruits and vegetables. In line with the development of this project, Corbett discussed establishing national committees for each of the commodities. These committees would be made up of farmers and they would serve somewhat as a board of directors for the commodity groups. The committee in turn would report to the AFBF board. In this way, the AFBF board would be better able to speak for all commodity groups. If we are going to set up national commodity groups, Corbett asked if it would not be logical to set up state commodity committees and even county commodity committees.

In regard to the national fertilizer program proposed by a staff committee of the AFBF after considerable study on the subject, Corbett said that the objective of such a program is not to dominate the commercial fertilizer field, but for cooperatives to join in setting up enough machinery, or to control enough resources to furnish a yardstick for the industry. If we are to develop our fertilizer program, he said, we must have some interest in the mining and distribution of soil minerals. Corbett outlined some of the recommendations of the AFBF staff committee for financing such a project and stressed the part land grant colleges could play in the educational field of the program.

Corbett pointed out that there will be a greatly expanded use of fertilizers after the war and reported some of the projects that have been carried on in the field by state Farm Bureaus and some that are contemplated in the future.

Minnesota, Ohio and Indiana Farm Bureau cooperatives have had considerable experience in the fertilizer field, and are expanding operations. Wisconsin Farm Bureau has approved the adoption of a state-wide fertilizer program and is forming a new cooperative to be known as the Wisconsin Farm Fertilizer Cooperative with authorized capital stock of $500,000.

Cooperative associations of four states, Illinois, Indiana, Wisconsin and Minnesota, also have recently formed a new cooperative to engage in the manufacture of plant foods.

Rural schools, medical care for rural people, and the federal social security program came in for discussion at the conference. Donald Kirkpatrick, legal counsel for the AFBF and IAA, discussing the federal social security act, said one of the questions that will be facing farmers in the future is whether they are to be brought under the act. He outlined the past history of the legislation, its provisions and the groups covered, and of the current proposals for extension of coverage.

On rural schools, Dr. Frank W. Cyr, former Nebraska farm boy and now professor of education at Columbia University, New York City, declared that we must determine the purpose of the school in the rural community and see that program meets the needs of all. In looking at the rural school picture, he said, it should be realized that the early pioneers set up districts to fit the educational needs of the area. Today, he continued, we need to reorganize our schools to fit present needs. This doesn't mean the elimination of all one-room schools, and it doesn't just mean making our schools bigger — the need is to provide modern education.

Dr. Cyr suggested that in many cases more educational opportunities could be brought to the country through the use of mobile libraries, health and dental clinics, and even mobile mechanical training shops similar to the mobile units our Armies are using to repair motorized equipment at the front. In the same way, he said, we might even make use of circuit teachers. He also declared that there is too much emphasis today on the agricultural land tax for financing schools. "We are not using other sources of taxation that are available."

Above all, Dr. Cyr emphasized that the rural school problem should be determined by the rural people.

On the topic of medical care for rural people, Dr. Michael Davis, chairman of the committee on research in medical economics, New York, emphasized the growing trend toward few doctors in rural areas, and the need for meeting the problem growing out of this trend.

At one of the evening sessions of the conference, Farm Bureau leaders heard an interesting discussion on British aims and policies by Allan Kline, president of the Iowa Farm Bureau Federation. Kline, who recently made a trip to England, pointed out that Great Britain recognizes she is no longer the world's greatest power, but looks to America. As a result, the United States has a tremendous responsibility as the world's leading nation. He also asserted that it appeared that England is going to maintain the integrity of the individual—that she is not going to some form of socialism after the war.

Clifton Utley, Chicago Sun, discussing Germany's 60 year war, said the key to peace in Europe is in preventing aggression on the part of Germany in the future. Our job is to convince Germany that aggression is hopeless, he said.

Farm Radio Batteries

WPB has informed hardware merchants and other dealers that "substantial increase in farm radio batteries within the next two or three critical months would seriously affect our military program. What we are attempting to do at present is to hold what production of farm radio batteries we now have. Military requirements exceed production of batteries by an estimated 30 per cent."

Scott county will grow more than 100 acres of Mung beans in 1944 at the request of Dr. Chang, government buyer from San Francisco. A guarantee of 9 cents per pound is made to growers with a possible 12 to 15 cents, reports Farm Adviser George H. Reid.

Illinois farm advisers wished that they had worn their winter suits when they toured the University south farms during their annual conference in June.

Farm Income Big Factor In Prosperous Post-War World

FINANCIAL reserves of farmers, coupled with needs for goods, should help sustain high production in the post-war period, Prof. H. C. M. Case, head of the department of agricultural economics, U. of I. College of Agriculture, told Illinois county farm advisers at their summer conference in Urbana.

It is significant, he said, that in the period from 1937 to 1940 agriculture with approximately 10 per cent of our national income, expended about 14 per cent of the new outlay for producers' goods. "This is just one indication of the dependence upon agriculture to bring prosperous conditions in the postwar period. During the period 1937 to 1940, it has been estimated that farmers spent about a billion dollars a year for producers' goods, that is, buildings, machinery and other production goods."

Case pointed out that it appears that the agricultural market for farm products for five years after the war should make it possible for farmers to expand their purchases of production goods.

Illinois farm advisers get figures on soil and water losses on corn farmed up and down the slope in the U. of I. plots. This study has been conducted cooperatively by the research division of the Soil Conservation Service and the Illinois Agricultural Experiment Station.

The question Case raised was whether the farmer could hold his savings for the purchase of such production goods after the war. Most of it, he said, could be absorbed by paying higher prices for land and by assuming larger mortgage indebtedness, or land values could be held at reasonable levels and much of these savings could be used for needed farm improvements.

Case emphasized that only "by preventing serious inflation can we swing into balanced production in the postwar period."

Case also pointed out that our post-war prosperity likewise depends upon employment and purchasing power for all individuals who are going to buy goods. Allowing for a practical minimum of two million unemployed, perhaps nine million or more additional jobs will have to be provided in 1946 over 1940 if we are to have full employment.

In the matter of postwar employment, agriculture stands in a different position from many other lines of industry, he said. Much of industry was converted for the production of war munitions and stopped normal production.

Agriculture, on the other hand, did not greatly change its type of production but intensified production along the same lines. The productions of crops and livestock were changed, but in general we have produced the same kinds of products.

This leads directly to the question of postwar employment. Many people expect new jobs for returned service men in agriculture. There will not be many new jobs in agriculture. There will be replacements. Many farmers, because of the shortage of labor, have continued farming longer than they intended. Some will remain in the farm, but they will want someone to take their place when it comes to heavy farm work. Many boys are becoming old enough to take a man's place on the farm unless more of them continue in school longer than in the past.

Some makeshift farm hands have been found in the present labor emergency who under normal conditions would not be on farms. After they are replaced by competent farm workers there will not be many new jobs available. Modern improvements have continued to make possible an increased output per worker in agriculture, resulting in a 50 per cent increase in output per worker over the past 50 years, Case said.

Other conclusions drawn by Case included: (1) After having been under a stringently controlled economy, the sudden removal of all restraints in the post-war period would likely be disastrous; (2) much can be attained toward sound economic life through reducing losses resulting from ill health and increasing efficiency through proper nutrition, and (3) local postwar programs of any one community added to those of other communities adds up to a national program, and farmers as individuals and members of communities have a responsibility in helping to develop sound local postwar programs.

Reflecting prospects for somewhat larger supplies of fertilizer in the year beginning July 1, 1944, particularly phosphates and potash, the WFA has eliminated crop classifications and made several other changes in its fertilizer order.

In the year beginning July 1, all general crops may be fertilized with as many pounds of fertilizer per acre as recommended by the state experiment stations. There will be no A and B crop classes as there have been this year.

June 30, 1944

NOTICE

Illinois Agricultural Association
Election of Delegates

Notice is hereby given that in connection with the annual meeting of the Ford County Farm Bureau to be held during the month of August, at the hour and place to be determined by the Board of Directors of said County Farm Bureau, the members in good standing of said County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

PAUL E. MATHIAS,
Corporate Secretary

DAD says I'm little, but that I'm a mighty big help these days when help is scarce on the farm, and he pays me well for helping with the chores.

So every Saturday I take my money and see how much I still have to earn before I can get a War Bond.

Mr. Clifford—he's our mailman—says he is saving a War Bond for me to have as *my own*, just as soon as I get enough saved.

Mr. Clifford sells War Bonds to Dad, too. And one day when Dad was buying a Bond from him, Dad said: "Cliff, it's just like I was buying a chunk of Victory!"

So that's why we children started calling Mr. Clifford the "Victory Man."

WHY FARMERS EVERYWHERE ARE BUYING WAR BONDS — REGULARLY!

War Bonds play many roles in this war—from teaching young America how to save to buying the materials of VICTORY. And when the war is won, many a farm the country over will have the backing of hundreds and thousands of dollars for replacement of machinery and equipment and the construction and modernization of new buildings. *That's* the way War Bonds are helping win the peace!

YOU NEVER GET LESS THAN YOU LEND and you can get 1/3 more than you invest. When held 10 years, Series E War Bonds yield 2.9% interest, compounded semi-annually. You get back $4 for every $3.

If an emergency comes along your War Bonds are like money in the bank. Uncle Sam will redeem them in cash—at full purchase price—any time after you've held them 60 days.

YOUR HELP IS NEEDED!

FACTS ABOUT WAR BONDS (Series E)

You LEND Uncle Sam:	$18.75, 37.50, 75.00, 375.00, 750.00
Upon Maturity you get back:	$25.00, 50.00, 100.00, 500.00, 1000.00

You can buy War Bonds from your bank, Postmaster, Production Credit Association, or Rural Mail Carrier

Let's All KEEP BACKING THE ATTACK!

WAR . . . BRINGS SOIL DEPLETION

AFBF COMMITTEE MAKES STUDY OF NATIONAL FERTILIZER NEEDS AND RESOURCES — SOME PARTIAL FINDINGS

MOST people know the story of how our soils were depleted to meet the food needs of World War I. Today the cycle is being repeated on a vaster scale than in 1914-18. Better yields through the use of improved seed and favorable weather for seven crop years have tended to hide the real danger of soil mineral depletion.

In view of this trend which threatens our national security, the American Farm Bureau Federation executive committee in January authorized a staff committee to make a study of our national fertilizer needs and resources. The staff committee has prepared a report of its intensive study, and while the complete recommendations cannot be fully publicized at this date, there are some findings which deserve thoughtful consideration.

In making the report the AFBF staff committee has kept in mind these three essential points:

1. Soil fertility is our nation's most fundamental capital resource, the maintenance of which is essential to our national security.

2. The backbone of soil fertility consists of exhaustible soil minerals. As the supply of these diminishes, it becomes increasingly difficult to produce balanced rations and diets combining adequate amounts of proteins, minerals, and vitamins — a situation leading to dependence upon the production of cultivated carbonaceous crops (corn, oats, etc.). The effect of this transition is to hasten the depletion of the fertility resources.

3. Sound public policy, therefore, should be such as will insure to farmers the adequate amount and the kind of mineral fertilizer to meet their needs.

If such a policy is made effective, (1) farmers can become independent of the need for expanding their acreage of cultivated crops; (2) our land, labor, and equipment can be applied with increasing efficiency in terms of a rising standard of living for agriculture, and the production of a balanced and nutritious national diet.

Such a policy — whatever else is required — is basic to the social, economic, and political welfare of farm people everywhere.

In studying fertilizer needs, the committee came to three definite conclusions:

1. That, assuming wise utilization of war constructed ammonia plants, existing capacity to produce chemical nitrogen fertilizer is now adequate to meet the immediate and prospective demands of agriculture.

2. That, however, plant facilities to produce both potash and phosphate must be expanded substantially.

3. That the need for initiating steps to achieve such expansion is urgently related to our security as a nation.

The committee's report emphasizes that the depletion of soil fertility is not just a wartime problem. Wartime demands for increased production highlights the problem and centers more attention on it. War speeds up the fearful process of exploitation.

Some impression of the extent of the draft upon the soil's fertility, resulting from a continuous cropping system, may be gained from the results of the classic Morrow plots at the University of Illinois.

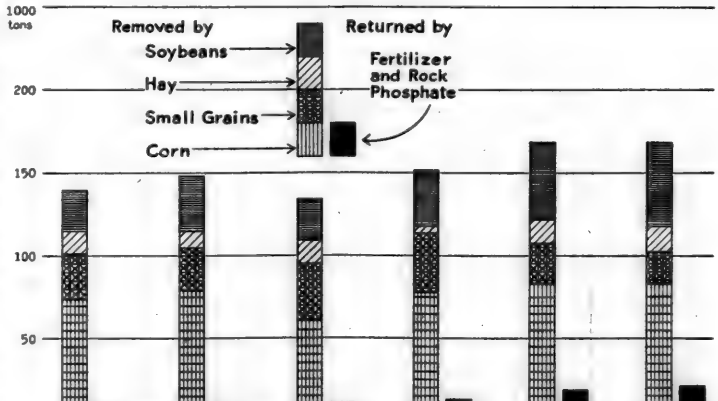
In a period of 40 years without mineral treatments the yield in corn and oats in rotation declined about 40 per cent. During the first 16 years they declined about 20 per cent. These plots are located on some of the best land in Illinois.

The committee points out that farmers need not be deceived by the fact that production yields calculated on a state average basis have continued to be high, a fact attributable to spectacular developments in plant genetics, in methods of tillage, and to the expansion and shifting of acreages in cultivation.

The extent to which we are now exporting fertility throws considerable light upon the scale of our current depletion problem.

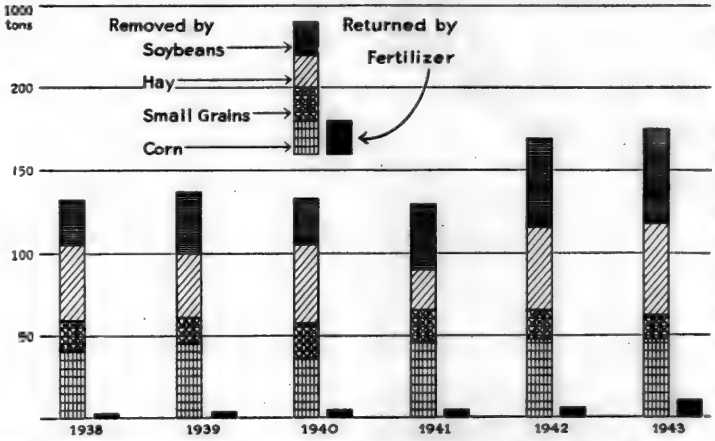
Since war broke out we have already exported approximately 25 per cent of

Phosphate Removed From Soil By Specific Crops and Returned By Fertilizer In Illinois, 1938-43.



This chart shows phosphorus expressed in terms of phosphoric acid removed from Illinois soils from 1938 to 1943 by specific crops and addition of phosphoric acid to the soil by use of commercial fertilizer including raw rock phosphate. Phosphoric acid available from rock phosphate is based upon 50 per cent becoming available within 10 years after application.

Potash Removed From Soil By Specific Crops and Amount Returned By Fertilizer In Illinois, 1938-43.



This chart shows potassium expressed in terms of potash removed from Illinois soils from 1938 to 1943 by specific crops and the amount returned to the soil by the commercial fertilizers.

our annual food production, representing about 434,000 tons of phosphate and 593,000 tons of potash. For some time, beginning before Pearl Harbor, we have been shipping substantial quantities of phosphate in concentrated phosphates. More recently 10 per cent of our total potash production has been earmarked for export.

For reasons of military secrecy the committee did not have access to figures indicating the amount of phosphorus diverted to munition uses which would otherwise be domestically utilized as plant food.

These figures were cited by the committee as indications of the variety of ways in which war has taxed the fertility resources of the soil; they likewise give some indication as to the dimensions of the job which now concerns us.

Based on an interpretation of the experiences resulting from 40,000 test demonstration farms, the Land Grant College Association concluded in a recent report that a three-fold expansion in phosphate plant capacity would be necessary to make it possible for all farmers in the humid and irrigated regions of the United States to follow the example established on test demonstration farms. In quantitative terms, the amount so required is 3½ million tons of P205. This P205 is equal to 17,500,000 tons of 20 per cent super phosphate. Last year a little better than a million tons of phosphate were put on our soils in the United States.

Recognized authorities in the field estimate that the country needs an annual minimum of 1½ million tons of potash. Last year farmers put on 630,000 tons.

It is noted that whereas phosphorus deficiencies are almost universal, potash deficiency now seems to be most acute in the production of intensive crops and more generally throughout the north central states.

AFBF — Co-ops Set Up Research Association

DR. George Scarseth, chief in agronomy, Purdue University, has been engaged as director of research of the newly formed American Farm Research Association, according to an announcement from the American Farm Bureau Federation.

Farm Bureau members who attended the IAA convention last year will remember Dr. Scarseth as one of the outstanding speakers at the soil improvement conference.

The new association, with headquarters in the AFBF offices at Chicago, is jointly sponsored, financed and managed by the AFBF and 10 charter members of statewide cooperative farm supply purchasing organizations. Illinois Farm Supply Company is one of these charter members and C. H. Becker, manager, is on the board of the association, as well as Earl C. Smith, IAA president, and AFBF vice-president. It is contemplated that additional state associations will seek membership in the American Farm Research Association.

According to John W. Sims, operating manager of the Ohio Farm Bureau Cooperative Association, and president of the new organization, this research program "springs from a growing awareness on the part of many Farm Bureau cooperative associations for the need of a better understanding and application of existing data."

Sims made it clear, however, that this program will not engage in actual physical research, but will serve as a coordinating agency to gather and catalog existing research data from the land grant colleges, and with this, serve and advise member associations on their practical problems.

The research program will use and support the work of the land grant colleges and may point the need for new and amplifying research studies in the field of livestock feeds and feeding, plant foods, and farm fuels and lubricants. It is the plan of the association to begin on these fields first, and probably research in other lines will follow.

The association's policies will be under the general direction of its board, consisting of one director from each participating association and three representatives of the AFBF.

To get their program started, the board of directors have already appointed three active committees to assist Dr. Scarseth. A committee on farm fuels and lubricants under the chairmanship of C. H. Becker, IFS manager; a committee on livestock feeds and feeding under the chairmanship of B. A. Rainey, Michigan Farm Bureau Services, and a committee on plant

(*Continued on page 25*)

Dr. George Scarseth, chief in agronomy, Purdue University, who has been engaged as director of research of the newly formed American Farm Research Association, chats with John R. Spencer, IAA director of soil improvement, at the Midwest conference.

For the war against flies and insects, the Rocket Gun is not recommended. Instead of this clumsy, noisy weapon, we suggest that you use a much more quiet and efficient product called Blue Seal Fly Spray.

BLUE SEAL FLY SPRAY

Here's the way Blue Seal Fly Spray is effective:

IT KILLS. Blue Seal contains two effective ingredients that kill flies by contact. Many different types of materials and formulae were tested in Illinois dairy barns by cooperating farmers in our search to determine the most effective killing agencies and formulae. We have them now in Blue Seal Fly Spray.

IT REPELS. These barn tests prove also that Blue Seal Fly Spray has powerful knock-down and repellent property. By spraying the cows at night and in the morning a half hour before milking time, its effectiveness will last through the day.

IT'S SAFE. Blue Seal kills flies, but it is harmless to animals and humans. Its highly refined petroleum oil base assures easy spraying, prevents dirt collection, will not mat the hair nor irritate the skin.

For Household Use—

For a household use, use Blue Seal Fly Killer. Fly Killer is especially prepared to effectively kill and control flies in the home and milk house. You can use it without fear of tainting food or milk. It will not stain wall paper, clothing, curtains, or drapes. It is harmless to humans, kills flies, ants, roaches, bed bugs, mosquitoes, and any other insect pests.

ILLINOIS FARM SUPPLY COMPANY

608 South Dearborn St. Chicago 5, Illinois

USDA Estimates Drop of 24% in Spring Pig Crop

According to USDA reports, the spring pig crop of 1944 is estimated at 55,925,000 head, which is 24 per cent smaller than that of 1943. A fall pig crop of about 32 million head, a decrease of 33 per cent from 1943, is indicated by farmers' reports on intentions for fall farrowings, the USDA says.

A total pig crop, spring and fall combined, of about 87,925,000 head would be 28 per cent below 1943, and 16 per cent below 1942, but larger than any other year on record.

The number of hogs over 6 months old on June 1, 1944, was about 5 per cent smaller than a year earlier but much larger than in any other year, USDA reports.

Illinois shows a reduction in the number of sows farrowed in the spring of 1944 as compared with 1943 of 18 per cent. For all the North Central of the country (corn belt) the spring pig crop reduction was estimated at 25 per cent. The states of Minnesota, North Dakota, South Dakota and Nebraska show reductions in farrowing of 29 to 36 per cent.

The USDA report also stated that the reduction in the total yearly pig crop means that there would be 33,771,000 pigs fewer than were saved in 1943, and 16,634,000 below 1942, but 12,600,000 above the 10-year average.

The reduced hog production resulting from such a decrease in the pig crops may materially change the feed situation in 1945 from what it is now in 1944 and was in 1943. If feed crop production in 1944 should be about as large as in 1943, the number of grain-consuming animal units for 1945 would be in more normal relationship to feed grain production and to total feed supplies than in either 1943 or 1944, the USDA report pointed out.

Illinois Ranks Second In Land Value Increase

Illinois is in second place among states of the Middle West in land value increases during the last year, according to a report of the Chicago Federal Reserve Bank. This conclusion is based on reports from country banks.

Percentage increases in the last year for Indiana, Illinois, Iowa, and Michigan were reported at 19, 17, 16, and 15 respectively for the last year.

In Illinois, "better" land values were quoted by reporting banks at $202 an acre average compared with $124 in normal times.

Plan County Livestock Tours for 22 Counties

Twenty-two county livestock committees are planning livestock and pasture tours, according to Sam Sorrells, fieldman for the IAA livesock marketing department.

Here is the schedule of tours by counties and dates:

Aug. 3, Edwards; Aug. 4, Gallatin; Aug. 16, Monroe; Aug. 17, Hamilton; Aug. 18, Franklin; Aug. 22, St. Clair; Aug. 23, Clinton; Aug. 24, Washington; Aug. 28, Perry; Aug. 29, Fayette; Aug. 30, Jackson; Aug. 31, Clay.

Sept. 1, Wayne; Sept. 6, Wabash; Sept. 7, Effingham; Sept. 8, Marion; Sept. 11, Lawrence; Sept. 12, Johnson; Sept. 14, Williamson; Sept. 15, Saline; Sept. 19, Jefferson, and Sept. 20, Richland.

Chicago Junior Market Show Set for Sept. 28

A swine show for midwest farm boy and girl exhibitors will be held Thursday, Sept. 28, at the Chicago Stock Yards. It will be the fifth annual renewal of this event known as the Chicago Junior Market Hog Show and Sale.

Cash premiums of $332 will be offered and special prizes will be awarded by a number of swine breeder associations.

Competition will be divided into three divisions, with three weight classes in each. The divisions will be for individual barrows or gilts, pens of three hogs, and pens of five.

Iroquois County Girl's Lamb is Show Champion

It was a big day for two girls who had entries in the sixth Chicago Junior Market Lamb Show and Sale in June for they took three of the four top honors in this event.

Miriam Meyer, Crescent City, Iroquois county, exhibited the winner in the single lamb class which was the champion of the show. This lamb weighed 80 pounds and sold at auction at 42 cents per pound.

The other girl to make an outstanding showing was 17-year-old Louise Bailey of Lowell, Lake county, Ind., who took two blue ribbons as exhibitor of the first prize pen of 5 and 10 lambs. She also took second prize with a pen of three.

Both girls had their entries consigned to the Chicago Producers. Vincent Horst, Mt. Morris, Ogle county, secured the other first prize with a pen of three.

Miriam Meyer, Iroquois county, had the champ of the Chicago Junior Market Lamb Show and Sale with this 80-pound Southdown-Hampshire lamb. At the right is six-year-old Sheryl Clayton, a neighbor of Miriam.

Entries were the largest in the history of this event, that came mostly from Illinois with others from Wisconsin and Indiana. There were 59 boys and girls who competed with their 332 entries — 201 of which were consigned to the Chicago Producers, or approximately 60 per cent.

Rural Schools Too Often Experimental Laboratories

By John K. Cox

FOR many years our rural schools have too often been the experimental laboratory for inexperienced teachers. The rural school almost invariably has been looked upon as a stepping stone to town schools or to matrimony. Teacher tenure there is very short, with a change of teachers in some instances every year.

When the rural teacher makes a success, she is told that she deserves something better and is likely succeeded by another inexperienced teacher. Such a situation does not lend itself to building an efficient and continuous rural school program.

Also, there always have been only a limited number of teachers specialized by training for rural teaching who actually do teach in rural schools. It has been commonly thought that anyone who could teach at all could teach in a rural school.

The isolation of the one room rural school tends to eliminate the competition with other similar schools and a lower average standard for all results. The nature and complexity of the work of instruction in the one room school requires special training in that particular field of education.

Also, and perhaps equally important, the rural teacher should be socially adjusted to the life in a rural area before she attempts the task of assisting her pupils in adjusting themselves socially. It is doubtful whether the average town or even village girl who has not been specifically trained in rural education has much conception of the economic and sociological aspects of her work.

A press release of the Extension Service, University of Illinois, College of Agriculture, in June, 1944, states, "Reports from teachers' colleges indicated that there were no teachers enrolled in preparing for rural school teaching." At a meeting of the Illinois Rural Education Committee at Springfield on June 3, 1944, Dr. Hans Olsen, Eastern Illinois State Teachers' College, said that over 2,300 emergency certificates had been issued in Illinois to May 29. Also he said practically no students were preparing for teaching in rural schools and only about 100 in the State of Illinois were graduated this year for elementary school teaching.

Anyone who is interested in teaching at the present time can get a position with more money and more enticing prospects in larger schools. Who are left to teach the one room school? Often they are older teachers who had taught before but who had discontinued teaching when teachers were plentiful. Also some married women, former teachers, have gone back into teaching for the money, for patriotic reasons, or to bide the time until their husbands return from the service. Many of these are good teachers. But the supply is limited, and will become more limited. Some of them are in advanced years.

A careful survey by the Illinois Education Association indicates that more than 1200 rural one room districts did not operate their schools in 1943-44, one cause being the lack of teachers. The scarcity of teachers is more serious in one room districts than in other types of schools because of the peculiar difficulties of the one room districts as mentioned above.

One answer, and perhaps the only practical answer to this teacher shortage in rural schools is the reorganization into larger districts. In that way fewer teachers will be needed, and there can be more selection in securing the better teachers. Also, some of the savings achieved by eliminating the need of a few teachers can be applied to the salary schedules of those employed. The higher salary schedule will enable the rural school to bid on a fairer basis against town schools for the outstanding teacher talent. The larger attendance units will bring more competition between pupils and better opportunities for social adjustment and learning to work with others of one's own age and abilities. To date there are 38 counties reported who have set up their school committees for the study of their rural school problems, and 14 more have made plans to establish such committees. The Illinois Agricultural Association offers the services of this office in assisting by printed material or personal contacts in the solving of our rural school problems.

..."AS FARMERS FORWARD GO"

By O. D. Brissenden

LAST month C. H. Mills, organization director for the Cook County Farm Bureau had 2999 members and when he drove into the farm of Lester V. Richards and asked him to join the Farm Bureau. Richards said "yes" without any hesitation and became the 3000th member.

Lester V. Richards became the 3000th member in the Cook County Farm Bureau when he signed up last month. C. H. Mills, Cook COD, Jacob Ouwenga, president, and Richards appeared on radio station WLS in a broadcast recognizing the outstanding membership achievement.

Since this marked an unusual membership record, Mills, Richards, and Jacob Ouwenga, president of the Cook County Farm Bureau, appeared on a broadcast over station WLS. On July 1, Mills reported that 30 more members had been added to the membership rolls.

In the interview over WLS conducted by Arthur C. Page, Ouwenga, charter member, told the story of how Cook county's membership had grown. He said that when the Cook County Farm Bureau was organized in 1920 there were about 1600 members. In 1926, membership dropped to 185 members. It was proposed that the county be divided up and the membership allotted to adjoining counties. A small group of the remaining 185 members said "No, there is a

C. H. Mills, Cook COD, tells Earl J. Hays, La Salle COD, at the Midwest conference that Cook County Farm Bureau is over the 3000-mark in membership.

place and a need for a Farm Bureau in Cook County."

The members rolled up their sleeves and started buliding membership. Today with 3000 members, Cook County Farm Bureau has the largest membership of any county in Illinois and has two offices — one at Arlington Heights and the other at Blue Island. Both buildings are paid for and a reserve has been put aside for a rainy day.

Ouwenga pointed out that Cook county has approximately 4200 farms. There are some 2200 general and dairy farms and near the metropolitan area about 2000 vegetable growers.

Richards, when asked why he joined the Farm Bureau said, "I know from experience we're living in an organized world and a man by himself can't get very far. Before I turned farmer I belonged to organizations. The Farm Bureau is a strong farm organization and I want to belong. Farmers can do many things as an organization they can't possibly hope to accomplish by themselves."

Glen Snider, Gibson City, signs a membership contract and becomes the 1000th Ford County Farm Bureau member. The solicitor is Grotis McGuire, member of the Ford County Farm Bureau board and Service Company board.

Illinois and Iowa pledged the attainment of their respective quotas in the "Million Member Goal" in 1944 at the Midwest Farm Bureau Conference held in Milwaukee in mid-June. Other midwest states indicated that they would make their goals in 1945. Illinois reported that it expected to exceed its goal of 100,453 by a slight margin in 1944. Iowa indicated that it expected to have 75,000 members by the end of 1944 as compared with its goal of 74,243.

The Midwest Conference was well attended. Registration from Illinois was reported at 139. Wisconsin had a registration of 162, and Michigan, 138. Total registration was reported at 673.

R. B. Corbett, secretary of the AFBF, in summarizing the conference said that the one major thought is the tremendous responsibility resting on the Farm Bureau in postwar readjustment.

Ray H. Schilling, vocational agricultural teacher at Elkhart, Ind., is the new county organization director in Logan county replacing Lee Roy Hayes, who entered the armed services May 20.

Marion County Farm Bureau has employed John C. Bigelow as county organization director. He took over his duties as of June 23.

H. H. Glick, organization director in Wayne county for 10 years, has tendered his resignation to be effective Aug. 8.

Aug. 15 Deadline for Co-op Tax Information Returns

Agricultural organizations, exempt from filing income tax returns under the provisions of Section 101 of the Internal Revenue Code and whose fiscal year ended Dec. 31, 1943, or Jan. 31, Feb. 29, and March 31 of 1944, must file information return Form 990 (revised May, 1944,) on or before Aug. 15, 1944, according to C. C. Chapelle, tax consultant for the Illinois Agricultural Auditing Association. All other cooperatives must file by the 15th day of the fifth month following the close of their fiscal periods.

The returns must be filed with the Collector of Internal Revenue for the district in which the organization is located.

Chapelle pointed out that the filing of the returns calls for great care in the preparation, and if it is desired, members of the Association will be given assistance in the work.

L. W. Braham, who recently resigned as farm adviser in Will county, will become general manager of Will County Co-operatives and also will serve as county organization director. He succeeds Frank Loucks, who has served well in the capacity of COD since Fay Sims left to enter the armed services two years ago.

IAA LIVESTOCK MARKETING COMMITTEE

HOLDS FIRST MEETING

FIRST meeting of the newly organized statewide livestock marketing committee of the Illinois Agricultural Association was held July 7 in the Chicago IAA offices.

The committee discussed problems of livestock marketing and formulated plans for further study of the whole picture. President Earl C. Smith, and George E. Metzger, IAA field secretary, attended the meeting. It was tentatively decided to hold the next meeting some time in August.

This special committee was formed at the recommendation of the IAA marketing committee made at the May 19 meeting of the IAA board of directors. Its purpose is to study the livestock marketing program in Illinois and determine ways and means of securing and maintaining a much greater bargaining power for farmers in the sale of their livestock.

The committee is made up of two persons from each of the Congressional districts selected by Farm Bureau leaders of the respective areas, together with one member representing each of the cooperative livestock marketing agencies serving the state and members of the IAA marketing committee.

Operation of the IAA livestock marketing committee will be similar to that of the IAA school committee in that it will make a study and report its recommendations to the IAA board of directors.

Members of the committee from the Congressional districts are: 11th — Earl Hughes, Woodstock, and Russell Webb, Plainfield; 12th — Carl Johnson, DeKalb, and E. C. Phelps, Rockton.

Thirteenth — Ed Stukenberg, Freeport, and Ed Stengel, Mt. Morris; 14th — S. S. Stetson, Milan, and Irving Graham, Carthage; 15th — Ed Gumm, Galesburg, and A. K. Hohenboken, Osco.

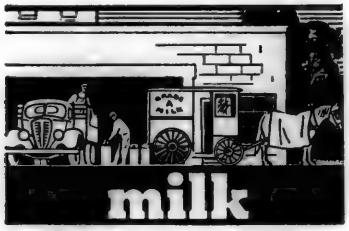
Sixteenth — Charles Haller, Edwards, and R. V. McKee, Varna; 17th — Charles Smith, Eureka, and Bryon Kline, LeRoy; 18th — Alfonse Bourgeois, Rt. 2, Kankakee, and C. E. Johnson, Martinton.

Nineteenth — Milton Warren, Mansfield, and D. H. Cuppy, Kemp; 20th — James Coultas, Winchester, and Charles Smith, Eldred; 21st — T. H. Lloyd, Girard, and Lawrence Todt, Harvel.

Twenty-second — August Sachtleben, Holeton, and T. J. Williford, Greenville; 23rd — William Pigg, Boulder, and Clay Trimble, Montrose; 24th — Franklin Bramlet, Eldorado, and L. F. Brissenden, Flora; 25th — J. P. Redman, Cairo, and Prosper Jacko, DeSoto.

Representatives of the livestock marketing agencies: J. Frank Felter, Eureka, Peoria Producers; H. H. Parke, Genoa, Chicago Producers; Roy Burrus, Arenzville, St. Louis Producers; O. B. Goble, Charleston, Indianapolis Producers; Dan J. Maloney, Ridgway, Evansville Producers; Harvey Herndon, Adair, Illinois Livestock Marketing Association; John P. Stout, Chatham, Springfield Producers.

IAA marketing committee members: A. O. Eckert, Belleville; Harvey Adair, Chicago Heights; Charles Lauritzen, Reddick; Ronald A. Holt, Galva; Talmage Defrees, Smithboro, and H. N. Myers, Clinton.



by Wilfred Shaw

The Chicago, St. Louis and Quad Cities milk markets are operating under Federal Milk Market orders. The following comparisons of receipts and Class I sales have been computed from the respective market administrators' reports which are authentic for these markets.

Milk receipts for each marketing area in May showed the following changes in **May 1944 compared with April 1944:** Chicago — plus 6.8%; St. Louis — plus 12.8%; Quad Cities — plus 15%.

Milk receipts in May 1944 compared with May 1943 were as follows: Chicago — plus 4.5%; St. Louis — plus 9.6%; Quad Cities — plus 9.9%.

Class I milk sales in May 1944 compared with April 1944 were as follows: Chicago — plus 1.8%; St. Louis — plus 5.3%; Quad Cities — plus 3.5%.

Class I milk sales in May 1944 compared with May 1943 were as follows: Chicago — plus 6.5%; St. Louis — plus 4.3%; Quad Cities — plus 9.6%.

Several inquiries received indicate that there is a lack of familiarity with the OPA regulations regarding permissive prices for milk to producers supplying bottle milk distributors in Illinois.

OPA authorizes producers supplying bottle milk distributors to obtain for their milk a price up to $2.75 per cwt. for 4% milk without any permit or consent from OPA.

However, if the milk prices to producers supplying bottle milk distributors are at the $2.75 per cwt. 4% basis or above, the milk price to producers cannot be increased to a higher price without specific authority from OPA to do so.

Reports indicate that there are a number of markets in Illinois where milk producers are still receiving less than the OPA permissive price of $2.75 per cwt. 4% basis for their milk.

A tentatively approved Federal Milk Marketing Order for the suburban Chicago marketing area was submitted by the War Food Administration in early July to the producers affected for a referendum vote.

The Illinois territory included in the order includes Dundee, Elgin, St. Charles, Geneva, Batavia and Aurora townships in Kane, Cook, DuPage and Will Counties and also the city of Barrington in Lake County, excepting any portion of these areas already covered by the Chicago Milk Marketing Order No. 41.

The proposed order provided for an individual handler pool; a similar classification of sales to the Chicago order with a few differences; a pricing arrangement similar to the Chicago order except that two grades of milk are provided for and no seasonal price adjustment is included as is the case in the Chicago order.

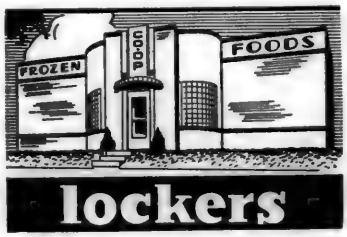
The outcome of the producers' referendum vote upon this order was not available at this meeting.

The following are the blended prices received by producers supplying the respective Illinois markets. All are May prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances.

Bloomington	$2.37
Canton	2.75
Champaign	2.75
Chicago	2.97
Danville	2.45
Decatur	2.70
DeKalb	2.74
Freeport	2.70
Galesburg	2.65
Harrisburg	2.65
Jacksonville	2.40
Kewanee	2.55
LaSalle	2.67
Moline	2.93
Peoria D	2.89
Peoria M	2.89
Pontiac	2.406
Quincy	2.36
Rockford	2.99
Springfield D	2.725
Springfield M	2.725
St. Louis	3.18
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for April unless otherwise noted:

Baltimore	$3.85
Boston	3.49
Chicago (70 mile zone — May)	2.97
Cleveland	3.33
Denver	2.87
Detroit	3.57
Evansville	2.89
Indianapolis	3.27
Kansas City (May)	3.16
Milwaukee (May)	3.00
New York (201-210 mi. zone)	3.67
Pittsburgh	3.43
Seattle (May)	2.97
St. Louis (May)	3.18
St. Paul, Minn. (May)	2.99
Washington, D.C. (May)	4.00



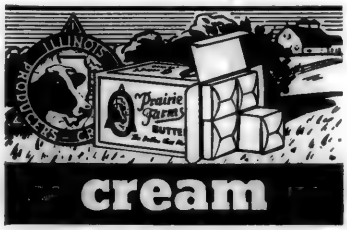
By Frank Gougler

Requests continue to come from Farm Bureau leaders for assistance in organizing cooperative locker plants. Since materials have been made availble by WPB more than 25 new plants are in various stages of construction and many older plants have been enlarged.

The demands from both cooperatives and private interest have been so extensive that the allocated materials for the year are running short. This year these allocations have been made on a quarterly basis. In order to be able to take care of current requirements WPB has moved the "bank of materials" intended for the fourth quarter up to the third quarter to be available July 1st. It is reported that this allotment is not very large and because so many applications are on file it will soon be exhausted. No more materials will likely be made available until Jan. 1, 1945 it is reported.

A number of our cooperatives have applications on file and it is hoped they will be approved before materials are all gone.

For the past several years the Bank for Cooperatives of St. Louis has summarized the annual audits of our cooperative locker plants for comparative information. This service has been greatly appreciated by locker officials. This year because of limited help bank officials were unable to give this service. However, with the assistance of Fred Ringham, Secretary of the Bank, we are securing the services of S. T. Warrington and Paul Wilkins, both of Farm Credit Administration, Washington, D.C., to make the summaries.



By Frank Gougler

The peak of butter production in Illinois this year was reached about the last week of June. For the U. S. as a whole 10% less butter was produced during the week ending June 15 than the corresponding week a year ago.

Total butter production for the ten member creameries during the past eight months, October, 1943, thru May, 1944, was 2.51% over the same months a year ago.

Powder production at the four creameries is far in excess of a year ago. During the past eight months the four creameries making powder have produced the following amounts:

Galesburg	127,705 lbs.
Olney	203,642
Mt. Sterling	400,838
Carlinville	744,068
	1,476,253 lbs.

The federal government still demands a large set aside of this highly concentrated food product. During June 35% had to be set aside and 50% is required during July.

Set-aside butter requirement for May was 45%, June 50%, and July 45%. Butter for set-aside purposes must score 90 or better.

If present trends continue to the end of the fiscal year of the Producers Creamery of Mt. Sterling, September 30, 1944 — this year's business will far exceed last year. Butter production is 5% ahead of last year. May powder production was 110,957 pounds and for 8 months was 400,838 lbs.

The four plants making powder have made more powder in 8 months this year than was produced in 12 months last year.

Excavation will soon start for the first of two new creameries to serve the Peoria district. One is to be established at Henry. Ample new capital has been provided through the sale of stock to finance the project.

MAKE YOUR CORN GO FURTHER

HOG BALANCER SUPPLY IMPROVED

You can make your corn stretch further by balancing it with Blue Seal Hog Balancer. The protein situation has improved to the point whereby your Blue Seal distributor has a larger allotment available. Sows and growing pigs should have it. See your Blue Seal Salesman today for your supply.

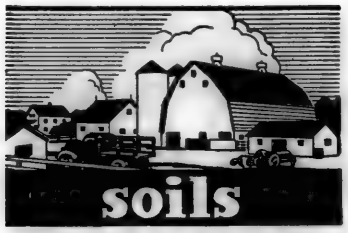
ILLINOIS FARM SUPPLY COMPANY • CHICAGO 5, ILLINOIS



By John R. Spencer

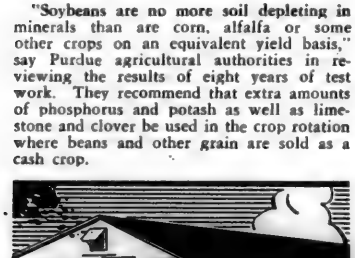
The 175,581 tons of rock phosphate used on Illinois soils last year should get newspaper headlines all over the state for it is a new high record amount. It indicates that farmers are taking definite action to restore this necessary fertility element phosphorus to their soils along with nitrogen and potash in the well established limestone and clover program. Some 117,735 tons were distributed commercially and 57,846 tons by the AAA program according to E. E. DeTurk, professor of soil fertility, U. of I. College of Agriculture.

The state geological survey in a preliminary report announce that 3,113,248 tons of limestone were used in Illinois last year which indicates a reduction of 19.5% from the previous year. Quarries reporting production dropped an even 40 in number from 143 in 1942 to 103 last year.

Illinois Farmers face a serious clover and grass seed shortage according to J. C. Hackleman, of the U. of I. College of Agriculture agronomy department, who says, "Unless all potential seed production is saved in 1944, we face one of the most critical seed shortages in recent history." Harvest time for seed is coming soon and farmers can help by harvesting red clover, alsike clover, sweet clover and mammoth clover seed.

Rock phosphate shipments continue in large volume all over the state, with Farm Adviser H. D. Van Matre of Iroquois county reporting more than 3,000 tons delivered to farms during the first four months of this year.

"Soybeans are no more soil depleting in minerals than are corn, alfalfa or some other crops on an equivalent yield basis," say Purdue agricultural authorities in reviewing the results of eight years of test work. They recommend that extra amounts of phosphorus and potash as well as limestone and clover be used in the crop rotation where beans and other grain are sold as a cash crop.



By L. L. Colvis

The 1944 Illinois peach crop might well be the largest since the bumper crop of 1931 when more than 2½ million bushels were harvested. Present estimates for this year are approximately 1,500,000 bushels. This could be considerably increased however if timely rains come in July.

The quality in general is excellent, as of July 10. Better care of orchards is partly responsible, but a favorable season has also been important. For some unexplained reason, damaging insects have been less prevalent this year.

Indications at present are that the consumer will get good peaches this year and at a satisfactory price. Grower costs are of course extremely high, but with a large crop of good quality, they will not expect the exorbitant price of last year when most growers had no crop to sell.

Farmers in Illinois who will be buying peaches this year, will in many instances, buy direct from the grower. They can help the package situation by remembering to bring containers when making purchases. New baskets are very scarce and those available will be needed for shipments to more distant markets.

Those consumers who were disappointed with the price and quality of strawberries this season should not assume that this one crop represented a true picture of the fruit situation. Weather conditions were unfavorable for strawberries, and because of the large amount of hand labor, acreage was at an unprecedented low level.

The high price and poor quality of berries did not occur because of high profits to the grower. On the contrary, most growers lost money because the production was so extremely low.

The modern cold storage plant planned by the Illinois Fruit Growers Exchange will not be built this year. WPB did not approve the application for construction, though it admitted the need for the storage space. WPB reported that the building was in excess of absolute minimum requirements. The Exchange plans to reconsider the project as soon as wartime conditions permit.

Home Bureau Conference At Jacksonville July 18

HOME BUREAU leaders representing 25,000 women in 75 Illinois counties will meet July 18-21 at MacMurray college, Jacksonville, for their eighth annual conference on citizenship and Home Bureau organization.

The conference is planned to emphasize the Home Bureau woman's responsibility as a citizen and to help improve her county organization. It is sponsored by the Illinois Home Bureau federation and extension service in agriculture and home economics, University of Illinois College of Agriculture.

Presidents and vice presidents of county Home Bureau organizations are delegates to the conference, and other Home Bureau women may attend. Each day's session will open with a chapel period conducted by Clarence P. McClelland, president of MacMurray college, and will continue with discussions by speakers widely known in their fields and with recreational programs.

The program is being arranged by Mrs. Kathryn Van Aken Burns, Mrs. Elsie Mies of Champaign county, and Mrs. John Clifton of Iroquois county. Recreation is in charge of Mrs. Fred Sass, Livingston county, and Mrs. R. E. Milligan, Champaign county.

Former IAA Employee "Missing In Action"

"Well, I'm finally at my operation squadron," wrote former IAA and Country Life employe Lt. Harry Just, "and so far I have 36 missions to my credit. I'm flying with a great bunch of fellows and boy they really treat me grand. I have my own plane now, and have named it 'By Babes.' Babes is my wife's nickname.

"My pal in civilian life, who enlisted with me, is stationed close by here so we get together once in a while. I intend to spend my next 48 hour pass with him. I ought to have a ring-side seat at the coming invasion."

At that time Harry had already received the D.F.C. and two Oak Leaf Clusters. And he kept up his outstanding work.

On the day following the invasion, Chicago papers carried items praising his work during the invasion. "A Chicago Mustang pilot," said the article in the *Herald American*, "was revealed by an Associated Press dispatch as one of a group of U.S. Eighth Air Force fliers who lashed at Nazi gasoline trucks rushing to bring supplies to the invasion battle area. He is Lt. Harry Just, Jr. of 1926 S. Sangamon Street. The report said he dived with his flight and strafed a truck filled with German soldiers, as his companions set the gas ttucks a-flame."

The following week the papers carried a short statement that Harry was missing in action, as of June 7.

Killed In Action

Tech. Sgt. John R. Paarlberg, a mechanic with the Army Air Forces and a crew chief of a B-25 bomber, was killed in action May 13 over the island of Corsica, while serving as a co-pilot, according to word received from the War Department by his father, Teunis P. Paarlberg, Cook County Farm Bureau member.

"Bob", as the youth was known to his friends, was active in 4-H club and Rural Youth activities in Cook county. After having been graduated from high school he had been farming with his father prior to joining the Air Force in 1942. He had only been stationed at Corsica for a period of two or three weeks. Prior to that he had been in the North African, Sicilian and Italian campaigns.

Farm Research

(*Continued from page 17*)

foods under the chairmanship of M. J. Briggs, Indiana Farm Bureau Cooperation Association.

Dr. Scarseth is a graduate of the University of Wisconsin, took graduate work at Yale University, and received his doctor's degree from Ohio State University in 1935. He went to Purdue University in 1938 as a soil scientist and chemist from the Alabama Polytechnic Institute, where he had been serving in a similar capacity for 10 years. On July 1 of last year he was made head of the agronomy department at Purdue.

He served several years as consultant for the Standard Fruit and Steamship Company, going to Central American countries on various research investigations and has been a collaborator with the U. S. Office of Foreign Agricultural Relations and U. S. Soil Conservation Service.

He is the author of many scientific papers on soil science and while at Purdue directed research work on the plow-sole fertilization of crops which has attracted national attention.

When rationing days are over and gas and tires become available, here's one spot you will surely want to take the family. Recreational areas have been developed including a picnic grounds and bath house facilities on Lake Glendale. A publication describing the work of Dixon Springs is now in press at the University of Illinois and will soon be available for distribution.

Rural YOUTH

By Ellsworth D. Lyon

Illinois Rural Youth have exceeded the goal for the first six months in the 1944 War Bond campaign — the purchase of more than $110,000 in bonds as of June 30, which equals the cost of an ambulance plane. The exact figure on bond purchases, according to the June 30 report, was $111,903.45.

Marjorie Gasaway was voted queen of the Macon County Rural Youth at their dinner and dance in mid-June featuring Decatur as soybean capital of the world. Left to right: Howard Conner, president; John Henneberry, queen's escort; Marguerite Monaghan, Mary Wall, Agnes Morton and Monica Mickey, attendants, and Max Kuster, toastmaster.

(Decatur Herald-Review Photo)

Rural Youth bond goal for 1944 is $300,000 and there is every indication that members are going to make this goal.

Illinois Rural Youth was represented by 15 members at the Rural Youth section of the Midwest Farm Bureau Conference at Milwaukee: Franklin Allen and Mary Luft, Tazewell; Virginia Brown, Fulton; Margaret Sharp, Woodford; Marian McCormick, Catherine Rinker, and Bob Corcoran, LaSalle; Harold Toepke, McLean; Eunice Gale, Winnebago; Melvin Peterson and Henry Henricksen, Kane; Mary Agnes Faivre and Mary Alice Hart, DeKalb; Lawerence Woessner and Charles Burkholder, Carroll.

Three delegates from Illinois were members of the panel discussing the question "What Are We Going to Do in the Community for the Young Men and Women Who Come Back to Agriculture?" They were Eunice Gale, Winnebago county, Franklin Allen, Tazewell, and Assistant Farm Adviser Harold Neal of Peoria county.

Rural Youth members showed that they had done much thinking on the questions discussed in the conference.

Five counties, Ogle, Lee, Stephenson, Carroll, and Whiteside, will hold a district sports festival Sunday, July 30, at Lowell Park, Dixon. Two committee meetings have been held, and plans are almost complete. There will be a picnic dinner, and the sports program will largely follow the plan used in Whiteside county.

From Whiteside county the Twin City Ripples report enthusiastically of their activities through Secretary Mary Jane Reitzel. This group feels encouraged about attendance during these busy days. One item of interest is the "20 Club" a recreational group which has been organized in Sterling by Rural Youth employed girls and the YWCA.

Wayne County sets forth some definite and highly important questions on "Marriage in Wartime" in the June issue of the "Wayne Newsette".

Rural Youth of Warren county states a definite reason for its existence in a recent issue of "Country Capers". "While the ranks of Rural Youth have been depleted by members going into the armed services the Club continues to keep the organization going to contribute to the fullest extent to the war effort, and also, to keep the organization in good running condition so the boys in the armed services may have something to help them get relocated and oriented when they come back." Warren's picnic was held in Monmouth Park on the evening of June 7.

The secretary's report of the year's activities at the annual banquet of the Mason County Rural Youth June 12 at Mason City showed a successful year. Henry Imig is president and Vera Thompson, secretary.

With 75 in attendance at the May meeting, the Rural Youth group of Woodford county enjoyed a real Hard Times Barn Dance. An educational feature for the evening was a physical fitness test. The June event was a hayride followed by a weiner roast. Eighty were in attendance including four service men.

Brown County Rural Youth are learning about the life of people in China and some of the European countries — France, Germany, Italy, Russia, England — from members who have made a study of these countries and present interesting educational material at the Rural Youth meeting.

Rural Youth Training Camp To Open Aug. 13

Rural Youth State Camp has been renamed Rural Youth Training School and will be held Aug. 13 to 19 at East Bay, Lake Bloomington. Pre-registrations are due Aug. 1. The name of "Rural Youth Training School" explains the educational aim of the group better than the word "camp".

Those attending the sessions will have an opportunity to name the ambulance plane in recognition of the $111,000 in War Bonds purchased by Rural Youth members during the first six months of 1944.

EDITORIAL

Farm Planks

IN this issue of the RECORD is published the recommendations of the American Farm Bureau Federation which were presented to the Republican Party, and the Agricultural Plank adopted by the party at its National Convention on June 27. Commenting upon the acceptibility of the plank to organized farmers, president Earl C. Smith said that it was satisfactory. He said that "If literally interpreted and sympathetically put into action it would be adequate to meet the farm situation."

The RECORD goes to press July 10. The Democratic National Convention convenes July 19. It is hoped that the Democratic Party at its national convention will adopt an agricultural plank which embodies the recommendations of the American Farm Bureau Federation.

"Greedy Grasping Farmers"

HOG producers have just gone through a marketing season which left much to be desired. They expanded their operations or went into the business of producing pork at the request of their government and with the understanding that their government would stand back of them in effectively supporting a floor price of $13.75 a hundred, Chicago basis, on good and choice butcher hogs within the weight range of 200 to 270 pounds, later 180-270.

What has transpired during the past marketing season is history. That it was a period of exploitation of hog producers there can be no doubt. That government officials failed to make necessary provisions for handling the huge numbers of hogs they asked to be produced, there can be no doubt. When the markets became glutted and practices grew up overnight which cost hog producers millions of dollars, no drastic measures were taken by the government to correct the situation, which placed the government in the unsavory position of giving tacit approval to what any informed person recognizes as a flagrant circumvention of the principles and purposes of existing law.

Shortage of labor — insufficient processing capacity— insufficient storage room—these are some of the attempted excuses by both government officials and processors *but* are they excuses on which any kind of a case can be built or do they justify certain practices which developed in the hog market?

Assuming these excuses have some merit, farmers wonder why available processing and storage capacity was not first used for hogs within the government support weights rather than leaving choice hogs in the pens to shrink and in many cases die, while hogs outside of government weights were purchased at indefensibly low prices.

Farmers know what labor shortages mean — they know what insufficient equipment means — and they know what it means to *get a job done!*

If the present processing facilties were not sufficient to handle the 121 million head of hogs the government asked the farmers to produce, steps should have been taken to provide the additional needed facilities — just as plants have been provided to produce the munitions and other implements of war throughout the nation. Hog producers have taken their losses in stride and with their chins up — they know we have a war to win — there have been no strikes. But they do see red when they hear and read insinuations — some coming from government officials — to the effect that the hog situation is a result of the greedy, grasping corn-hog farmers' inordinate desire for profit. Facts do not justify such statements and conclusions. The truth is that corn and hog farmers were doing their best to meet goals set by official authority. Here are the facts:

In 1941 — 71,397,000 hogs were slaughtered. In September 1941, Secretary Wickard asked for increase in production to 79,300,000. In January 1942, he increased the call to 83,000,000. The 1942 slaughter was approximately 78,000,000. The hog slaughter goal for 1943 was set at 97,000,000. The actual slaughter was 95,273,000. In November of 1942, the Secretary of Agriculture set the goal of 1943 at 121,000,000 head. The actual pig crop in 1943 was 122,000,000.

It should be noted that over the past two year period total hogs produced actually falls short of the goals set by the officials at Washington by almost a million head.

Hog producers were asked to produce — they did produce and they want the public to know the facts and let the chips fall where they may!

Please Pass The Pie

(*Reprinted from the Illinois Fruit Exchange News*)

BUDDY, our ten year old son, is eating his noon lunch at the school cafeteria this year. It's a new experience for him, and he is enjoying the privilege of selecting his own food. Each evening with considerable enthusiasm he tells us what he had for lunch, and how good it was. Almost invariably he has had at least two desserts. Generally this fact somewhat chagrins him because he is trying to use good judgment, and he knows a little about balancing a meal. He intends having only one dessert, but somehow or other that second one often slips in. Sometimes he mistakes it for a salad, sometimes he forgets, and I guess sometimes it just looks too good to resist.

A great many of us in the "Cooperative Family" are having the same trouble. We keep our eyes so intently on the desserts that we overlook the everyday things that are so essential to a strong healthy, vital organization. The man who purchases only those things through his cooperative which he can get cheaper than from any other source is a dessert eater. The man who uses his cooperative only to get someone else to pay him a dime more for his apples is a dessert eater. The man who uses his cooperative only to obtain hard-to-get materials and gives someone else the remainder of his business is a dessert eater. Yes, the Farm Bureau member who cares nothing about the Farm Bureau except to get cheap automobile insurance is a dessert eater. There are many other examples, but perhaps these few are sufficient to get over the general idea.

The cooperative system in Illinois offers a well rounded balanced program. Some very tasty desserts are included. Patronage dividends, equitable prices and special services are in that class. Fine as those things are, however, they do not make up the entire strength of the program. The real "bread, meat and potatoes" will be found in the broader objectives leading toward a stronger agriculture with a fairer share of the national income, and the opportunity for a better farm life. To reach that goal every cooperative must build solidly. It is doing this with the day by day cooperation of many members. The occasional man who speaks up only to say please pass the pie, might be having a good time for the moment, but he doesn't add much strength — and he sure is hard on the pie.

FOR FARM BUREAU MEMBERS ONLY:

Farmers Mutual, a sound 18-year old organization, is devoted exclusively to servicing the protection needs of Farm Bureau members! For fire, windstorm, growing crop hail insurance, Farmers Mutual can give you greater protection at less cost.

IT'S THE LITTLE THINGS THAT COUNT . . . .

IN PREVENTING BIG FIRE LOSSES

Last year farm property valued at 95 million dollars was destroyed by fire. Most of this loss could have been prevented if folks had been more careful in following simple preventative measures such as not smoking in barns and dry fields.

Statistics show that once a fire starts farm buildings usually burn to the ground.

NE member said, "It seems like when one of us has an accident everybody gets his medical expenses paid except the member and his family and friends who are injured while riding with him."

To fill this need the Illinois Agricultural Mutual offers its policyholders a Medical Expense Endorsement. Many thousands of Farm Bureau members have already taken advantage of this added protection.

If you have not added the medical expense endorsement to your policy fill out the application below, attach a check for $2.50 and mail to the company's agent located in your county or send direct to the company:

ILLINOIS AGRICULTURAL MUTUAL INSURANCE CO.

Application for

Medical Expense Endorsement

(There must be separate Application for each Motor Vehicle)

Policy Fee $1.00 . . . Semi-annual Premium $1.50

I hereby make application for the MEDICAL EXPENSE ENDORSEMENT to be attached to my Policy No. ..... covering the motor vehicle described below.

MAKE	YEAR MODEL	STYLE OF BODY	SERIAL NO.	MOTOR NO.

Name of Insured .....

Address ..... County .....

IT IS FOR YOU — FOR YOUR FAMILY — FOR YOUR FRIENDS

Regardless of legal liability if you have this endorsement added to your auto policy neither you, your family nor friends need to worry about medical expense when the automobile covered by the policy is involved in an accident.

SECTION A—*For Bodily Injury*

A The loss resulting from reasonable and necessary expense actually incurred within six months from the date of accident for ambulance, medical, surgical, dental, hospital or registered nurse services or medical supplies, not to exceed the sum of Three Hundred Dollars ($300.00) for each such injured person. (Insured also included.)

SECTION B—*For Death*

B If such bodily injury shall result in death within six months from the date of accident, the sum of Five Hundred Dollars ($500.00) less all amounts paid under Section A on behalf of such person, and, if such person is the "Named Insured" under the policy, an additional sum of Five Hundred Dollars ($500.00).

LIMITS

The maximum aggregate benefits payable on account of any one accident for bodily injury to or death of other persons than "Named Insured" are Fifteen Hundred Dollars ($1500.00). The maximum benefits payable on account of any one accident for bodily injury to or death of the Insured are One Thousand Dollars ($1,000.00). — TOTAL — Two Thousand Five Hundred Dollars ($2,500.00).

The Illinois Agricultural Association Record

The Illinois Agricultural Association RECORD is published monthly by the Illinois Agricultural Association at 1501 W. Washington Road, Mendota, Ill. Editorial Offices, 608 So. Dearborn St., Chicago, Ill. Entered as second class matter at post office, Mendota, Illinois, September 11, 1936. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1935. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 608 So. Dearborn St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578 and undeliverable copies returned under Form 3579 to editorial offices, 608 So. Dearborn St., Chicago, Ill.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

SEPTEMBER, 1944 **VOLUME 22 — NUMBER 8**

This Month

By Earl C. Smith

FARMERS like all other citizens have had cause to be encouraged over the successful trends on the battlefronts of the world in recent weeks. We can little realize nor can we fully appreciate the tremendous sacrifices being made by our boys in the armed forces and those of our Allies. Although many predictions are being made that the war in Europe will be brought to an early close, I do not believe anyone is justified in predicting when or how the war on either front will be terminated. There must be no letdown until as a nation we have discharged our every responsibility and duty in supporting the men at the front. It behooves every citizen to support the armed forces in his or her most effective way. This may be in the fields of producing food supplies, within war plants, transporting commodities, the purchase of war bonds, or other activities. The men who are fighting our battles, many of whom have made the supreme sacrifice, have shown little if any concern as to the hours of duty or pay for service, and certainly no citizen at home has been or can be justified in saying or doing anything that would slow up or retard production or activity in any line of endeavor that could in any way interfere with an early and successful culmination of the war effort.

Actually, the victories rolling up on the battlefront are making new demands upon those of us on the home front. Although it has been a tremendous task to prepare for war he would be an optimist indeed who did not recognize something of the gigantic problems to be met in securing a successful peace. Farmers must watch developments carefully as a basis for intelligent planning for 1945 operations. The consumer subsidy program developed by the government during the war over the protests of the American Farm Bureau Federation and most other farm organizations undoubtedly poses one of the most difficult stumbling blocks farmers face in planning for a stable, peace-time agriculture. The AFBF has consistently and aggressively opposed any type of subsidy in lieu of fair market prices. Notwithstanding this opposition, very substantial subsidies have been paid by the federal government to those engaged in certain types of agriculture. In other branches of agriculture farmers have been successful in opposing all efforts of those who would have federal funds substituted in part for a fair price in the market place.

Farmers should not forget that in opposing subsidies as substitutes for fair market prices, the AFBF has insisted that such subsidies would be charged in public consciousness to farmers when as a matter of fact they are subsidies to consumers. This prediction has proved to be true. Already we are seeing much publicity relating to the gigantic national farm income, and in arriving at the amounts farmers have received from the federal treasury these consumer subsidies, which run into hundreds of millions of dollars, have been added as a part of the farmers' income.

One of the big problems confronting agriculture and particularly those divisions which have accepted subsidies, will be of finding ways and means of cushioning the shock when subsidies are removed. It is going to be a difficult task. Consumers are becoming increasingly price conscious as to the cost of a quart of milk or a pound of meat. Undoubtedly consumers, particularly those in the large metropolitan areas, will resist increases in prices of commodities to compensate for the removal

of subsidies, although actually subsidies have been paid in the consumer's interest rather than the producer's interest.

Farmers through their organizations must also watch carefully all trends under lend-lease operations affecting food, as a sudden letdown in the tremendous flow of food under lend-lease, unless such surpluses were effectively controlled, could easily bring about nothing less than disaster in the current market. This is of immediate concern to farmers but it is equally, if not greater, in importance to the national welfare.

Farmers are generally looked upon as producers but little emphasis has been placed nationally upon the importance of farmers' buying power in maintaining industrial employment. Farmers are the largest group purchasers of the products of industry, and therefore the maintenance of farm income and farm buying power will essentially be a major factor in assuring orderly employment in the cities.

As during other wars, all lines of American business and their respective employees have become increasingly price and hour conscious. What the nation will require is mass production and employment and an interchange of products on a basis of fair exchange value between industry and agriculture at a price level that will encourage a continuance of large scale production.

There are many signs pointing toward a repetition of experiences following the last war, when American business limited production to market demands at a price. This practice resulted in a large scale reduction of the potential production volume with a corresponding decrease in the number of people employed. Farmers continued to produce and to witness with limited exception their larger scale production finding a less total value annually. Farmers learned by bitter experience that they cannot continue maximum production if industry and labor follow a policy of limited production at a price.

It is therefore to be hoped that leaders of American business and labor will assume a different attitude following this war, but if they fail or refuse to make adjustments in prices and wages that are found necessary to continue large scale production and employment, American farmers must be prepared to take any necessary steps to keep agricultural prices and farm income at a point of fair exchange value for their products with the products of American industry.

These are but a few of the many tremendous problems we must face, and as never before it behooves farmers to strengthen the ranks of their organization as the only means available for farmers generally to make their greatest contribution to sound national policies necessary during the days of readjustment that lie ahead.

THE FARM PLANK OF THE DEMOCRATIC PARTY

IN THE August issue, the IAA RECORD carried the statement and recommendations of the American Farm Bureau Federation presented to the Republican Platform Committee during its national convention. It also published the agricultural plank adopted by the Republican Convention.

As indicated in that issue of the RECORD, it was the intention of the AFBF to present the same statement and recommendations to the Democratic Platform Committee when the Democratic National Convention convened. This was done and we print below that part of the Democratic National Platform having to do with agriculture:

Economic Pledges

Beginning March, 1933, the Democratic administration took a series of actions which saved our system of free enterprise. . . .It provided federal bank deposit insurance, flood prevention, soil conservation, and prevented abuses in the security markets. It saved farms and homes from foreclosure and secured profitable prices for farm products. . . .We pledge the continuance and improvement of these programs.

Post-War Programs

We offer these post-war programs: Price guarantees and crop insurance to farmers with all practical steps:

To keep agriculture on a parity with industry and labor.

To foster the success of the small independent farmer.

To aid the home ownership of family-sized farms.

To extend rural electrification and develop broader domestic and foreign markets for agricultural products. . . . We indorse the President's statement recognizing the importance of the use of water in arid land states for domestic and irrigation purposes. . . .

The enactment of such additional humanitarian, labor, social, and farm legislation as time and experience may require, including the amendment or repeal of any law enacted in recent years which has failed to accomplish its purpose. . . .

Commenting on the Democratic statement, President Earl C. Smith said that it was broad enough to meet the requirements of agriculture.

He said that a careful RE-READING of both the Republican and Democratic agricultural pledges was convincing that it behooved farmers to organize as never before and thus be better prepared not only to secure but to limit federal laws and federal activities to the extent they are necessary for a stable and prosperous agriculture.

IAA Annual Meeting is Set for Nov. 27 - Dec. 1

You won't have to miss your Thanksgiving dinner to attend the annual meeting of the IAA and associated companies, Nov. 27 to Dec. 1, inclusive, in the Hotel Sherman, Chicago.

Thanksgiving used to come on the last Thursday of November and then the date was changed to the fourth Thursday of the month. Since there are five Thursdays in November of 1944, the IAA annual meeting date comes after Thanksgiving so everything works out all right.

12 Die in Gas Fire At Farm Supply Terminal

The most tragic accident in the history of the Illinois Farm Supply Company occurred Aug. 11 when 12 persons perished in a gasoline fire at the Shawneetown IFS terminal.

Three of the persons were employees of the company: They were: William Scott, 48, tankerman and welder at both Shawneetown and Kingston Mines terminals; Logan Tharp, watchman at Kingston Mines, and Joseph Rider, 42 watchman at Shawneetown. The other nine fire victims were members of Rider's family.

The men had just finished unloading two large barges when a 300,000-gallon storage tank caught fire. Another 600,000-gallon storage tank did not burn. Cause of the fire has not been determined. Although a coroner's jury has returned a verdict of accidental death, a complete investigation to determine the cause of the fire is now under way.

The fire destroyed the nearby homes of Rider and Hallas Wayne Roark. The nine members of Rider's family who died in the flames were his daughters,

Mrs. Harold Back, 23; Mrs. Hallas Wayne Roark, 17; Betty Jo Rider, 10; Clara Donna Rider, 7; his grandchildren, Bobby Harold Back, 5; Delores Dean Back, 3; Brenda Louise Back, 5 months; Hallas Wayne Roark, Jr., 2½ months; his son-in-law, S-2/c Hallas Wayne Roark, home on leave from the Great Lakes Naval Training Center.

Three members of the Rider family survived — Mrs. Rider, who was in St. Louis, and her two daughters, Mrs. Myrtle Stubbs, who lives a block and a half from the Rider home, and Dorothy Jean Rider, 14, who was playing on the levee at the time of the accident. Harold Back, Rider's son-in-law, was attending a movie when the fire started.

Scott had worked for Farm Supply for five years; Tharp for the last two and a half years, and Rider for a year and a half.

Scott leaves his wife, three daughters and two sons. Tharp leaves his wife, two sons and two daughters.

J. E. Stickle, 73, formet president of the McDonough County Farm Bureau and a continuous 24-year charter member, died in August. He served as president in 1922 and 1923 and was on the board of directors for a number of years. The McDonough County Farm Bureau also lost another continuous 25-year member in August with the death of Fred Wiley, Macomb.

Illinois Agricultural Association Record won a third prize award at the third annual Wartime Conference of the National Council of Industrial Editors Association in Cleveland, O., in June. There were 1500 publications entered and a total of 58 awards were made. The IAA Record also won a first award in the seventh annual contest of the Industrial Editors Association of Chicago in December, 1943.

Illinois Tops States In 5th War Loan Drive

Results of the Fifth War Loan Drive show that Illinois topped the comparable states of the Union in percentage of overall total sales to quota sales of "E" bonds — individual sales, and corporate sales as well, for a grand total of $1,467,948,000.

All available information indicates that Illinois farmers did their full share in making this splendid achievement possible.

At the July meeting of the board of directors of the Illinois Agricultural Association President Earl C. Smith reported the employees of the IAA and associated companies in the Fifth War Loan Drive subscribed 118 per cent of their quota. He said employees of the IAA and each of the associated companies exceeded their quotas, and that a total of $46,587 of bonds was purchased.

Lt. Leskovar, Country Life Employee, Killed

Lieut. Leskovar

Lt. Richard F. Leskovar, 25, Country Life Insurance Company home office employee, Chicago, was reported killed in action in France on July 20. He was in an armored infantry company and had been a member of the armed forces since February, 1941. He was one of the first employees to enter the services in this war.

This is the fiirst verified death among the 27 Country Life employees now in the armed forces.

Keep your woven wire fences tight and well fastened to posts to obtain the maximum life and usefulness of fences.

IAA PROTESTS OPA RULING ON CO-OP PATRONAGE DIVIDENDS

IAA officials during the first week of August called the attention of War Food Administrator Marvin Jones to a section of Food Products Regulation No. 2 of the OPA which the IAA believes to be discriminatory to farmers and their bona fide cooperative grain marketing associations.

The effect of section 2.4 of this order is to put a stop to the payment of patronage dividends by cooperatives set up after Jan. 1, 1943.

Up to date the regulation only applies to oats and barley, but there is the possibilty that OPA might issue a supplement to the order to cover corn, wheat and other grains.

Section 2.4 of Food Products Regulation No. 2 prohibits any person from adding a broker's commission service charge upon the sale of any grain purchased from or sold to a supplier with whom he has an agreement to pay, or actually pays any rebate, dividend or share of his profit except in cases where such arrangement existed prior to Jan. 1, 1943, and has continued since that date.

When the effect of this order was called to the attention of Jones, he immediately communicated with OPA Administrator Chester Bowles. Jones declared that his office did not deem the provisions of section 2.4 of the order as being applicable to the distribution of patronage dividends of the savings of bona fide cooperative associations.

He said that it was his understanding that OPA supplementary Order 84 issued Feb. 14, 1944, established the policy of the OPA with respect to cooperative marketing associations and that regulations issued by the OPA would be interpreted in line with Order 84.

Jones declared that he hoped OPA would find it possible to interpret Food Products Regulation No. 2 so as to permit any farmer grain cooperative association which complies with the standards set forth in Order 84 to continue to function without hindrance.

He added that if OPA did not find it possible to make such an interpretation, that the regulation be amended promptly so as to make it clear that farmers cooperatives whether local or regional which comply with Order 84 standards, be permitted to add appropriate markups for the functions they perform and distribute their savings in patronage refunds.

The IAA, together with several cooperative associations, has recommended amendment of the Food Products Regulation to include the proviso:

"Provided that the prohibition of this section shall not apply to any person which (1) is owned and controlled by producers of agricultural

By CRESTON FOSTER

THE future of agriculture is in good hands. That's the impression you get from watching Illinois youth in action at the state 4-H Junior Leadership Conference at East Bay.

The conference presented a good cross section of the best 4-H junior leaders in the state. More than 350 delegates from 81 counties attended, representing 35,000 club members throughout Illinois.

Keyed to the idea of developing leadership, the philosophy of the conference was well expressed during the session in these words: "There is greater need than ever before for the vision, clear judgment, sound planning, perseverance, and capable leadership which we believe can best be developed in the open country. Farm life and work continually present new situations. Our standards of farm life must constantly be improved if our state and nation are to make progress and if our democratic form of government is to be perpetuated."

The pictures on these two pages are an attempt to show a typical day at the 4-H conference. At best they show only a part of the activities since each of the six days of the program was filled to capacity with various phases and approaches to the general theme of leadership.

Special training in practical work was afforded members in the classes on

Mary Bower, Menard, Norman Vartman, Scott, Roy Eichelberger, Champaign, Rosemary Casteel, Moultrie, and Lois Cummins, Moultrie, tackle breakfast.

Zella Argenbright, McDonough, gets busy on camp cleanup following breakfast.

LEADERS

repairing indoor and outdoor electrical equipment, concrete construction, in making clothing, preparing foods, in improving health, etc.

In the coming months, these young leaders will have an opportunity to make use of the information and new skills gained at East Bay camp in their own local meetings.

One of the lasting impressions received at the 4-H camp is the way in which farm boys and girls maintain a keen interest in the sessions from the first to the last day. This interest testifies to the fine balancing in the program between recreation and education.

You get plenty of exercise at East Bay camp in the form of walking up and down hills and over bridges, but healthy 4-H'ers take it in their stride and ask for more.

Physical fitness tests are an important part of the program. Wayne Gilbert, farm adviser from Stark county, takes chest measurements of Orville Dickhaut, St. Clair.

Illinois 4-H club members present third ambulance to U. S. Army. Left to right: Frank Mynard, state staff; Home Adviser Jessie Campbell, Livingston; Corp. John H. Garrity; Beverly Otte, Mercer; Wendell Morine, Marshall-Putman; Lt. Col Roy M. McKerchar; Pvt. Carlton McAllister, St. Louis, and Miss Mary McKee, state staff.

LIVESTOCK MARKETING TRENDS SHOW NEED FOR CO-OP STUDY

Hogs and Cattle Purchased Outside of Public Markets Show Increase Over Past 20 Years. Statewide Committee Seeks Ways and Means to Improve Cooperative Machinery.

By S. F. RUSSELL

FOR the past five years, livestock farmers have been pointing to the time when they could get together as a representative state-wide group and consider the in and outs, ups and downs of marketing their livestock. This they are determined to do on a cooperative basis.

The war, with all of the attendant rules and regulations, ceilings, floors, rationing, and many many other ramifications, brought the problem to focal point much sooner. Then too, last winter and this spring and summer the markets all over the country were literally flooded with hogs and marketing became disorganized to a very high degree. Hogs remained in pens in many instances because they could not be sold until the quality was lowered below good to choice and as a result sold below the support price. The shrinkage on all hogs so handled was very marked, amounting in some instances to as much as 10 to 15 pounds on a 200 lb. hog. Heavy hogs suffered severly and were penalized as much as $2.50 a cwt. A chaotic market situation existed all over the country. Farmers must do something.

The country insisted that the IAA call a series of district meetings in order that livestock raisers could get together and express themselves as to what should be done to improve the marketing of their livestock. As a result the IAA called six district meetings. These meetings were designed to cover the entire field of commodities in which the IAA is interested, such as milk, produce, grain, fruit and vegetables, wool, and livestock. The meetings were held at Mt. Vernon, Galesburg, Champaign, Jacksonville, Peoria and De Kalb. The major part of the discussion at most of the meetings was on livestock and minutes were kept and out of these conferences came the following general recommendations.

1. Complete a study of the possibility and feasibility of establishing local meat slaughtering and packing plants.

2. Study the possibility and feasibility of extending our cooperative livestock marketing agencies, or coordinating them, in such a way as to exercise greater bargaining power in the sale of livestock through the control and distribution of volume.

3. To study the possibility of securing stocker and feeder livestock through agencies already established, or agencies to be established that would put the buyer of such feeder livestock in a better bargaining position than he seems to possess now, buying his feeders through established sales agencies.

4. That the foregoing studies be made and conducted by a committee selected and established in a manner similar to the State School Committee, and that these studies should be gotten under way promptly.

Recommendation No. 4 has been carried out, and a state-wide committee has been set up, composed of two representatives from each of the 15 congressional down-state districts together with a representative of the following producer agencies; Chicago, National Stockyards Illinois, Peoria, Springfield, Indianapolis, Indiana, Evansville, Ind., and Illinois Livestock Marketing Association. The marketing committee of the IAA heads up the state group. The main objective of this group is to develop ways and means whereby the bargaining power of the livestock producer can be strengthened and maintained in the sale of his commodities.

At the first meeting of the committee in July, a review of the cooperative marketing system was made from the organization in 1922 of the first producer agency up to the present time. Figures revealed that 37,273 decks of livestock were marketed, cooperatively from Illinois in 1943 and that 20,450 decks of livestock were marketed in 1943 through concentration points scattered over the state. Also there are 38 meat packing plants operating in Illinois, outside the big cities of Chicago, East St. Louis, and Peoria.

Charts prepared by the reasearch department of IAA showed receipts and shipments of hogs, cattle, calves, sheep and lambs from Chicago, 1866-1942; per cent of federally inspected slaughter received at Chicago and per cent purchased outside public stockyards. The latter indicated trends of marketing and showed the following changes.

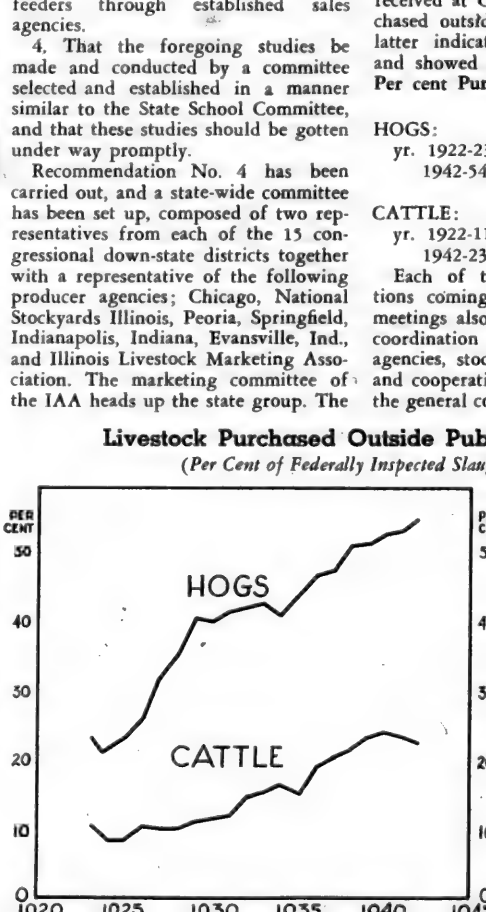
Per cent Purchased Outside of Public Stockyards

HOGS:	CALVES:
yr. 1922-23%	yr. 1922-13%
1942-54%	1942-37%
	SHEEP AND LAMBS:
CATTLE:	yr. 1922-15%
yr. 1922-11%	1942-38%
1942-23%	

Each of the general recommendations coming out of the six district meetings also were discussed. Namely, coordination of present marketing agencies, stocker and feeder program, and cooperative packing plants. It was the general concern of the meeting that

Livestock Purchased Outside Public Markets

(Per Cent of Federally Inspected Slaughter)



This chart shows one of the reasons why farmers' livestock marketing problems have grown more complicated during the last 20 years. Hogs purchased outside public markets increased from 24 per cent in 1924 to 54 per cent in 1942; cattle showed an increase from 10 per cent to 24 per cent in the same period.

we: (1) Must meet organized buying with organized selling. (2) That we should get all the information obtainable on packing plants. (3) Bring about membership consciousness. (4) Coordinate our present livestock marketing system.

A complete list of the state committee was published in the July-August issue of the IAA RECORD. Consult this list and contact your committee member and let him know what your livestock marketing problems are. Mr. Livestock Grower, what do you think should and could be done? What will you support? Your opportunity is here, what are *you* going to do about it?

Victory Farm Volunteers Aid in Northern Illinois

Ernie Ellingson, Boone County Farm Bureau member operating 280 acres with 38 purebred Holsteins, would have had a hard time getting his hay crop baled if he hadn't had the help of Victory Farm Volunteers.

With the help, however, of four Victory Farm Volunteers he got 168 acres of hay and straw baled during the past season. These VFV's included Kenneth Turek, Cicero, a high school boy; Barbara Wardrip, Poplar Grove; Patricia Stevenson, Rockford, and Joseph Kroc, Lyon. Kenneth worked as a regular hired hand throughout the summer on the Ellingson farm while Joseph Kroc, who was employed on the nearby Don Bohert farm, helped out on an exchange of labor basis. The two girls worked during the haying season.

Ellingson appreciated this help as one of his two sons is in the armed services.

Such experiences were typical among the VFV's in northern Illinois this summer. Some 800 VFV's worked on farms in northern Illinois. Two hundred of these lived on farms and worked by the month, 500 were in three VFV camps in Cook county, and 106 VFV girls detasseled corn.

These VFV's help Ernie Ellingson, Boone county farmer, bale 168 acres of hay and straw. Left to right: Ellingson, Kenneth Turek, Barbara Wardrip, Patricia Stevenson, and Joseph Kroc. There is a total of 50 VFV's working in Boone.

VFV's work on the farm of Louis Wetterman, Cook county, president of Illinois Vegetable Growers Association. Left to right: Irvin Sacheck, Gilbert Christfher, Mrs. Wetterman, Marcus Crown, and Wetterman. Wetterman is chairman of the North Cook County Farm Labor Committee.

Al Ames, Lake County Farm Bureau member, shows Larry Woods, VFV, how to hand feed a calf.

Farm Boys and Girls Are Urged To Collect Milkweed

Rural school children, 4-H, Rural Youth and FFA members will have an opportunity to do an important war job this month. This job is collecting milkweed floss urgently needed in making life jackets and life rafts for fighting men in the battle areas.

Patriotic young Americans who want to pitch in and help should get in touch with their school leaders, 4-H leaders, county farm and home advisers for details on where and how the milkweed floss is to be collected and delivered. The milkweed harvest will start about Sept. 15 and continue about six weeks, according to Dr. W. I. DeWees, assistant professor of agriculture, Illinois State Normal University, who is in charge of the program for the state.

Dr. DeWees explained that onion bags would be provided for the collection and boys and girls would be paid 15 cents a bag for pods, plus 5 cents a bag for drying.

Milkweed floss is being used in life jackets in place of kapok from the Dutch Indies, the supply of which has been cut of by the Japs.

Carl F. Mees is Union Adviser

Carl F. Mees, a native of Union county, is the new farm adviser in Randolph county, succeeding E. C. Secor who served in that capacity for 21 years.

Born near Anna, Mees was graduated from the U. of I. College of Agriculture, and has had 10 years of teaching experience — two years in Union county, three in the high school at Vienna and five at Waterloo. He began work Aug. 1.

Secor is employed in 4-H work for the U. of I. College of Agriculture in southern Illinois.

The FARM FRONT ROUNDUP

BUTTER SET ASIDE — Manufacturers of creamery butter will be required to set aside for war uses 20 per cent of their production in September, as compared with 30 per cent in August. This is the same set aside, however, as September, 1943. It is expected that the set aside program will be continued in October.

MILK POWDER — WFA has cancelled a previously announced set aside requirement of 35 per cent of September production for manufacturers of roller dryer skim milk powder.

WORK CLOTHING — A new WPB order requires all manufacturers of work clothing to produce each quarter at least 90 per cent of the number of units produced during the third quarter of 1942. The order also requires manufacturers to put back into production any of the listed items of work clothing that may have been discontinued since the base period.

TRUCK TIRES — Maj. Gen. Lucius D. Clay, director of materiel, Army Service Forces, informed tire manufacturers that the Army considers the tire situation so serious it will furlough back to the manufacturers for heavy tire building all soldiers over 30 years old who are not in the infantry, who have had one year's experience as heavy tire builders and banbury room workers in the tire industry, and who are in this country.

COMMERCIAL TRUCKS — Production of 56,705 commercial trucks has been programmed for the first quarter of 1945, according to WPB. Programmed production for the first quarter of 1944 was 10,894 units. A total of 41,068 is scheduled for the last quarter of 1944.

FERTILIZER PRICES — OPA has issued a nation-wide simplified retail schedule of uniform dollar-and-cents ceiling prices on mixed fertilizers, superphosphate, potash and nitrogenous materials. Local ration boards have copies of a trade bulletin on these fertilizers.

SUPERPHOSPHATE OUTLOOK — Production of superphosphate fertilizers will be adversely affected by industrial shortages of sulfuric acid caused by increased demands of the Army for ordnance requirements and of the Petroleum Administration for War, according to the WPB. According to the current rate of fertilizer production, approximately 8000 tons of superphosphate fertilizers will be available to American farmers for the year July 1, 1944, to June 30, 1945, as compared with 6,800,000 available in the 1943-44 year. The 8000 ton estimate will be short of WFA estimated requirements of 10,000 tons.

APPLE CEILINGS — Maximum prices have been fixed for the 1944 apple crop. The schedule will result in a national average price which consumers may have to pay for a pound of apples at approximately 10¼ cents.

WHEAT SUPPLY — WFA reports that 1944-45 supplies of wheat in the United States, which probably will exceed 1,500 million bushels, should be sufficient not only to meet all essential requirements for the fiscal year beginning July 1, but also should provide a substantial carry-over as a protection against the possibility of shorter supplies in 1945-46.

1945 WHEAT GOAL — Illinois 1945 wheat acreage goal has been announced at 1,500,000 acres as compared with 1,381,000 estimated 1944 planted acres. State wheat acreages total 68.5 million acres for the country as a whole.

POULTRY PRICES — WFA's two new live poultry grades "1" and "2" have replaced its previous three grades of "A", "B", and "C". All new grade 1 live poultry items will have as ceilings the prices previously applied to grade A. All grade 2 poultry will have maximums 4 cents per pound lower than grade 1, at price levels corresponding to old ceilings for grade C poultry.

BEEF SET-ASIDE — Beginning Aug. 20, WFA required all federally-inspected slaughterers to set aside for government procurement 50 per cent of the quantities of beef meeting Army specifications.

CATTLE ON FEED — Number of cattle on feed for market in the 11 corn belt states on Aug. 1 this year was 41 per cent smaller than on the corresponding date a year earlier, USDA reports. This is one of the sharpest decreases in corn belt feeding ever shown. Only in January, 1935, following the drouth year of 1934, was the percentage decrease larger than this year. Smallest decreases were in Wisconsin and in the two leading cattle feeding states of Iowa and Illinois. Wisconsin was down 20 per cent, Iowa 35 per cent and Illinois 34 per cent.

LUMBER PRIORITIES — Farmers who need lumber for essential maintenance and repair work on farms may obtain preference ratings of AA-3, and in some cases AA-2, according to the WFA. These ratings are as high as those assigned to any other civilian uses.

CORN PICKERS — WPB on Aug. 22 called upon manufacturers of corn pickers and binders to step up production the next six weeks so that the machinery would be available for the fall harvest season.

WPB reported the total value of farm machinery produced during July was a 51.2 per cent increase over the monthly average for the 12 preceding months.

Continuation of the national school lunch program for the 1944-45 school year has been assured by the appropriation by Congress of 50 million dollars for its operation, according to the WFA.

HOUSING TIME

Get Better Results with "FREE CHOICE" Method

Blue Seal Poultry Balancer fed "FREE CHOICE" has won many friends because of its effectiveness and economy. Poultry research has demonstrated that growing pullets and laying hens will balance their own rations if given the freedom of choice.

Build or buy a flock feeder with three compartments. Place Poultry Balancer in the center compartment, whole oats on one end, and shelled corn in the other. A five-foot flock feeder will accommodate fifty hens.

By this system your own corn and oats provide about eighty per cent of the total ration. The simplicity of this method permits you to be doing other things while your hens "grind and mix" their own high egg producing ration. Keep grit oyster shell and plenty of water before them at all times.

Phone your Blue Seal salesman today for your Fall supply of Poultry Balancer.

BLUE SEAL

ILLINOIS FARM SUPPLY CO.
608 SOUTH DEARBORN ST., CHICAGO, ILLINOIS

Get Your House In Order

Here are some suggestions which will aid you in preparing your poultry house for winter:

1. Move pullets to winter quarters before they start to lay.
2. All nests, roosts, and interior equipment should be cleaned and disinfected.
3. Provide one nest for every five or six hens.
4. Provide one foot feeder space for five hens. One five-foot flock feeder will accommodate fifty hens.
5. Have not less than four square feet per bird.
6. A five-gallon waterer will provide for 100 hens.
7. Provide plenty of ventilation, but free from drafts.
8. Cull your birds very closely during September.
9. All fowls should be vaccinated for pox as early as possible.

THE WHY OF I.A.A. INTEREST IN SCHOOL IMPROVEMENT

By John K. Cox

A NUMBER of questions relating to rural school improvement and the Illinois Agricultural Association's interest in it are continually being asked by teachers and others who are not familiar with the Farm Bureau Organization. One of the most frequent questions is, "Why did the IAA assume responsibility for helping to improve rural schools?"

There are several reasons. First, rural schools are primarily the concern of rural people. Our children attend them. They are located in our communities. And the changes that have placed the rural children at a disadvantage because of small enrollments, inequality of financial support and insufficient well trained teachers have occurred in our rural communities. Second, as a non-political organization the IAA is in a better position to assume this responsibility without fear of political consequences. Third, this special interest in schools is a natural out-growth of the expanding services rendered by the IAA to rural people.

Although this organization has been unjustly accused of placing the emphasis upon saving money rather than upon providing good educational opportunities for our children, those accusations largely grew out of the fact that the IAA has had no definite school policy, and its attitude toward school improvement may have seemed to many people a negative one. The IAA has long been in favor of better rural schools. But it has always been opposed to forced reorganization. As early as 1937 the IAA adopted resolutions favoring a reasonable reorganization of schools into larger administrative units wherever such changes are approved by the farm people and could be accomplished at reasonable cost. It is to the credit of the state organization of Farm Bureau people today that school improvement and reorganization is not being advocated to save money but to secure better results from the money spent, whether it be a trifle more or less.

Farm people want their children to have equal educational advantages with town children and yet retain those advantages inherent in rural living. Farm parents want their boys and girls to have a broader education than is generally offered in a very small school. They want them to have competition in both work and play, so that additional incentive will be provided to bring out their best effort. They want their children to learn to associate happily with others, to learn to give and take, to estimate the other person's personality and ideas, to learn to cooperate with others for the good of the group. Those things are essential to a useful, happy citizenship, and they can not be learned well except by much contact with others. This learning of the value and means of cooperation is fundamental to the future success of the program of Illinois agricultural groups.

A fourth reason why the IAA assumed some responsibility in helping to improve rural schools is that there was a possibility that legislation would soon be passed making reorganization mandatory. The IAA believes in local planning, local controls, local responsibility, and that the school should fit the needs of the particular community. Educational authority is vested in the state government and is delegated to the local communities, to be retained by those local communities only so long as the local communities discharge their duties toward their schools. That includes keeping them up-to-date, so that they will afford educational opportunity equivalent to that offered children elsewhere. The rural communities are very jealous of this local control of their schools, and rightly so. Control of their schools in many instances is practically the last vestige of local governmental control left the community. And it is an institution, next to the church, most dear to rural people.

Our purpose as an organization is clear. We intend first to learn more about the factors affecting the efficiency of our schools and the effects of those factors on the schools. Second, after securing this information we hope to acquaint our own people with the inadequacy of educational opportunity furnished by many of our schools as well as with advantages to be found in better school systems as a means not only of obtaining a more useful educational program, but also of retaining local control of the schools.

A sizeable number of Illinois counties have already set up their county school committees and are proceeding with the work of gathering information about their schools and presenting that information to the various communities in their county. This work is being carried on and inspired by expert county leaders who try to inform themselves fully before passing on suggestions and recommendations to others. We have already seen some splendid examples of democracy in action and of very capable, cautious, enlightened, and unselfish leadership. This rural school problem presents a challenge to all those who can visualize what some of our rural schools are today as compared with what they should be to serve the best interests of rural people.

To eliminate any further doubts as to our intentions or methods, this organization is working with educational groups and plans to continue to work with them. We welcome the sympathetic support from these groups, realizing that we all have common ultimate aims and if we can work together harmoniously, our achievements will come more quickly and will be more worthwhile.

The IAA wants the kind of schools that will serve well the present needs of the citizens of tomorrow. It wants schools big enough, well financed, and with broad and practical school programs that will entice good material into the teaching field. It wants school districts that are able to pay teachers and administrators enough to cause them to want to make teaching a profession. And then, it wants the kind of schools that serve as logical community centers, that graduates can look upon with pride, and that parents and patrons enjoy supporting, knowing that they fulfill their responsibility and justify the confidence placed in them.

V. B. Hamilton Resigns Iowa Bureau Position

V. B. Hamilton, secretary-treasurer of the Iowa Farm Bureau Federation for the past nine years, resigned Aug. 1 to assume duties with a hybrid seed corn company of which he is a partner.

Roger Fleming who has been director of research for the Iowa Farm Bureau Federation for five years was named to succeed Hamilton. As Fleming is now serving with the U. S. Navy, Don Groves has been named acting secretary.

Here is what you would call a "Farm Bureau" family. These five Hertel brothers, left to right, Bernard, Joseph, Raymond, Anthony and John, are all members of the Lake County Farm Bureau. Their mother, Mrs. Joe Hertel, is at the right. Five Obenauf brothers are also members of the Lake Farm Bureau, and a sixth Obenauf brother is a member in McHenry County Farm Bureau.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Bissenden

Champaign county has scored again. The recent countywide canvass to attain the goal of 2700 was well supported by the membership workers. Accomplishment of the goal was celebrated by a countywide fish fry for workers and their wives.

Clark county kicked off a 14-day drive on Aug. 18 with 100 per cent attendance. Thomas Drummond really believes, "what you do in the forenoon, you don't have to do after dinner."

Seventy-five of Shelby county's "live wires" attended the pep meeting on Aug. 21. More than 100 prospects received a well worded letter in advance of the worker contact.

Lake county launched a contest program Aug. 23, and the attendance was 100 per cent. With General Elbert Elsbury in command of the north half of the county, and General George Berghorn in command in the south, the battle is on. Watch for results

Commission Orders Rail Line Kept in Operation

Adequate rail transportation for the late apple crop of Calhoun county has been insured by the order of the Interstate Commerce Commission that the Carrollton-East Hardin branch of the Alton railroad be kept in operation.

This order was issued by the commission in late July following presentation of evidence outlining the need for the 19.4 miles of rail line by Guy W. Baxter, director of transportation for the IAA, at a hearing during the first of the year. Baxter represented the farmers' interests at the request of the Calhoun, Greene and Jersey County Farm Bureaus. The railroad sought to abandon the line Sept. 29, 1943.

Report of the commission issued July 18, 1944, said in part: "Under these circumstances we are of opinion that the branch should continue in operation during the present emergency and our finding herein will be without prejudice to the renewal of the application after the termination of the war, if it can be shown that conditions then existing warrant such action."

New Membership Contract of PMA Signed by 10,491

According to a report made by Pure Milk Association officials in the last week of August, 10,491 of 12,739 members have signed the new PMA membership agreement since July 7. All this was accomplished by mailing the new membership agreement to members for their signatures.

Each director has been furnished with a list of those members who have not signed the new agreement and they will be called by telephone by local officers. It is hoped that this method will bring in at least another 1000 signed agreements by mail. The balance of the members will then have to be called on by directors, local and district officers and fieldmen. Such a record of cooperation is a tribute to PMA membership and leadership.

Delegates at the annual meeting of Pure Milk Association on March 14, 1944, passed a resolution asking the board of directors to prepare a new membership agreement. Two reasons were given for this request; to simplify the system of allocating members' savings and to provide more funds for the purchase of milk plants and equipment.

Under the new membership agreement the board of directors can take from one to three cents per cwt. out of members' milk checks for the purpose of purchasing and building milk plants and equipment. Under the old contract it was possible to use only one cent for this purpose.

Under the new membership agreement it is the intention of the board of directors to build up a total capital of $3,000,000 and to revolve this investment, including the savings of the organization, every seven years.

Livestock Group Submits Program to Government

A program looking to the solution of immediate and long range problems facing hog producers has been submitted to government officials in Washington by the swine subcommittee of the Joint Livestock Committee representing 130 livestock producing and marketing associations and general farm organizations. The program was drafted by the Joint Livestock Committee.

Recommendations dealing with support and ceiling prices for live pork were submitted to War Food Administrator Marvin Jones and to OPA officials as follows:

I. FLOORS: Butcher hogs weighing 180 to 270 pounds, minimum $13.75 per cwt. Chicago base. The average monthly minimum drove cost shall not be less than $13.50 per cwt. for barrows and gilts of all weights.

II. CEILINGS: If ceilings are continued they should be adjusted for increases in cost of production. Ceilings should be the same for all weights and classes of hogs.

III. ENFORCEMENT OF FLOOR PRICES: Floors must be enforced. The enforcement of floor prices might be secured by withholding all subsidy payments for that month from those packers whose monthly drove cost is below the drove floor price or who, at any time, pay less than $13.75 per cwt. for butcher hogs of 180 to 270 pounds.

IV. SUBSIDIES: We continue our opposition to the use of subsidy payments in lieu of fair market prices. However, any reduction of subsidy payments to packers should be accompanied by a compensating increase in retail and wholesale ceiling prices of pork and pork products.

V. ADJUSTMENT OF PRICES OF CUTS: We suggest a readjustment of retail and wholesale ceiling prices on pork cuts and pork products in order that a balance in demand for various cuts and products may be restored.

The committee also stated, "We urge that lend-lease require allied civilian

populations to accept not less than a proportional share of the pork cuts and products which are in less demand as is required of our civilian population."

There has been considerable speculation as to whether the government will lower the price support on hogs from $13.75 to $12.50 on Oct. 1, as originally announced.

The Price Control extension act directs that the President shall take "all lawful action" to maintain prices to producers at the higher of parity or the highest level obtaining during the first nine months of 1942, and it is pointed out that a reduction of the hog support price to $12.50 would be a violation of this mandate.

The swine subcommittee includes Francie Johnson, Iowa, chairman of the AFBF National Livestock Committee; Ted Anderson, Missouri; William Yungclas, Iowa; C. L. Farrington, Indiana; R. B. Evans and P. O. Wilson. Herman Aaberg, director of the AFBF livestock department, also accompanied the committee to Washington, in the place of F. G. Ketner, committee member, who was unable to make the trip.

lockers

By Frank Gougler

During the past year 13 of our locker companies have expanded their operations through the establishing of new plants. Eleven new companies have been organized by county Farm Bureaus and one independent cooperative has been organized making a total of 25. In addition several companies have expanded present plants.

By early July all allocations of material for locker plant construction were exhausted. This means that a number of applications that have been filed must wait until new allocations of material are made available. This very likely will not be done until early 1945. Applications are still being received by WPB, and when material is available they will be considered in the order received.

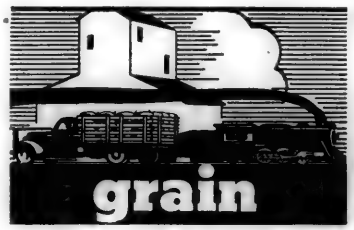
On Aug. 10 Producers Locker Association of Carbondale had "Open House." This was a sort of emergency opening. Peach harvest at this time was at its peak and many locker patrons were eager to utilize their lockers for storing peaches.

The locker plant chill room, processing room and curing department are just being completed. The locker room, however, was ready, therefore the board and management saw no reason for not accommodating patrons who wanted to put fruit, vegetables and poultry into their lockers. Pork and beef cannot be processed until the chill and curing rooms are completed.

Opening day and the following two days were indeed busy days for all of the employees, for there was a constant flow of patrons into the plant with products to be stored.

This plant when fully occupied will accommodate 750 patrons and present interest indicates it will soon be filled.

Architects and engineers have completed plans for Edgar County Locker Service's 850 locker plant. The original plan proyided for complete slaughter facilities as a part of the plant, but the Paris City Council objected to slaughter facilities within the city limits.



grain

By G. H. Iffner

Information accompanying the 1944-45 soybean processors' contract points out that an additional cent a bushel has been provided in the processors' margin to enable processors to pay country storage contractors an additional cent a bushel to cover increased risks incurred by handling and storing a product of higher value.

The country elevators contracting storage will have to find a way to collect this extra allowance for OPA holds that it is an increase in rent. The Illinois Agricultural Association holds that it is not a rental proposition at all. Rather it is a just payment for increased risks involved in handling and storing a product of higher value. The IAA will make an effort to secure the extra cent a bushel for the country elevator storing soybeans.

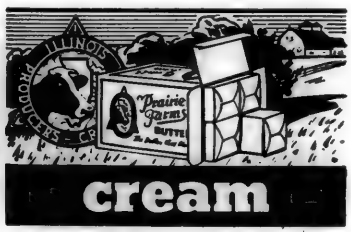
Members of the Illinois Grain Corporation are looking forward to the melon slicing which will distribute $100,000 in cash and three times that amount in patronage stock.

The Eminence Grain and Coal Company, Logan county, is the first new member to be signed in the Illinois Grain Corporation since the reorganization period of 1937-38. The Eminence Grain and Coal Company marketed grain through Illinois Grain Corporation during the intervening years, but never was a member. Ray Thompson is the manager.

The books of the Rushville Farmers Grain and Livestock Company, Schuyler county, would prove discouraging to an old line grain company for this cooperative has only Illinois Grain Corporation on its account list. Manager William Eifert says, "There is no use in having an Illinois Grain Corporation if you don't use it, so I just use it 100 per cent."

There has been considerable turnover in management recently. Sam Bane moves from the Atwood Grain and Supply Company, Douglas county, to the DeWitt County Cooperative Grain Company at Clinton; Walter Henkel moves from the Moultrie Grain Association, Cadwell, to Atwood, and Harlow Boyd, Sullivan, moves to the Moultrie Grain Association. Dale Bunney is the new manager of the Farmers Cooperative Elevator Company, Maroa, Macon county, and the board of the Hudson Grain Company, McLean county, is looking for a successor.

R. V. Graves, manager of the Elmwood Elevator Company, Peoria county, bought an elevator in eastern Illinois leaving a vacancy at Elmwood. Richard Lovingfoss, Philo, has been named manager of the Sadorus Cooperative Elevator Company, Champaign county, to fill the vacancy caused by the death of H. W. Holl. A new manager is being sought for the Godfrey Elevator Company in Madison county. Ellsworth Turley, assistant at the Greenville Equity Elevator, Bond county, succeeds J. M. Daniels who resigned recently.



cream

By Frank Gougler

Butter production by the end of July this year for the United States was approximately one billion pounds, but 11 per cent under the same period for last year. The northeast central states which includes Illinois also showed an 11 per cent decrease. Drouth conditions are largely responsible for the decrease.

The ten member Producer Creameries during the past ten months purchased 1.47% more butter than during the same months last year. Since a number of our creameries purchase whole milk and some of the cream is sold as such, the butter made does not represent total fat purchases. Total fat purchases by the ten member creameries is 20.3% above last year.

Producers Creamery of Moline leads all plants in increased butter made over a year ago. The gain amounts to 29.03%. This plant also leads in the production of 92 score butter. Despite the hot weather during July, 91.61% of all the butter received from member plants scored 90 or better, and 11.5% scored 92%.

By Aug. 1, the four creameries making powder, Galesburg, Mt. Sterling, Carlinville and Olney, will have manufactured two million pounds of skim milk powder since Sept. 30, 1943. Half of this powder has been sold to the government at 14 cents per pound and the remainder to local buyers.

During the past year the number of milk patrons of Producers Creamery of Carlinville has increased from 80 to 500. This growth measured in another way is in the value of business done. The first full year that the company operated it had a $73,000 business. This year the total value of all products will be $750,000.

During June, 28 new patrons were added to the creamery.

William Knetzer, who for a number of years was in charge of the cream department, has entered the armed services and is suc-

"THE WEALTH OF ILLINOIS IS IN HER SOIL, AND HER STRENGTH LIES IN ITS INTELLIGENT DEVELOPMENT."

Old Agriculture Building
University of Illinois

— This inscription appears on the "Old Ag Building" at the University of Illinois. It symbolizes the practical, forward-looking attitude of Illinois farmers. Each year thousands of rural youth attend the University to help prepare themselves for the problems which they will face in the future.

More than any others, perhaps, Farm Bureau members appreciate the need for farmers to be well-informed. As a consequence, many of them have asked the assistance of their Farm Bureau insurance agent in order to be sure that their sons and daughters will have money for an education.

He has shown them how a Country Life Insurance policy, taken when the child is young, can be used to provide an educational income. He has shown them that a Country Life Insurance policy taken on the life of the father can guarantee that even in case of his death, his children will be able to continue with their educational plans.

There is a Country Life representative in your community, or in your Farm Bureau office. He is prepared to supply you with the facts and figures which will meet your own life insurance problems. Why not call him today? Or, if you wish, drop a line direct to the Home Office of the company — Country Life Insurance Company, 608 South Dearborn, Chicago 5, Illinois.

EXCHANGE MARKETS

All-Time Record

PEACH CROP

AN all-time record for the Illinois Fruit Growers Exchange in marketing peaches appears to have been established in the 1944 season just completed with an estimated volume of 150,000 bushels. This compares with 36,000 bushels during the short crop year of 1943, and 67,000 bushels in 1942.

This volume of marketing was made in the face of wartime difficulties such as truck, labor and basket shortages.

There were fewer trucks to move the crop in 1944 than in 1943 and there were more breakdowns on the road, L. L. Colvis, director of fruit and vegetable marketing for the IAA reported. In spite of this situation, 50 per cent of the peach crop moved by trucks. In addition the Exchange handled about 250 cars of peaches by rail. Here again, labor shortages were noted and as a result railroads found it difficult to furnish iced cars.

The job of picking and packing the crop was largely achieved through local help working extra long hours. Drouth conditions that destroyed other crops in southern Illinois made it possible for more farmers to help out with the peach harvest and their help was a saving factor.

The labor situation also was aided by the Victory Farm Volunteers and Jamaicans. At Centralia, 185 boy VFV's were housed and fed in the Centralia High School and made up 13 teams that worked in orchards. At Salem, 84 boy VFV's made up 6 teams that were housed and fed in the Salem High School. There also was an Illinois-Missouri adult labor camp set up at

LOCAL HELP RECRUITED TO HANDLE MILLION-BUSHEL VOLUME — HALF OF CROP RUSHED TO MARKET BY TRUCKS

★ ★ ★ ★ ★ ★ ★ ★ ★

Victory Farm Volunteers who helped out in the orchards in the Centralia area were housed and fed in the Centralia High School. Here they are shown in the school cafeteria for one of their meals. Lunches were brought out to the orchards. Salem High School also followed a similar plan.

Centralia with 250 workers, and one at Salem with 91 workers. Eighty-four Jamaicans were stationed in a camp at Mt. Vernon, and 40 at the state park camp at Makanda, near Carbondale.

Baskets were as scarce as anticipated and some peaches were sold in bulk. In some cases packing sheds had to shut down while baskets were shifted from some other shed that temporarily had a few extra containers. The Exchange did a good job in getting 50 carloads of baskets for growers.

One of the major features of the 1944 deal was the excellent demand for peaches. This demand continued with limited exception throughout all of the harvest. The bulk of the No. 1 two-inch peaches sold at the ceiling price of $3.66 to the grower. Some 50 per cent of the crop in the Centralia area was smaller than two-inch, but the quality was good and the fruit was remarkably free from worms and brown rot.

The demand for peaches undoubtedly was due to the points on canned goods which encouraged more home preserving and by the increase in the number of Illinois people who put peaches in cold storage lockers. Some of the growers were of the opinion that if a ceiling had not been placed on the 1944 crop, the price would have gone over $5 per bushel. Last year No. 1 peaches sold for $6 and $6.50 because there was a short crop.

Colvis said that he believed the state's estimate of a 1944 crop of 1,300,000 bushels would be close to the actual production figure. Lack of rain reduced the size of the peach this year, and resulted in a lower figure in total bushels. If weather conditions had been normal the total bushelage would have been larger than the state's estimate as the number of peaches was very great this year.

Rains over the weekend of Aug. 19 and 20 helped to clean up the markets, but were responsible for some over-ripe peaches, Colvis said.

The Exchange served more growers than ever before during the 1944 peach deal. In fact, the Exchange had as many growers as it could take care of under the limitations of wartime conditions.

Leo J. Adams, veteran picker from Fayette county, reaches for top ones in the orchard of H. H. Thurness & Son, near Centralia.

NEW HEALTH, PHYSICAL EDUCATION LAW TOOK EFFECT JULY 1, 1944

THE new Health Physical Education Law known as Senate Bill No. 396, and passed during the 1943 session of the state legislature, will be limited in its effectiveness during the coming year and for some time to come. The act became effective, however, on July 1, 1944.

The part of the law that requires each pupil on starting to school or just prior to that to have a thorough physical examination by a competent physician and to have additional physical examinations at least every four years thereafter, will be limited in effectiveness temporarily by the scarcity of doctors.

A second part of the law requires that all pupils in public schools and teachers' colleges shall, as soon as practicable, be required to engage daily during the school day in courses of physical education to the amount of one full instructional period per day, exclusive of recess and lunch periods; or, where local conditions warrant an exception, to employ 200 minutes weekly distributed over a period of three or four days for that purpose. This law cannot be enforced satisfactorily until many more physical education directors than are now available return to the teaching field or new ones are trained for the jobs.

Pupils who object to physical examinations on constitutional grounds are required to present to the board of education a statement of such objection signed by a parent or guardian. They are not released from the required participation in physical education, however.

Also pupils who do not pass the physical examination are to be placed in a special physical education class. Parents are urged to correct all remedial defects in their children as early as possible. In most small schools it is likely that those students who are barred from participation in regular physical education classes will receive little or no attention. Either lack of help on the faculty, class conflicts, or lack of gymnasium space at the time when they can meet will operate against a program for the physically handicapped.

Since the new Health and Physical Education Law carried no appropriations with it, undoubtedly the parents will have to bear the expense of the physical examinations. In some cases county school superintendents have already met with county medical associations to discuss the program and to agree upon physicians' fees per child.

The intent of the new law is to build health and physical education programs in our schools that will rectify or eliminate remedial physical weaknesses and that will build strong, healthy bodies and minds. Health authorities report that 25.4 of our young men, 18-19 years of age, have been rejected for military service. Also it has been found that in spite of interscholastic sports programs and limited efforts to meet minimum requirements of the previous physical education law, these did not suffice to build shoulder, neck, arm, upper trunk and leg muscles for a good many of our boys and girls.

Evidently, if and when these new requirements can be put into operation generally, there will be some hope for better results. It is possible for a wide-awake, inventive and energetic physical education director to provide the kind of program that will sell itself even to hard-working farm boys because of its value as muscular development. The value of a good physical education program cannot be over-estimated. Past experience has proved that a good, well-rounded physical development program for boys should in addition to the formal sports, include such exercises as tumbling, rope climbs, ladder work, calisthenics, balancing, drills, trapeze, rings, weights, wrestling, boxing, and perhaps even company command drill. Some schools have found that the materials needed for the above mentioned exercises can be secured and placed in use for $100 or less. They can be used in any gymnasium, and the value derived merely as energy burners during the noon hour, before and after school, are ample compensations for the cost of installation. Such physical education programs have been found to be very popular with school patrons.

Girls, of course, should have a moderate program including such exercises as tumbling, calisthenics, folk dancing, and sports.

Standards of accomplishment should be set up in each phase of exercises and each pupil should be required to pass a minimum number of tests in order to qualify for credit in the courses. Some hygiene might also be added.

A group of varied exercises under the direction of an enthusiastic physical education teacher goes a long way toward securing 100 per cent cooperation from the students.

Record Number 1945 Calendars Are Ordered

A new record has been established in the number of orders received for the 1945 IAA-Farm Bureau calendar from 97 County Farm Bureaus. Orders for 1945 calendars number 127,925 as compared with 114,905 in 1944. This is also the first time that all 97 County Farm Bureaus have placed orders for the IAA-Farm Bureau calendar.

The 1945 calendar will be somewhat similar to 1944 with the exception that the numerals on each page will be larger, and Kodachrome pictures in full color of farm scenes are being used in the illustrations instead of paintings.

Women, Girls Detassel Corn

The largest hybrid seed corn crop in the history of the state — 84,000 acres — has been detasseled under ideal conditions with the aid of Illinois women and girls who deserve special recognition for their work, according to farm labor officials and seedsmen.

Records in the office of P. E. Johnston, state supervisor of emergency farm labor, show that 24,532 young people were assigned to farm work this summer up to Aug. 1. Of this number, thousands of girls and women worked 8 to 10 hours on day and night shifts detasseling seed corn. Some were high school girls, some teachers, others college students, nurses, factory workers, librarians, secretaries, housewives, and wives of servicemen.

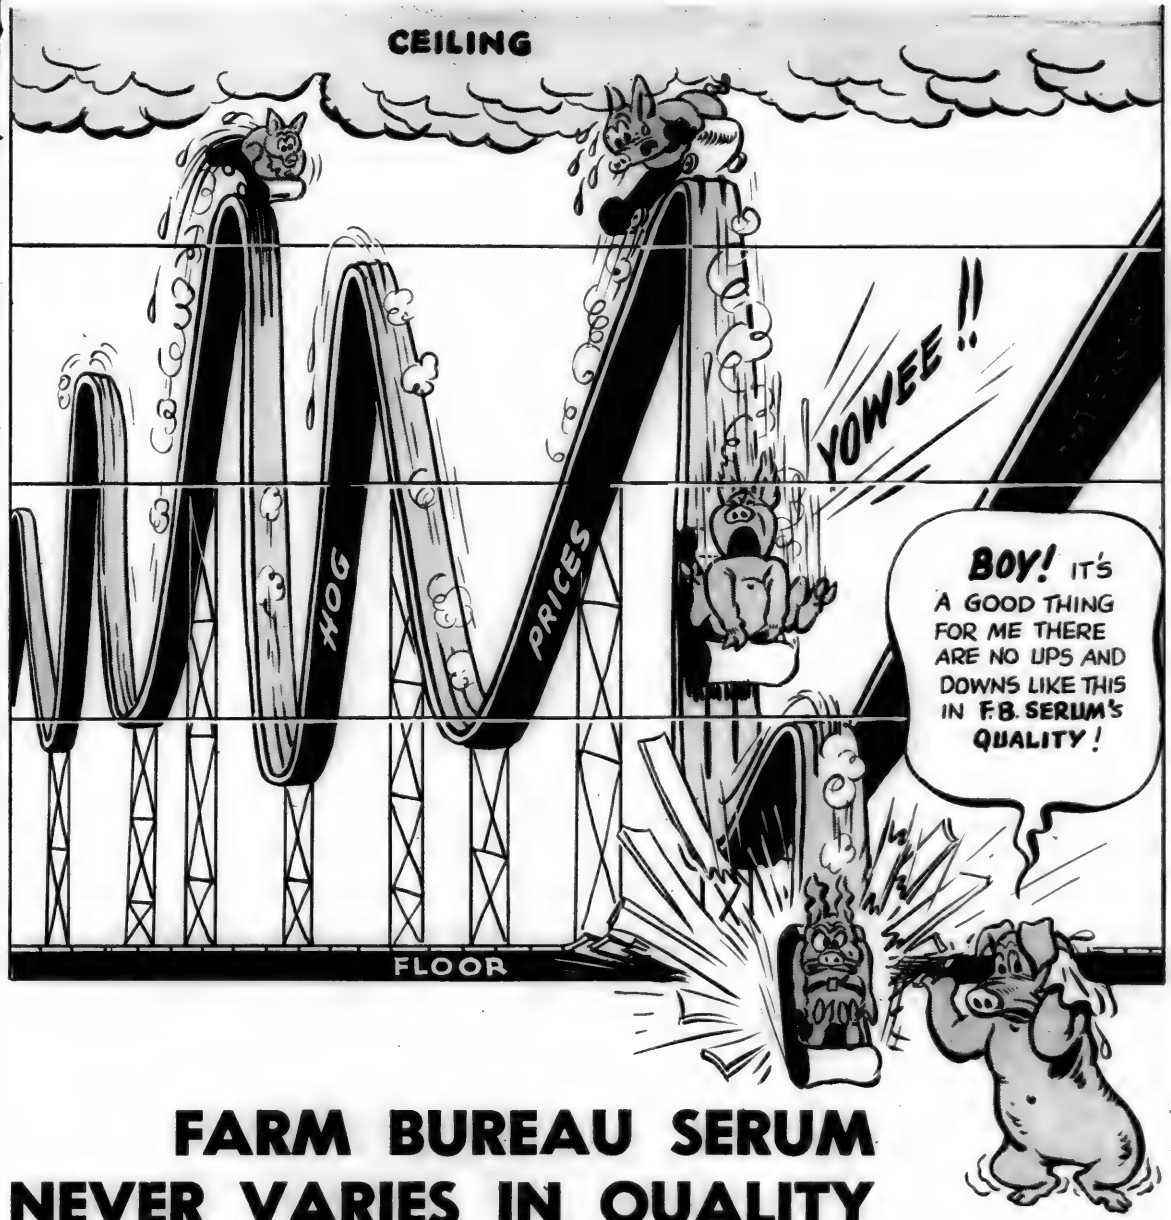
Dear Editor:

Will drop a few lines to let you know I just received the July-August edition of your wonderful magazine. I want you to know I enjoy your magazine very much. On ship we don't get much reading material, so my buddy from Avon, Ill., is next to get your magazine. I live in the community of Kingston Mines, Peoria county, and I imagine there are plenty of Rural Youthers from there doing some great 4-H work. Am enclosing my new address and hope you will send the magazine to it as it will get to me a lot quicker.

Respectfully yours,
Herman Gohde

(Editor's Note: We would like to hear from more of the men in service in various parts of the globe who are receiving the IAA Record.)



FARM BUREAU SERUM NEVER VARIES IN QUALITY

It's the one sure thing in this hog business; dependable year after year for freshness and potency. A high quality product furnished at a reasonable cost to hog raisers. Vaccinate today — you can't afford to put it off.

REMEMBER:

The smaller the shoat The cheaper the shot

Milk

(*Continued from page* 14)

ceeded by Ernest Atchison who has been working in the milk department.

September 1, IPC will be located at 2101 W. Pershing Road, in the U. S. Cold Storage building. At this location better facilities will be available for handling both butter and milk powder. The plant is now equipped with an automatic butter cutting, wrapping and cartoning machine. This machine is capable of handling one car load daily.

Manager Virgil Johnson of the Galesburg Creamery reports that he has replaced his old rotary can washer with a straightaway can washer. This new addition will assure patrons that their cans will be returned in better condition and cans can be handled more rapidly.

The board of directors has authorized the management to solicit non-stock holders to subscribe for one share of class "A" preferred stock. The purpose is to get wider distribution of stock and to increase producer interest. Every patron should share in the Creameries' financial structure.

The architect for Producers Creamery of Peoria has completed plans and specifications for the new creamery at Henry. Bids will soon be called for from several contractors, and when approved by the board of directors, work will be started on its construction.

Hot weather according to Forest Fairchild, Manager of Farmer Creamery Co., Bloomington, brings the dairymen added responsibility. Some dairymen have learned the art of cooling milk and cream to 50 or 60 degrees soon after it is milked. Others have not. It's the "have-nots", who have had to take lower prices or have their milk or cream rejected.

He says further: "Everybody knows that pails, strainers and milking machines should be scrubbed with brush and cold water, followed by warm water and finally rinsed with hot water or chlorine solution.

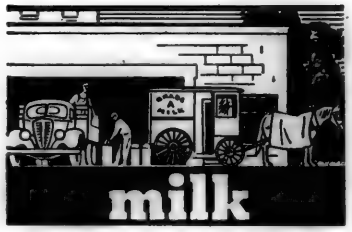
"Bacteria, the gremlins in the dairyman's life, multiply so fast that if you don't take precautionary measures, well: rejected milk is a loss to everyone — except maybe the pigs.

"Bacteria multiply very slowly in milk at 50 degrees F. but in milk at 60 degrees F. there will be 15 times as many in 12 hours.

"The little devils really appreciate milk at 70 degrees, because for each rascal at the beginning you will find 700 at the end of 12 hours. Who cares where they come from. Let's get rid of them quickly."

Manager Frank Mleynek, Producers Creamery of Olney, reports that a faithful employee after nine years of service as a cream hauler, Louis Englebright, has been forced to resign due to ill health. He has been succeeded by Delbert Von Almen, who will operate cream routes in White, Wabash and Edwards counties.

Collections made from producers during the first 15 days of June in the Olney territory amounted to $304.17. This has been paid to ADA and will be used with thousands of other like payments to sustain "The Voice of the Dairy Farmer" radio program telling the consuming public about the goodness of dairy products.



By Wilfred Shaw

Pure Milk Association of Chicago reports that by the use of mail alone 10,100 of their members have already signed and returned to their office the newly revised Pure Milk Association membership agreement. Art Lauterbach, manager of Pure Milk, states that practically all of the remaining 2,600 members will have signed and returned the agreement to their office within the next 60 days. This is the fourth revision of the membership agreement for the purpose of adapting it to current needs.

A meeting of the officers with the advisory committeemen of Sanitary Milk Producers was held Wednesday, Aug. 23, in St. John's Methodist Church, Edwardsville, Ill. Matters discussed at the meeting included: membership acquisition; the St. Louis milk price situation; association finances; milk transportation problems and milk inspection under the St. Louis Milk Ordinance.

A special membership meeting of the Quality Milk Association was held in the Lend A Hand Club Building, Davenport, Ia., Monday evening, Aug. 28. This meeting was called to discuss with the membership current milk marketing problems in the Quad City market and also association policies and activities for the future in the Quad City area.

A Federal Milk Marketing order for the suburban Chicago marketing area was approved by referendum vote of producers in July and becomes operative effective Sept. 1. The order will be administered by H. H. Erdmann, acting milk market administrator of the Chicago Milk Marketing order No. 41.

The Illinois territory included in the order includes Dundee, Elgin, St. Charles, Geneva, Batavia and Aurora Townships in Kane county, Du Page and Will Counties; the City of Barrington in Lake County; excepting any portion of these areas already covered by the Chicago Milk Marketing order No. 41.

The order provides for an individual dealer handlers' pool or for a pooling of prices paid within these areas by a Producers Cooperative Association. The classification of milk sales to dealers is similar to that provided for in the Chicago order. The pricing arrangement is also similar to the Chicago order except that pricing is provided for upon two grades of milk instead of upon grade A only, as in the Chicago order.

Quotas have been established by the War Food Administration limiting the sales during August to 100% as much fluid milk as in June 1929, 90% as much by-products, and 75% as much cream.

Effective Sept. 1 the War Food Administration's supplementary feed subsidy payments to producers upon the sales of fluid milk is raised to 60c per cwt and to 10c per pound upon butter fat sold in cream.

The following are the blended prices received by producers supplying the respective Illinois markets. All are July prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.47
Canton	2.75
Champaign	2.75
Chicago	3.08
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.70
Galesburg	2.65
Harrisburg	2.65
Jacksonville	1.85
Kewanee	2.55
LaSalle	2.68
Moline	2.88
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.05
Springfield	2.85
St. Louis	3.56
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for June unless otherwise noted:

Baltimore	$3.85
Boston (191-200 mile zone) (July)	3.32
Chicago (70 mile zone) (July)	3.08

By John R. Spencer

With truck tires getting thinner, every effort should be made to reduce the number of trips and the size of loads. In the handling of fertilizers, the use of more concentrated materials will accomplish this along with a great many other economies. For example, the 480 pounds of phosphoric acid and potash contained in a ton of 0-12-12 can be supplied by only 1200 pounds of 0-20-20. This reduces the weight, the storage requirement, and the sacks to only sixtenths of that needed for the 0-12-12, according to L. B. Miller, assistant chief, soil experiment fields, University of Illinois College of Agriculture.

"Higher plant food concentrations mean higher prices per ton but lower prices per pound of actual plant food. Present ceiling prices in Illinois are $51.70 per ton for 0-20-20 and $33.50 for 0-12-12, making unit costs of plant food $1.29 and $1.40 respectively, or a saving of almost eight per cent in purchase price, if the more concentrated grade is used," Miller said.

Farmers in Jersey county will be able to purchase more limestone in 1944 than in any year since the war started according to a recent survey there by the local Farm Bureau. Three of the five quarries supplying the county have added more machinery to their facilities to cope with the shortage of available labor.

A new quarry is being opened by the West Countries Construction Company in Kane county between St. Charles and Elgin that will add materially to the available supply of agricultural limestone in that area.

According to A. L. Lang, associate chief of Illinois Soils Experiment Fields, soil erosion is the effect of soil depletion and not the cause of it.

The Midwest Rock Products Corporation at Greencastle, Ind. has not been in operation since April due to a shortage of labor. A number of eastern Illinois counties along the Pennsylvania Railroad thus have one less source of agricultural limestone.

The Hannibal, Mo. plant of Marblehead Lime company stopped production of agricultural limestone May 1 and will have none available this year.

Even at the Chester Penitentiary, the quarry superintendent was bemoaning the shortage of labor!

Six quarries, including a new operation west of Ursa, are producing agricultural limestone in Adams county. However, the three mining operations south of Quincy are producing very little of this material due to other demands. Prices range in the county from $1.15 to $1.50 per ton f.o.b. quarry.

The Radom quarry in Washington county has not been in operation, but plans to resume work in late summer. A new operation in Schuyler county produces some limestone along with road rock, their principal output.

The Federal Quarry of Material Service Corporation which has been producing flux stone (for steel manufacturing) recently started a small production of agricultural limestone. The quarry is at the south edge of Brookfield in Cook county.

Rural YOUTH

By Ellsworth D. Lyon

Attendance of 300 Young People at the East Bay Rural Youth Training School, Bloomington, Aug 13-19, exceeds all other years by nearly 100. The closest year was in 1943 with 212. Forty-four Counties were represented in both 1943 and 1944.

The full program of classes continued throughout the week with good attendance in each. The courses included: "You and Your Shadow" a course in personality development; "Fun for 45," a discussion of recreational problems, plans and approaches; "Applied Psychology;" "Farming in Wartime;" "Getting your Ideas Across," Public Speaking; "Rural Youth Programs that Satisfy;" "Before 'I Do' — And After," a premarriage course; "Building Family Life."

The above classes were scheduled for the forenoon, while the afternoon was given over to such special interest groups as first aid, photography, folk & square dancing, social dancing, song leading, swimming, and crafts.

The evenings schedule consisted of flag ceremonies, vesper services, and programs planned by Rural Youth.

The ambulance plane purchased with war bonds bought by Rural Youth members during the first six months of 1944 was named "Spirit of Illinois Rural Youth" at one of the most important sessions of the Training School. Names were suggested by delegates and a vote taken. Rural Youthers are pledged to purchase war bonds for equal to the cost of a pusuit plane, a second ambulance plane, and an amphibious jeep by Jan. 1, 1945. The plan is to name these at Farm and Home Week.

The summer months provide opportunities for Rural Youth picnics. Among the counties that have enjoyed such relaxation from heavy work are: Carroll enjoyed folk dancing; Livingston, featured swimming and a weiner roast; Macon concluded a paper drive with a hay ride and ice cream freeze; Mason went to New Salem State Park. Randolph had a large attendance at a lawn party; Tazewell held a picnic of its own and later joined with Woodford and Fulton in a visit to Peoria County where a baseball tournament was sponsored in connection with a picnic; Wayne, sponsored an over-night hike with sunrise service and breakfast; Warren staged hayride, scavenger hunt, ice cream freeze and weiner roast; Clay enjoyed a lawn party with folk dancing and active games; Whiteside sponsored a party well attended in spite of a busy season for farm boys; Brown had a hayride without hay; Henry County topped off a picnic supper with a movie; McLean featured a watermelon party with a hayrack ride.

Ogle, Lee Whiteside, Stephenson and Carroll counties got together for a big district Sports Festival July 30 at Lowell Park, near Dixon. More than 200 young people attended. Whiteside walked away with a high score. Husband calling was a great attraction for all counties represented.

Bond County's educational feature for June consisted of a demonstration of health exercises. The recreational feature was a weiner roast.

Richland County reports a grand turn out for the educational programs, "What Rural Youth Is and Does," presented in a panel discussion on Parents' night.

Bureau County recently took Henry County for a cleaning in a baseball game with a score of 8-3. What will be the result in the return game?

LaSalle and DeWitt Counties included a unique educational feature in their weekend Lookout Camp at Starved Rock State Park — identifying and naming of trees and plants in the park. By this plan they had a happy combination of education with recreation.

White county held a sports festival at the Carmi fairgrounds with successful participation.

Rural Youthers line up for ice cream at the LaSalle-DeWitt weekend camp at Starved Rock State Park.

Eugene L. Lopez, University of Illinois Health Service, instructing class in first aid. Subject: Roberta Harms, Richland. Practicing first aid: Mary Weiler, Richland.

Leading Farmers take advantage of this

SPECIAL "FUTURE ORDER" OFFER!

Gerhard H. Ekhoff, Grant Park, Illinois, and his ten-year old tractor which has been operated exclusively on Service Company petroleum products. Mr. Ekhoff operates a large dairy farm, has served his community as a Director of Chicago Pure Milk Association for seventeen years, and was its president for six years.

Place Your Order NOW for BLUE SEAL MOTOR OILS & GREASES

You can make real savings on your purchases of Blue Seal Motor Oil and Blue Seal Greases by placing your order NOW.

Delivery will be made direct to your farm after January 1st, 1945. This incentive is offered as a result of volume buying and a desire to level off the peak load of work during the rush seasons, to safeguard quality, improve service, and save money for you.

You can save money on these products:

Blue Seal Master Motor Oil
Blue Seal Motor Oil (regular)
Penn Bond Motor Oil
Blue Seal Greases
Blue Seal Anti-Rust

The future order incentive is in addition to regular quantity discounts and any patronage dividend savings.

See your Blue Seal Salesman for more complete information.

Fall Livestock Outlook Meetings Now Underway

First in the series of annual fall livestock feed outlook meetings sponsored by County Farm Bureau livestock marketing committees were held during the last week in August. Participating in the meetings were the U. of I. College of Agriculture, cooperative marketing agencies and the livestock marketing department of the IAA.

Main topics discussed at the August meetings and scheduled for the September meetings include: livestock marketing conditions (stocker and feeder movement), general economic situation, more technical problems pertaining to livestock feeding. Following the consideration of these topics there will be a general discussion period.

Remainder of the meetings to be held in September in County Farm Bureaus are as follows: Sept. 1, Marshall-Putnam, Sangamon, Will and Wayne; Sept. 5, Madison; Sept. 6, Hancock, Iroquois, Douglas, Macoupin, Wabash and Vermilion.

Sept. 7, McDonough, Grundy, Piatt, Bond, Effingham and Edgar; Sept. 8, Warren, Kane-Kendall at Sugar Grove; Macon, Clinton, Marion and Coles.

Sept. 11, Lawrence, Gallatin-White; Sept. 12, Henderson, St. Clair-Monroe at Waterloo; Johnson; Sept. 13, Knox, DeKalb, Pike, Union and Clark.

Sept. 14, Mercer, Livingston, Moultrie, Adams, Williamson, Jasper-Crawford at Oblong, and Pulaski-Alexander. Sept. 15, Rock Island, McLean, Shelby, Brown, Saline.

Sept. 19, Whiteside, Fulton and Jefferson; Sept. 20, Henry, Ford, Mason, Greene, Richland and Washington; Sept. 21, Bureau, DeWitt, Tazewell, Scott and Franklin-Hamilton.

Sept. 22, LaSalle, Champaign, Peoria, Cass, Pope-Hardin and Edwards; Sept. 26, Ogle; Sept. 27, Carroll, Lake and Schuyler.

Sept. 28, Jo Daviess, DuPage and Morgan; Sept. 29, Stephenson and Menard.

Bond County Hires Adviser

Harold H. Kuhnen, fieldman for a milk company, Greenville, has been hired as farm adviser in Bond county succeeding W. H. Tammeus, who is now serving as farm adviser in Woodford county.

Born and reared in Madison county, Kuhnen was graduated from the University of Illinois College of Agriculture in 1925. He is scheduled to start work Sept. 15.

Announcing a

PLANT FOOD PROGRAM

FOR ILLINOIS

New emphasis is being placed on the **"PERMANENT SYSTEM"**

- **Good Crop Rotation and Soil Management**
- **Soil Testing and Recommendations to be made by Extension Service**
- **Limestone**
- **Potash**
- **Legumes**

Blue Seal Plant Food materials and Grow-Crop Fertilizers are recommended as supplements only, to be used when properly recommended on farms with a good foundation built by "Permanent System."

A Special THIS FALL

Considerable tonnage of superphosphate and some high analysis mixed grades are now available for use this fall. For further information contact your present Blue Seal distributor or your county Farm Bureau office.

THE PROGRAM

This Plant Food Program for Illinois has been a long time in formation. It has been evolved democratically after much discussion and debate. It now rests upon a sound foundation, with full recognition of the teachings of the University, the Extension Service, the Farm Bureau, and our farmer-owned cooperative distribution system.

A SOUND FOUNDATION

This Plant Food Program rests upon a sound foundation because it has Farm Bureau approval, which means that the appointment of an authorized distributor of Blue Seal Plant Foods and materials will be made by your local Farm Bureau Board after careful consideration of the following qualifications:

- **A** Distributor must be a Farm Bureau type cooperative.
- **B** It should be engaged in another successful line of business.
- **C** It should have adequate warehousing.
- **D** It should have adequate capital.
- **E** It should have sufficient personnel to render a county-wide service in this seasonal type of business and
- **F** To return the savings brought about by volume and efficiency to those who made those savings possible—to Farm Bureau member patrons.

FARMER CONTROL OVER MANUFACTURE AND DISTRIBUTION

Blue Seal Plant Food materials and Grow Crop Fertilizers will be manufactured by "Cooperative Plant Foods, Inc." jointly owned by four state groups of farmers—Indiana, Wisconsin, Minnesota, and Illinois. A quality control committee has been set up by the Illinois Agricultural Association to make sure that farmers in Illinois receive the best available in plant food materials and mixed grades.

Home Bureau Membership In State Reaches 23,706

WITH many County Home Bureaus carrying on organized membership campaigns, substantial numbers of new members are being enrolled in Illinois, according to the latest progress reports.

July 1 membership stood at 23,706 as compared with 21,231 a year ago. Net gains since July 1, 1943, reported by districts at the eighth Citizenship and Home Bureau Organization Conference at Jacksonville, according to Mrs. John Clifton, Milford, membership chairman, are: northwest, 332; west central, 572; southwest, 138; northeast, 769; east central, 399, and southeast, 130.

Membership figures also have been given a boost by the formation of new county units. Bond County Home Bureau organized with 307 members, and Lawrence County Home Bureau organized with more than 308.

An interesting sidelight on membership reported recently by the McLean County Home Bureau was that 260 were charter members with 126 having continuous membership since the organization was formed 26 years ago.

The Citizenship and Home Bureau Organization Conference drew an attendance of 150 women and was termed successful by Home Bureau leaders.

One of the interesting panels at the conference, "Air Your Prejudices," brought up these questions and points:

1. The war situation looks encouraging. What are we doing about getting ready for peace?

2. Who sits at the peace table? Who decides who shall sit there? Will terms be made that can endure and who will ratify them?

3. What is to be done about material furnished liberated countries for rebuilding. Do we rebuild and make the countries gifts of such construction? In other words where do obligations of these countries begin?

4. Are we going to disarm again? Or is there to be a real disarmament agreement between all nations? Who will say what becomes of the huge steel mills in Germany?

5. Education — can German youth be educated in such a way to counteract the education they have been given?

6. Do we not all need much education to take care of the racial problems here in our own country as well as elsewhere? Can we expect to accomplish much in less than 30 years or a generation?

Carl A. Taeusch, head of the division of program study and discussion, USDA, charged Home Bureau members with their responsibility as citizens in planning and working for a just peace. He urged that delegates on their return to their communities discuss these problems.

Taeusch pointed out that rural women through their organizations can have a voice at the peace table, if they are willing to do their part. He also cited the individual's responsibility in helping returning servicemen in adjusting themselves to civilian life and finding jobs for them. Robert B. Browne, professor of education and director of extension, University of Illinois, discussed "Some Pros and Cons of Federal Aid to Education," and stated that many fear federal aid because they are afraid it will mean loss of local control of school programs. He added, however, that there are some special educational problems which cannot be met by state and local units.

Home Bureau members also heard the plea of Mrs. Florence Fifer Bohrer, president of the Illinois League of Women Voters, for revision of the Illinois state constitution.

Clubmobile Fund Gets $1130.35 from Illinois

ILLINOIS Home Bureau members have contributed $1130.35 toward the Red Cross Clubmobile fund of the Associated Women of the American Farm Bureau Federation, according to the latest tabulated reports. This places Illinois in fourth place among the state Home Bureau organizations.

Total funds collected for the Clubmobile fund amount to $16,800. Out of these funds, $3500 has been used to purchase the Clubmobile which is now in operation in Italy, leaving $13,300 to apply on the operating cost of $21,000 for one year. This means that $7700 for operational funds must be collected between now and the end of November.

"Through the generous efforts which have been put forth on this project for the past six months, the Associated Women now has its own Clubmobile actually in operation on the battlefronts of Italy," said Mrs. Charles W. Sewell, administrative director of the organization. "Now that we have achieved this initial part of our purpose, I am sure that every unit of our nation-wide group will put forth still greater effort to assure the complete maintenance of the Clubmobile."

Missouri sent in a check for $2,663.45 for the Clubmobile project, $2,264.34 of which was donated by one county. An Army private from this Missouri county in expressing his appreciation for the Clubmobile wrote from Italy:

"Today has sure been a red letter day for us around here. I have read about the Clubmobiles driven by the Red Cross girls that serve doughnuts and coffee to units like ours, but today was the first time I had ever seen one. We had a movie and all the doughnuts and coffee we could hold and more too."

Contributions for the Clubmobile fund may be sent to Mrs. R. W. Stamey of the Illinois Home Bureau Federation whose address is rural route No. 1, Urbana, Ill.

Plan District Meetings on Nutrition Problems

New developments in nutrition will be discussed at eight district conferences sponsored by the state nutrition committee in various sections of the state during September, according to Mrs. Kathryn Van Aken Burns, state chairman, U. of I. College of Agriculture.

The conference series opens Sept. 19 in Bloomington and continues with meetings in Galesburg, Sept. 20; Sterling, Sept. 21; Geneva, Sept. 22, Effingham, Sept. 25; Harrisburg, Sept. 26; Belleville, Sept. 27, and Jacksonville, Sept. 28. Eighty-seven Illinois counties will send representatives of their nutrition committees to the one-day session.

There are 87 Illinois counties that now have active nutrition committees and organization work is under way in several other sections.

Mrs. Edith Huffman, home adviser in Will county since the establishment of the Home Bureau there six years ago, has resigned to accept a similar position in Fulton county.

Miss Christine Schroy, home adviser in Washington, N. C., for the past two years, has taken over the duties of home adviser in Winnebago county. She started work Sept. 1.

IAA Opposes OPA Ruling

(*Continued from page 5*)

products or associations of such producers and (2) is marketing grain covered by any applicable supplement on the cooperative plan in conformity with the laws of the state wherein it is organized."

Disapproval of that proposal has been expressed by OPA officials on the ground that it would enable patrons of a cooperative, to the extent of their patronage refunds, to receive more for their grain than the patrons of a private dealer would receive.

In answer to this, the National Federation of Grain Cooperatives in a recent communication to the OPA asserted:

. . . "The cooperative farmer — as a farmer — does not receive any more for his grain than the patron of a private grain dealer. Both receive the same price for their grain. The greater return to the cooperative farmer results only from the fact that, in addition to producing grain, he is — like the private dealer and unlike the private dealer's patrons — in the business of marketing grain, and the cooperative farmer receives from his marketing activities only the same margin as his private competitor receives. Their investment, risk, operations, and margins are the same. The only difference is that the income of a private grain company is distributed on the basis of stock owned, while a cooperative distributes its income on the basis of patronage. That difference antedated price control by several decades. It was not created by price control, and effective price control does not require the obliteration of that difference."

Mangner to KMOX

Ted Mangner, former conductor of the popular Illinois Farm and Home Hour, a 30-minute program on the U. of I. radio station, WILL, is now farm director of radio station KMOX, the Columbia Broadcasting System outlet in St. Louis.

Mangner, who resigned his position with the University station in August, had established a record of never having missed one of his 12:30 p.m. Farm and Home Hour shows. He had broadcast 2275 straight programs. In addition to this six-day-a-week farm program, Mangner has written a regular syndicated radio program dealing with farm work for 38 stations throughout the middle west. He also has assisted county farm advisers throughout the state with their local radio programs. Mangner came to the university as a student in 1934 and received his bachelor of science degree from the College of Agriculture in 1937. He started radio work just before graduation.

NOTICE ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the months of September and October, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During September, annual meetings will be held in Christian, Macon and Stark Counties.

During October, annual meetings will be held in Adams, Clay, Fayette, Hancock, JoDaviess, Madison, Marion, Menard, Montgomery, Pike, Pulaski-Alexander, Scott, Washington and White Counties.

Paul E. Mathias,
Corporate Secretary.

Euell E. Greer of Salina, Kansas, has been hired as farm adviser in Williamson county and started work Sept. 1. Born in Hamilton county, Greer has been teaching vocational agriculture at Salina for a number of years.

Gross Income Doesn't Tell All

An Editorial

A METROPOLITAN paper recently contained a reference to the prosperity existing in night clubs and on farms. Such references to high farm income are becoming numerous, and tend to give the wrong impression to city consumers. Perhaps the reason for such stories is the fact that it's still news when and if a farmer receives a good market price for his products, but it is certainly not fair to picture the agricultural producer as receiving exorbitant prices.

A news release from the University of Illinois College of Agriculture covering the findings of 1000 farms located in the northern half of Illinois gives a somewhat different picture of farm income than that appearing in the metropolitan press. The report covers 1943 earnings of these farms on which operators have been keeping accounts in cooperation with the Extension Service. Farm account keepers represent for the most part, the more efficient and higher income group, and for that reason the findings of the report are worth consideration as a yardstick of wartime income for the better than average farm.

The report states that net earnings were good, and average cash balance was more than in 1942, but the inventory increases were enough less to make the net earnings less.

It is also pointed out that "poultry returned $169 per $100 worth of feed as an average on 777 farms. This was not enough to pay for all costs including feed. The average hen laid 133 eggs, used $3.29 worth of feed and brought in $5.56."

Hogs paid $136 for each $100 worth of feed; cattle on 159 farms where feeder cattle were fed returned $160 for each $100 worth of feed fed; and dairy cattle on 359 farms returned $160 for each $100 worth of feed fed. These returns were not enough to pay for feed, labor and other costs.

Another report of a summary of annual farm business reports of 2970 Illinois farms cooperating with the University of Illinois showed that 1943 incomes for these farms were at new highs, but it also pointed out that Illinois accounting farms spent more money to run their farms in 1943 than in any year of record.

"The average expenditure per farm of $6905 in 1943 may be contrasted with an average expenditure of $1494 per farm in 1933, the low point for expenditures in the depression period — an increase of 462 per cent. This change

(*Continued on next page*)

EDITORIAL

reflects changes in the price level, changes in the quantities purchased, and changes in the average size of farm," the report explains.

It would be incorrect to say that farmers did not make money in 1943, but it is equally false to consider gross income and fail to make allowances for increased costs of production when a fair estimate of farm income is being made.

Victory After the War

THE highest duty of American farmers, next only to continued production effort for victory in war, is to do all that is humanly possible to prevent a postwar agricultural disaster.

The glorious exploits of our sons and daughters in France and other war theatres are bringing the victory of farms nearer with each day. History is repeating itself in the desertion of Germany's allies, and in the signs of a crackup of her once great military machine. Farmers have contributed mightily to this result through all-out food production. *That, too, is a repetition of history.*

Will history as enacted in 1919, 1920 *and* 1921 *also repeat itself?* Will a farm debacle, such as occurred then, take place in a greater or lesser degree? That is something for farmers not only to think about, but to plan against, and to take positive action to prevent.

Victory after the war can be achieved only through organization. Farmers must be strong enough, during the reconversion period, and during the years of adjustment that follow, to insist upon fair hearing and fair treatment at the hands of government and governmental agencies. Sound price policies, production adjustment policies, wage policies, employment policies, relief policies — all these and more must be had if an agricultural depression is to be avoided.

Adequate farm representation at Washington and elsewhere depends upon just one thing: the strength and militancy of farm organizations. If the duly constituted leaders of agriculture can speak with the voice of millions of individuals behind them, they will be in a position to obtain sound policies and sound administration of them.

It is encouraging in thinking of this problem to note that the American Farm Bureau Federation's Million Member drive is making real progess.

It is encouraging also to note that in Illinois, home of the largest state farm organization, with over 105,000 members, County Farm Bureaus in every section of the state are working for still greater membership.

The long range goals set last winter and spring by all 97 Illinois County Farm Bureaus will, when achieved, bring membership in Illinois over 118,000. That these goals will be reached is evident from the vigorous efforts now being made, and others now being planned, for this fall and winter.

The loyal, conscious, informed Farm Bureau directors, volunteer workers, and other members could make no greater contribution to a stable, prosperous postwar agriculture — and thus to a stable, prosperous post-war nation — than to achieve these membership goals before another September has gone.

Let's have not only victory in war.

Let's go "all out" for VICTORY AFTER THE WAR.

Surplus War Land

RECENT proposal of the government to sell some 3449 acres of Sangamon Ordance plant land brought farmers face to face with the first reconversion problem in the agricultural field.

As the matter now stands, the proposed sale has been postponed until Congress has fixed a policy of disposal of surplus war real estate. Such postponement was brought about largely by the failure or the refusal of surplus war property officer of the Office of War Mobilization to offer these lands first to their former owners at the price paid by the government for respective parcels of land, adjusted only to cover any damage or benefit to the property during the period of ownership by the government.

First reports of the proposed sale of land in July indicated that it would be advertised for sale on a basis of sealed bids without any prior rights for former owners. The Farm Bureau strenuously objected to this procedure and asked that former owners be first given an opportunity to repurchase their land and that the government develop a constructive, long-range policy on the disposal of all such land.

The surplus war property officer then adjusted the proposal to provide for offering the land to former owners at federally appraised values and if not purchased by Aug. 15 to call for sealed bids on the land. This resulted in much dissatisfaction as in many cases the federally appraised value was substantially in excess of the amount paid by the government for the land even though improvements such as fences had been removed and in some cases the land seriously affected by the manner in which it had been handled.

At the present time Congress is working on a program for the government sale of war surplus land, and the Farm Bureau has made two recommendations which it believes should be the basis for any adequate legislation governing such sales.

These recommendations are:

(1) That the land first be offered for resale to the former owners from whom it was purchased at the price paid by the government, adjusted for any damage or value of added improvements. (This provision is included in the Colmer bill which has passed the House of Representatives.)

(2) If the former owner does not exercise this opportunity to repurchase, then the land to be advertised and sold at public auction within the country where located in economic units on which a family can make a reasonable living, with preference being given to qualified farmers or war veterans in such sales.

—BUT IF IT DOES, HERE'S WHAT TO DO!

IF YOU have a loss, whether it be windstorm, fire or hail, notify your company and your agent at once. It will help us in making an early settlement of your claim.

Farmers Mutual has but one aim — to furnish Farm Bureau members insurance at the lowest possible cost. If you do not now carry your windstorm, fire, and hail insurance with Farmers Mutual, contact the general agent at your Farm Bureau office or the special agent in your community. They will be glad to give you information concerning coverage and cost with no obligation on your part.

At the present time Congress is working on a program for the government sale of war surplus land, and the Farm Bureau has made two recommendations which it believes should be the basis for any adequate legislation governing such sales.

These recommendations are:

(1) That the land first be offered for resale to the former owners from whom it was purchased at the price paid by the government, adjusted for any damage or value of added improvements. (This provision is included in the Colmer bill which has passed the House of Representatives.)

(2) If the former owner does not exercise this opportunity to repurchase, then the land to be advertised and sold at public auction within the country where located in economic units on which a family can make a reasonable living, with preference being given to qualified farmers or war veterans in such sales.

—BUT IF IT DOES, HERE'S WHAT TO DO!

IF YOU have a loss, whether it be windstorm, fire or hail, notify your company and your agent at once. It will help us in making an early settlement of your claim.

Farmers Mutual has but one aim — to furnish Farm Bureau members insurance at the lowest possible cost. If you do not now carry your windstorm, fire, and hail insurance with Farmers Mutual, contact the general agent at your Farm Bureau office or the special agent in your community. They will be glad to give you information concerning coverage and cost with no obligation on your part.

WARNING!

Corn - Picking Time Is Accident Time

Watch for these hazards:

1. Don't clean or adjust machinery without shutting off the power.
2. Don't wear loose clothing or gloves that will get caught in the moving machinery.
3. Don't fill the gas tank while the engine is running, or the exhaust pipe is still hot.

FARMERS: In case of injury to an employee working on your farm, an I A Mutual General and Employers Liability Policy will cover the medical expense involved, up to $250. In addition, you are provided with liability protection up to $5000 for injuries to one person, and up to $10,000 if more than one person is injured in an accident arising out of your farming operations. This policy also provides liability protection against claims of individuals not employed by you.

For full details in regard to this I A Mutual liability policy and its three-way protection, contact the company's representative in your community, or at the Farm Bureau office or write

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

OCTOBER, 1944 **VOLUME 22 - NUMBER 9**

THE LIBRARY OF THE
OCT 1 3 1944

This Month

By Earl C. Smith

EVERY person knows that our nation faced many gigantic problems in meeting the requirements of war. All thoughtful people now recognize that many tremendously difficult problems must be faced in the readjustment necessary for a successful peace.

Possibly the greatest responsibility will rest with the representatives of the people who are elected to the national Congress, and the administrators of government policies. The Congress to be elected in November will undoubtedly have to make decisions of as great and far reaching character as any Congress heretofore serving the people of the United States, and the administrators of government to be selected will have as great if not greater responsibility in the re-establishment of peacetime conditions as ever confronted the leaders of government. That statesmanship of a high order will be required no reasonable person can doubt. Therefore, the election on Nov. 7 will be possibly the most important election in the history of the United States.

Every eligible voter carries the responsibility of carefully considering the important questions before the people, the pronouncements of candidates seeking positions of public trust, and according to his or her best judgment casting a ballot on Nov. 7.

If I were asked to state in one sentence the cause for which millions of American boys are fighting and hundreds of thousands are giving their lives I would state, "It is that the people of the respective nations of the world might have the opportunity to determine their own destiny through selecting the type of government under which they would choose to live." I do not believe that any eligible voter who is able to get to the polls, but who fails to vote and express his best judgment on the questions before the people Nov. 7, is worthy of the great sacrifice American boys are making on the battlefields of the world.

Certainly there can be no excuse for a repetition of the poor showing made by American voters in 1940, when only 62 per cent of the eligible voters participated in the general election.

It is not my purpose, nor is it my responsibility to suggest or to advise how any person votes, but it is my responsibility as a citizen and as a leader of an organization to urge every American citizen to vote, and to be guided when making decisions only by calm, deliberate, and unprejudiced appraisal of issues and candidates.

Never forget that citizens with selfish interests invariably go to the polls and vote, while too many who have no selfish interests say to themselves, "One vote won't mean much so I won't bother to vote today."

I firmly believe in the impartial and sound judgment of a majority of the American people and therefore my only purpose in making this appeal is to do everything possible to assure that all eligible voters make it a matter of first importance on Nov. 7 to go to the polls and vote, and thus make their contribution to the future of America and a free, representative government.

Farm Bureau Position Reaffirmed

REAFFIRMATION of the Farm Bureau's position in advocating retention of the present parity formula was made by President Earl C. Smith of the Illinois Agricultural Association at the regular fall meeting of Farm Bureau leaders held in mid-September at Springfield.

"Let's not agree to some popular formula in a hurry which might result in the loss of all the gains we have made," Smith counseled.

In discussing the Agricultural Adjustment Act, Smith cautioned that "we must be careful as Farm Bureau leaders, Farm Bureau members and as thinking farm people that differentiate between misadministration and the law itself. If there are some things that ought to go out, let's take them out. If there are some limitations that should go in, let's put them in, but let's not do away with the only law farmers have on the books which brings a balance between supply and demand. If changes are to be made, we want the friends of agriculture to make them after full consideration of all the facts."

The IAA president reviewed the resolution adopted at the Baltimore convention of the AFBF in 1940 which called for the formation of an independent, bipartisan board within the Department of Agriculture for administration of the AAA, Soil Conservation Service, etc., to be responsible for all plans, policies, and regulations necessary for the administration of these laws.

On the problem of reconversion, Smith said there were indications that postwar readjustments would be greater than many realize. He cited the reversal of position in the statements of high government officials during the year. In the early part of the year, he said, farmers were told that they need not worry about surpluses, but now these same officials are saying publicly that they are fearful of surpluses.

Smith declared that if farmers are willing to produce a surplus of basic farm crops for the protection of the nation, then it becomes a national responsibility to see that these surpluses are controlled in such a manner as not to depress market prices.

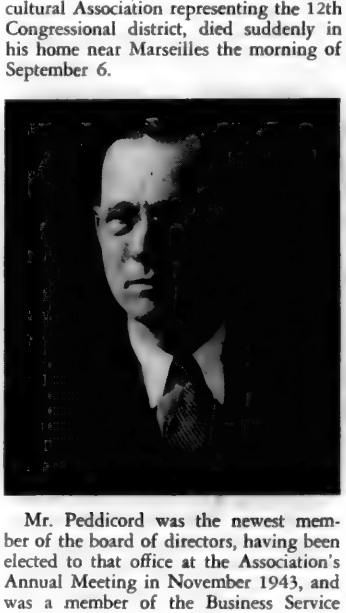
"We need a national understanding on the imperative need for controlling farm surpluses and we need to have such an understanding made part of our national policy so that it does not become a question for political debate every four years," Smith said.

The IAA president also asserted that the major farm problem is in selling the nation on the tremendous buying power of the farmer. Economists agree, he said, that farmers as a class are the best buyers of the products of the factories and mills of the United States. The level of values placed on farm products therefore determines the buying capacity of farmers.

Other topics discussed by Smith included farm credit, disposal of surplus war land and property, and the duty of citizens seeing to it that they are properly registered, and that they vote in the general election Nov. 27.

Rex Peddicord, Member Of IAA Board, Dies Suddenly

Rex E. Peddicord, 57, member of the board of directors of the Illinois Agricultural Association representing the 12th Congressional district, died suddenly in his home near Marseilles the morning of September 6.



Mr. Peddicord was the newest member of the board of directors, having been elected to that office at the Association's Annual Meeting in November 1943, and was a member of the Business Service Committee of the board.

Although serving his first year on the board, his splendid qualities and devotion to agriculture were recognized by all of his associates. His long and valued service in La Salle County admirably fitted him for official service in the state organization, and his counsel will be greatly missed.

A charter member of the La Salle County Farm Bureau, Mr. Peddicord served as a director or a member of the executive committee for 18 years, having held the offices of treasurer and vice-president during part of that period.

Mr. Peddicord was a leader in the many programs and activities of the Farm Bureau and was particularly interested in young people. For many years he served as a member of the La Salle County 4-H Club committee and was its chairman up to the time he was elected to the IAA board. He served on almost every Farm Bureau committee in his county in some years, including IAA Insurance, Public Relations, Finance and Business, Legislation, Grain Marketing and Organization. He was also president of the La Salle County Co-Op Refrigerated Service and was a member of the board of directors of La Salle County Breeding Cooperative, Inc.

This long list of Farm Bureau and community activities and projects in which Mr. Peddicord was a leader does not begin to tell the full story of the devotion and faith he had in the efforts of organized farmers to make the rural community an even better place in which to live.

Mr. Peddicord and his two married sons, Kenneth and Clinton, operated 400 acres of land 4½ miles northeast of Marseilles. He was a member of the Marseilles Rotary Club, Marseilles Masonic Lodge, and trustee of the Marseilles Congregational Church.

He is survived by his wife, Ethel, two sons, a daughter, Mrs. Collins Davidson of Geneva, Ill., and four grandchildren, Kenneth Lee Peddicord, Janet Peddicord, Kenton Collins Davidson and Robert Bruce Davidson.

Eight members of the IAA board of directors, including the president and vice-president, attended funeral services and acted as honorary pallbearers.

New Assistant Extension Editor Hired at U. of I.

Appointment of James Robert Walker, extension editor of the University of Idaho, Moscow, as assistant extension editor of the College of Agriculture, U. of I., has been announced by Dean H. P. Rusk.

Dr. G. L. Jordan, acting extension editor since F. J. Keilholz went on a year's leave of absence to join the staff of Country Gentleman, has been handling editorial duties of the extension editor's office with the assistance of Miss Jessie Heathman, who edits home economics department affairs.

Walker received his bachelor of science and master of science degrees from the University of Idaho and took undergraduate work in agriculture and journalism and graduate work in education and journalism.

TWO NEW COOPERATIVE PROGRAMS OUTLINED AT LEADERS' MEETING

TWO new, forward-looking, cooperative programs of the Illinois Agricultural Association, service brand feeds, and plant foods, were outlined to Farm Bureau leaders at the annual fall leaders' meeting in Springfield by George E. Metzger, IAA field secretary.

At the outset of his report, Metzger pointed out that the Service Brand Feeds program will in no way interfere with the Blue Seal Feeds program which has been carried on for several years by the Illinois Farm Supply Company at the request of the IAA.

Service Brand Feeds, Metzger said, are complete mixed feeds. They will be sold to the farmer as such. The Service Brand Feeds program will make it possible to grind and mix homegrown grains in the localities where the feed grain is grown. It will permit taking advantage of the purchase of protein ingredients under volume contracts and provide for the manufacture and distribution of precision pre-mixes containing vitamin carriers and other essential ingredients and guarantee to the purchaser a quality product at a considerable saving in price.

The savings to be made are largely savings in transportation which the farmer would ordinarily pay shipping his grain into the market and shipping the mixed feeds back. Certain pre-mixes involving possibly 250 to 400 pounds in each ton of complete feed will be prepared by the Illinois Farm Supply Company in its central mills.

The local distritbutor will provide the locally grown grain where possible, purchase his protein ingredients to the best advantage, purchase the pre-mix from the Illinois Farm Supply Company and mix the feed under quality control supervision and sell the feed to the farmer in bags carrying the Service Brand label. There probably are some sections of the state where insufficient grain is grown locally to take care of the feed needs where this program may be of little or no advantage. However it may be that in such areas a local distributor might ship in the grain, buy his necessary concentrates and pre-mixes and mix it more cheaply locally. These cases will require careful study before entering into such a venture.

The Service Brand Feeds program will not be introduced in any county without the approval of the County Farm Bureau board. It will not be carried into any county until the County Farm Bureau board names a distributor. The local distributor must meet certain qualifications:

1. **The distributor must be a cooperative organization of the Farm Bureau type, providing all the necessary controls to make it such an organization.**
2. **The distributor should be able to give county-wide service or adequate service in a definitely assigned territory within the county.**
3. **The distributor must have adequate finances.**
4. **The distributor must have adequate facilities, which in this case means a grinding plant, with mixing equipment, sufficient and satisfactory storage for both grain and mixed feed and trucks to make delivery to the county.**
5. **The distributor must have adequate personnel.**
6. **The distributor should be in a position to pay patronage dividends to Farm Bureau members only.**

On invitation of County Farm Bureau boards, representatives of the IAA and Illinois Farm Supply Company are meeting with County Farm Bureau boards to discuss in detail this program and furnish any available information to enable the County Farm Bureau board to make the proper selection of a distributor.

County Service Companies and Producers Supply organizations can usually qualify as distributors. There are a number of counties, however, particularly in the surplus grain producing area where it might be wise for County Farm Bureaus to consider farmer cooperative elevators which could be reorganized to meet the qualifications or to set up County Grain Associations which could acquire or build facilities and otherwise meet the qualifications.

All formulas and other matters pertaining to quality will be worked out by a Quality Control Committee made up of the business service committee of the IAA, one member appointed by the Farm Advisers' Association, and one or more representatives from the Illinois Farm Supply Company in collaboration with representatives of the University of Illinois.

The program is getting under way rapidly and can be made available in most counties as soon as the proper distributor has been appointed and has acquired facilities necessary to the distribution of these feeds.

The Plant Food Program is the result of a study which has been made during the past two years by a committee made up of representatives of the

CHECK IAA LEGISLATIVE ANALYSIS BEFORE VOTING

* *

RECORD of our LEGISLATORS in WASHINGTON

PROBABLY the most far-reaching and serious issue of domestic policy considered by the present Congress had to do with the so-called roll-back consumer food subsidies. The Association did not believe these subsidies to be warranted or justified and consistently opposed them. The ban on the continuation of these consumer food subsidies was carried in a bill to continue the Commodity Credit Corporation. In addition to continuing the Commodity Credit Corporation, this bill prohibited subsidies to consumers of agricultural commodities and provided for the termination of the subsidy programs now in effect. The bill permitted and proposed to continue the price support programs. The Association and the American Farm Bureau Federation supported this measure. The opposition to consumer food subsidies was on the ground that these subsidies were unnecessary and placed a huge burden on the Federal treasury at a time when consumers generally were able to pay their food bills. The Association was opposed to passing these costs on to future generations. Further, it pointed out that subsidies would not increase or tend to increase production of needed agricultural products. The bill passed the House by a vote of 278 to 117 and passed the Senate by a vote of 43 to 28. It was vetoed by the President and his veto was sustained. The vote of members of Congress from Illinois upon this subsidy measure is given below.

Another far-reaching measure considered by the present Congress was the Smith-Connally Act or anti-strike bill. This legislation, which was supported by the Association and the American Farm Bureau Federation, provided a thirty day cooling off period before strikes were voted, provided criminal penalties for strikes in government operated plants and forbade labor unions to make political contributions. The bill passed the House and Senate and was vetoed by the President. The President's veto was over-ridden and the measure became law. The vote of the members of Congress from Illinois upon the proposal to override the President's veto is given below.

Upon each of these measures a "Yea" vote is in support of the Association's position and a "Nay" vote is against the Association's position.

VOTE NOVEMBER 7!

By action of the IAA board of directors, the RECORD is herewith reprinting the voting records of members of Congress and the Illinois General Assembly, which were originally carried in the March issue. The voting record of Congressmen is confined to broad legislation of direct interest to agriculture and does not reflect their position on the important issues relating to international policies and relationships.

Many of these members of Congress and the General Assembly are candidates for reelection on November 7. The Association urges its members to study carefully the information published in this issue of the RECORD and to actively support for election those candidates who, by their records, have proved themselves worthy of the confidence of farmers.

Farm people represent only a minority of the population. Only through their united action at the polls, wherein they place the interests of agriculture above parties and personalities, can they hope to maintain fair representation in lawmaking bodies.

How Illinois Congressmen Voted

		Proposal to Ban Subsidies	Smith-Connally Anti-Strike Bill
Senators			
	Lucas	Nay	N.V.
	Brooks	N.V.	Yea

At Large	Day	Yea	Nay

The abbreviation "N.V." means not voting; the abbreviation "G.P." means general pair, that is, position not made known, and the abbreviation "P.F." means paired for, that is, in support of the measure.

VOTING RECORDS OF MEMBERS OF ILLINOIS GENERAL ASSEMBLY

IN ACCORDANCE with action taken by the voting delegates of Illinois Agricultural Association at an annual meeting several years ago, the Board of Directors has authorized and directed the publication of the following statement, together with the records of the members of the General Assembly as determined by their votes and general attitude on matters of important legislation directly affecting farmers, as supported or opposed by the Illinois Agricultural Association. In the 1943 regular session, the Association did not sponsor an ambitious program but endeavored to avoid highly controversial issues. However, there were numerous legislative matters of considerable interest to agriculture upon which the Association took a position. The Association regarded the Gateway Amendment to the Constitution and the companion Party

Circle bills as the most important agricultural legislation in the session. The Association believes the adoption of these measures is necessary and fundamental if needed changes in our State Constitution are to be made. The Association informed members of the legislature of its position on these measures and stressed their importance. The voting record of downstate legislators on the amendment issue was given in the August 1943 issue of the Record. In view of the fundamental importance of the Gateway Amendment and the so-called Party Circle bills, this report is weighted heavily by the vote and attitude of members on these measures.

Basis of Report

This report is based entirely upon the legislator's record and attitude as observed in Springfield. The Association has not given and obviously cannot be aware of, or give consideration to, the record or attitude upon local problems which may affect the voters' decision.

The first column of the report tabulated below lists the number of regular sessions of the General Assembly during which the respective members have served. The second column carries the legislative record of the legislators as determined by their votes on agricultural legislation during the last regular session, together with their general attitude on legislation supported or opposed by the Illinois Agricultural Association throughout their terms of service.

Ratings Used

A member, to receive a rating of "Excellent" must have not only a satisfactory voting record, but his general attitude throughout his legislative service must have been generally recognized as actively supporting the Illinois Agricultural Association's legislative program. To achieve an "Excellent" record, a member must also have served more than one two-year legislative period and must have taken a favorable position on highly controversial legislative proposals.

First term members, to secure a "Very Good" rating, must have a satisfactory voting record and must have actively supported the Illinois Agricultural Association's legislative program. This rating is the highest given any first term member.

In compliance with the directions given by the delegates of the Illinois Agricultural Association, members of the Association are advised that all members of the present General Assembly seeking reelection who are rated as "Excellent" or "Very Good" are entitled to support by all members and friends of the Illinois Agricultural Association in the coming general election.

The records of members rated as "Good" are worthy of careful consideration in comparison with the qualifications of new candidates seeking office.

FARM FIRE MENACE

This may happen on your farm! More than 40,000 barns were either destroyed or damaged by fire in the United States last year. Check your barn for fire hazards.

ORGANIZE TO FIGHT IT! . . .

Every 15 minutes during the day a farm home or farm building catches fire in the United States!

With this figure in mind, the U. S. Department of Agriculture urges all farmers to take advantage of fire prevention week, Oct. 8 to 14, to organize local fire-fighting groups. Cooperative neighborhood action, efficiently organized, will give the farmers better protection against fires and help cut down the nation's fire loss, according to the National Fire Protection Association.

Figures show that the nation's fire loss showed a sharp increase over 1942, with indications it will go even higher by the end of 1944. More than 10,000 persons lost their lives and more than 370 million dollars in property was destroyed.

Next to the home, the barn is the most important building on the farm. Yet, largely through carelessness more than 40,000 barns were either destroyed or damaged by fire in the United States last year.

SO THIS COMMUNITY DID JUST THAT!

A BRIGHT, new swanky red fire truck is now available to 100 cooperating farmers for fighting fires on farms in the vicinity of Manhattan, Will county, as the result of many people working towards a community objective, according to John H. Brock, farm adviser. This project has been accomplished as a result of the efforts of a local committee, the Extension Service of the College of Agriculture, the Will County Farm Bureau, and the Illinois Agricultural Association.

Two years ago the first series of meetings of the Wartime Educational Program for Agriculture presented fire prevention as one of the discussion topics. These meetings were conducted by local people in their school districts under the county co-chairmanship of Leonard W. Braham and Mrs. Edith Huffman, former Will county farm and home advisers.

After discussing the need for fire prevention, the local school district groups around Manhattan decided to do something more than talk about it. They appointed a committee composed of Harry White, chairman, George Bovee, Henry Eberhardt, Wilbur Francis, Robert Haley, Arbie Seltzer and Harvey Weibel.

Braham worked closely with the committee and attended many of the committee meetings. About a year ago it was decided to organize a stock company. Paul Mathias of the IAA legal department assisted in preparing the necessary legal papers for organizing the association.

As it now functions, the truck and its fire fighting equipment is owned by the corporation known as the Manhattan Rural Fire Protection Association with a board of five directors. Officers of the association are Harry White, chairman; George Bovee, secretary; Arbie Seltzer, treasurer; Wilbur Francis and Harvey Weibel.

The purchasing and maintenance of the truck and equipment has been accomplished by the sale of two shares of $25 stock and an annual membership fee of $5.00. From this membership fee the directors hope to be able to lay aside sufficient income above actual cost of operation to cover depreciation of the equipment. The board has agreed to purchase the stock of any landowner or operator in case of a sale.

The rural truck will be operated by the Manhattan Volunteer Fire Department. As an example of effective cooperation between rural and urban groups, arrangements have been made for both trucks to be used in either the town or the country at any time there is a fire of serious enough proportions to need both pieces of equipment.

As soon as some additional pieces of small equipment are secured by the association and approved by the underwriters, farmers who are cooperating in this project have been told that they can get a sizeable reduction in their fire insurance rates on their buildings and personal equipment.

This bright, new red fire truck of the Manhattan Rural Fire Protection Association makes an appropriate picture for Fire Prevention Week. Left to right: Arbie Seltzer, George Bovee, Wilbur Francis, Harry White's son, Mr. White and Harvey Weibel.

FARM FIRE MENACE

This may happen on your farm! More than 40,000 barns were either destroyed or damaged by fire in the United States last year. Check your barn for fire hazards.

ORGANIZE TO FIGHT IT! . . .

Every 15 minutes during the day a farm home or farm building catches fire in the United States!

With this figure in mind, the U. S. Department of Agriculture urges all farmers to take advantage of fire prevention week, Oct. 8 to 14, to organize local fire-fighting groups. Cooperative neighborhood action, efficiently organized, will give the farmers better protection against fires and help cut down the nation's fire loss, according to the National Fire Protection Association.

Figures show that the nation's fire loss showed a sharp increase over 1942, with indications it will go even higher by the end of 1944. More than 10,000 persons lost their lives and more than 370 million dollars in property was destroyed.

Next to the home, the barn is the most important building on the farm. Yet, largely through carelessness more than 40,000 barns were either destroyed or damaged by fire in the United States last year.

SO THIS COMMUNITY DID JUST THAT!

A BRIGHT, new swanky red fire truck is now available to 100 cooperating farmers for fighting fires on farms in the vicinity of Manhattan, Will county, as the result of many people working towards a community objective, according to John H. Brock, farm adviser. This project has been accomplished as a result of the efforts of a local committee, the Extension Service of the College of Agriculture, the Will County Farm Bureau, and the Illinois Agricultural Association.

Two years ago the first series of meetings of the Wartime Educational Program for Agriculture presented fire prevention as one of the discussion topics. These meetings were conducted by local people in their school districts under the county co-chairmanship of Leonard W. Braham and Mrs. Edith Huffman, former Will county farm and home advisers.

After discussing the need for fire prevention, the local school district groups around Manhattan decided to do something more than talk about it. They appointed a committee composed of Harry White, chairman, George Bovee, Henry Eberhardt, Wilbur Francis, Robert Haley, Arbie Seltzer and Harvey Weibel.

Braham worked closely with the committee and attended many of the committee meetings. About a year ago it was decided to organize a stock company. Paul Mathias of the IAA legal department assisted in preparing the necessary legal papers for organizing the association.

As it now functions, the truck and its fire fighting equipment is owned by the corporation known as the Manhattan Rural Fire Protection Association with a board of five directors. Officers of the association are Harry White, chairman; George Bovee, secretary; Arbie Seltzer, treasurer; Wilbur Francis and Harvey Weibel.

The purchasing and maintenance of the truck and equipment has been accomplished by the sale of two shares of $25 stock and an annual membership fee of $5.00. From this membership fee the directors hope to be able to lay aside sufficient income above actual cost of operation to cover depreciation of the equipment. The board has agreed to purchase the stock of any landowner or operator in case of [illegible].

The rural truck will be operated by the Manhattan Volunteer Fire Department. As an example of effective cooperation between rural and village groups, arrangements have been made for both trucks to be used in either the town or the country as [illegible] there is a fire of serious proportions to need both pieces of equipment.

As soon as [illegible] of small equipment [illegible] the association and approved by the underwriters, farmers who are [illegible] in this project have been told that a [illegible] reduction in their fire insurance rates on their buildings and personal property.

This bright, new red fire truck of the Manhattan Rural Fire Protection Association makes an appropriate picture for Fire Prevention Week. Left to right: Arbie Seltzer, George Bovee, Wilbur Francis, Harry White's son, Mr. White and Harvey Weibel.

The FARM FRONT ROUNDUP

WHEAT PARITY SUPPORT — War Food Administrator Marvin Jones, Sept. 23, announced that WFA will purchase from farmers at parity prices, less carrying charges to the end of the storage year, all unredeemed 1944 crop wheat which is under loan May 1, 1945. The wheat parity price is the 1944 loan rate plus 15 cents a bushel, Jones explained. Deducted will be the carrying charge to the end of the year, which for warehouse loans is May 31 in the southwest and June 30 in all other areas, and which will be to the date of delivery in May and June for farm storage loans. The Aug. 15 parity price for wheat was $1.50 per bushel. The Sept. 15 parity prices have not been announced. Jones had announced on July 7 that wheat loans on the 1944 crop would be raised from 85 per cent to 90 per cent of parity as of July 1, 1944, a national average of about $1.35 per bushel at the farm. Jones also announced Sept. 23 that the WFA will purchase from farmers at parity prices all cotton of the 1944 crop for which a loan schedule has been announced and which is placed in acceptable storage. The program will start as soon as arrangements can be made and extend through next June 30.

NITROGEN PLANTS — Secretary of Agriculture Claude R. Wickard has made public the recommendations of the USDA postwar planning group, calling for the production of solid nitrogen fertilizers at some of the synthetic ammonia plants now operated by the government.

LUMBER SUPPLIES — Additional quantities of certain lumber, which has accumulated in distributors' yards and is slow-moving, will be made available to home owners, farmers and other consumers until Dec. 31, 1944, according to WPB. This lumber — estimated at 500 million board feet and not adaptable for war uses — may be sold by distributors without priority ratings or special WPB authorization up to an amount not exceeding one-third of their Sept. 1, 1944 lumber inventories, but only if there is no interference with the filling of certified orders. Farmers also may receive without certification up to 5000 board feet of lumber annually if it is produced from trees cut from their own farm, WPB has announced.

HOG PRICE PROGRAM — OPA and the WFA with the approval of the director of economic stabilization, Sept. 15 announced that ceiling prices on live hogs will not be reduced from present levels prior to June 30, 1945. Ceiling prices are $14.75 per hundredweight, Chicago basis, for hogs weighing 240 pounds or less and $14 per hundredweight, Chicago basis, for hogs weighing more than 240 pounds. The WFA also stated that the support price of $12.50 per hundredweight, Chicago basis, for good to choice butcher hogs weighing 200 to 240 pounds, which becomes effective Oct. 1, 1944, as heretofore announced for the period ending March 31, 1945, will be continued until June 30, 1945.

PEA FLOUR FOR SALE — WFA is offering for sale to feed millers and grain merchants 1498 bags (100 pounds per bag) of pea flour for livestock and poultry feed. The flour was made as an experiment in an attempt to find a use for human consumption of dry wrinkled peas purchased under the price-support program. Testing found that the product was undesirable for human food. The flour is located in Chicago.

WAR SURPLUS SALES — Surplus War Property Administration has announced that between May 15 and Aug. 15, approximately 38 million dollars of surplus war property had been disposed of by five authorized disposal agencies. The Treasury Procurement Division disposed of surplus consumer goods in July appraised at $9 million for $7½ million. Among the larger categories of sales were used Army trucks and leather products.

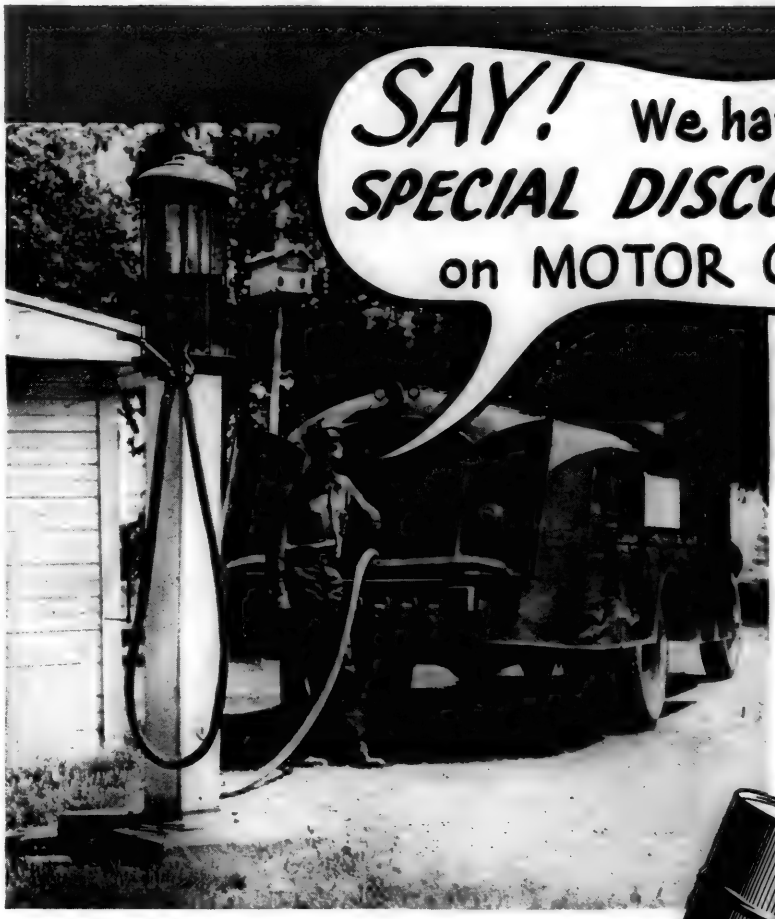
MACHINERY PERMITS — ALL certificates for the purchase of new farm machinery were scheduled to be cancelled Oct. 1, according to AAA orders to county committees. Notices are to be mailed to the holders of these certificates for the purchase of rationed farm equipment. New certificates will be issued soon after Oct. 1 to those people whom the county farm rationing committees deem eligible. Many items have been taken off the rationed list, but permits are still needed to buy new tractors, pick-up balers, side delivery rakes, hay loaders, combines, manure spreaders, corn pickers, corn binders and mowers.

CHEESE SET-ASIDE — WFA will require that 40 per cent of the Cheddar cheese produced in October be set aside for sale to government agencies, compared with 50 per cent required to be set aside in September.

HATCHERY PRODUCTION — Bureau of Aricultural Economics report says that the output of chicks by commercial hatcheries during August was 52 per cent less than the record output of August last year.

SWEETCLOVER SEED — A BAE report says production of sweetclover seed this year is expected to be about 40 per cent larger than the very small crop of last year, but about one-third smaller than the 10-year (1933-42) average.

TRUCK TIRES — Severe shortage of heavy-duty trucks and bus tires for replacement purposes will continue through the fourth quarter of 1944 and a spread of the tire shortage to smaller size truck tires is in prospect, according to the ODT.



SAY! We have a SPECIAL DISCOUNT on MOTOR OIL!

You can place your order NOW for oil and grease to be delivered between now and next spring.

The special future order discount is in addition to regular quantity discounts and patronage dividend savings.

Ask your Blue Seal servicemen for full particulars.

Spring farm work may seem far away just now, but it's not too early to make plans. One big problem will be solved when you have arranged for your supply of motor oil and greases.

Blue Seal Oils and Greases are of the best quality and are designed especially for *farm* use. Quality standards established by farmers have been fulfilled by their own trained technicians in producing these oils and greases.

Tell your Blue Seal serviceman what types and quantities of oils and greases you will require and he will arrange deliveries to suit your convenience.

Ask about that marvelous machinery saver

SOYBEANS

WHAT OF THEIR FUTURE?

By Creston Foster

WHAT will soybeans be worth a few years after the war when and if competing oils of low production cost from other parts of the world begin to flow into this country? Can enough new outlets be found in industrial uses to maintain a market for the production that has increased by leaps and bounds in recent years? Can bean production costs be reduced through improved yields, better quality, and more efficient planting and harvesting machinery?

Illinois farmers have a big stake in the answers to these questions as the soybean crop has become a substantial part of their annual income. Scientists, representatives of the processors, and those from other branches of the soybean industry were conservative in discussing the postwar outlook for soybean products at the 25th anniversary meeting of the American Soybean Association in September at the University of Illinois.

Said Dr. E. O. May, chief of the bureau of agricultural and industrial chemistry in the USDA, "Right now soybean products are in tremendous demand, but we are all at least slightly fearful of the future, when the demand may lessen considerably and we may be faced with surpluses.

"Until Europe is rehabilitated, it is generally felt that fats, oils, and protein feeds will continue to command favorable prices. However, copra and other oilseeds are being stockpiled in the South Pacific, awaiting the return of normal transportation. New sources of vegetable oils have been developed in South America.

"In the case of soybean oil meal, too, the immediate future appears satisfactory, that is, as long as we must feed Europe. There will surely come

A new self-propelled soybean combine stirs interest among farmers at American Soybean Association meeting tour.

a time, however, when Europe will no longer need the vast quantities of food we are supplying. We must build for the more distant future when, as in the years immediately preceding the war, soybean products may again have to compete with ominous surpluses of other commodities which are equally acceptable to the consumers.

Dr. May said he believed that when surpluses return, soybean meal may occupy a more favorable position, relatively, than it did in 1938 and 1939. Its value as a feed, he said, has been so overwhelmingly proved during the last few years that its place in the feed industry is firmly established.

The future for oil, however, seems less promising unless, through research, means can be developed for enhancing its competitive position among possibly surplus supplies of oils and fats.

There are some optimistic views from the research side, however, Dr. May pointed out. Films and fibers made from soybean protein now seem destined to assume industrial importance.

A vast future for soybean oil was predicted in the production of coatings and other polymeric products.

Soybean oil was described as a mixture of materials, some ordinarily considered best suited for use as foods and others that are best used in paints and varnishes. In the past it has not been economically practical to seperate these constituents, but now new processes separate the oil into two fractions. The two portions are worth much more than the original oil.

Products from this process, developed at the Northern Regional Research Laboratory at Peoria are Norepol, a rubber substitute, and Norelac, a new resin having remarkable properties. New developments in the art of modifying soybean oil to impart fast-drying properties may result in far-reaching changes in the field of protective coatings such as paints and varnishes and thus provide a larger outlet for oil than in the past.

At the present time only about 2,500,000 bushels, or about 2 per cent of our 200 million bushel crop of soybeans in the United States is being used for industrial purposes, according to P. E. Sprague, vice-president of the Glidden Company. Fully three-quarters of this 2 per cent is required for proteins used in critical wartime industrial applications.

"You have the apparent paradox," Sprague said, "of substantial industrial operations involving relatively small amounts of soya protein. Some of the new uses that we hope to perfect in the future, of which the protein fibers for textiles are an example, will contain a much larger percentage of protein and hence step up proportionately the soybeans required."

The question of the price that can be paid for beans to make industrial protein lies in the oil market, Sprague said. He suggested that in peacetime the producer of industrial soya will need a meal or flake cost of approximately $20 per ton in order to compete in the protein market. From this industrial soya producer's standpoint, beans may sell for a poor price or good price so long as the meal cost is within his reach. Value of the oil is the factor that means most to the grower, Sprague said.

On the production side of the soybean picture great strides were reported by staff members of the U. of I. College of Agriculture and by rep-

resentatives of the U. S. Regional Soybean laboratory. A conducted tour of the university south farm gave visitors an excellent picture of the progress made in developing and improving soybean varieties.

The Lincoln bean was the star of the show. This variety, developed cooperatively by Dr. C. M. Woodworth, of the U. of I. Experiment Station, and representatives of the USDA, is recognized as the most outstanding of all soybean varieties yet introduced. Because of its better yields and higher oil content, it has caught the imagination of growers in adapted areas. Prof. J .C. Hackleman indicated that about 8000 acres of Lincoln beans are in production in Illinois this year and the seed will be available for general distribution for the first time in 1945.

However, Dr. W. B. Allington of the U. S. Regional Soybean laboratory, warned against too extensive use of one soybean variety. "From a pathologist's viewpoint," he said, "extensive planting of one variety is a questionable procedure since it may provide the setup for a widespread epidemic of disease.

"Lincoln is a superior variety and represents a brilliant achievement by our agronomists. As far as our experience has gone it has no serious weakness as far as disease susceptibility is concerned. It is attacked by all our common diseases but seems to be as resistant as any of our varieties."

In Illinois, Lincoln is adapted to the south central, central and north central sections. It may be grown farther north and farther south than the Illini variety.

In addition to outstanding yield performances, about 40 bushels under most favorable conditions, Lincoln has proved resistant to lodging and to shattering.

J. L. Carter, agronomist, U. S. Regional Soybean laboratory, reported that the Lincoln now has been crossed with Richland, and the F1 crossed to Lincoln to make a variety having 75 per cent Lincoln parentage and 25 per cent Richland. Lincoln brings to this union a yield 5 bushels per acre higher than the average of Dunfield and Lincoln and oil content better than Dunfield and Scioto, present commercial leaders, and 1 per cent above Illini.

Spectacular damage to soybeans by grasshoppers in certain sections of Illinois was reported by John H. Bigger, associate entomologist of the Illinois Natural History Survey. He said that 40 to 50 tons of grasshopper bait have been used in a few counties in western and southwestern parts of the state, with considerable success, but the losses will run into important figures.

Other insects attacking soybeans include: fall webworms, going into soybeans after stripping adjoining hedgerows; grape colaspis, which can be avoided for soybeans by frequent rotations; Japanese beetle, which has not caused any trouble in the Midwest but is a potential pest of real consequence.

Prof. R. I. Shawl described experiments with the newest types of planting, cultivating and harvesting machinery, including the new four-in-one experimental machine that has been developed for planting corn, planting soybeans, cultivating corn and cultivating soybeans. Another modern development is the self-propelled combine which has been produced in limited supply and put on the market by a few companies this season. Arguments pro and con on the self-propelled machine were reviewed. Farmers viewing the machine expressed the opinion that it would require a large acreage of custom harvesting to justify its inherent high cost.

C. M. Woodworth, professor of plant genetics, U. of I., discusses soybean breeding work on South Farm tour

Considerable interest was shown in the soybean storage experiment being conducted on the agronomy south farm. The project includes 67 storage bins ranging in size from 760 to 2800-bushel capacity and about 60,000 bushels of soybeans of varying moisture content were stored in them after the 1943 harvest.

With the possibility of greater soybean storage on farms in the postwar period, the experiment will prove of great value to farmers. Soybeans having a moisture content of 10 to 12 per cent probably are best for safe storage, according to the results so far, although it was pointed out more research is needed to establish exactly safe limits.

Pioneers in the field of soybean production were honored at the meeting by Prof. J. C. Hackleman, who expressed the regret felt by those assembled that Dr. W. L. Burlison, head of the agronomy department, was unable to attend because of illness. Dr. Burlison, who served as 1930 president of the American Soybean Association, is recognized by soybean old timers as one of their fellow pioneers. W. E. Riegel, Champaign county pioneer soybean producer, traced the early history of the soybeans. He was the association's second president. Wheeler McMillan, editor of Farm Journal and Farmers' Wife, and Donald S. Payne, office of distribution, WFA, were principal speakers at the main evening session of the meeting.

Howard Roach, Plainfield, Ia., was elected president to succeed J. E. Johnson, Champaign county, and Walter McLaughlin, Decatur, Macon county, was named vice-president, succeeding Roach in this position.

L. F. Williams, associate agronomist, U. S. Regional Soybean Laboratory, Urbana, explains breeding work of the laboratory to soybean producers on South Farm tour.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES
By O. D. Bissendon

Christian County Farm Bureau started an intensive membership drive on a township basis September 27th. The Farm Bureau Directors and members of the staff will meet with the workers of three or four townships at 8:30 a. m. each morning, divide up into teams and spend the day calling on their non-member neighbors.

A Kick-Off Meeting in Madison county, Sept. 19, in preparation for a membership drive, was attended by 85 enthusiastic boosters, reports W. H. Faires, county organization director. Madison County Farm Bureau enrolled 247 new members during the past year.

Jo Daviess, Scott, Sangamon, Pike, Ogle, Hancock, Henry, McDonough, Brown, Douglas, Clay, Moultrie, Kankakee and Livingston are among the county organizations that are staging late September or early October membership drives. Everyone of them achieved splendid records during the past year in membership acquisition. They are now getting set for the new year.

Chelsea Williams, county organization director of Massac county, reports that they are now in the midst of a membership drive and that the leaders of that county will have their long range goal of 430 members on the books by October 1, 1944.

Lyman Bunting, the leader of the "Old Birds" in Edwards county says that he's afraid that the "Young Birds" will compel the "Old Birds" to eat "old birds" at the report meeting. The above comment may be appropriate in view of the fact that they are in the midst of a membership contest with the leaders over 40 years of age competing against those under 40, and the losers are to eat Old Rooster while the winners feast on fried chicken at the report banquet.

The Greene County boys are at it again. Three breakfast meetings were held in the county on Sept. 21, starting a drive with determination to reach the 1,000 mark by Oct. 1, 1944. Past results prove that these Greene county boys really know what the word cooperation means.

Bert Jones has resigned as county organization director in Mashall-Putnam County Farm Bureau and has accepted a similar position with the Pike County Farm Bureau.

Richard O'Dell is now serving as county organization director in Piatt county on a temporary basis pending the return of R. J. Lee, who is now in the armed forces. O'Dell succeeds J. E. Miner, who resigned effective July 31, 1944.

Leslie N. Finkenbinder is the new county organization director in Stephenson county.

Reports from Lake county indicate a most successful membership drive in August and September. The long range goal of 1150 members was exceeded and John Stiehr, a new volunteer worker, signed 14 members and collected full dues from all of them.

George W. Christman, Sadorus, signs as the 2700th member in the Champaign County Farm Bureau. Left is Russel Burdick, a neighbor, and right is J. Walker Robbins, COD.

Congratulations to all the leaders who participated with special recognition to Stiehr. May many more like him come forward with their talents this year.

Scott County Farm Bureau has organized a "Fifty Club" which will meet at regular intervals to discuss their organization's programs and opportunities. And last, but not least, to have a good time with a good bunch of fellow farmers.

R. H. Kelly, county organization director, reports that 35 new members were signed in a recent drive in Shelby county and that they are now staging an intensive campaign on the township basis.

The Johnson county organization meeting held in September was attended by 25 interested workers who are now on their annual membership campaign assisted by County Organization Director Harry Cummins.

Pope-Hardin County Farm Bureau expects to sign at least 40 more members before the dedication of the New Farm Bureau Building, early in October.

That August campaign in Clark county netted 32 new members. Twenty-five volunteers assisted by the genial County Organization Director Tom Drummond were responsible for these results.

Is Our Face Red!

In the September issue of the IAA RECORD, W. H. Tammeus incorrectly was reported to be serving as farm adviser in Woodford county. Tammeus, former farm adviser in Bond county, is the new farm adviser in McHenry county. T. H. Brock is farm adviser in Woodford county, and the other Brock in farm adviser circles (J. H.) who served as farm adviser in McHenry county is the new adviser in Will county.

In a picture on page 7 of the September issue of the IAA RECORD, the youth having his chest measurement taken is Paul Kimmelshue of Kankakee county. The picture caption incorrectly reported the youth to be Orville Dickhaut, St. Clair county.

What is vision but the imagination to see today what others will be willing to see and use tomorrow.

Farm Bureau Institute Proves Great Success

For one week in September there were no harder working students on the University of Illinois campus than 134 Farm Bureau workers from 23 states attending the first National Farm Bureau Institute.

At the end of a week of study and instruction on how to do a better job of building Farm Bureau, every worker voted in favor of another Institute. There was unanimous approval of the facilities afforded on the university campus with the air-conditioned class rooms and cafeteria in the Illini Union building.

Sentiment of the majority of those attending the Institute was expressed by one worker who said: "It is something we have needed for a long time."

The Institute was sponsored by the Farm Bureau in response to widespread demand from workers for a meeting at which they could mingle with other workers in this field, learn the latest methods being employed in various areas, and in general absorb new enthusiasm and additional information about their job.

Serving on the faculty of the Institute from the Illinois Agricultural Association were George E. Metzger, field secretary; O. D. Brissenden, director of organization; Donald Kirkpatrick, legal counsel, and W. P. Sandford, director of sales service. Illinois had 27 enrolled in the course of study.

Leslie Finkenbinder, center, new COD in Stephenson county, chats with Floyd McDonald, Indiana, and Leslie Parsons, Iowa, at National Farm Bureau Institute held at Urbana.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES
By O. D. Bissenden

Christian County Farm Bureau started an intensive membership drive on a township basis September 27th. The Farm Bureau Directors and members of the staff will meet with the workers of three or four townships at 8:30 a. m. each morning, divide up into teams and spend the day calling on their non-member neighbors.

A Kick-Off Meeting in Madison county, Sept. 19, in preparation for a membership drive, was attended by 85 enthusiastic boosters, reports W. H Faires, county organization director. Madison County Farm Bureau enrolled 247 new members during the past year.

Jo Daviess, Scott, Sangamon, Pike, Ogle, Hancock, Henry, McDonough, Brown, Douglas, Clay, Moultrie, Kankakee and Livingston are among the county organizations that are staging late September or early October membership drives. Everyone of them achieved splendid records during the past year in membership acquisition. They are now getting set for the new year.

Chelsea Williams, county organization director of Massac county, reports that they are now in the midst of a membership drive and that the leaders of that county will have their long range goal of 430 members on the books by October 1, 1944.

Lyman Bunting, the leader of the "Old Birds" in Edwards county says that he's afraid that the "Young Birds" will compel the "Old Birds" to eat "old birds" at the report meeting. The above comment may be appropriate in view of the fact that they are in the midst of a membership contest with the leaders over 40 years of age competing against those under 40, and the losers are to eat Old Rooster while the winners feast on fried chicken at the report banquet.

The Greene County boys are at it again. Three breakfast meetings were held in the county on Sept. 21, starting a drive with determination to reach the 1,000 mark by Oct. 1, 1944 Past results prove that these Greene county boys really know what the word cooperation means.

Bert Jones has resigned as county organization director in Mashall-Putnam County Farm Bureau and has accepted a similar position with the Pike County Farm Bureau.

Richard O'Dell is now serving as county organization director in Piatt county on a temporary basis pending the return of R. J. Lee, who is now in the armed forces. O'Dell succeeds J. E. Miner, who resigned effective July 31, 1944.

Leslie N. Finkenbinder is the new county organization director in Stephenson county.

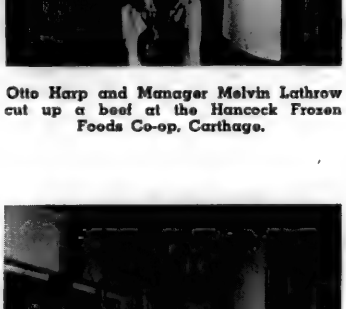
LOCKER BUTCHERING

SLAUGHTERING SERVICE BEING ADDED BY MORE AND MORE PROGRESSIVE COOPERATIVE LOCKER PLANTS



Robert Burns moves carcasses into the chill room of the Henry County Locker Service slaughter plant at Cambridge.

By FRANK GOUGLER

IAA Director of Produce Marketing

MOST farmers don't care much for the chore of home butchering. That's why progressive cooperative locker plants in Illinois have made it their business to improve the slaughtering services afforded patrons.

Today the latest development along this line is the installation by cooperative locker plants of slaughtering facilities in connection with their operations. Where such services are afforded, all that a farmer patron has to do is load an animal on a truck, and haul it to the locker plant. There it is slaughtered, cut up, frozen, and moved into his locker.

Since the first installation of a locker plant in Illinois, leaders have recognized the importance of furnishing efficient slaughtering service. The first step taken by some associations was to employ a capable slaughterer who owned a truck and have him do the slaughtering on the farm and bring the carcass to the locker plant. This was an improvement over the farmer having to do his own butchering or trying to hire anyone he might find available.

Now some of the cooperative locker associations in Illinois that have built slaughter houses with modern facilities include Henry County Locker Service, Hancock Frozen Foods Co-op, Waverly Locker Company, Morgan county; Golden Locker Cooperative, Adams county; and the Winchester Cold Storage Locker Service, Scott county.

The Hancock, Waverly, and Winchester associations have the slaughter room attached to the locker plant, while the Henry and Golden associations have the slaughter plants in the country. All five slaughter plants have adequate pens for holding both hogs and cattle at the slaughterhouses.

One of the advantages of having the slaughtering operations near or adjoining the locker plant is in the convenience of moving the slaughtered animal direct from the slaughter house to the chill room in the locker plant. This is usually done by moving the animal along an overhead track.

Slaughter plants adjoining locker plants may also in some cases utilize existing facilities to provide ample hot water and steam for cleaning in addition to sewage outlets.

Where plants are located within the city limits, city water and sewage outlets of course are available. In some cases, as at the Hancock and Winchester plants, which are just outside of the city limits, they still have the advantage of city water and sewage outlets.

One of the main disadvantages of having a slaughter plant adjoining the locker plant and located within the city limits is that city officials may raise objections.

However, there are several locations in this and other states where locker plants have their slaughter plants located within the city limits with the consent of city officials. At these points, the city officials have expressed the belief that locker operators would naturally do a better job of keeping the plant in a sanitary condition when it is near his processing operation than at a point in the country.

Likewise the city inspector finds it more convenient to do the inspecting. State officials of the Pure Foods Division have no objection to the location in the city as long as the plant and surrounding premises are kept in a sanitary condition and has adequate sewage disposal. One of the problems confronting locker plants with slaughter facilities located within the city limits is in securing permanent approval for such location. City administrations do change and likewise their policies.

However, there are two distinct advantages that slaughter plant operations have over farm slaughtering — convenience and sanitation.

Uncontrolled slaughtering on the farm for locker plants also results in high and low volume periods. This often results in inefficient locker plant operations. Where a locker association operates a slaughter plant and provides trucks for transportation from the farm it is possible to regulate to some degree the flow of animals into the locker plant. A regulated volume can thus be moved through the locker processing room.

The added facilities for slaughtering that have been built so far by Illinois cooperatives range in cost from $2500 to $5500.

Right wing of the Hancock Frozen Foods Co-op houses a slaughter plant 18 feet wide and 30 feet long. The wing was built at a cost of $2300.

This building 56 feet long and 20 feet wide is the Henry County Service slaughter plant at Cambridge. Complete cost including equipment was $5500.

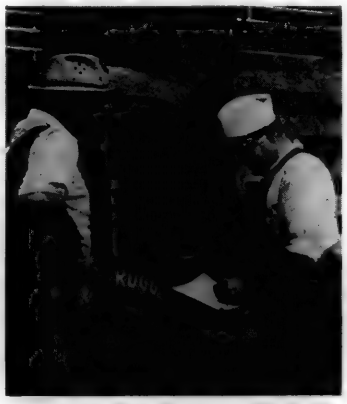
The $5500 slaughter plant is a building approximately 20 by 50 feet built of cement blocks. Hogs and cattle move into the plant from ample pens equipped with an unloading chute. Just inside the building is a killing pen. One-third of the building at this end is used for killing, skinning, cleaning, etc. Ample overhead tracks are provided for moving the carcasses to any part of the building. Power hoists are used for lifting the animals or carcasses up to the overhead tracks. The middle third of the building is used for processing and houses refrigeration machinery, boiler and other equipment. Remainder of the building is divided into two parts, both refrigerated. One room is used for chilling carcasses and the other for curing hides.

In order to keep a slaughter plant clean and sanitary it is important to have concrete floors in the building and pens. Floors must have a proper slope to numerous large drains. Essential equipment therefore includes killing pen, overhead track and hoist, blood collector, scalding tank, cleaning rack for hogs, scales, boiler, ice machinery and work tables. Smaller equipment consists of butcher tools, gambles, etc.

What does it cost a farmer patron who brings hogs or cattle into his slaughter plant for the butchering services provided?

What are the charges for the butchering services? While there is some variation from plant to plant, the average charges per animal are as follows: beef, 300 pounds or over, dressed weight, $2.50; hogs, $1.25; hogs over 300 pounds, live weight, $1.50; veal calves, $1, and lamb, $1.

Do locker plant associations find operations of slaughter facilities successful? Albert Metternich, vice-president of the Hancock Frozen Foods Co-op, says that farmer patrons definitely appreciate the new service. They especially like to have the locker plant do the job of butchering because it lightens the chores at home. Locker plants providing such facilities also realize additional revenue from custom slaughtering.



Thomas Ruggles, patron, delivers an animal for slaughter to the Hancock Frozen Foods Co-op, and Manager Melvin Lathrow makes a record of the receipt.

Chicago Market Fat Stock, Carlot Show Dec. 2-7

Third annual Chicago Market Fat Stock and Carlot Competition will be held at the Chicago Stock Yards from Dec. 2 to 7, according to B. H. Heide, manager of the International Livestock Exposition, and in charge of the substitute event.

The Fat Stock show will take the place of the regular International, cancelled following the 1941 show because of the war.

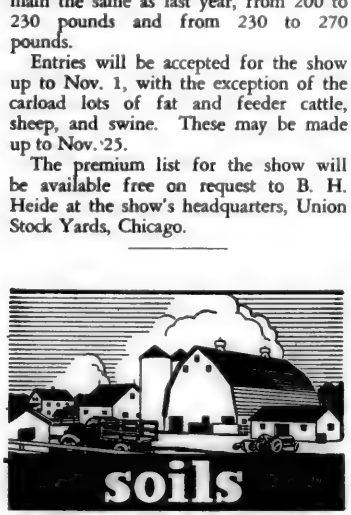
The competition will include all of the fat stock classes, in both individual and carlot contests, that were formerly featured at the International.

Farm boys and girls will again exhibit steers, lambs, and hogs in the Junior Live Stock Feeding contest, a feature of the market show.

Only change over last year's classification is a reduction in the upper weight limit on hogs in keeping with the trend to lighter weight market hogs. The heavy weight class will be for barrows weighing from 270 to 300 pounds. The light and medium weight classes will remain the same as last year, from 200 to 230 pounds and from 230 to 270 pounds.

Entries will be accepted for the show up to Nov. 1, with the exception of the carload lots of fat and feeder cattle, sheep, and swine. These may be made up to Nov. 25.

The premium list for the show will be available free on request to B. H. Heide at the show's headquarters, Union Stock Yards, Chicago.



By John R. Spencer

The limestone quality supervisional work of this department during August revealed five new quarries in operation: one each in Ogle, Boone, Pike, Winnebago counties and one in Missouri which will ship by a Burlington Railroad into this state. The overall limestone supply picture is somewhat brighter due to these and the increase in production facilities at many of the older established quarries.

Benjamin Franklin wrote many years ago in his Poor Richard's Almanac: "A deposit of fertility in the soil bank is safest and pays the best." This advice is especially appropriate now, says the Illinois College of Agriculture, while limestone, phosphate, potash and other materials which build up the productivity of the soil are cheap in relation to the price of crops and other farm products. In some localities it is difficult to get sufficient limestone or other fertilizer materials delivered. It is suggested that War Bonds bought now and earmarked for that purpose will assure a soil improvement program after the war and will be safe investment.

Important soil fertility elements removed from the land by the 1943 hemp crop were found to be relatively low in comparison to other farm crops, according to H. J. Snider, assistant chief in soil experiment fields, University of Illinois College of Agriculture. Snider reports that Number I hemp straw as taken from the farm to the processing mill was found to contain approximately 10 pounds of nitrogen in a ton. A ton of corn grain (35.7 bushels) was found to contain approximately 30 pounds of this important element. A four-ton-an-acre yield of Number I hemp straw was found to contain a total of 73 pounds of nitrogen, phosphorus and potassium. A 75-bushel corn crop, grain only, contained 94 pounds of these important elements. The removal of these elements by the corn crop greatly exceeded that removed by the straw of a large hemp crop.

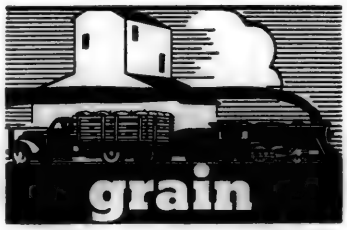
Soil conservation and improvement was recommended as "Item No. 1" in the farmers post-war planning, in a statement made public by the Middle West Soil Improvement Committee. "The best preparation a farmer can make to meet the competitive conditions of the postwar period is to build up the fertility level of the soil", a statement points out. The soil's resources of nitrogen, phosphorus and potash have been used up faster than they have been replaced in order to meet the war time need for more food. Hence, a gigantic soil rebuilding job lies ahead — a job which necessarily must be the responsibility of the individual farmer.

Ogle county has seven or eight quarry operators producing agricultural limestone in a somewhat unusual way in that their equipment is moveable or portable. There are a score or more of suitable limestone deposits or pits of Galena-Platteville formation or geological name well distributed over the county which have been quarried in years past. Operators moved their crushing equipment to other pits when the localities needs have been temporarily satisfied and thus, make a material saving in hauling charges and wear on trucks. Prices range from $1.10 to $1.30 per ton, f.o.b. quarry.

An informational limestone quarry tour for farm advisers was held on Aug. 30 visiting five operations in the area around St. Louis. A shortage of available labor for maximum quarry production was found at all of the companies visited.

Some 175,581 tons of rock phosphate used in Illinois soils last year should get newspaper headlines all over the state for it is a new high record amount. It indicates that farmers are taking definite action to restore this necessary fertility element phosphorus to their soils along with nitrogen and potash in the well established limestone and clover program. 177,735 tons were distributed commercially and 57,846 tons by the AAA program according to Dr. E. E. De Turk, professor of soil fertility, U. of I. College of Agriculture.

Clark county farmers applied more than 55,000 tons of agricultural limestone last year according to Farm Adviser T. E. Myers.



By H. G. Iftner

The Service Brand Feed program recently announced by Illinois Farm Supply Company, is a service which Farm Bureau members will support as wholeheartedly as any service ever offered by the Farm Bureau. The right kind of feed, plus quality control, plus economy, will mean thousands of dollars to feeders and Farm Bureau support to the county and state organizations.

The Service Brand Feed program is the program which country elevators have needed, and in counties where there are strong farmers' elevators, official boards and management should consider adapting their services to the Service Brand Feed program.

Perhaps the greatest service can be offered in the counties comprising the south third of the state. County companies, set up to handle the feed program, to own and control facilities for the movement of coarse grains into the area and their distribution therein, and to provide cooperative marketing facilities for the handling of wheat and soybeans, will add further strength to the southern Illinois Farm Bureaus.

It now figures out that Illinois Grain Corporation will pay its members something like 1¼ cents a bushel on grain marketed for them last year. This is the big year for Illinois Grain Corporation. It marks its maturity for this is the first time the statewide agency has paid patronage in cash.

The director spent the week of September 19-22 in Iowa attending district meetings held at Sheldon, Mason City, Fort Dodge and Des Moines, by the Farmers Grain Dealers Association. Secretary Don Edison and Manager Fred Maywald were high in their praise and appreciation of services rendered by Illinois Grain Corporation's representatives, Frank Haines and E. J. Kazmarek at Chicago, N. R. Moore at Peoria, and Harry Adams at St. Louis. Said Maywald, "The service could not have been better had we opened our own offices, and it was far more economical." Said Edison, "We are doing everything we can to put our Iowa grain through cooperative channels."

This would appear to be one year when Illinois will lead the nation in corn production as well as soybeans. On August 20 it was announced that only 42 per cent of Iowa's corn was beyond danger of frost. An untimely frost would put Illinois in the lead. Let us hope that Illinois has to be content with second place in corn production. Corn, like nothing else, means food for freedom. Stay away, Jack Frost!

Unless a killing frost hits Randolph county within the next few weeks, the river bottoms along the western side of the county will produce a bumper corn crop in spite of floods last spring, according to the Sparta News-Plaindealer.

Grains with a low moisture content are least likely to be damaged by stored grain insects.

Stockmen Warned To Be Cautious in 1945 Plans

IF favorable hog-feed price rations prevail this winter, caution should be used in expanding production of hogs for marketing in late 1945 and 1946.

This was one point stressed by the U. of I. College of Agriculture outlook committee at the series of annual fall livestock-feed outlook meetings held throughout the state during September. Participating in the meetings were the U. of I. College of Agriculture, cooperative livestock marketing agencies and the livestock marketing department of the IAA.

Here is the summary of the outlook as presented by the College of Agriculture committee:

"Present progress of the European war makes the period ahead one of economic uncertainty. When peace will come to Europe or what effect it will have on prices of farm products is not known. Both agricultural production and demand are now at high levels, and there are large supplies of some food products.

"In the transition period ahead farm prices could be carried higher by temporary inflation, they could remain at approximately present levels, or they could go lower. The outlook committee of the College of Agriculture believes lower prices are likely, especially for those products which are in large supply. Therefore the following suggestions are offered:

"1. This is not a time when debt commitments can be made without considerable hazard. Long-time debts should be made with the realization that they will have to be liquidated under less favorable prices than the present.

"2. In livestock production continued efficiency in the use of feeds is necessary. In view of present numbers, selective culling of flocks and herds is advisable.

"3. If favorable hog-feed price ratios prevail this winter, caution should be used in expanding production of hogs for marketing in late 1945 and 1946.

"4. The postwar risks of a price decline are of especial importance to cattlemen because of the record number of cattle on farms and ranches in the United States. Close culling while prices are high is a wise policy.

"5. Cattle-feeding operations at present prices offer an opportunity for profit, but risks are great. Emphasis should continue to be placed on maximum gains from roughages and marketing at not too high a finish.

"6. The trend of sheep and lamb prices is not definite. Liquidation is continuing and wool stocks are high. On the other hand, comparatively strong feeder lamb prices may prevail this fall."

More Than Half Of Illinois Farms Are Now Electrified

Today nearly 120,000 Illinois farms — 55 per cent of all farms in the state — are electrified, according to the Rural Electrification Administration.

Only 28,000 Illinois farms had central station electric service on May 11, 1935, when the REA was established. About half of the Illinois farms that have received service since 1935 are on the lines of REA borrowers, and many of the 200,000 farms not yet electrified and other rural consumers can be reached after the war with extensions from existing REA-financed lines.

On April 1, 1944, REA had advanced $19,387,733 as loans to 28 borrowers in Illinois, 27 of which are farmer-owned cooperatives. The borrowers had made payments of principal and interest totalling $3,384,771.

When hog cholera strikes, it usually takes the entire herd. Be prepared. Vaccinate.

NO MATTER HOW WELL YOU TREAT 'EM—

YOU'RE NEGLECTING A BASIC MEASURE IN THE CARE OF PIGS WHEN YOU DON'T VACCINATE!

HOG CHOLERA IS ONE WORRY YOU WON'T HAVE AFTER YOU USE FARM BUREAU SERUM AND VIRUS.

REMEMBER: The smaller the shoat The cheaper the shot

See YOUR FARM BUREAU

Rural YOUTH

By Ellsworth D. Lyon

A series of district Rural Youth Short Courses and Talk Fests has been scheduled for six centers over the state from Oct. 16 to Nov. 16, according to Ellsworth D. Lyon, director of young people's activities for the Illinois Agricultural Association.

The schedule is as follows:

Oct. 16-17	DeKalb
Oct. 18-19	Galesburg
Oct. 23-24	Bloomington
Oct. 25-26	Jacksonville
Nov. 13-14	Carbondale
Nov. 15-16	Olney

The district Rural Youth Talk Fests will be held at 7 p.m. on the first day in each center.

The Short Course sessions will include studies in plant foods, Service Brand Feeds, the relationship of the Extension program of the U. of I. College of Agriculture and the Farm and Home Bureau, public speaking, soil conservation practices, the story of Farm Bureau, Rural Youth organization, and program building. Instructors will come from the U. of I. College of Agriculture, the IAA and affiliated companies.

The Farm Bureau office in each of the cities in which the Short Course and Talk Fests are scheduled will be the headquarters for the activities. Further information may be obtained through the county farm adviser or the director of young people's activities for the IAA.

The educational features of Rural Youth meetings for August and September over the state have consisted mainly of reports of the Rural Youth Training School at Camp East Bay, Aug. 13-19. This policy serves a double purpose. The reports help the young people who have the privilege of attending the training school to retain the many valuable lessons received in home making, farming, recreation, program building, public speaking and in other studies. Also the young people who were not favored with the privilege of going to East Bay have brought to them some of the same lessons which the others received first hand and are helped to understand how much the Rural Youth Training School means to Illinois Rural Youth.

"The Whiteside of Rural Youth" of the Whiteside County Rural Youth group and "Country Capers", published as the "Cider Press Service" of Warren County Rural Youth in the September issues carry much news of Rural Youth work in their respective counties and over the state, including Talk Fests and the District Short Courses. Looks like good participation from both counties in these activities.

The Saline County "Informer" and the Brown county "The Little Brindle Breeze" are being sent to the servicemen and women who have gone from Rural Youth. They also give news from the servicemen and women in which they express great satisfaction in receiving news through the Rural Youth publications.

LaSalle County Rural Youth has formed a class in songs and games leadership. Kirby Todd is the leader of this group.

Peoria county has just completed the building of a six-month program. At one meeting they will tell guests — parents — about Rural Youth. At the next meeting Rural Youth will hear the story of Farm Bureau from the parents. Other features also blossom with interest for this group.

LaSalle county sends in a complete outline of meetings through January. Looks like a well balanced program of fun and education, with a large number of people working to make each meeting a success.

Husband calling proved popular at the Lowell Park sports festival of Ogle, Lee, Carroll, Stephenson and Whiteside counties.

E. I. Pilchard's Son Dies In Bomber Raid on Japan

Capt. Robert Pilchard, 24, son of Mr. and Mrs. E. I. Pilchard, Urbana, reported missing after the B-29 raid on Yawita, Japan, June 15, died when the super-fortress crashed in China following the raid, according to word received from the war department in September.

Mr. Pilchard is professor in agricultural extension, in charge of boys' 4-H club work, U. of I. College of Agriculture.

Captain Pilchard joined the Royal Canadian air force in March, 1941, and transferred to the American Air force, May 28, 1942 when he was commissioned second lieutenant.

A flight instructor both in Canada and in the United States, Captain Pilchard volunteered for B-29 training and went to Salina, Kan., where he received his instruction as a super-fortress pilot.

The war department did not confirm Captain Pilchard's death until a search party found the remains of the bomber, one of the four missing after the first super-fortress raid on Japan.

USDA Economist Lists Points To Define Family Size Farm

What is a "family farm?" What does the phrase mean?

Can a "family farm" be identified by the number of acres in it? By cash value? By its record of production? None of these, it seems to Marshall Harris of the Bureau of Agricultural Economics, makes a good measure.

In a recent study of the prospects for the family farm in postwar developments and the part USDA can play in making the prospect encouraging, Dr. Harris, an agricultural economist, offered these four simple tests for what a property should be if it is to be considered a "family farm."

(1) Large enough to produce efficiently;

(2) Small enough so that the family does the work without hiring much outside help;

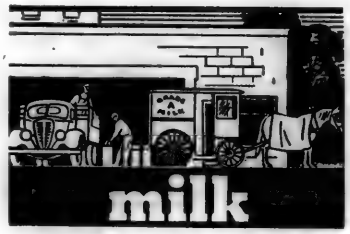
(3) Able to furnish a decent level of living for the family; and

(4) a farm with land conserved and buildings kept up to date.

Farmer-Owned Cooperatives Increase Their Membership

Farmer-owned cooperatives increased their membership by 250,000 and added 940 million dollars in business volume during their 1942-43 marketing season, according to final estimates just released by the Cooperative Research and Service Division of the Farm Credit Administration.

Greatest concentration of cooperative enterprise is in the 12 north central states. California, however, led in cooperative marketing with Minnesota and Illinois following.



By Wilfred Shaw

The Government "set asides" of all dairy products manufactured in September called for 20% of butter, 50% of cheese, 60% of spray powdered dry milk. The previously announced set aside of 35% for roller process dry milk was cancelled because of adequate government stocks on hand of this product.

According to the U. S. Bureau of Agricultural Economics, milk production for August was approximately 2% below that of August 1943 and 4% below that of August 1942. There were more cows on farms in August 1944 than in any previous year but unfavorable conditions as a result of the drought lowered milk production.

United States cold storage holdings of butter and cheese on September 1 were 138,378,000 lbs. of butter compared with 231,543,000 lbs. on September 1, 1943; 186,392,000 lbs. of American cheese compared with 172,937,000 on September 1, 1943 and the five years average of 159,856,000 lbs.

Friends of Wm. McClugage, plant superintendent of the Peoria Producers Dairy, were shocked and saddened by the sudden death of Mrs. McClugage in early September. Mrs. McClugage died as the result of a stroke at the age of 28 years. Two small children survive their mother.

In 43 Illinois counties located in central and southern Illinois the War Food Administration's dairy feed subsidy payments for September were to be 70c per cwt. upon milk sold and 11c per lb. upon butterfat in cream.

In all the other Illinois counties for September the dairy feed subsidy payments were 60c per cwt. upon milk and 10c per lb. butterfat in cream. The payments in the 43 counties in central and southern Illinois were increased because they were included by WFA in the drought area of the Midwest.

All milk handlers in the cities operating under War Food Administration Order 79 were authorized to sell in September the following quotas of their June 1943 sales: fluid milk 105%; cream 75%; and 100% of their byproduct sales.

The fluid milk quota for September was raised 5% above the quota for August. The other quotas remain the same for September as they were in August.

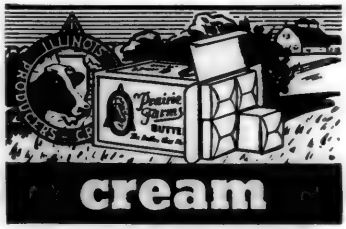
The markets in Illinois operating under WFA 79 orders include Chicago, Peoria, Rockford, Springfield, Decatur and St. Louis, Mo.

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States and are quoted on a 3.5% butterfat basis delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for July unless otherwise noted:

Baltimore		$3.85
Boston (191-200 mile zone)		3.55
Chicago	(August)	3.11
Cleveland		3.36
Denver		2.84
Detroit		3.38
Louisville	(August)	3.32
Indianapolis		2.89
Kansas City		3.23
Memphis		3.52
New York (201-210 mile zone)		3.78
Pittsburgh		3.34
Seattle	(August)	3.10
St. Louis	(August)	3.59
St. Paul, Minn.	(August)	5.03
Washington, D. C.	(August)	4.00

The following are the blended prices recieved by producers supplying the respective Illinois markets. All are August prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.45
Canton	2.75
Champaign	2.75
Chicago (70 mile zone)	3.11
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.74
Galesburg	2.65
Harrisburg	2.65
Jacksonville	2.85
Kewanee	2.55
LaSalle	2.69
Moline	2.95
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.11
Springfield	2.85
St. Louis	3.59
Streator	2.40



By Frank Gougler

For some time the dairy industry has had a committee studying post-war dairy problems. A preliminary report has been made by O. F. Garrett, chairman. The committee started its work by asking six major questions and attempted to answer them. They are:

1. "What changes have occurred and what trends have been started in the dairy industry because of the war?"

2. "Which of the numerous war-stimulated developments in science and industry, are likely to affect the dairy industry or find application in it?"

3. "How long will it take the war-torn countries to rebuild their agriculture, particularly, dairying?"

4. "Are the peace terms likely to involve commitments as to free trade, particularly in food products, and are there likely to be sizable imports of butter and cheese?"

5. "If we assume Mandate over numerous Pacific islands, to what degree is this likely to result in imports of vegetable fats?"

6. "What is the economic oulook for the country in the postwar period?"

The answers to some of these questions will have to wait the peace term period. We do, however, have the experience of post-World-War I as a guide, and we have trends as a result of World-War II.

Both wars demanded of the farmer tremendous increased production of dairy products. The number of dairy cows in the United States now, as compared to the pre-war period of 1925-29, is a good example. The prewar average was 22,952,000 heads. The number has now increased to 25,666,000. Total milk production averaged for the five year pre-war period 100 billion pounds annually. Production for 1942, was 119 billion pounds, and 118 billion pounds for 1943. It is estimated that we will have 15% more cows on our farms during the postwar period, than immediately preceding the war.

Trends in the uses of milk require watching. Tom Stitts points out that before 1934 more milk was marketed in the form of cream than in the form of whole milk. During 1934, separated cream represented 44% of total milk, and whole milk marketed as such, was 44%. The balance was utilized on farms. Since 1934, there has been a steady increase in the amount of whole milk sold. By 1943, whole milk sales increased to 60% of total, while separated milk, dropped to 32%. War measures stimulated this trend, but did not initiate it.

War demands for cheese and evaporated milk resulted in further diversion to milk marketing, and finally, the excessive demand for milk-solid-not-fat, for lend-lease uses, resulted in further diversion to whole milk sales.

These special war demands for certain dairy products, have made heavy drains on other dairy products and their uses. Butter consumption in the United States is now the lowest in 70 years. This has resulted in increased demands for substitutes. Likewise, war demands for milk-solids-not-fats has compelled users of this product, to look elsewhere for substitutes. Bakers, for example, have found that soybean meal makes a satisfactory substitute.

Turning to substitutes raises the question as to whether these former uses of dairy products can be recaptured, when dairy products are again available. The outcome of these changes due to the war, will have a far reaching effect on the future of the dairy industry.

Monday, Sept. 18, the board of directors of the Producers' Creamery of Mt. Carroll met to review bids that had been received for a new building. The bid approved, was submitted by James R. Hayes, of Dixon Home Builders, Inc. of Dixon. The new structure is to be a one-story building, about 45 x 75 feet, with a boiler room built at the back. The cost of the building, complete with equipment, will approximate $65,000.

Thursday, Sept. 28, farm leaders, board members of the Producers' Creamery of Carlinville and others of the Carlinville district, met to consider an expansion program for this district. Increased volume of milk and cream received in the present building is taxing present facilities beyond capacity. A second boiler is needed as well as other equipment. The question is where to put them.

Keep a clean, healthy dairy herd and stop these enemies of health — mastitis, abortion and tuberculosis.

Announcing a

PLANT FOOD PROGRAM

FOR ILLINOIS

New emphasis is being placed on the "PERMANENT SYSTEM"

- **Good Crop Rotation and Soil Management**
- **Soil Testing and Recommendations to be made by Extension Service**
- **Rock Phosphate**
- **Limestone**
- **Potash**
- **Legumes**

Blue Seal Plant Food materials and Grow-Crop Fertilizers are recommended as supplements only, to be used when properly recommended on farms with a good foundation built by "Permanent System."

A Special THIS FALL

Considerable tonnage of superphosphate and some high analysis mixed grades are now available for use this fall. For further information contact your present Blue Seal distributor or your county Farm Bureau office.

THE PROGRAM

This Plant Food Program for Illinois has been a long time in formation. It has been evolved democratically after much discussion and debate. It now rests upon a sound foundation, with full recognition of the teachings of the University, the Extension Service, the Farm Bureau, and our farmer-owned cooperative distribution system.

A SOUND FOUNDATION

This Plant Food Program rests upon a sound foundation because it has Farm Bureau approval, which means that the appointment of an authorized distributor of Blue Seal Plant Foods and materials will be made by your local Farm Bureau Board after careful consideration of the following qualifications:

- **A Distributor must be a Farm Bureau type cooperative.**
- **B It should be engaged in another successful line of business.**
- **C It should have adequate warehousing.**
- **D It should have adequate capital.**
- **E It should have sufficient personnel to render a county-wide service in this seasonal type of business and**
- **F To return the savings brought about by volume and efficiency to those who made those savings possible—to Farm Bureau member patrons.**

FARMER CONTROL OVER MANUFACTURE AND DISTRIBUTION

Blue Seal Plant Food materials and Grow Crop Fertilizers will be manufactured by "Cooperative Plant Foods, Inc." jointly owned by four state groups of farmers—Indiana, Wisconsin, Minnesota, and Illinois. A quality control committee has been set up by the Illinois Agricultural Association to make sure that farmers in Illinois receive the best available in plant food materials and mixed grades.

BLUE SEAL

ILLINOIS FARM SUPPLY CO., Chicago 5, Ill.

G. L. Mussfeldt, Farm Supply Accountant, Dies

Gustave L. Mussfeldt, known to many Farm Bureau members throughout the state through his work with the Illinois Agricultural Auditing Association and Illinois Farm Supply Company, died Sept. 11. He had been home for a few weeks prior to his death recuperating from the effects of a "tired heart."

At the time of his death, Mr. Mussfeldt was employed as chief accountant in the Chicago office of the Illinois Farm Supply Company. Before coming to Farm Supply two years ago he had been with the Auditing association and had traveled extensively over the state in connection with his work.

Mr. Mussfeldt also will be remembered by Farm Bureau members as a member of the Farm Supply quartet which sang at IFS annual meetings and other gatherings.

The funeral was held Sept. 14 at Christ Methodist Church and burial was at Evergreen cemetery, Chicago. Staff members and associates served as honorary pallbearers.

Pasture, well managed, and productive, is a good erosion control cover and furnishes a good supply of low cost feed.

NOTICE ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the months of October and November, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During October, annual meetings will be held in Adams, Brown, Clay, Fayette, Hancock, JoDaviess, Madison, Marion, Menard, Montgomery, Pike, Pulaski-Alexander, Scott, Washington and White Counties.

During November, annual meetings will be held in Bond, Cass, Cumberland, Gallatin, Henry, Lawrence, Logan, Macoupin, Massac, Peoria, Pope-Hardin, Schuyler, Shelby, St. Clair and Williamson Counties.

Paul E. Mathias,
Corporate Secretary.

September 19, 1944

Taxation of Farmer Organizations Under Internal Revenue Code

By Donald Kirkpatrick

The Internal Revenue Code, as amended in 1943, provides for the first time that all income tax exemption corporations, other than religious, charitable and educational organizations, make an annual information return to the Collector of Internal Revenue in the district in which the corporation maintains its home office. Such return is made on form designated "Form 990." Prior to this act the government could, at its request, require such a return but now the requirement for an annual informational return is mandatory. The making of an informational return does not in and of itself affect the exemption status of the corporation. The return, however, may disclose a situation which will deprive the exempt corporation of its right to income tax exemption and force it to make a regular return and have a corporation income tax assessed against all taxable income. A farmer tax exempt association desiring to maintan an exempt status must therefore examine its operation with care and respect of limitations of law and valid regulations making possible the exemption.

It will be surprising indeed if some of the many exempt corporations will not, from their information returns, disclose to the Internal Revenue Department that their operations are not wholly within the tax exempt limitations. Extreme care, of course, should be exercised in the making of the return on Form 990 so that it will truly reflect operations of the corporation. It is very important for a farmer tax-exempt corporation desiring to maintain its exempt status to see that its operation is within all of the limitations.

Since the first federal graduated income tax law was passed in 1916, farmer organizations have been permitted exemption from income tax under the federal law. The classes of exempt corporations have been increased over the years until now there are nineteen separate classifications of corporations that are permitted exemptions from federal income tax. These classes are as follows:

(1) *Agricultural, horticultural and labor membership organizations.*
(2) *Mutual savings banks.*
(3) *Fraternal beneficial societies.*
(4) *Mutual building and loan associations.*
(5) *Mutual cemetary associations.*
(6) *Religious, charitable institutions and community chests.*
(7) *Chambers of Commerce, business leagues, etc.*
(8) *Civic leagues and local associations of employees.*
(9) *Recreational clubs not for profit.*
(10) *Benevolent life insurance associations of local character. Mutual ditch and irrigation companies, and mutual telephone companies.*
(11) *Mutual fire insurance companies.*
(12) *Farmers' cooperative marketing and purchasing associations.*
(13) *Corporations organized to finance cooperative operations.*
(14) *Corporations organized for the exclusive purpose of holding title to property.*
(15) *Corporations organized by Congress as a governmental instrumentality.*
(16) *Voluntary employees' beneficiary associations.*
(17) *Teachers Retirement Fund associations.*
(18) *Religious organizations.*
(19) *Voluntary employees' beneficiary associations for Federal employees.*

Farm people are interested primarily in tax exemption for their membership organizations, for their marketing cooperatives, for their farm supply cooperatives, and for their local mutual insurance associations. It is proposed to treat these several activities separately through the use of this column in succeeding issues of the RECORD.

Jo Daviess Makes Study of Rural School Problems

Jo Daviess County's Rural Schools Committee is one of a number of such committees over the state studying various phases of rural school problems. Statistics obtained from the county superintendent of schools furnished the basis for some of the discussion periods and proved interesting. A brief analysis of this phase of the study for the school year of 1942-43 follows:

Highest assessed valuation on a rural school district	$323,970.00
Lowest assessed valuation on a rural school district	50,545.00
Average school district assessed valuation	118,073.42
Highest educational tax rate on a rural school	1.00
Lowest educational tax rate on a rural school	.28
Average school district educational tax rate	.77
Highest building tax rate on a rural school	.37
Lowest building tax rate on a rural school	.02
Average school district building tax rate	.10
Highest current expense on a rural school	1,670.00
Lowest current expense on a rural school	601.00
Average school district current expense	882.83
Highest claim for State Aid by a rural school	557.80
Lowest claim for State Aid by a rural school	33.11
Average school district claim for state aid	131.97
Highest teacher's salary per rural school	1,035.00
Lowest teacher's salary per rural school	640.00
Average teacher's salary	822.57
Highest school enrollment	35
Lowest school enrollment	2
Number of schools with average daily attendance from 1 to 10 pupils	65
Number of schools with average daily attendance from 11 to 20 pupils	34
Number of schools with average daily attendance from 21 to 30 pupils	4
Number of schools with average daily attendance from 31 to 40 pupils	2
Highest net operating cost per pupil	$ 562.00
Lowest net operating cost per pupil	29.26
Average of all districts net operating cost per pupil	101.31

Associated Women Urged To Cast Vote

RECOGNIZING that the American farm woman has much at stake in this year's election, Mrs. Elsie W. Mies, president of the Associated Women of the AFBF, has issued an appeal to all members of the organization to exercise their right of suffrage at the polls on Nov. 7.

"Today the American farm woman is challenged as never before," Mrs. Mies said. "At its ninth annual meeting in 1943, the Associated Women adopted the following resolution:

" 'We believe that the foundations of good citizenship are laid in the home. We accept our responsibilities as citizens by becoming familiar with and concerned about the offices and duties of the various government units — local, county, state and national.

" 'We believe that the right to vote carries with it the obligation to exercise that right to the end that we secure competent and conscientious officials to administer the affairs of state. We recognize that the future world must be a community of good citizens if we are to have a peaceful world.'

"As your president, let me urge you to make every effort to accomplish the purpose of this important resolution."

Tazewell County Reports on Membership Program

Organization of four new Home Bureau units in Tazewell county since the 1943 annual meeting has focused attention on the county's successful plan to enroll new cooperators.

Started last August at an organization training school the plan has progressed well with each unit woman in the county having a part in the organization work. According to Home Adviser Marian Sympson, county women expressed their enthusiasm for the plan which took about two months to get under way.

Unit officers were unanimous in accepting the plan setting up a committee with the unit vice president as chairman. She appointed, with the unit's executive committee's approval, a maintenance chairman whose duties are: 1—to assist hostess with hospitality; 2—to address post cards to absent members at each unit meeting and give them to next month's hostess for mailing as a special invitation to the next unit meeting, and 3—to collect lesson sheets for absent members and see that they get them.

Duties of the new campaign chairman included preparing a record sheet which each unit woman uses in her calls on prospective cooperators. This sheet was explained at the September meeting and signatures were obtained from each cooperator who recorded the month or months she wished to make calls and when she wished to report them. All such signatures were to be received before the October meeting. At each monthly meeting each cooperator made her individual report on her calls.

At the 1944 annual meeting the plan called for each woman who has made her two calls to be given a blue ribbon to wear. Women of units where calls were made 100 per cent were to wear red, white and blue ribbons.

It was stressed that this plan called for a minimum of work from every cooperator, that it was accepted by unit officers at the training school and that it will work only in proportion to the support given it by the entire roll of cooperators.

The work should be well started a month after the training school — in this case September — with the unit cooperator chairmen presenting their plans, the minor leaders giving the lesson, "Know Your Organization," and the county chairman visiting the units and encouraging organization work.

REPORT OF MRS. ELMER NELSON, CORDOVA UNIT, ROCK ISLAND COUNTY ANNUAL MEETING 1944

This is a twelve months' tale you know
Of the worthwhile doings of Home Bureau;
Now my dear friends, I'd like you to meet
Mrs. Susan Glum — and Sally Sweet.
Now Mrs. Glum, as you all well know,
Would never belong to a Home Bureau;
'Twas a waste of money and time and such,
And besides she was sure she wouldn't learn much,
She works from dawn until set of sun,
Yet never seems to get her work done.
She fusses and frets and fumes around,
When night does come, she can't sleep sound,
Her husband and children upset her no end,
She is so disagreeable, she's hardly a friend.
But now let's turn to a cherrier scene,
Where Sally Sweet works calm and serene.
Her wash on the line is as white as pure snow,
She is now getting ready to attend Home Bureau.
She has already learned of her Allied Neighbors,
Their modes of living, their likes and behavior,
She is interested now in some postwar planning,
Since food fights for freedom, she's canning and canning,
She's anxious to know all the ways to conserve,
Take care of all surplus, to freeze and preserve.
She's learned how to care for her family's clothes,
New methods of remodeling and pressing she knows,
She knows many short cuts in cooking and sewing,
Now she has more time for weeding and hoeing,
She's healthy and happy, having some time to play,
She budgets her time the Home Bureau way.
Only those who are stupid, or tiresome or dumb,
Belong in the class with poor Susan Glum
But those who are eager a victory to win,
Know how to do this and when that to begin.
We'll surely take heed to Sally Sweet's call
When she urges you to rejoin one and all.
We are happy and gay as we work and we play.
Won't you visit with us in Cordova some day?

For easier ironing, rub the sole plate of your iron once a month with paraffin or beeswax, advise Purdue home economists. Wipe off excess on paper or cloth.

The family food budget calls for 60 quarts or more of vegetables and 50 quarts of fruit per person for use during the period from October to June.

New Home Advisers Begin Duties in Two Counties

Miss Josephine Giganti, Springfield, was named home adviser of Bond county at a recent meeting of the board of directors of the Bond County Home Bureau.

Miss Giganti is a graduate of Illinois State Normal University with the class of 1941. She has taught home economics in the Mackinaw High School for three years. She started work in Bond county Sept. 1.

Miss Christine Schroy, Palestine, began her duties as home adviser in Winnebago county Sept. 1. She is a graduate of East Carolina Teachers College, Greenville, N. C., and also studied at the University of Illinois, having received the Farm Bureau scholarship for Crawford county in 1932. She has been home adviser in Washington, N. C. for the past four years.

Need for Gas Rationing is Told by Oil Industry

Here's what the petroleum industry says about the need for gasoline rationing in a series of newspaper advertisements.

"There is not plenty of gasoline in the central states!

"The reasons are simple: Our military machine — mightiest in history — gets first call in the nation's gasoline, of course. You wouldn't have it otherwise. The needs are tremendous — and will become increasingly greater.

"For example, to train a pilot requires enough gasoline to last the average automobile 18 years — 12,500 gallons; it takes three tons of gasoline (approximately 1000 gallons) to deliver a one-ton bomb; tanks of one armored division requires 25,000 gallons to move 100 miles."

Illinois Farmers Reduce PCA Loans by $11 Million

During the six months period ending June 30, 1944, Illinois farmers paid off a total of $11,130,000 of their loans to Production Credit Associations throughout Illinois, according to W. S. Brock, president of the Production Credit Corporation of St. Louis.

As of June 30, some 15,610 Illinois farmers owned $1,329,000 worth of capital stock of the 20 Production Credit Associations serving the state. During the first six months of the year these associations made 6504 loans for $13,087,744. Consolidated net earnings for the period were $53,459. and total reserves as of June 30 were $973,418.

Two New Programs

(*Continued from page 5*)

IAA, the Illinois Farm Supply Company, the soil improvement committee of the Farm Advisers' Association, conferring with representatives of the University of Illinois. It is designed to supplement the Illinois system of permanent soil fertility and does not change that program in any respect whatever.

The IAA has designated the Illinois Farm Supply Company to take charge of, make the necessary investments, and process and distribute the mixed fertilizer and the fertilizer ingredients in this program.

The Illinois Farm Supply Company has entered into an agreement under which it will own jointly with the Indiana Farm Bureau Cooperative Association, the Wisconsin Farm Bureau Cooperative Association and the Midland Cooperatives, an acidulating plant now under construction at Hartsdale, Ind. They will also own jointly with these other cooperatives a mixing plant in connection with the acidulating plant which will provide in part at least the mixed fertilizers for the Illinois Farm Supply Company until demands require further expansion.

This acidulating plant will have a capacity of upwards of 40,000 tons per year of superphosphate. The Illinois Farm Supply Company will receive more superphosphate from this plant than any of the other cooperatives involved and will secure from the mixing plant all of the mixed fertilizers that its potash allocation will make. It is the plan in this Plant Program to distribute these fertilizers as nearly as possible direct from the manufacturing plant to the farm.

This program will not be placed in any county by the Illinois Farm Supply Company without the approval of the County Farm Bureau. The County Farm Bureau must name the distributor or distributors in the county. Qualifications for distributors are the same as those outlined for Service Brand Feeds. In naming the distributor, however, County Farm Bureaus should keep in mind that the distribution of plant foods is not a year around program and it should be placed with some company already in existence which will have other business.

The control of quality in the Plant Food program is under a committee set up in exactly the same way as that described under Service Brand Feeds. Every effort is being made to make these materials available as soon as possible.

Stephenson County Farmers Sure They've Had Their Share of Hail

THEY say that lightning doesn't often strike twice in the same place, but some Illinois farmers know from recent experience that such a saying doesn't apply to hail.

Some Stephenson county farmers have had hail hit their corn three times during the past summer, and similar reports have been received from other counties. Right now Farmers Mutual Reinsurance Company is figuring up the hail losses reported by policy owners in Stephenson county and it appears that the losses will be between 280 and 300. The smallest payment made to date was $12 and the largest $9400 to one policy owner.

Stephenson county had three hail storms this summer. The first one came June 25 and others followed on July 26 and Aug. 23.

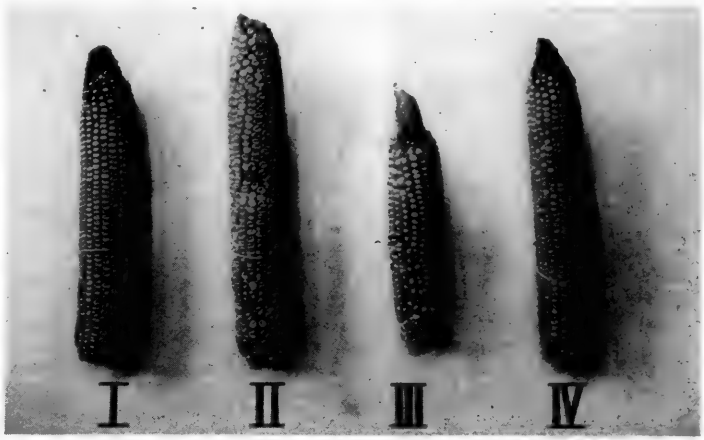
The June 25th storm brought in reports of 650 losses from 36 counties to the office of the Farmers Mutual Reinsurance Company, with most of them being from Peoria, DuPage, Mercer and Stephenson. Mercer county also reported a number of losses from Aug. 15 and July 26 storms.

While Stephenson county had a number of hail losses this year, it looks as though hail storms play no favorites as far as the northern half of the state is concerned.

DuPage county, for example, hadn't had a bad hail storm for 12 years until the June 25th storm spoiled the record.

Farmers Mutual Reinsurance Company in the 1944 season had an estimated 2000 losses reported over the state which will exceed one-half million dollars, as compared with 848 losses in 1943 when $232,000 was paid out. However, Farmers Mutual has 81 million dollars in growing crop hail insurance in 1944 as compared with 50 million dollars in 1943, 29 million in 1942, 13 million in 1941, and 10 million in 1940.

Carl Block, president of the Stephenson County Farm Bureau, looks over corn stalks cut down by hail on the farm of L. D. Mitchell, Pearl City. Block was helping put the hail struck corn up for silage.



Here are four samples of seed corn taken from a Stephenson county field six weeks after a hail storm struck it. The storm came a day after detasseling. No. I and IV ears are from the same hill, and No. II and III are from the female row, four rows from the male I and II samples. This county had some 280 to 300 hail claims.

EDITORIAL

"Of Course, Farm Prices Will Go Down"

IF FARMERS ever had convincing proof of their need of a still greater organization, they should find it in the current attitude of many government leaders and industrial and labor groups about post-war farm prices. That attitude, boiled down, is simply this, "OF COURSE, FARM PRICES WILL GO DOWN."

Less than a year ago, officials were reassuring farmers that there was no need to worry about post-war surpluses of food and fiber, what with potential European demand and the pledge to maintain prices at parity for at least two years after the conflict. Today, the attitude seems to be that a sharp decline in farm prices is inevitable.

That would be serious enough, but at the same time, industry is predicting higher prices for its post-war products, and labor is demanding that wages be maintained at wartime levels, with a guaranteed annual wage, or "take home" pay adjusted high enough "to make up for the loss of overtime." The OPA is apparently using 1942 prices as a standard. Automobile makers have told us, in a long series of statements, that cars will cost 15 per cent to 30 per cent more than they did in pre-war days. Yes — labor's wages will be maintained, and industrial prices upped to compensate for increased costs — but "Of Course, Farm Prices Will Go Down."

Is that attitude fair? Does it make sense? And what can farmers do about it? Those are questions upon which the farmer and the non-farm population need to do a lot of thinking.

Why should farm prices be singled out for decline, while others are to be maintained? Is it the old and persistent campaign of some groups for cheap food and a peasant agriculture? Is it the shortsighted thinking of some business and labor groups who persistently fail to recognize that the farmer is their best customer?

Part of it is just that. Another part is the persistent idea that farm prices are unjustifiably high. Anti-farm groups take the depressed farm prices of 1939 — the lowest period for agriculture in twenty years except for the depths of the depression — as their basis for figuring. Then, lo and behold, they say "farm prices have increased more than wages." In August of 1939, farm prices stood at 74 per cent of Parity; farmers were able to realize an average of less than $5.50 per hundred for hogs, less than $6.75 for cattle, less than 55 cents per bushel of wheat. During the year 1939 farmers received only about 9 cents per pound for cotton, 17 cents per dozen for eggs, 24 cents a pound for butterfat, and 57 cents a bushel for corn. Are comparisons based upon such a price level fair and reasonable?

What are some of these groups thinking of? Are they indulging in the old fallacy that dominated the fateful 1920's, that prosperity can be maintained for industry and labor by exporting huge quantities of industrial products, and importing a vast amount of agricultural products in return? That, of course, could only mean another crash in farm prices. Then the old pattern of depression would inevitably repeat itself: a depressed agriculture, a drastic cut in farmers' buying power, industry and labor deprived of their farm market, and the country facing another catastrophe like that of 1929-32.

It is up to the farmer, and to sound-thinking business men and labor leaders, to correct this dangerous and mistaken line of thought. Farmers have two enormous tasks before them in this connection. One is to convince non-farm groups that the parity standard, which insists upon prices for farm products sufficient to give farmers a fair exchange value for the products of industry, should be maintained. This is agriculture's one basic protection in the law, and it must be clearly explained and vigorously defended. The other is to prove again to industry and labor — before it is too late — that the mass buying power of the six million farm families of America constitutes the most important single market for the products of industry. If that buying power is destroyed, national prosperity will go down with it.

Full national production and a high national income, upon which depends our ability to recover from the effects of war and to build a sound peace, rest upon productivity and prosperity in the cities — and neither industry, labor, nor agriculture can prosper unless all groups prosper.

Let's correct the false and dangerous thinking implicit in the statement, "Of course, farm prices must go down."

New Cooperative Frontiers

IN PREVIOUS issues of the RECORD we have outlined, especially for new members, the array of cooperative services which the Farm Bureau makes available to them.

Substantial and important as past accomplishments and present services are, however, the movement is not standing still. The Farm Bureau member through his county, state, and national organization is exploring new frontiers of cooperation. He is finding where the needs of the post-war period are, and is planning what to do about them.

Two current developments in Illinois are the Service Brand Feed program and the Plant Food program. Service Brand feeds are complete mixed feeds. In the Service Brand Feed program, a high-quality pre-mix, containing the vitamin carriers and other important essential ingredients, will be made by Illinois Farm Supply Company in centralized mills. This pre-mix will go out to the county distributor who will grind and mix with it certain quantities of grain and protein feeds, obtained locally. Quality standards will be controlled by a well-chosen committee, and maintained by constant check upon the mixing at the plants of county distributors. The savings involved in the first county in which the Service Brand program is in effect have exceeded previous estimates.

The Plant Food program is one of processing and distributing mixed fertilizers and plant food ingredients. Quality control is again a paramount consideration. Illinois Farm Supply Company, with similar organizations in Indiana, Wisconsin, and Minnesota, is setting up an acidulating plant and enlarging a mixing plant for this purpose. The acidulating plant will turn out 40,000 tons of superphosphate per year, from which Illinois will receive more superphosphate than any of the other cooperatives involved and as much mixed fertilizers from the mixing plant as Illinois Farm Supply's potash allocation will make. When sufficient allocations of potash can be had, it is contemplated that the service will be expanded.

Thus, on two vital frontiers, cooperative endeavor is making plans and taking action. Farmers, working together, can solve their problems.

EDITORIAL

"Of Course, Farm Prices Will Go Down"

IF FARMERS ever had convincing proof of their need for still greater organization, they should find it in the current attitude of many government leaders and industrial and labor groups about post-war farm prices. That attitude, boiled down, is simply this, "OF COURSE, FARM PRICES WILL GO DOWN."

Less than a year ago officials were reassuring farmers that there was no need to worry about post-war surpluses of food and fiber, that with industrial European areas and the pledge to maintain prices at parity for at least two years after the war. Today, the attitude seems to be that a drastic reduction in farm prices is inevitable.

[illegible] would mean a serious threat to the stability of industry by providing much lower prices for post-war farm products, [illegible] to maintaining that wages be maintained at wartime levels, with a guaranteed annual wage or "take home" pay adjusted high enough "to make up for the loss of overtime." The OPA is apparently using 1942 prices as a standard. A recent report to Congress [illegible] that the farmer's share of the consumer's food dollar [illegible] rather than the 47 cents we got in 1932. Yet [illegible] wages will be increased [illegible] approximately 50 points to [illegible] of Farm Prices Will Go Down.

[illegible] Don't [illegible] And what [illegible] the farmer and the [illegible] of the country [illegible] standing.

Add [illegible] single [illegible] other [illegible] about [illegible] groups for [illegible] and [illegible] agriculture. [illegible] groups who persist [illegible] organized [illegible] Parity [illegible].

Part of this [illegible]. Another part is the persistent idea that farm prices [illegible] high. Many farm groups take the depressed farm prices [illegible] the lowest period for agriculture in twenty years except for the depths of the depression [illegible] as their basis for figuring [illegible] and labor. They say farm prices have increased [illegible] since 1932. Parity farmers were able to realize an average [illegible] estimate, $5.50 per hundred for hogs, less than $6.75 for cattle, less than 55 cents per bushel of wheat. During the year 1932 farmers received only about 10 cents per pound for cotton, 17 cents per dozen for eggs, 24 cents a pound for butterfat, and 7 cents a bushel for corn. Are comparisons based upon such a price level fair and reasonable?

What are some of these groups thinking of? Are they indulging in the old fallacy that dominated the fateful 1920's that prosperity can be maintained for industry and labor by exporting huge quantities of industrial products, and importing a vast amount of agricultural products in return? That, of course, could only mean another crash of farm prices. Then the old pattern of depression would inevitably repeat itself: a depressed agriculture, a drastic cut in farmers' buying power, industry and labor deprived of their farm market, and the country facing another catastrophe like that of 1929-32.

It is up to the farmer and to sound thinking business men and labor leaders, to correct this dangerous and mistaken line of thought. Farmers have two enormous tasks before them in this connection. One is to convince non-farm groups that the parity standard, which insists upon prices for farm products sufficient to give farmers a fair exchange value for the products of industry, should be maintained. This is agriculture's one basic protection in the law, and it must be clearly explained and vigorously defended. The other is to prove again to industry and labor — before it is too late — that the mass buying power of the six million farm families of America constitutes the most important single market for the products of industry. If that buying power is destroyed, national prosperity will go down with it.

Full national production and a high national income — upon which depends our ability to recover from the effects of war and to build a social peace, rest upon productivity and prosperity in the cities — and neither industry, labor, nor agriculture can prosper unless all groups prosper.

Let's correct the false and dangerous thinking implicit [illegible] statement. Of course, farm prices must go down [illegible]

New Cooperative Frontiers

IN PREVIOUS issues of the RECORD we have [illegible] especially for new members, the array of cooperative services which the Farm Bureau makes available to them.

Substantial and important as past accomplishments and present services are, however, the movement is not standing still. The Farm Bureau member through his county, state, and national organization is exploring new frontiers of cooperation. He is finding where the needs of the post-war period lie, and is planning what to do about them.

Two current developments in Illinois are the Service Brand Feed program and the Plant Food program. Service Brand feeds are complete mixed feeds. In the Service Brand Feed program, a high-quality pre-mix, containing the vitamin carriers and other important essential ingredients, will be made by Illinois Farm Supply Company in centralized mills. This pre-mix will go out to the county distributor who will grind and mix with it certain quantities of grain and protein feeds obtained locally. Quality standards will be controlled by a well-known committee, and maintained by constant check upon the mixing at the plants of county distributors. The savings involved in the first county in which the Service Brand program is in effect have exceeded previous estimates.

The Plant Food program is one of processing and distributing mixed fertilizers and plant food ingredients. Quality control is again a paramount consideration. Illinois Farm Supply Company, with similar organizations in Indiana, Wisconsin, and Minnesota, is setting up an acidulating plant and enlarging a mixing plant for this purpose. The acidulating plant will turn out 40,000 tons of superphosphate per year, from which Illinois will receive more superphosphate than any of the other cooperatives involved and as much mixed fertilizers from the mixing plant as Illinois Farm Supply's potash allocation will make. When sufficient allocations of potash can be had, it is contemplated that the service will be expanded.

Thus, on two vital frontiers, cooperative endeavor is making plans and taking action. Farmers, working together, can solve their problems.

30th Annual Meeting of IAA and Associated Companies Nov. 27-Dec. 1

As the RECORD goes to press Oct. 18, all of the program plans for the 30th annual meeting of the Illinois Agricultural Association and associated companies, Nov. 27-Dec. 1, in the Hotel Sherman, Chicago, have not been completed. Before Nov. 1, however, all details are expected to be arranged and Farm Bureau members will be informed of the developments through press releases to their local Farm Bureau publications, the weekly and daily papers.

Those who are planning to attend the IAA annual sessions can be assured that the program committee plans to have several outstanding speakers of nation-wide reputation who will bring worthwhile messages on some of the serious and vital problems confronting farmers today.

As in past years, the associated companies will hold their annual meetings during the first days of the convention, Tuesday and Wednesday, Nov. 28 and 29.

There will be a program of entertainment Wednesday night, and the IAA general sessions will open Thursday morning, Nov. 30. Group conferences will be held Thursday afternoon, and there will be an IAA general session Thursday night.

The IAA general session will be resumed Friday morning, Dec. 1, and adjournment will come Friday afternoon.

THE BEST

(PRAIRIE FARMS BUTTER)

for

SERVICE MEN

WE KNOW the boys in the service are getting the best! Here's interesting evidence of that fact.

Kenneth Eugene Dilworth, an Army Medical Corps man, while enroute to Europe on a hospital ship discovered that they were carrying Prairie Farms butter.

In a letter to his parents, Mr. and Mrs. J. R. Dilworth, Fulton County Farm Bureau family, Eugene said that seeing the familiar Prairie Farms label on a ship in the middle of the Atlantic made him feel that he was not so far from home. The emblem, he wrote, indicated that this was a product of the farm on which he grew up as a child.

The discovery, he said, started him to thinking about some things. Perhaps, he wrote his folks, some of this butter came from the Jersey herd on their farm, near Table Grove. He could vision his mother helping milk the cows, the products of which through the Farm Bureau organization had found their way through channels of commerce and into the ship carrying hospital supplies to the war zone. It brought home to him, he wrote, the realization of what his father and mother were contributing to support the efforts being made by the civilized countries to liberate enslaved countries. He paid a very high tribute not only to his own father and mother but to all other parents of those in the military service and to others who are back on farm front so patriotically supporting those in the service.

Left to right are members of the Dilworth family: J. R. Dilworth, Harriet, Mrs. Dilworth, Kenneth Eugene, and in the front row, Eldon.

Eugene, 22, is the eldest son in the Dilworth family and was a junior in the U. of I. College of Agriculture when he entered military service March 12, 1943. Trained in the medical corps he was assigned to a U. S. Army medical ship and made his first trip to Italy in April, 1944. Since then he has made several trips on the ship which carries nothing but hospital supplies from the United States and returns with hospitalized soldiers.

The discovery of Prairie Farms butter on a hospital ship is not such a startling fact in itself as a good percentage of IPC production has been set aside for government use each month. The story is unusual in the coincidence of the youth being on a ship carrying butter which may have been produced on his parents' farm.

It also makes a good story because he comes from a pioneer family in Fulton county and because the Dilworths were builders of Farm Bureau and Producer Creamery, organizations which were responsible for the butter being on the ship. Eugene is the fifth generation growing up in the same community and on the same farm selected by his ancestors, whose family remained near the soil all these many years.

Eugene's great grandfather settled just north of Table Grove in 1834 after having come to Fulton county from the eastern states by horseback. Eugene's mother, Helen Miner Dilworth, also is a descendant from a pioneer family, who settled in the same locality about the same time as the Dilworths. Aaron Miner, brother of Mrs. J. R. Dilworth, was the first farm adviser in Fulton county, according to J. E. Watt, present adviser.

Farm Adviser Watt also reports that he had the good fortune of knowing Eugene's grandfather, William Harvey Dilworth, who was one of those progressive and thoughtful farmers who took his farming seriously. It was on his farm in 1920 that Farm Adviser Watt saw the results for the first time of an application of both lime and phosphate. He was interested in the Farmers Institute and in the work of the experiment stations, and was among the early pioneers in the organization of the Farm Bureau.

Estimate State Corn, Bean Production Lower Than '43

Illinois 1944 prospective production of corn and soybeans is much above the 10-year average although slightly below last year's, according to the reports of the state and federal agricultural departments issued Oct. 12.

The corn crop was estimated a fourth larger than the 1933-42 average and the soybean crop more than twice as large.

The yield per acre of corn appeared above the 10-year average and those of soybeans, hay and small grains except oats average or better.

Corn crop for the year was estimated at 419,934,000 bushels compared with 426,600,000 last year and the 10-year average of 330,989,000 bushels.

Soybean production was placed at 68 million bushels compared with 70,602,000 last year.

The supply of old corn on Illinois farms was set at 20,412,000 bushels compared with 848,231,000 a year ago and the 10-year average of 57,906,000 bushels.

Homer Fisher Resigns as Editor of CLIC Magazine

Homer Fisher, editor of CLIC magazine since May, 1935, resigned Oct. 15 to take a position with the Chicago Surface Lines, as assistant in the publicity department.

In addition to his duties as editor of CLIC, Fisher was in charge of the Insurance Service office which takes care of all agents' production records and supplies. The Insurance Service office was inaugurated several years after Fisher became editor of CLIC. Fisher also worked in preparing sales promotional material for the Farm Bureau insurance companies.

Under Fisher's editorship, CLIC magazine won several annual awards in national contests covering the field of publications published by insurance companies for their agents, as well as awards for sales promotion material.

At this date no successor has been named to take over the editorship of CLIC.

AFBF Annual Meeting

The 26th annual meeting of the American Farm Bureau Federation will be held in the Hotel Sherman, Chicago, December 12-14. Commodity Conferences will convene December 11, and the Tenth Annual Convention of the Associated Women will be held December 10-11.

Machines like this one have revolutionized onion picking in the South Holland area, Cook county. It is operated by 7 men and replaces 30 or more workers. Ordinarily 9 acres can be harvested per day by the use of this machine.

DEVICE HELPS GATHER ONION SETS

WAR or no war, shortage of farm labor or no shortage of farm help, there is one of the nation's crops in which the critical problem of getting enough help to do the job appears on the way to solution. That crop is onions.

Most of the onion sets used in the United States are grown in Cook county. New Holland, located in the southern part of the county, has the largest acreage. This year the total yield was about 600,000 bushels. Most of these onions are yellow in color and known as the Ebenezer or Jap Variety. Others include white and some red types.

Whatever their color, the harvesting of this crop is probably the only job of the kind which has continued to require all hand labor. Onion sets must be cut loose from the ground. They must then be picked. Next they must be stacked or windrowed to allow them to dry. Then the dirt must be cleaned from them by putting them on screens. Finally they are scooped into long shallow crates.

That is the way it has been done as long as anyone can remember. But in these times — with war cutting down on manpower so that farmers are short of help — thrifty onion set growers of Cook county, most of whom are of Dutch ancestry in the New Holland area, have figured out how to save from 30 to 75 workers per farm, depending on conditions, by devising machines for harvesting their onion sets, according to Paul E. Johnston, state farm labor supervisor, Extension Service.

Though there are several such machines in use, the one made by T. Verduin, prominent New Holland onion raiser, and Cook County Farm Bureau member, does the most complete harvesting job. Like many other farmers, Verduin spent many sleepless nights trying to figure out how he was going to continue to plant, tend and harvest crops with the shortage of help which is so general because so many farmers and their helpers have been called into service. In the New Holland area there are many factories doing war work. They have taken many additional men, too.

The idea for making a machine which would do a complete job of loosening, picking, gathering up and cleaning of onion sets came to him on one of those sleepless nights, he says. He proceeded to build it on his place, using spare parts of old implements and with the help of welding tools. As a result of trial and error Verduin finally hooked his new harvesting device behind his tractor this summer and found that, though it works slowly, it does a good job — a better job he thinks, than can be done by hand workers.

It takes seven men, or boys, to operate it. The machine has three conveyor belts operated by a special gasoline engine. On these belts at intervals are forked, finger-like metal claws which go down into the ground deep enough to loosen the onions, scoop them out and deliver them to a screen on the machine which is high enough so that five workers riding on the side of the device can help shake the dirt out of the onions and see that they are fed into crates. One man drives the tractor which pulls the machine, of course, and another sits just behind the hitch to steer the outfit so that it follows the three rows of onions accurately and in "floating" fashion to allow for rises and falls in the onion beds and thus prevent destruction of parts of the crop.

It is the opinion of Verduin that his harvester is "the greatest labor-saving machine I have on the farm." His neighbors agree. As a result he plans to have several more made at a recently installed machine and welding shop near New Holland operated by Peter Lagestee, former farmer in that area who has had considerable experience in welding in war plants. It is expected that neighbors will share these machines this coming year.

Verduin's machine will save 30 men and boys work, state supervisor Johnston says, and "shows what can be done by Illinois farmers to meet a serious farm problem and lick it." There are several other such devices which were tried out this past year in the onion fields and all of them are real contributions to the cause of meeting the critical need of farm help, Johnston added.

One of the other devices referred to was built by Mathew Van Dam who also lives in the New Holland area. It also must be tractor-drawn. One machine digs the onion sets from the ground. It also requires seven men, or boys, to operate it. Another device is then hooked to the tractor to windrow the picked onions so as to permit them to dry. A side-delivery rake has been changed somewhat to permit this pick-up. Then the onions are taken to screen boxes and cleaned. Crating follows. Unlike Verduin's machine which does practically all of this in one operation, Van Dam's outfit is much faster, as far as picking the onions is concerned and can, if "pushed," dig 1,500 crates a day, it is said.

Farm Adviser C. A. Hughes in discussing this problem pointed out that improvements will be made on these and other devices of the kind as experience is gained through their use. There is, of course, only a limited market for such harvesters because the onion set acreage is concentrated to the extent of 75 per cent or more in Cook county. But it is agreed by those who have seen some of them in operation that if every crop had a harvesting machine which would save as much labor as these, farm labor troubles would soon iron out as peacefully as nightmares after a good night's rest.

New AFBF Assistant

A new assistant in the AFBF Washington office is James D. Parel, native of Iowa, and for eight years secretary to Senator Guy M. Gillette of Iowa. During the past four years Parel has been employed in the U. S. Department of Agriculture. He served as assistant to Dave Meeker in administering farm machinery regulations.

Farm Bureau — Extension *Relationships*

★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★

Excerpts from an Address by Dean H. P. Rusk Before the National Farm Bureau Institute at Urbana

★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★

UNLIKE some other agriculture agencies created by congressional action, the Cooperative Extension Service in Agriculture and Home Economics is supported in part by federal grant-in-aid funds and in part by state and local funds. States and local communities may and commonly do exercise a large measure of control over policies and administrative policies and in some states different procedures are followed in different counties.

. . .What I propose to do is to tell you something about procedures and relationships in Illinois, a little about their historical background and why we think they meet our needs.

The first extension work of the College of Agriculture was carried on through local meetings of farm groups under varied sponsorship. Later the Farmers' Institute furnished the most effective medium for agricultural extension work.

But it was not until after the passage of the Smith-Lever Act in 1914 that extension work was organized as a major project. This act constituted public acknowledgment of the actual and potential influence of the land-grant colleges of agriculture and experiment stations to the rural people. It undertook to extend and increase that influence by combining national, state, and local resources in a cooperative educational venture.

In Illinois the local support which gave the Extension Service its firm anchorage in every county in the state was in most counties the Farm Bureau and in a few counties its predecessor, the Soil and Crop Improvement Association. In fact, these local or county organizations were developed specifically to meet the requirements for local participation and local responsibility which Dean Eugene Davenport and his associates, who were responsible for the launching of the reorganized extension program in Illinois, felt were essential for the success of the enterprise.

. . . In the beginning, extension work in Illinois under the Smith-Lever Act and subsequent legislation consisted largely of taking to farmers the teachings of the Agricultural College and the findings of the Agricultural Experiment Station on better methods of production. The main objectives were to increase the efficiency of production and to reduce costs. A little later, information on marketing problems and farmers' cooperatives was demanded, and that field of educational work became recognized as an important part of the Extension Service in Illinois and in most other states.

Dean H. P. Rusk

That such an active, vital, educational program should draw into the county Farm Bureaus the forward-thinking farmers of the community was only logical; and it was inevitable that when such men were banded together into a state association, their thinking would find expression in other than purely educational projects. No voice has spoken more clearly or more effectively for agriculture in the public forum and in the legislative halls than has that of the Illinois Agricultural Association. The very weight of its influence places a special responsibility upon the organization to sponsor only sound programs.

. . . The Extension Service and the Farm Bureaus must continually examine and reexamine their programs; they must be willing to challenge yesterday's position in the light of today's facts; they must constantly appraise the results of their efforts, their methods, their techniques. They must continually direct their best thought toward the discovery of ways and means of improving their services for the welfare and advancement of agriculture.

At this point we come to a problem in relationship that demands careful, and probably continuous study. That problem involves our responsibilities to nonmembers of the Farm Bureau.

. . . The essential points of this relationship (of the Farm Bureau as the local sponsoring agency for the Extension Service in Illinois) are set forth in the Memorandum of Understanding between the various Illinois county Farm Bureaus and the Illinois Extension Service.

. . . The contractual and official relations of the farm adviser are, on the local basis, with the Farm Bureau, not with any of its subsidiaries. Any reasonable interpretation of the Memorandum of Understanding or of the contracts with farm advisers makes it clear that the farm adviser's functions are educational and that he is, by the terms of the contract, specifically restrained from participating in the operation of so-called business activities.

But it should be generally recognized that even many of these business activities are carried on by the Farm Bureau and its subsidiaries for the sole purpose of facilitating the adoption on local farms of practices recommended by the Extension Service. The maintenance by the Farm Bureau of adequate supplies of potent serum and virus at reasonable prices did much to promote the adoption of extension teachings on immunization of swine against cholera. It is not, of course, the farm adviser's duty to operate a serum service, but it is his duty to use every appropriate facility to promote the adoption of practices which are outlined in plans of work or programs approved by the Extension Service.

Let me say here that the Extension Service does not discharge its full responsibility by talking about sound practices — it must make an effective effort to get farmers to adopt them. In Illinois the Farm Bureau and its subsidiary organizations have provided facilities for

extending the teachings of the College, the Experiment Station, and the U. S. Department of Agriculture that have greatly enhanced the value of the extension work of the farmers of this state.

. . . The public often does not distinguish between the teaching function of the Extension Service and the facilities of the Farm Bureau for putting improved methods into practice. While the educational work of the Extension Service must be available to all rural people, certain service functions of the Farm Bureau and its subsidiaries may very properly be limited to Farm Bureau members who, through membership dues and often personal effort, contribute to the support of that service.

No amount of formal memorandum or agreements between the Extension Service and the Farm Bureaus will make the public distinguish between these two important functions. In this case action not only speaks louder than words — it is the *only* thing that counts. Our actions, therefore, must make clear the fact that the educational work sponsored by the Farm Bureau cooperating with the Extension Service is available to all rural people.

. . . I question whether the Extension Service of any other state has a firmer anchorage with the farmers than has the Extension Service in Illinois; and this anchorage is furnished pretty largely by the Farm and Home Bureaus. I doubt whether the Extension Service of any other state has been more effective in influencing farmers to improve their farming practices than has the Extension Service in Illinois. I can say these things without seeming too immodest in my claims because the credit for the development of the Extension policies and procedures in Illinois must be laid to my predecessors — to Davenport and Mumford and their immediate associates.

But we of the College of Agriculture must acknowledge freely that what has been accomplished has been made possible only by the cooperation of other organizations with the College of Agriculture. A large part of the success of the Extension Service I attribute without reservation to the friendly working relations that have existed between the Extension Service of the College of Agriculture and that soundly organized and splendidly staffed organization . . . the Illinois Agricultural Association. May we continue to coordinate our efforts with generous understanding of each other's motives and prerogatives, for together we can accomplish tenfold, what neither of us could accomplish alone.

Contour cultivation saves productive top soil fertility and moisture. For these reasons, it is logical that contour cultivation of sloping land will increase yields.

E. L. Rice, extreme right, and his class of 13 vocational agricultural boys in Manlius High School, Bureau county, compare corn yields from test fields.

Erosion Cuts Corn Yields

FIELD studies made by 10 different vocational agricultural classes in Bureau county for two consecutive years show that erosion reduces corn yields by 39.2 bushels per acre.

Two acres were selected in each of the 15 demonstration fields studied that were of the same soil type and about the same degree of slope. The only difference between the two areas being the depth of top-soil remaining.

The following table shows the difference between the two areas for the 15 demonstrations.

	Seriously Eroded Average for '42, '43	Slightly Eroded Average for '42, '43
No. of Areas Harvested	15	15
Percent of Sound Corn	49.10	88.05
Percent of Unsound Corn	50.90	11.95
No. of Stalks Per Hill	2.20	2.50
No. of Missing Hills	8.05	3.45
Shelling Percentage	76.60	79.70
Percent Moisture	25.20	22.98
Yield per Acre — computed at 15.5 percent moisture	31.67 bu.	70.87 bu.

Other data obtained from this study show that in each of the areas harvested, the number of stalks per row was less on the lower side of the slope as compared to the upper side of the slope. The reason is that as the length of slope increases the amount of run-off water increases, which in turn washes out more corn when checked and cultivated up and down hill. The results also showed that less corn per row was harvested on the lower slopes than on the upper slopes. This was true on the slightly eroded areas, as well as on the severely eroded areas.

In both areas, the students harvested and weighed 150 hills of corn under the supervision of their instructors. The corn was sorted as to quality, the total number of stalks and missing hills were counted, the shelling percentage and per cent moisture were obtained and the yields per acre computed.

The average yield of corn from the 15 demonstrations on the severely eroded acres was 31.67 bushels per acre as compared to 70.87 bushels per acre on the slightly eroded areas.

According to the study, the reasons for the lower yield on the seriously eroded areas was due to (1) loss of top-soil, (2) lower quality of corn, (3) lower average stand or stalks per hill, (4) more missing hills, (5) weight of corn shelled out was less, (6) higher percentage of moisture.

The vocational agricultural departments that made this study in 1942 were: Walnut, Manlius, LaMoille, Ohio, Tiskilwa, Princeton and Neponset. The schools that recently completed the demonstrations in 1943 were: Bureau Twp., Walnut, Manlius, Buda, Wyanet, LaMoille, Ohio and Tiskilwa.

Two hundred and fifty-six students and 14 farmers assisted in the demonstrations. These demonstrations were made possible through the combined efforts of the vocational agricultural departments, Paul V. Dean, farm adviser, Kenneth P. Zunkel and Elmer Offerman of the Bureau county soil conservation district.

This is part of the coordinated agricultural program in Bureau county which was worked out by the farm adviser with the agriculture teachers and personnel of other agricultural agencies.

How *Safe* Are School Buses?

By John K. Cox

IAA Director of Rural School Relations

IT IS a striking situation when people who have vigorously opposed bus transportation fight for its retention with even more vigor after they have become used to it. From both principals and county superintendents comes word that it is a great deal more difficult to sell them on the idea of using it in the first place. War-time problems in bus transportation have apparently not caused any slackening of demand for it where it has been in operation.

One farmer school board member in a district that operates 7 school buses recently said that he did not blame the parent for not wanting to give up bus transportation, even if it did cost the district more money. He said that he would not want his child walking down a hard road or any road with traffic like it is in normal times. "They are safer in the school bus," he said.

Perhaps a great many people would be interested in knowing what attempt is made or can be made by school bus operators to increase the probability of safe school bus transportation. In the first place, all school buses in Illinois are given a very rigid safety inspection in December and August of each year at a regular bus inspection headquarters. Any deficiencies must be corrected before the bus is approved. Without this approval at the inspection headquarters, no money is forth coming from the state as reinbursement for pupil transportation.

Also the driver has to have a chauffeur's license, must have had experience driving buses or trucks, must pass a health examination, a mental examination, and an examination in actually driving the bus, the two latter examinations being given by members of the state police force.

Then the principal of the school has the responsibility of seeing that the school buses are in safe operating condition and to plan the routes with an eye to the maximum safety, comfort, and convenience of those served. Among other duties he is to plan the school program for those children who arrive early or remain late on account of transportation schedules, so that they will be under supervision at all times, and, if possible, have a planned program of activity.

The bus drivers have the responsibility of keeping the bus in repair or reporting needed repairs to the principal. Also he must maintain discipline on the bus and report unusual cases of misconduct on the bus to the principal. The driver is in full charge of the bus and the pupils while en-route. He must be obeyed. Through a large rear view mirror he has a reasonably good vision of what happens in the bus. The driver can stop the bus and correct a disobedient child or put him off the bus to walk home if the pupil's conduct is persistently unsatisfactory. It has been found that this punishment is a very powerful "persuader."

In addition to the responsibilities of bus drivers and principals, the pupils have some definite responsibilities. They must obey monitors or patrols on duty. These officers are generally older children, charged with the duty of assisting younger pupils on and off the bus and helping them to get across traffic lanes. The stop arm on the bus is always to be extended when the bus is stopped if the bus is being used to transport pupils. The state law requires that all traffic stop while the school bus is stopped to take on or let off pupils on the highways. The bus driver is asked to report the license number of any driver who fails to heed the stop signal to the principal, who in turn reports such cases to the proper state authorities.

Pupils may be assigned seats in the bus and allowed to move only by consent of the driver and when the bus is not in motion. Pupils must not use tobacco while being transported nor throw waste paper or other rubbish on the floor of the bus. Pupils must not extend their head or arms out of bus windows. When buses are in motion, the windows must be kept at a level high enough to discourage the thrusting of head or arms out of the windows. Pupils must not try to get on or off the bus or move about while the bus is in motion. When pupils must cross the road to be picked up, the driver, (if the patrol is not used) after looking for approaching cars, motions them to cross. Pupils must await the proper signal and cross promptly. Similar precautions are taken for unloading pupils.

These responsibilities of the bus driver, the principal and the pupils are outlined in the bulletin "Safe Transportation" and published by the Office of State Superintendent of Public Instruction. It is the guide to school bus transportation and is effective to the extent that its recommendations are applied. Principals often have special meetings at the beginning of the school

Rural students appreciate the convenience of modern bus transportation. Here boys hop off the bus at the Greenfield High School ready for a day's work. School buses in Illinois are required to meet safety standards.

year to discuss their responsibilities in connection with bus transportation and the necessity of conforming to the regulations, and to provide accident drills in methods of escape, use of fire extinguisher and other emergency procedures.

Good school bus service depends on good roads, good equipment and good operating personnel. School boards are responsible for seeing to it that those essentials are provided. The latter two essentials are almost impossible of attainment at the present, but will be available after the war. It is the responsibility of the school principal to discuss with the bus drivers the standard of conduct which the community and the school expects to be maintained on the bus. It is the responsibility of the principal to impress the drivers with the importance of checking the bus for loose lug bolts, low tires, weak brakes, etc., twice a day before hauling pupils. It is the duty of bus drivers to report needed bus repairs promptly.

Without doubt Illinois standards for pupil bus transportation are very high, and rightly so. One result of those high standards is that there has been only one fatality in Illinois from 1940 to 1944 in school bus transportation while transporting pupils to and from school. We have no figures on the number of casualties among children walking along country roads nor among the numbers of those students who ride in private cars to school. In order to continue this safety record in school bus transportation, parents and board members should insist that all measures which have been outlined for safe bus transportation be enforced.

However, it seems to be increasingly apparent that many rural people will prefer parent transportation to bus transportation for the newly organized grade school districts. Parent transportation may be used entirely in any district or be used as feeders to school buses. By meeting requirements set up by the Office of State Superintendent of Public Instructions, the parent can secure payment through the school board of state funds for pupil transportation. These requirements are not as rigid as they were several years ago and seem very reasonable. Your county superintendent of schools should be well informed on the requirements for parent transportation. If you wish, you might write to M. M. Cruft, Director of Pupil Transportation, Office of the Superintendent of Public Instruction, Centennial Building, Springfield.

Peter Hansen, right, is one of the 14 neighbors John Stiehr, left, signed in the Lake County Farm Bureau recent campaign. Said Hansen: ". . .I believe it is time that every farmer should belong to the Farm Bureau. It is doing much for us that we cannot do by ourselves alone."

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES
By O. D. Brissenden

TOTAL Farm Bureau membership in Illinois stands at approximately 105,040, as of the close of the fiscal year, Sept. 30, 1944, according to the preliminary accumulative membership report from the membership record department of the IAA, and the records kept in the organization department office. This represents an increase of almost 11,000 over that of September 30, 1943. The amount of dues paid during the year would indicate that the membership is practically free from dues delinquency, and paid membership stands at an all time high.

It appears now that all but one county in the state exceeded their new member quota.

Membership drives are now being staged in many counties and most all others have definite plans for a drive prior to March 1, 1945.

Enthusiastic reports are coming in from all parts of the state on kick-off meetings, report sessions and membership campaigns already held.

McLean county had a report meeting in which 102 contracts were turned in and volunteer workers are now shooting for a goal of 3000 members.

Livingston county's report meeting turned up 78 contracts and Lee Vilven, a volunteer worker, signed 8 out of 9 contacts.

At a report meeting in McDonough county Oct. 6, there were 52 workers present and this group reported 51 members signed.

From Whiteside county comes word that 100 new members have been signed in the current campaign which will continue until the IAA annual meeting. The final count is expected to be 150 new members. Establishment of a soil testing laboratory by the Whiteside County Farm Bureau is believed to be responsible in acquiring some of the new members.

Williamson county reports signing about 30 in a few days of work.

Report meetings scheduled in Henry and Carroll counties are expected to show good results.

Lee county terms a recent 3 day drive a decided success with 95 members signed.

Hamilton county farmers have made up their minds to have a Farm Bureau all their own. They expect to start out with at least 400 members.

Schuyler county is aiming at a membership of 800 by the IAA annual meeting. Thirty-seven new members were reported signed early in October.

Piatt county also is continuing its drive until the IAA annual meeting. Pike county held a report meeting with all but six townships represented and indicated 49 members signed.

Kankakee county's recent drive brought in 87 new members, and indications are that the work is still going strong.

Menard county has set a membership goal of 834 by the end of 1944. Present membership is 775.

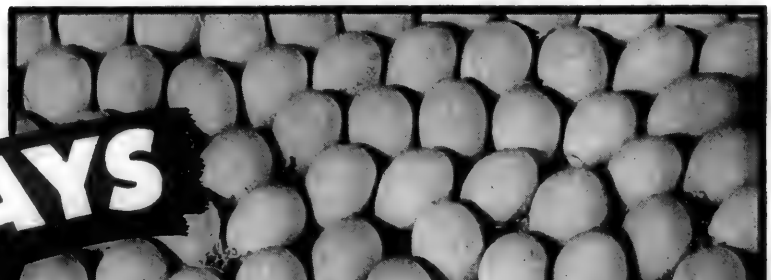
NOTICE OF ANNUAL MEETING ILLINOIS AGRICULTURAL MUTUAL INSURANCE COMPANY

Notice is hereby given that the annual meeting of the members of Illinois Agricultural Mutual Insurance Company will be held in the Sherman Hotel, Chicago, Illinois, on Wednesday, the 29th day of November, 1944, at 1:00 o'clock P.M. to receive and if approved, confirm the report of the Board of Directors of the company for the fiscal year ending September 30, 1944; to consider and if approved, ratify and confirm all the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the members of the company; to elect directors for the coming year and for the transaction of such further and other business as may properly come before the meeting.

Dated at Chicago, Illinois, this 31st day of October, 1944.

Chas. B. Shuman, Secretary

WFA is asking farmers to store, before Jan. 1, six bags of fertilizer for every five bags they stored in the same months last year. By accepting early delivery, farmers can help pave the way for maximum use of the fertilizer materials that become available in time for use in 1945. Purchases at this time will relieve storage facilities and make them available for fertilizers as they are produced.



3 WAYS to get MORE WINTER EGGS With BLUE SEAL FEEDS

One of these BLUE SEAL feeding methods will fit your needs . . .

1. "Free Choice"—Blue Seal 26% Poultry Balancer is fed with whole corn and oats. This plan saves time, labor, expense, and is the cleanest of all methods.

2. Blue Seal 32% Poultry Supplement is recommended to those who prefer to "mix their own." Blue Seal Poultry Supplement mixed with home grains will meet all requirements for a home mixed ration.

3. Blue Seal Lay Mash is a straight mash feed, formulated to maintain a high ratio of eggs per pound of feed and fortified with vitamins to keep birds healthy during winter confinement. Keep Blue Seal Lay Mash before birds at all time. Hand-feed scratch grains morning and night.

FREE OFFER

During the month of November, each patron placing a ten-bag order for Blue Seal Poultry Feed (Laying Mash, Poultry Balancer, or Poultry Supplement) will receive one wire egg basket FREE OF CHARGE.

Choose Your Plan!

Provide hard grit, oyster shells, and plenty of water at all times.

ILLINOIS FARM SUPPLY CO.
608 SOUTH DEARBORN ST., CHICAGO, ILLINOIS

By John R. Spencer

The survey on quality of agricultural limestone available to farmers of the state has recently been completed by the soil improvement department of the IAA. This work gives the quarry location, method of operation, calcium carbonate equivalent test (CCE), screen score, percentage of material passing and 8 mesh screen, and price per ton. All possible care is used in making the survey in order to give accurate, unbiased facts on a quarry's production, before an official report is released.

These are sent to all Farm Bureau offices in the area served by the quarry and are available there to the farm public.

The purpose of this work is to maintain a high standard of quality in limestone used for neutralizing sour or acid soil. The calcium carbonate content should run as high as the rock material permits and the grinding should be fine enough so that 80 per cent or more will pass an 8 mesh screen (64 openings to the square inch).

During the 12 months ending Sept. 30, nearly 200 samplings including resamples were made on 123 limestone quarries in and adjacent to Illinois. The quality of limestone available to farmers is revealed by this work to be good in most sections of the state, although, the department recommends that prospective purchasers inspect these reports since limestone quality does vary between different quarries.

The price of liming material ranges in the state, from 75 cents to $2 per ton F.O.B. quarry.

The general labor shortage is affecting both production and distribution of materials and thus this department also recommends that farmers cooperate fully and utilize every available opportunity to get their limestone hauled and spread.

A survey made by the state AAA committee last spring of "farmers intentions to lime" showed that a total of 6½ million tons of limestone would be used if obtainable. Quarries are doing a good job of production under the present shortage of labor. In two quarries that for normal operation require 80 men each, one was operating with 55 and the other with 46 men.

A limestone company in Logan county reports that it produced and sold 16 thousand tons of limestone in September and is operating on a 10-hour work day.

The Illinois crop of about 68 million bushels of soybeans now being harvested will remove from the soil more than 100 million pounds of phosphorus (P) and potassium (K) and 16 million pounds of calcium. Soil conscious farmers will take steps to replace these fertilizer elements in a plant food program.

Ground corn is satisfactory for dairy cattle as long as grass is succulent. But as the season advances, protein should be included in the grain mixture.

Natural Productions (not Inc.) presents the annual, stupendous phenomenon entitled

"WINTER"

starring the famous villains, "Jack" Frost, "Windy" Blizzard, and "Icy" Radiators, and the famous hero who foils these villains, the popular

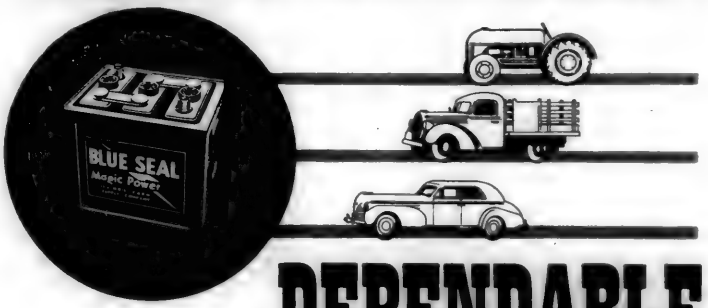
"P.T." PERMA-TYPE

Seriously, folks, it's time to get your car, truck, and tractor ready for cold weather. Change to winter oil, of course. Make sure your radiator is leak-proofed with Ajax cooling system compounds before putting anti-freeze in the radiator.

Blue Seal Perma-Type Anti-Freeze is non-rusting and will not boil away. One fill lasts all winter.

Due to military requirements, supplies of P.T. are limited. However, an ample supply of Ethyl alcohol containing rust inhibitor is available.

ILLINOIS FARM SUPPLY CO., Chicago 5



DEPENDABLE

During this strenuous war period, Blue Seal Batteries have delivered the magic spark that has kept the wheels of food production moving on thousands of Illinois farms.

You can depend on Blue Seal magic power Batteries to supply the extra energy needed for cold weather starting.

SOIL CONSERVATION

DOES PAY!

By E. L. SAUER

Project Supervisor, Division of Economic Research,
United States Soil Conservation Service

SOIL conservation farming does pay — the question is how much?

An approach to this question is to be found in the results of studies carried on in McLean county by the department of agricultural economics, U. of I. College of Agriculture, and the division of economic research, Soil Conservation Service, in cooperation with O. L. Welsh, McLean county farm adviser, and C. C. Morgan, conservationist for the McLean County Soil Conservation District.

The farm records used in the study were started in 1935 in the LeRoy Soil Conservation Project Area, one of the first projects of its kind in the United States, and continued and extended to cover the work in the McLean County Soil Conservation District.

Using farm account records of 20 cooperators who are operating their farms in accordance with a planned program of soil conservation and erosion control and the records of 20 neighboring farmers who do not operate their farms under a planned soil conservation program, some interesting facts are revealed.

Taking the nine-year average, 1935-43, the conservation farms showed a net income of $14.83 per acre as compared with the non-conservation farms of $11.60 per acre. The crop yield index (county average-100) was 104 for conservation farms and 94 for non-conservation farms. This net gain of $3.23 per acre from conservation farming represents increased earnings of $5,168 for a 10 year period on a 160-acre farm.

Corn yields on the conservation farms were 5 bushels an acre higher than on the non-conservation farms.

Studies of the economic effect of individual conservation practices reveal yield results and costs of contour farming, strip cropping and terracing.

Contour farming with terraces, contour farming with buffer strips, strip cropping, and contour farming the entire field with the same crop, resulted in average yield increases of 8 to 11 per cent for corn, soybeans, and oats for the 5-year period, 1939-43.

Specific increases in yields were 5.0 bushels of corn, 2.1 bushels of soy beans, and 3.6 bushels of oats from "around-the-hill" farming compared with "up-and-down the hill" farming on the same farms.

Contour farming practices enables the soil on slopes and hillsides to sponge up most of the rain and store it for the dry months of July and August, and these practices also help prevent soil washing and erosion losses. Based on the average crop yields per acre for the account keeping farms from which these data were secured, "around-the-hill" farming averaged for the five years 1939-43 the following percentage increases: corn, 9 per cent; soybeans, 10 per cent, and oats, 11 per cent.

In a study of farm operating costs resulting from conservation practices, farms on which all or the major part of the farming operations were on the contour were matched with comparable farms on which none of the field operations were on the contour.

The results of this study for the

four years 1940-43 show that power and machinery costs and labor costs per crop acre were practically the same on the two groups of farms averaging 15 and 47 cents less, respectively, on the contour-operated farms.

Records of individual farms having a good conservation and improvement program showed that such a program increased yields from 10 to 50 per cent, compared with neighboring farms not operated under a good farm plan.

The planned farms had a slightly smaller proportion of their land in grain crops and a larger proportion in soil-building legume hay and pasture. They used more limestone, rock phosphate, and the quick fertilizers, such as super phosphate and mixed fertilizers. These farmers also found that such a common practice as the using of all available farm manure greatly helped to increase production.

The adoption of a pasture improvement program (especially for old permanent pastures) offered one of the best possible means of increasing livestock production from the use of otherwise unmarketable feed. This is well illustrated on a number of account keepers farms, where permanent pastures have been limed, manured and reseeded, and milk production per acre is now more than double that of adjoining farms.

Many of the account keepers who have adopted a good land use program are utilizing legume hay and pastures to boost production of needed dairy products. Some of the account keepers have found that a good succession of animal forage crops and legume mixtures provides a means of reducing the acres needed in pasture.

Those farms with a planned program of good land use and soil conservation and improvement had higher average returns per $100 of feed fed to livestock compared with farmers not having such a plan. The good land use program not only increased grain production, but provided more and better quality hay and pasture, and the rotation pastures aided in livestock sanitation.

While the conservation and non-conservation farms in the study are matched as nearly as possible from the physical standpoint, the human equation naturally varies from farm to farm. However, it should be pointed out that the conservation cooperating farms were generally in rather bad shape when they started the program and that many of the non-conservation farms have been following good farming programs for a number of years.

The soil conservation plan used by the cooperating farms in the study generally included one or more of the following:

(1) Changes in land use such as shifting some cropland to hay or pastureland, some rotation pasture or cropland to permanent pasture, and possibly some pastureland to woodland.

(2) The addition of necessary soil treatments such as limestone, phosphate, etc.

(3) The adoption of a sound rotation on the cropland, including the use of deep-rooted legumes such as clover and alfalfa.

(4) The use of supporting erosion control measures, such as grass waterways, contour farming, terracing, strip cropping and buffer strips.

(5) A pasture renovation or pasture improvement program.

(6) A tree planting or woodland management program.

(7) The utilization of roughages in the efficient production of livestock.

In order to make comparisons between conservation and non-conservation farms, these farms were matched in so far as it was possible to do so on the basis of the following factors: (1) land-use-capability, (2) per cent of land ares tillable, (3) size of farms —acres, (4) type of farming, and (5) land valuations.

The land-use-capability rating figure is an index or composite rating of the physical characteristics of the land, considering (1) soil type, (2) slope of the land, (3) degree of erosion, and (4) permanence of the soil if cultivated.

These records of conservation and non-conservation farmers are proof that farmers in general can secure the most profitable farming returns by following a sound, well-planned soil and water conservation and erosion control program.

Table 1. — Land Use, Production, Income and Expenses, Soil Conservation and Non-conservation Farms, McLean County, Illinois

Item	McLean County, 9-year Average, 1935-43	
	20 conservation farms	20 non-conservation farms
Per cent of tillable land in legumes	18	10
Per cent of tillable land in hay and pasture	27	19
Per cent of tillable land in grain crops	73	81
Corn yield, bu. per acre	55	50
Crop yield index (County average — 100)	104	94
Gross income per acre	$27.85	$24.40
Total farm expense per A.	13.02	12.80
Net farm income per A.	14.83	11.60
Difference in net income per acre	$ 3.23	

NOTICE OF ANNUAL MEETING
ILLINOIS AGRICULTURAL ASSOCIATION

Notice is hereby given that the annual meeting of the members of Illinois Agricultural Association will be held in the Sherman Hotel, Chicago, Illinois, on the 30th day of November, 1944 at 9:00 o'clock A.M. for the following purposes:

To consider and vote upon the approval and ratification of the reports of the president, secretary and treasurer of the Association and the acts of the Board of Directors and officers in furtherance of the matters therein set forth, since the last annual meeting of the members of the Association.

To approve, ratify and confirm the several purchases heretofore made by this Association of stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein.

To secure consent and authorization to acquire on behalf of the Association, by purchase, certain stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein.

To elect eight members of the Board of Directors for a term of two years and one member, to fill a vacancy, for a term of one year.

To elect a president and vice-president, who shall also serve as directors, for a term of one year.

To consider such proposed amendments to the Articles of Association or of the By-Laws of Illinois Agricultural Association as may be properly submitted.

For the transaction of such other business as may properly come before the meeting.

Dated at Chicago, Illinois, October 30, 1944.

Paul E. Mathias, Secretary.

VOTE Nov. 7th

it's your No. 1 Job

The greatest privilege and number one responsibility of every American citizen is to vote on November 7. Millions of American boys are fighting, and hundreds of thousands dying to protect the privilege of the ballot. No citizen mentally and physically capable of getting to the polls, who fails to vote, is worthy of the sacrifices American boys are making on the battlefronts of the world.

ILLINOIS AGRICULTURAL ASSOCIATION

The FARM FRONT ROUNDUP

BEAN MEAL PROGRAM — Illinois AAA committee has announced a general plan whereby producers of soybeans are entitled to priority in obtaining soybean meal to meet their minimum feeding requirements as follows: (1) Producers market their soybeans through regular market channels. (2) If the grower cannot secure protein meal for his minimum feeding requirements through his ordinary sources of supply, he can request the county AAA committee for a grower-feeder certificate to meet these needs. (3) The county committee can then issue the certificate to the feeder, who will take it to his dealer. The dealer then uses this certificate in securing soybean meal for the grower-feeder or in replacing the meal if he has it already in stock. All that is necessary to make the producer eligible for meal applications is evidence that his beans have been sold.

GASOLINE SUPPLIES — The nation's stockpile of civilian gasoline, near minimum working levels, is barely sufficient to take care of any reasonable fluctuations between demand and refinery production during the remainder of this year, according to the Petroleum Administrator for War.

POULTRY MARKETING — WFA recommends that farmers continue to cull their poultry, but urges them to contact their poultry buyers or processors before attempting to market their chickens, because of the inability of some processing plants to handle them as rapidly as they are offered. The WFA says that farmers, in attempting to find an immediate market, sometimes take a much lower price than is justified by the high consumer demand.

FARM LABOR — The smallest farm labor force of record is harvesting one of the biggest productions of full crops this country has ever raised, the U. S. Department of Agriculture reported Oct. 13. Despite the utilization of workers from unusual sources, the number of people working on farms Oct. 1 was slightly lower than at the same time last year and 5 per cent less than the 1935-39 average, when crop production was much smaller than this year. Of the 11,839,000 persons working on farms Oct. 1, 8,928,000 or 75.4 per cent — the highest percentage in more than a decade — were unpaid family workers.

CORN ORDER ENDED — An order (WFO No. 103) requiring elevators and others to set aside certain corn for sale to authorized purchasers has been terminated by the WFA. The order has been in effect since June 24. Corn acquired under the program totaled 71.5 million bushels as of Sept. 25.

FERTILIZER FOR FRUIT — Fruit ranks high on the food list, and fruit orchardists should be able to get as much fertilizer as they need for the 1944-45 season if they buy early, says the WFA. The total supply of nitrogen for essential crops in 1944-45 may be somewhat less than last year. The WFA is encouraging fall buying of fertilizer to keep factories working and to relieve the spring rush.

FARM MACHINERY — War Food Administrator Marvin Jones ended all WFA rationing and distribution control of farm machinery and equipment, except corn pickers, Sept. 28. Rationing and control over state and county distribution of corn pickers were retained as of this date, but will be removed as soon as it is practicable to do so, the announcement said.

SCHOOL BUSES — A free market in the sale of secondhand school buses and other local passenger transportation equipment was scheduled to be reinstated Oct. 15, as a result of the suspension of a part of general order ODT 35, says the office of defense transportation.

FERTILIZER SUPPLIES — Prospective supplies of nitrogen and phosphate fertilizers for use on 1945 crops have declined since midsummer, due to greatly increased military use of materials required for manufacture of those fertilizers, but substantially increased supplies of potash are expected to be available, the WFA reported Oct. 12.

REA Ear-Marks $347,416 In Funds For Illinois

Rural electrification Administrator Harry Slattery has announced estimates of unelectrified farms, by states, as of July 1, 1944. On the basis of these estimates, as required by the REA act of 1936, Administrator Slattery allocated half of the REA loan funds available for the current fiscal year. These ear-marked funds totaling $12,500,000 will be reserved for loans in the designated states during that period.

Slattery again emphasized the fact that no funds will be made available on applications which do not comply fully with WPB regulations.

Allotment of funds for loans during the year ending June 30, 1945, for Illinois designates $347,416.

Farms without central station electric service as of July 1, 1944, in Illinois numbered 97,939.

Sunflower Crop Harvested By Piatt County Farmers

A group of Piatt county farmers in October began harvesting 100 acres of sunflowers for a Monticello processor who declares that the seed will furnish an excellent food for either animals or humans and a potential source of industrial raw materials.

The sunflowers are being harvested like soybeans with a combine.

The Monticello processor, Ezra Levin, who is also a bio-chemist, reports that the seeds taken from the sunflower heads will be treated in his plant by a solvent extraction process. Preliminary tests have indicated, he said, that meal and oil thus obtained can be stored, or shipped for an indefinite time without becoming rancid. The crop can be grown in any climate, he said, and will grow on submarginal land.

Report Results of Tests On New Alfalfa Variety

Ranger, a relatively new variety of alfalfa, has demonstrated its resistance to wilt and winterkilling in a three-year demonstration on the William Rohlwing farm in Cook county.

In 1941, nine varietal plots of alfalfa were seeded in plots 300 feet long and 12 feet wide at the crossroads of highways 53 and 58, under the supervision of C. A. Hughes, Cook county farm adviser. Seed was provided by J. C. Hackleman, professor of crops extension, U. of I. College of Agriculture.

This year there was a near-perfect stand in the Ranger seeding, and about a 50 per cent stand in the plot of Orestan. All other varieties showed little or no resistance to bacterial wilt. The front 50 feet of each plot will be maintained through the 1945 growing season for additional comparisons. The remaining portion of each plot will be plowed under this fall. Other varieties tested were Dakota Common, Beehive, Cossack, Ladak, Utah Common, Kansas Common and Grimm.

Ranger alfalfa was created by plant breeders of the U.S. Department of Agriculture and the Nebraska Experiment Station and, according to Hackleman, is especially adaptable to the northern sections of Illinois.

Possible Farm Land Boom Ahead, Economists Warn

Land prices in Illinois have advanced as far as long time farm earnings will justify, and a farm land boom may lie immediately ahead, according to Prof. H. C. M. Case, head of the department of agricultural economics of the U. of I., and Prof. C. L. Stewart of the same department. Their statement is contained in a recent article in Illinois Farm Economics, extension service publication.

"There is little basis to expect land prices in the long run to remain as high as those prevailing in the summer of 1944. Consequences of a serious deflation of farm land values following this war may vary in certain respects from those following 1920, but the general pattern is likely to be similar," the article states.

Ten ways prospective buyers and sellers of farm land may exert voluntary control of land inflation may be summarized as follows:

(1) Buyers should not incur more farm land indebtedness than is justified by the long time earnings from the land.

(2) Where land prices have risen unduly, farmers generally will be better off in the long run to postpone purchase of land, retire their debts, and build reserves.

(3) Available funds can be used now or later for needed land and home improvements.

(4) Tenants may find it more profitable to continue as tenants than to buy land at inflated prices.

(5) Owner farm operators who want to expand their acreage to secure an economic size of unit should give consideration to leasing land from others rather than buying at inflated prices.

(6) Non-farmers should give serious consideration to alternative investments, particularly to purchase of war bonds.

(7) Purchasers of land at war prices should make as heavy cash payments on it as is consistent with adequate funds for operating it.

(8) Prospective farm purchasers who are not well-informed in regard to the value of land should avail themselves of competent land appraisal service.

(9) Buyers who assume heavy indebtedness incur risks not incurred by those who are able to pay cash.

(10) Farmers wanting to retire and others interested in disposing of farm lands should consider the advantages of sale in the present market. Sellers should require substantial down payments.

Castor Beans Net $13.54 Per Acre, Accounts Show

The castor bean crop proved to be a profitable one in 1943 on the light soils found in the Illinois counties where the crop was grown commercially, according to R. H. Wilcox, associate professor of farm management, U. of I. College of Agriculture. He based his conclusion on the cost account records kept by 34 farmers in Mason and Cass counties in cooperation with the college.

Average production of castor beans in the hull was 600 pounds an acre.

Total cost per acre for growing, including all expenses, was $20.96. The beans from the average acre sold for $34.50, leaving a profit above costs of $13.54. In other words, it cost the farmer $3.48 to produce 100 pounds of beans in the hull for which the government paid $5.73.

Nearly 600,000 pounds of castor beans were produced on Illinois farms in 1943 by arrangement with the federal government. Castor oil was needed for the lubrication of airplane engines used in high altitude flying, and in the hydraulic mechanism used in opening and closing bomb-bay doors, and in raising and lowering landing gears. The castor bean program was not continued in Illinois in 1944.

Chicago Producers Handle 56% Junior Show Entries

Chicago Producers Commission Association handled 56 per cent of the hogs entered in the fifth annual Chicago Junior Market Hog Show and Sale held Sept. 28 at the Chicago Stock Yards. Termed the best show to date, 474 entries were shown by 90 vocational and 4-H club boys and girls from Ill., Wis. and Ind.

Four first prizes were won by entries handled by the Chicago Producers. Kenneth Schertz, 17, Benson, Woodford county, won first in the light weight pen of three class on purebred Duroc Jerseys; Denver Goetz, 18, Geneseo, Henry county, topped the heavy weight pen of three class on purebred Hampshires. Schertz's pen of three, averaging 225 pounds each, brought 31 cents a pound, and Goetz received 27½ cents for his pen that averaged 256 pounds each.

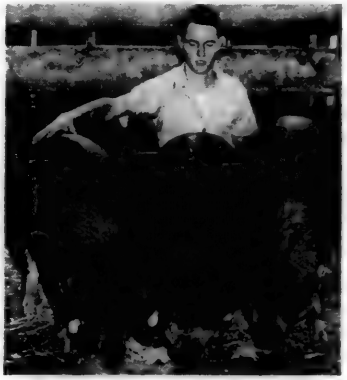
Miriam Meyer, 13, Crescent City, Iroquois county, won first in the light weight pen of five class on purebred Chester White hogs, averaging 214 pounds each which sold for 32 cents a pound.

A Duroc Jersey purebred hog, weighing 210 pounds, and shown by Kenneth Bast, 17, Tallula, Menard county, won the light weight class of single hogs. It sold at 29 cents a pound.

Top honors of the show went to Norman Jorstad, Morris, Grundy county, who took all three championship awards with his purebred Chester Whites. His champion single hog brought 82 cents a pound, an all time record price.

Donald Wilken, 14, Danforth, Iroquois county, won the medium weight class of five with Duroc Jersey hogs that sold for 31 cents per pound.

Delbert Decker, Jr., 16, Aledo, Mercer county, won the heavy weight single class on a purebred Hampshire that sold for 40 cents per pound.



Keith Schertz, Benson, Woodford county, won first in the light weight pen of three class with these purebred Duroc Jerseys at the fifth annual Chicago Junior Market Hog Show and Sale.

Rural YOUTH

By Ellsworth D. Lyon

Congratulations, Bureau County Rural Youth upon your community service through the waste paper collection! The facts concerning your recent drive for waste paper collection are outstanding. It was supervised by Rural Youth; assisted by Boy Scouts, 4-H Clubs, rural and village schools, and other civic groups. Some 105 tons of vitally needed waste paper were collected in 60 days, five railroad boxcars were filled and more than $1200 was netted from the sale of this waste paper. All money received was turned over to war relief agencies, including community war chests, USO and Red Cross.

The Randolph and Tazewell County Rural Youth groups have recently studied and revised their Rural Youth constitutions. Why not make the changes that bring the Rural Youth up with the times?

Warren county cooperated with Fire Prevention Week, October 8-14. "Country Capers" newsletter of the organization featured a good article on causes and prevention of fires.

A former Rural Youther of Macoupin county, Miss Lucille Denby, now with the University of Illinois Rural Sociology Extension, is scheduled for a square dance training school in LaSalle county on Nov. 8. Lucille is to be commended upon her new position as is the LaSalle County Rural Youth for its efforts to balance the recreational and educational features of its program as well as to improve recreation.

President Franklin Allen of Tazewell County sends this significant item, "We are stretching out election over three meetings to brush up on parliamentary procedure. First meeting, nomination of candidates for office; second meeting, election of officers; third meeting, installation of officers."

Rural Youth want to do the job right and here is a helpful, training process for new officers as well as for all in the group.

Marshall-Putnam and Tazewell County Rural Youth groups are sending Christmas boxes to members from their counties in the armed forces.

New groups organized within the state during 1944 are going well. These are the St. Clair county group, the Forreston Community group in Ogle county, and the South, or Geneva Community group in Kane county.

Hats off to the Cook county group for the third issue of its newsletter "Ruralite." By illustrative drawings, by good makeup, by well-written items it is publishing a good newsletter.

Montgomery County Rural Youthers visited a glass factory in Hillsboro in September. President Kenneth Wilson writes, "We saw the production of glass from the drying ingredients to the finished jars packed ready for shipment."

NOTICE OF ANNUAL MEETING
ILLINOIS WOOL MARKETING ASSOCIATION

Notice is hereby given that the annual meeting of the shareholders and members of Illinois Wool Marketing Association will be held on Wednesday, the 29th day of November, 1944, at the hour of 9:30 A.M. in the Sherman Hotel, Chicago, Illinois, to elect directors for the succeeding year; to receive and if approved, confirm the report of the Board of Directors of the association for the fiscal year ending September 30, 1944; to consider and if approved, ratify and confirm all of the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the shareholders and members of the Association and for the transaction of such further and other business as may properly come before the meeting.

Dated at Chicago, Illinois, this 31st day of October, 1944.

S. F. Russell, Secretary

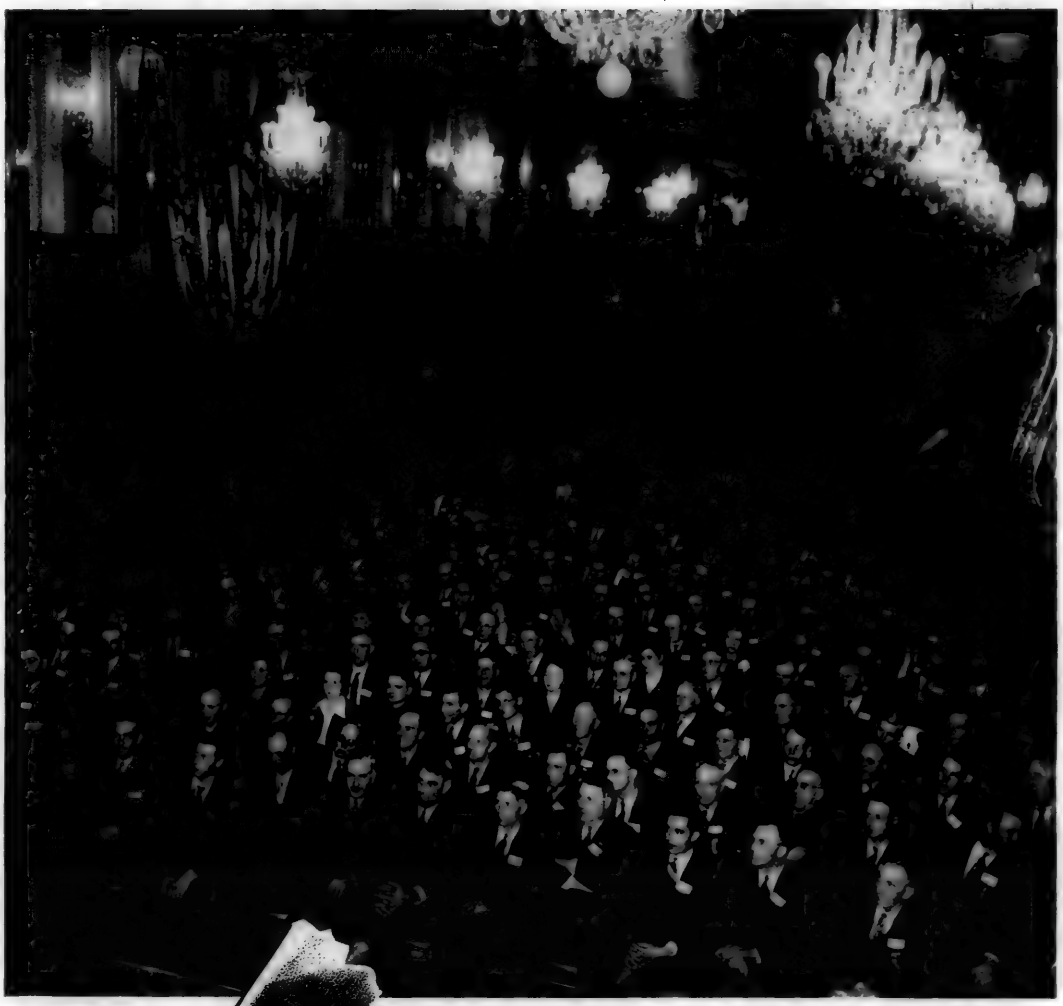
According to a canvass made by the Illinois State Geological Survey, in cooperation with the Midwest Agricultural Limestone Institute, 3, 221, 477 tons of liming materials were used for agricultural purposes in the calendar year of 1943. This is 17 per cent less than in the previous year but still is well over 20 per cent of all agricultural liming material applied in the entire United States.

And Many Illinois Farmers

will be thankful this year for being given the opportunity to safeguard their pig investment at relatively low cost with Farm Bureau Serum — handled cooperatively for Farm Bureau members only.

REMEMBER: **The smaller the Shoat The cheaper the Shot.**

See YOUR FARM BUREAU



COOPERATION

Basically, life insurance is a cooperative business -- it's only logical that Illinois farmers who pool their strength and resources to get so many other jobs done should build a life insurance company to provide for their future security.

Stitts, Richards Named On IMPA Annual Program

Dr. T. G. Stitts, chief of the dairy and poultry section of the War Food Administration, Washington, D. C., and Owen Richards, general manager of the American Dairy Association, Chicago, will be two of the principal speakers at the Il-

Tom Stitts

Owen Richards

linois Milk Producers Association annual meeting which opens at 9:30 a.m. Wednesday Nov. 29 in the Crystal Room of the Hotel Sherman, Chicago.

Dr. Stitts will address the meeting upon the present and prospective dairy situation in the United States. "Tom Stitts," as he is affectionately known to the dairy industry, is a key man of the dairy industry in the United States, due both to his important position and also to his broad and intimate knowledge of the dairy industry throughout the United States.

Mr. Richards, general manager of the American Dairy Association, will discuss their program of promotion and merchandising of dairy products for the postwar period.

By Wilfred Shaw

Seventh annual meeting and banquet of the Kewanee Milk Producers was held Thursday evening, Oct. 5, in St. Peter's Lutheran church, Kewanee. One hunderd and forty-three members and their wives were in attendance. Reports upon the past years operations were submitted by President Henry Couve and Secretary-Treasurer Dean Radford. Principal address was given by Mr. Johnson of the Kewanee Daily Courier. Short talks were given by H. K. Danforth, Henry county farm adviser, and Wilfred Shaw, IAA director of milk marketing. The following retiring directors were re-elected for three year terms: Frank Binno, Dean Radford and Arthur Custer. Keith Milnes was elected a director succeeding Henry Couve.

The WFA limitations upon the sales of cottage cheese were removed effective Oct. 1. Previous to this action cottage cheese sales were restricted by the WFA to 100 per cent of the amount sold during June, 1943. The WFA limitation of sales of buttermilk and chocolate drinks still stands at 100 per cent of June 1943 sales.

The government set aside requirements of the manufacturers of cheddar cheese were lowered from 50 per cent in September to 40 per cent in October.

Five million pounds of butter, previously set aside and held by the trade for government war agencies, was scheduled to be released to hospitals at frequent intervals beginning Oct. 16. Field representatives of the dairy and poultry branch in the regional offices of the WFA's office of distribution in Chicago, New York, Atlanta, Dallas or San Francisco. Butter release certificates may be turned in to any creamery or authorized receiver holding unsold "set aside" butter.

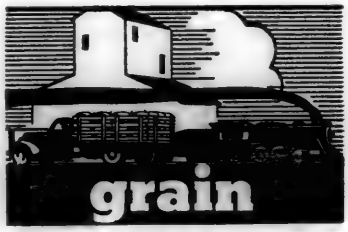
The following are the blended prices received by producers supplying the respective Illinois markets. All are September prices for 3.5% milk f.o.b. dealers platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.47
Canton	2.75
Champaign	2.75
Chicago (70 miles zone)	3.18
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.76
Galesburg	2.65
Harrisburg	2.65
Jacksonville	2.85
Kewanee	
LaSalle	
Moline	3.00
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.12
Springfield	2.85
St. Louis	3.63
Streator	

Stocks of dried whole milk powder on Sept. 1, according to the U. S. Bureau of Agricultural Economics, were 18,478,000 pounds —up 68 per cent from a year ago. Stocks of non-fat powder (formerly known as skim milk powder) were reported at 63,594,000 — up 34 per cent from a year ago, and dried buttermilk 9,671,000 — up 140 per cent. August production of all non-fat powder totalled 51,300,000 pounds, an increase of 20 per cent over August a year ago with spray powder production up 5 per cent and roller powder up 35 per cent.

Butter holdings in the U. S. on Sept. 1 were 138,378,000 pounds, the lowest amount on record and 93,000,000 pounds below that of the same date the year previous. Current butter production is running approximately 10% below a year ago. The foregoing may explain the reasons for the current shortage of butter, especially when it is estimated that between 80-90% of present storage holdings are held by government agencies. All WFA set aside requirements for butter were dropped for October.

Northern Illinois evaporated milk plants raised their producer price in September from $2.55 per cwt. for 3.5% milk to $2.60 per cwt. f.o.b. plant. The previous price of $2.55 had prevailed since April, 1944.



By H. G. Iftner

Don Edison, secretary-manager of the Farmers Grain Dealer's Association of Iowa, Fort Dodge, Ia., will be the principal speaker at the annual meeting of the Illinois Grain Corporation in the Hotel Sherman, Chicago. The meeting will convene at 5:30 p. m. Tuesday, No. 28. A free dinner will be served to those sending in reservations.

Illinois Grain Corporation has justified the faith of its founders and supporters. It will have distributed $100,000 in cash patronage dividends and nearly a third of a million dollars in the form of patronage stock this year.

Frank Haines, manager; Arthur Burwash, Fred Romine and Charles Schmidt, directors of Illinois Grain Corporation; Eugene Hoerner, manager of the Ludlow Farmers, Champaign county, largest Illinois shipper to Indiana Grain Cooperative, and G. H. Iftner, IAA director of grain marketing, attended the annual meeting of the Indiana Grain Cooperative Sept. 27 at Indianapolis. Indiana Grain Cooperative has a net worth of nearly one and one-half million dollars.

The October issue of the Greene County Farm Bureau News Letter contained an article, "Greene County Co-ops Topped State." It went on to say that Greene county went to town in grain marketing during July by placing first in the state in marketing to the Illinois Grain Corporation. It listed Champaign, second; Morgan, third; Christian, fourth, and St. Clair, fifth. McLean usually leads the list. In August, Greene county again led with shipments from Greenfield, Carrollton and White Hall.

William R. Butler, formerly employed by the Stronghurst Grain and Merchandise Co., Henderson county, has been hired to manage the Brimfield Elevator Company.

Stockholders of the Cissna Park Cooperative Grain & Coal Co., Iroquois county, in annual meeting Sept. 30, changed the name to "Farmers Cooperative Company of Cissno Park," and approved a plan of reorganization increasing the capital stock and revaluing the shares of stock, thus expediting cooperative procedures. A. D. Goers is manager.

J. O. Cain, manager of the Illinois Grain Jacksonville office, reports that in one month his office shipped in 20 cars of northern oats for feeders in the area. This is the kind of service Farm Bureau members around Jacksonville appreciate.

More than 100 member elevators of Illinois Grain will have received checks in final settlement of old retains approximating $20,000 by the time the IAA RECORD goes to press. This liquidates the last obligation assumed by Illinois Grain for operations prior to 1937.

A team and dog await the return from the war of Cpl. Berry, son of Mr. and Mrs. W. F. Farrell, Moultrie county.

It looks as though this youngster of Mr. and Mrs. F. J. Groth, La Salle county, has made contact with the chocolate frosting pan.

Three "Homers" of the Jo Daviess County Farm Bureau, left to right, are Homer Curtiss and Cynthia, Homer Kearnaghan and Douglas, and Homer Wollensberger and Donald.

Donna Jean, daughter of Mr. and Mrs. Orley Shaw, Schuyler county, finds her first birthday cake interesting.

Mr. and Mrs. Henry W. Deters, Cumberland county, celebrated their 50th wedding anniversary in 1943. Mr. Deters is one of six brothers, all of whom married Cumberland county girls.

Here are two sets of twins of Mr. and Mrs. Ralph Weber of Coles county. Sharon and Karon were born Oct. 26, 1941, and Terry and Teddy on Oct. 25, 1942.

This little Western lamb found a soft place to rest on the back of a Shropshire ram. Photo was submitted by Mrs. Lyle W. Naylor, Lee county.

Mrs. Curtis McCauley, Woodford county, is the winner of the "Picture of the Month" award with this photo of her oldest son, John, and the first game he bagged with his 410 gauge shotgun. Because of lack of space — the picture page has been omitted for several months, but the editors plan to publish it as often as possible and welcome pictures.

Some Hunters Rely too much on their own Guardian Angel

Taxation of Farmer Organizations Under Internal Revenue Code

By Donald Kirkpatrick

THE first of the several classifications under Section 101 of the Internal Revenue Code exempting certain corporations from the obligation of paying a federal income tax covers certain agricultural, horticultural and labor membership organizations.

Such corporations are generally organized as membership corporations and without capital stock. Whether such a corporation has capital stock, however, is not a determining factor. The function, the operation and the non-profit character determine whether a corporation is within this classification.

These organizations, if incorporated, are incorporated generally under the Membership Corporation Act and in which no member is entitled to any pecuniary returns or distribution of income except on dissolution and liquidation of such corporation.

In Illinois our corporation act providing for the organization of such associations is entitled, "An Act for the Incorporation of Associations Not for Pecuniary Profit." The Illinois Agricultural Association is organized under this Illinois act. The American Farm Bureau Federation is organized under this Illinois act. All of the County Farm Bureaus in Illinois are incorporated under this act.

Some years ago prior to the enactment of the Illinois Agricultural Cooperative Act of 1923, this Membership Act Not for Profit was used for the incorporation of cooperative marketing associations. Practically all of our local livestock shipping associations were incorporated under this Membership Act.

The fact, however, that an organization is incorporated under the Corporation Act "Not for Pecuniary Profit" does not mean that it is entitled to exemption under the first classification of the exemption section. The County Farm Bureaus in Illinois, the Illinois Agricultural Association, and the American Farm Bureau Federation have letters of exemption under Section 101 (1) of the Internal Revenue Code.

Under the regulations of the Bureau of Internal Revenue a farm organization, whether it be local, state or national, to be entitled to exemption under this first classification must satisfy the following conditions:

(1) The association must have no net income inuring to the benefit of any member.

(2) The association must be educational or instructive in character.

(3) The association must have as its object the betterment of the conditions of those engaged in such pursuits, the improvement of the grade of their products and the development of a higher grade of efficiency in their respective occupations.

Particular consideration should be given to the first condition, that the association shall have no income inuring to the benefit of any member. This condition would prevent the Farm Bureau from engaging in extensive commercial and trading operations. It is suggested that such activities be carried on by cooperatives as subsidiaries or affiliates.

It has been the opinion of the legal department of the Illinois Agricultural Association that a County Farm Bureau organized under the "Not for Profit Act" and holding a letter of exemption from the Internal Revenue Department does not violate its right to hold such letter of exemption by acting as an agent for its members in performing certain services.

For example, a County Farm Bureau acts as an agent for its members in receiving from the Illinois Farm Bureau Serum Association certain biologic supplies and distributing them to Farm Bureau members and in receiving patronage dividends from the State Company, passing on such earnings and savings to the producer member. The Department of Internal Revenue has not taken exception to this operation by a County Farm Bureau exemption under Par. 1 of Section 101.

Organizations desirous of maintaining their tax exemption status under the Internal Revenue Code should remember at all times that exemption sections are strictly construed by the courts and that therefore an organization desiring to maintain its exempt status should live within the limitations of the law.

State Has Good Seed Corn Crop, University Reports

Three million bushels of hybrid seed corn, sufficient to plant 21 million acres next year, or more than twice the acreage planted in the state this year, is the estimate for the 1944 Illinois seed corn crop, according to Oren Bolin, assistant professor of plant genetics, U. of I. College of Agriculture.

"Illinois is one of the very few states that has not experienced a damaging effect on the seed corn fields this year," Bolin reported.

"Some Illinois seed fields have suffered from drouth and chinch bugs, but most of the damage was done in areas where only a small percentage of our seed is grown."

WELL STOCKED

FOR

SPRING WORK

Are you well stocked with Motor Oils and Greases for the Spring work? Or will you be worried about getting supplies, come the Spring thaw?

Blue Seal Salesmen are now taking orders for Blue Seal Motor Oils and Greases. Deliveries will be made at your convenience early next Spring.

FUTURE ORDER DISCOUNTS

Orders placed before December 31st will receive the *special future order discount*. This is in addition to the regular patronage dividend savings.

ESPECIALLY FOR FARM USE

Blue Seal petroleum products have been developed especially to meet the needs of farm machinery. Blue Seal Motor Oils and Greases are supplied in exactly the right SAE grades to fit your equipment. Tested by Blue Seal laboratory technicians.

Blue Seal "Master Motor Oil" not only lubricates and cools but also helps to keep the motor clean. Removes carbon and gums from pistons and rings.

Blue Seal Greases are especially compounded for service in farm machinery where dust, exposure to weather, and other factors demand high lubricating efficiency and long service. They include Luco Lube, Aluminate Gun, Hi-Temp Bearing for high speed, Harvester Gun for cold weather use in combines and corn pickers, Graph-Seal, a high quality gun grease containing graphite.

LOCKERS and / or HOME FREEZERS

By FRANK GOUGLER

THE evolution of preserving perishable farm products has been an interesting subject. The canning method has long been in use. To what extent will the freezing method replace the canning? The use of the frozen food locker is directing considerable attention to a wider use of this method of preservation. To what extent will it be used in the future by both rural and urban people?

Before Pearl Harbor a few manufacturers had started to make various kinds of home freezers. A few have been in use. Some have proved satisfactory, others not. When materials are again available many concerns will start making them. Single units will be available of approximately six cubic feet capacity — about the same as a locker. These complete will cost around $300 and with volume production they may sell for $250. Two and three-compartment home coolers, with each compartment of six cubic feet capacity also will be available. These will cost at least $150 more for each additional compartment. Already the walk-in type of home freezer has been on the market. These also vary in size and cost. The pre-war price was from $600 to $1,000.

Another type of refrigeration at zero or lower for home storage has and will be built into the ordinary kitchen refrigerator. This storage space will probably vary from one half the space of the standard locker to that of a locker.

Individuals who are interested in some kind of home freezer might well ponder the pros and cons of such an investment for a considerable time before actually making a purchase. The first question should be: What service do I expect of the machine? In connection with the small compartment type of home freezer, in most cases it may be assumed that by having such a unit fewer trips will be necessary to the locker plant. In this case it will not be expected to eliminate the use of a locker. Interest on initial investment, depreciation service and upkeep will probably be as much or more than the rental of a locker.

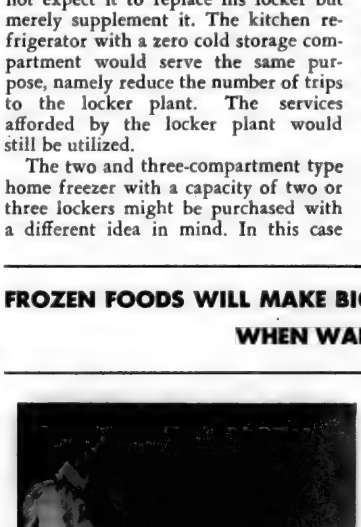
There are now approximately 325 locker plants in Illinois and as soon as materials are available many more will be built. Within a short time after the war most farmers in this state will have available lockers for rent in their regular trading center. If a locker can be rented in the town where one naturally trades, then very few extra trips would be required during the year to get products from the locker. With the smaller type of home freezer the owner would not expect it to replace his locker but merely supplement it. The kitchen refrigerator with a zero cold storage compartment would serve the same purpose, namely reduce the number of trips to the locker plant. The services afforded by the locker plant would still be utilized.

The two and three-compartment type home freezer with a capacity of two or three lockers might be purchased with a different idea in mind. In this case one may not intend to rent a locker at all.

In this case the slaughtering could be done on the farm and the carcasses would be taken to the locker plant for processing, wrapping, and sharp freezing. These costs would probably be slightly more than the charge for such where a locker is rented. This appears to be the policy now of locker plant operators who process for home freezer owners. In a locker plant these costs usually average slightly less than the rental charge for a locker. Here again interest on investment, depreciation, and power costs would probably equal or exceed the cost of like space rented at a locker plant.

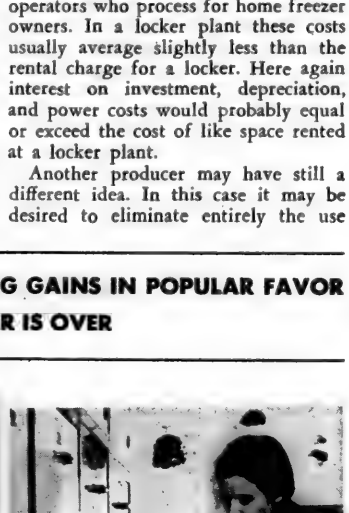
Another producer may have still a different idea. In this case it may be desired to eliminate entirely the use

FROZEN FOODS WILL MAKE BIG GAINS IN POPULAR FAVOR WHEN WAR IS OVER



Courtesy The Locker Operator

Here is one type of home freezer with a capacity of 3.7 cubic feet. Some locker patrons might consider this as a supplementary unit.



Locker patrons appreciate the cutting, wrapping and processing services furnished by locker plants. More and more locker plants are selling the idea of service as the main stock in trade.

and services of the locker plant. Slaughtering, processing, wrapping, sharp freezing and storing would all be done on the farm. It appears the walk-in type of cooler would be necessary to accomplish this.

Such an undertaking involves a considerable investment and justifies giving careful consideration to every phase of the venture. In the first place, it would probably be practical for only large operators. It might be practical for a large family or for a farmer who employs a lot of help or one who lives on a large farm operated with one or more tenants who are supplied with locker products. The size of the unit would depend on the number of persons involved. In 45 locker plants last year the average amount of meat processed per locker was 400 pounds, vegetables and fruit probably another 100 pounds. This might serve as a guide to the size of walk-in cooler to be purchased. The cost of course would vary with size, say $600 to $1,000. Here again, in addition to the initial cost, other cost items should be noted — depreciation, upkeep, interest and power.

These cost items, however, may not be the most important. A number of other items should be taken into consideration. It should be understood that the processing, wrapping, packaging, and storing of meat, fruit and vegetables require considerable skill if satisfactory results are to be obtained. Those who have managed locker plants for some time have learned this lesson. Does the average large farm operator want to take the time and trouble to master this skill? Another vital point is this: a locker plant maintains three different compartments, each held at different temperatures which according to Illinois law allows only slight tolerance in each compartment. Will a walk-in cooler have compartments for chilling, aging, sharp freezing and holding? Will it be possible to hold the temperatures in these compartments uniform? If not, best results can hardly be expected.

Among locker owners, both private and cooperative, there has been the question as to how home freezers will affect locker plants. Recently the National Frozen Food Locker Association made a nation wide survey on this point. Of the replies received, 66% were of the opinion that home freezers would be an asset to locker plants, and 34% thought they would compete with locker plants. It appears that if a locker plant is equipped to supply first class slaughtering and processing service to its patrons it should not have much to fear from competition of home freezers.

Only $200 Needed To Make Clubmobile Project Goal

Contributions to the Red Cross clubmobile project of the Associated Women of the American Farm Bureau Federation now total $24,500, or only $200 short of the goal to be reached by Nov. 30, according to an official report released Oct. 18.

The funds are for the purchase and operating costs for one year of a Red Cross Clubmobile which is already operating in Italy.

Illinois women rank fifth among the states contributing to the fund with a total of $2220.23. In first place is Iowa with $4461.

The Associated Women have decided to close the United China Relief project on Nov. 30, and any further contributions to this fund should be in the hands of Associated Women officers by that date. Total amount in the China Relief fund as of Oct. 18 was $3756.19.

Home Bureau Women Seek Facts On Edible Soybeans

Fourteen county Home Bureaus have requested local leader training schools on use of soybeans for the fall and winter months. This vegetable was included in many home gardens for the first time this summer, and women are anxious to learn ways to use and preserve the beans and to grow and use the bean sprouts. They also want information on soy products now available in many local markets.

The first local leader training school dealing with edible soybeans was scheduled for Shelby county in February, 1943. Since that time interest has developed in many sections of the state.

In addition to the training schools in the 14 counties, lessons will be given by home advisers in a number of others.

Kankakee Sets Goal

Kankakee County Home Bureau women have set their county membership goal for 1944-45 at 600, according to Miss Ann Ewing, home adviser. This means a net gain of 107 members from the time of their last annual meeting. The county goal was figured by individual units setting their own goals.

Growing School Children Need Adequate Luncheons

A survey made in one Illinois county where 35 rural and town districts reported on the lunch habits of their children showed that only 5 per cent of the pupils were eating a mid-day meal that came up to the type-A lunch standards outlined by the War Food Administration, according to Miss Annette Young, extension nutritionist, U. of I. College of Agriculture.

This type-A lunch, Miss Young explained, has been set up as a guide for those who have charge of local school programs and for mothers who pack their children's lunches.

It calls for one-half pint of milk as a beverage, a fruit or vegetable or both, whole wheat enriched white bread, butter, an egg, cheese, poultry, fish or meat or dry beans or peanut butter.

Explain Ways of Paying For School Health Exams

Five ways to finance the school health examination now required by the Illinois Health and Physical Education Law, effective July 1, 1944, have been suggested by the office of the state superintendent of public instruction, reports Miss Fannie M. Brooks, health education specialist, U. of I. College of Agriculture.

While school boards must provide for the examinations, they are not liable for the cost, unless they wish to assume it. Methods of financing range from full cost assumption by the school board to complete responsibility being placed upon the parents. Each community is free to meet this problem in any way it sees fit.

One proposed plan is for parents to take the children to the family physician and dentist. If parents are financially unable to do this, then the school follows up with an examination for all children not already examined.

Many school authorities are placing the entire responsibility on the parents to consult the family physician and have him make the examinations. The school furnishes the necessary blanks, keeps them on file and checks to see that there is a maximum of cooperation.

In some areas the Parent-Teacher Association summer roundup is encouraging and promoting the examination of preschool children.

A fourth plan calls for annual fall employment of physicians and dentists who will make complete examinations in September of all children required to have them.

For such service, the school board in some instances pays the fees, which vary from $1 a pupil to $10 per hour. In other instances, the school board pays the major portion, while the children pay small amounts from 25 cents to $2. Community service clubs may pay the fee of the physicians or dentists, or the latter in some cases have contributed their time without charging a fee.

The fifth plan is one under which the school board employs a full or part-time physician and dentist on a yearly basis to make whatever examinations the school authorities desire.

EDITORIAL

Let's Be Prepared

NO ONE knows when the war in Europe or the Pacific will end, but every citizen hopes and prays that there will be an early end to this worldwide conflict. Until the victory is won it is the solemn duty of every citizen to make certain there is no slackening of effort on his part that might hinder in any way an early and successful culmination of the war effort.

A second duty of every citizen is to contribute his best thought and effort toward planning for the peace so the returning service men and women may come back to an America that is prepared to furnish them opportunities for developing their abilities to the fullest capacity.

In such constructive postwar plans, farmers and their organizations can make their greatest contribution by emphasizing the imperative need for a sustained agriculture. This is essential to the prosperity of America and to the mass production and consumption of the products of both agriculture and industry.

To have a sustained agriculture it is necessary that overall policies be maintained whereby government in cooperation with producers sees to it that surplus reserves of basic soil crops do not depress market price levels. Such surplus reserves are a safeguard against an acute shortage in the nation's food supply in years of disaster. In view of this fact it becomes a national responsibility to see that such reserves are handled intelligently and in the best interests of all groups of the nation.

If farmers who realize the necessity of a basic farm program do not support their position vigorously, other groups might prevail — and the farmers could be left without a program when they need it most.

History tends to repeat itself. In the First World War 40 million acres of additional land were plowed up to increase needed production. As the end of that war approached, farmers were told that they need have no fear of surpluses, that ravaged countries would absorb the supplies. Farmers know the aftermath of that period. Now again we have a tremendous increase in production, and farmers again have answered the call of their government in an hour of need. Early this year, government officials told farmers not to worry too much about surpluses, but since then these same officials have reversed their position and have expressed concern about agricultural surpluses.

To avoid the experiences of the First World War, there must be a national understanding of the importance of controlling surplus reserves of basic soil crops. Of equal importance is that such an understanding be made part of a national policy so that it does not become a question for political debate every four years.

Let the organized farmers make it clear that they want, and insist upon, the maintenance of basic agricultural policies whereby farmers will be assured of prices for farm products sufficient to give them a fair exchange value with the products of industry. It is only through the adoption of such policies that the country will be able to maintain a high national income. It is only through a high national income that government can maintain the degree of taxation to meet the nation's huge war debt. Only through meeting our obligations can we have a solvent government and one that is backed by the integrity and confidence of the people. If these things are accomplished, there is no need to fear the future. Working together, agriculture, industry and labor can lay the groundwork for an even better America.

Farmers through their organizations can have a great influence in seeing that these objectives are reached. The voice of agriculture will be best heard if farmers are fully organized in the counties, the states and in the nation.

The Individual and Cooperation

PERHAPS you as an individual farmer, a member of the Farm Bureau, may sometimes ask yourself, "What difference does it make whether I market my livestock (cream, milk, grain, fruits and vegetables) cooperatively; and whether I buy my basic farm supplies (oil, gas, serum, paints, insurance) cooperatively? After all, I can buy sufficient quantities at a time so that I get good prices, and there isn't a lot of visible difference in the prices my products bring, no matter how marketed. Is it all very worthwhile after all?"

In such moments of contemplation, the individual may often lose sight of his long-run interests, and the larger interests of agriculture as a whole. There may not be a great short-run difference in some instances — as for instance during periods of light cream production, when cooperatives and competing concerns may be paying the same prices, or when the cooperatives may even be at a temporary disadvantage.

Let the individual who is thinking along these lines ask himself these questions: (1) Could I be sure of the quality, and service, and the saving, if others were to consult merely the short-run angles of the situation, and thus cooperatives were greatly weakened or destroyed? (2) Isn't it true that cooperative marketing has already improved many trade practices and brought a better level of prices? (3) If cooperative purchasing has brought returns because of the pooling of farmers' buying power, might it not bring even more returns if all organization-minded farmers used them? (4) If cooperative marketing has already made some gains, what could it make if all Farm Bureau members marketed everything through cooperative channels. Wouldn't our bargaining power be that much greater?

If everyone who sometimes "weakens" on cooperative purchasing and marketing would use these questions as a check-list, it is probable that all concerned would be better off, and that the benefits of cooperation would be even more striking than they have been up to now.

Cooperation does pay.

This isn't getting tiresome, is it?

Ordinarily, I like to change folks' presents from year to year, but you Illinois Agricultural Mutual policyholders always end up with the same thing — Special Dividends.

This means that in 1944 policyholders of two years' standing received a 40% total dividend.

Just as long as you keep down your accidents, you will have to put up with this same old gift. Maybe a neighbor would like the same treatment. Tell him about the auto insurance company which makes special dividends a habit. If he is a Farm Bureau member and a good driver — and most of you are — have him stop and see the insurance agent at your county Farm Bureau office.

Unity of Purpose

IT IS WINNING THE WAR

THE SAME SINGLE-MINDEDNESS WILL ESTABLISH THE PEACE, IS THEME OF 30TH ANNUAL CONVENTION

By CRESTON FOSTER

THE same unity of purpose that is helping America win the war will be required in winning the peace.

Such was the major theme of the messages brought to Illinois Farm Bureau members at the 30th annual meeting of the Illinois Agricultural Association.

Illinois farm families, along with other groups of the nation, are making and have made a great contribution in order that this war may be brought to an early and successful end. The service flags under which members and delegates met for their annual session told better than any words the sacrifices that have been made in the name of freedom. These flags showed that 398 sons and daughters of Illinois Farm Bureau families and eight Farm Bureau employees had made the supreme sacrifice. The flags also showed that 26,054 members of Farm Bureau families and 650 employees were in the service of their country.

Ever conscious of these gold and blue stars, members and delegates were filled with a quiet and calm deliberation as they met to determine ways and means of discharging their full responsibility in continuing a full prosecution of the war effort and in preparing to meet the equally great problems of the peace.

President Earl C. Smith reflected this sentiment when he declared in his annual address. "Regardless of obstacles already confronted or others yet to be met, farmers will neither slow up nor let down in their support of the gallant American men and women in uniform until their glorious achievements have been climaxed by the unconditional surrender of the enemy both in Europe and Asia. But we must not let our zeal for the defeat of the enemy becloud the responsibility of those of us on the home front in preparing for a successful peace."

President Smith stressed the interdependence of all groups of the nation in achieving a stable economy, and declared that national postwar prosperity will depend in a large measure on a sustained and prosperous agriculture. He asserted that in spite of general recognition that agriculture is basic in the national economy, it has not been treated as such. "Throughout the years every recognition given agriculture, and every advancement made by agriculture, has been secured as a result of organized argument and pressure," he said. "Never has the problem been met squarely from the standpoint of the importance of a prosperous agriculture to the welfare of every man, woman and child in the United States."

Dean H. P. Rusk of the U. of I. College of Agriculture, in his address to the convention Friday morning emphasized that true national income and our standard of living depend not upon dollars but upon the production and use of consumer and capital goods and services. "These," he said, "are the strategic points in the battle for national prosperity and the well-being of all the people."

"Maybe what we need," he said, "is a Bretton Woods type of conference for agriculture industry and labor. . . If industry expects a continuous and adequate supply of agricultural products, then agriculture has a right to expect industry to furnish a continuous and adequate supply of its products on a fair basis of exchange — something after the Bretton Woods ideal. But industry has not always been able or willing to do that. . . Fortunately there is a growing realization of the fact that agriculture and industry are complementary — that neither can function at full efficiency unless the other is doing its part, and that only to a minor extent can one compensate for the failure of the other."

The note of interdependence of groups was echoed by Paul G. Hoffman, chairman of the committee for economic development, and president of the Studebaker Corporation, in his address at the Thursday night session. He declared that planning now for a high level of productive activity in industry and agriculture is essential, and stated that a total production of 150 to 170 billion dollars annually will be necessary if seven to 10 million new jobs are to be provided. Government, he said, cannot provide more than two million additional jobs, and thus private enterprise must meet the problem of full employment.

"We can accomplish this", he said, "if all groups of employers plan now for an expanding activity and if the economic climate is favorable, and rid of the notion that America is through." "War production," he continued, "has revived business confidence in the ability of the nation to solve its economic problems."

Governor Dwight H. Green, bringing the greetings of the state government to the association, stressed the need of an adequate farm income at a parity level. He also stressed the importance of farm-to-market roads, soil conservation, flood control and drainage. He endorsed the establishment of a college of veterinary medicine at the U. of I. College of Agriculture, and reviewed the animal disease control program of the state department of agriculture under Director Howard Leonard.

Governor Green also called attention to the state's program for veterans, including rehabilitation and medical care for the disabled and job-finding service for the able-bodied. County service representatives, to make available full information to veterans of the aids set up, have been appointed, he said, and farm advisers have been asked to assist in this connection with veterans from farm families.

Edward A. O'Neal, president of the American Farm Bureau Federation, who brought greetings from the national organization to delegates and members at the Friday session, declared

AFBF President Edward A. O'Neal greets the convention. IAA President Earl C. Smith is at left.

IAA President Earl C. Smith makes annual address.

Hayward Simpson, Pacific veteran, registers with former employer, Lawrence McManus, Mercer county.

The "Five Taylor Kids" thrill their audience.

IAA Field Secretary George E. Metzger makes report to IAA 30th annual meeting Thursday.

General Counsel Donald Kirkpatrick is kept busy during convention by annual meetings and conferences of IAA associated companies. He told the story and history of Farm Bureau Insurance at Insurance Conference.

Among notables at speakers' table were IBA President Floyd Condit, Sam Thompson, L. S. Lyon, Chicago A. of C., Senator Simon E. Lantz, L. P. Volz, Governor's assistant, J. L. Donnelly, IMA and N. J. Zioner, Illinois Chamber of Commerce.

A Healthy Agriculture . . . . . A Healthy Nation

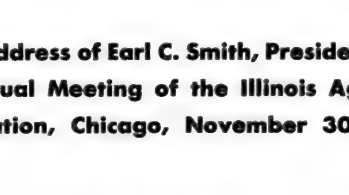
Agriculture must be recognized and treated as a basic industry if we are to have national postwar prosperity, Smith declares

Annual Address of Earl C. Smith, President, Before 30th Annual Meeting of the Illinois Agricultural Association, Chicago, November 30, 1944

IT AGAIN becomes my privilege and duty to report to the delegates and members on the state of the Illinois Agricultural Association, mention some of its accomplishments and to make recommendations for the consideration of the delegates in further outlining the general policies of the organization.

As we open this, the Association's Thirtieth annual meeting, we are all deeply conscious of, and we salute, the millions of young men and young women of America who are serving their country in the armed forces on every battlefront, upon far-flung seas, and in preparation for such service. Neither do we forget the fine young men and women who because of their special abilities are serving their country upon the farms, in offices, and in factories. The magnificent achievements of all bring to every worthy American a renewed sense of pride and loyalty to his country. Their outstanding attainments also instill within us a deeper feeling of responsibility to meet and to solve the many and difficult problems arising daily in our various walks of life.

Never have I felt more keenly my responsibility, and never have the delegates assembled carried greater responsibility in the determination of policies whereby farmers through their organization can make their greatest contribution to the welfare of our country. We are all conscious and proud of the manner in which farmers have continued to overcome serious obstacles, lay aside disappointments, and at times ignore unfair treatment, as they moved forward in supplying the nation with the greatest volume of food ever produced in any one



year. Neither do we forget that all of this has been accomplished when our members and other farmers throughout the country have been going about with daily and deep concern for the welfare of their sons and daughters serving in the armed forces, and some with heavy hearts after receiving the message that a loved one was killed, wounded or missing in action.

Again there has been no threat of farm strikes or slow downs, nor have price advantages been sought, notwithstanding the long hours that have been required on farms to meet the production goals requested by the government. It is becoming increasingly recognized that farmers are the one group in America which has been called upon constantly to do more and more with less and less.

If for no other reason, the record of accomplishments by farmers during the war will entitle them to a prominent place around the council tables of state and nation in solving problems of peace.

Although somewhat different in character, your organization has been forced to meet and overcome many serious problems resulting from wartime conditions. When our country entered the war there were 242 men and 282 women on the staff of the organization. Of this number 142 men and 3 women have entered the armed forces since the day of Pearl Harbor. At the close of the fiscal year 181 men and 300 women constituted the staff of the organization, which you will note is considerably less than during normal times and conditions. To carry on the organization's activities and to improve efficiency, it has been necessary to increase the hours of service by ten percent, and to curtail some of the ordinary detail that is desirable, but not imperative, and to ask both the men and senior women on the staff to discharge ever increasing responsibilities.

Equipment and supplies of nearly every character that are necessary for orderly operations have been seriously limited, and some impossible to secure.

I mention these things only that our members may know that, as an organization, we have been forced to meet many limiting factors similar to those confronting the members generally. In addition to these daily problems, have been the serious considerations that always confront an organization, such as ours, during a general election year.

Notwithstanding these and other problems and difficulties with which the organization has been confronted, it is with both pleasure and much satisfaction that I can report steady progress in the affairs of the organization, and that the financial position of the Association and all of its associated companies has been improved.

A year ago I reported a membership of 94,333 as of the close of the Association's fiscal year, September 30, which was then the highest paid membership in the history of the organization. During the annual meeting last year, we were all thrilled when a beautiful banner was unfurled disclosing a membership of 100,000 Farm Bureau members in Illinois.

Enthusiasm created by this announcement was naturally tempered by a feeling of greater institutional responsibility to provide and render service worthy of such outstanding confidence. We all recognized that as the membership grows, the natural or normal turnover in membership likewise increases, and that it would be increasingly difficult to continue the healthy growth the organization has enjoyed for many years. It is, therefore, with added pride and satisfaction that I can report a membership of 105,057 at the close of the fiscal year, September 30.

Organization Forges Ahead

Certainly this is an attainment of which we can all be proud. Credit for this splendid business and membership record, particularly under present day conditions and limitations, goes rightly to an understanding and loyal membership and to one of the finest and most capable groups of men and women on the Board of Directors and on the staff that ever surrounded a leader of an organization. It is with a great deal of personal pleasure and official satisfaction that I express to them publicly, my deep appreciation of their conscientious service and their loyal cooperation.

Neither time nor present day responsibilities permit me to make other than brief mention of the problems and accomplishments of the several business service corporations affiliated with the Association. Many of these problems have been difficult to solve. Some remain unsolved, but in every case, accomplishments have been outstanding. However, we recognize that the associated companies held their annual meetings this week where opportunity was afforded for complete reports and the consideration of their respective affairs.

Illinois Agricultural Auditing Association

The Illinois Agricultural Auditing Association completed 437 audits for 409 members. This work required 37,876 hours of auditing time, and 58,191 miles of travel. The Association filed 188 income tax and capital stock tax returns, 110 information returns, and secured three letters of tax exemption for its members. The taxes paid by these cooperatives approximated $226,000. When measured from the standpoint of available, experienced manpower and the limitations of travel, the record of the Auditing Association is not only commendable, but very outstanding.

Farmers Mutual Reinsurance Company

The Farmers Mutual Reinsurance Company had $339,663,235.00 of insurance in force at the close of its fiscal year, September 30, — a net gain for the year of $68,633,760.00. It paid loss claims totaling $838,366.10, paid dividends to its policyholders in the amount of $467,693.29, and added $242,009.89 to its surplus, which at the close of the year was $1,840,598.56.

Illinois Farm Bureau Serum Association

The Illinois Farm Bureau Serum Association purchased for its members 48,820,435 cubic centimeters of serum and virus during the year. In addition to dividends of $3,500.00 upon its capital stock, the Association returned to its members cash patronage dividends of $52,555.02, and added $1,480.10 to its surplus.

Illinois Agricultural Mutual Insurance Company

The Illinois Agricultural Mutual Insurance Company had one of its most successful years. At the close of business September 30, a total of 135,738 policies were in force — an increase of 16,206 for the year. Its total incurred losses for the year were $1,489,320.33, and the Company paid $1,117,311.66 in regular and special dividends to its policyholders.

Illinois Farm Supply Company

Although forced to meet serious curtailment of available merchandise, the sales of the Illinois Farm Supply Company were the highest of record. It purchased and distributed 124,000,000 gallons of petroleum products, and seventy-eight percent (78%) of this total was handled by its own transportation system. Its feed division distributed 39,337 tons of Blue Seal feeds and ingredients. The Company had a net income of $922,559.89, and of this amount paid $749,810.00 in cash patronage dividends to its 152 member companies. The records disclose that from the operations of this Company and its member companies, $2,009,986.45 was paid to Farm Bureau members of Illinois in the form of patronage dividends.

Country Life Insurance Company

When measured from any standpoint, the Country Life Insurance Company had its most successful year. 12,372 new policies of life insurance totaling $30,595,915.00 were issued. At the close of its fiscal year, 129,336 policies were in force, covering $22,059,698.00 of life insurance. At the close of its fiscal year the Company had total assets of $24,226,886.86, an increase for the year of eighteen percent (18%). During the year claims totaling $598,915.31 were paid, and $396,090.41 was paid in dividends to policyholders. $164,088.64 was added to the unassigned surplus of the Company, which on September 30 totalled $2,587,504.28. Fifty-two percent (52%) of the investments of the Company's funds during the past year were made in government bonds. Its holdings on September 30 of this class of securities aggregated $8,670,481.56. On that date its entire bond portfolio had a market value of $19,949,396.66, which was $821,053.42 in excess of the amount at which these securities are being carried on the books of the Company.

Illinois Agricultural Holding Company

The Illinois Agricultural Holding Company, which owns all of the stock of Country Life Insurance Company, and which is controlled by a directorate interlocking with that of the Illinois Agricultural Association, received $150,000.00 in dividends on this stock in 1944. After the payment of all dividend requirements on its stock, the Holding Company distributed $126,000.00 to holders of special policies and to Farm Bureau member policyholders of Country Life Insurance Company.

Illinois Livestock Marketing Association

The volume of livestock handled by Illinois Livestock Marketing Association was substantially less than the volume of the previous year. This drop in volume was occasioned largely by the unfavorable position in which government price ceilings and floors placed the Association, at its points of operation. This loss in volume could have been avoided, at least in substantial part, had the Association been willing to adopt practices used by some others during periods of both gluts and shortages of hogs as related to market demand. Notwithstanding this loss in volume, after paying the regular six percent (6%) dividends on its outstanding capital stock, a patronage dividend of seventeen percent (17%) was paid to its member companies and a substantial amount placed in the surplus of

the Company, which now equals sixty-two percent (62%) of its total outstanding capital stock.

Illinois Producers' Creameries

During the past year the ten members of Illinois Producers' Creameries produced 6,484,383 pounds of Prairie Farms butter, 2,577,083 pounds of powdered milk, and 233,740 pounds of cheese. Its operations were substantially larger than those of any previous year. From its net earnings, the Company paid $1,943.04 in dividends on its outstanding capital stock, $20,061.47 as quality premiums and patronage dividends, and $5,800.59 was added to the surplus of the Company. Records disclose that Illinois farmers have an investment in stock of Illinois Producer's Creameries and member companies now amounting to $471,092.00, and that this investment is now supported by a surplus equaling sixty-seven percent (67%) of total outstanding capital stock.

Illinois Grain Corporation

Illinois Grain Corporation handled 20,600,000 bushels of grain during the twelve month period ending September 30, which was an increase of fifty-four percent (54%) over that handled the previous year. A substantial portion of this increase came from the Farmers Grain Dealers' Association of Iowa, which during the year became a member of the Illinois Grain Corporation. The Illinois Grain Corporation had net earnings amounting to $147,392.25, which is more than four times the earnings of the previous year. Again is witnessed the importance of volume for the successful operation of an institution of this character. After the payment of $5,952.00 in dividends upon its outstanding capital stock, and the payment of cash patronage dividends amounting to $91,348.28, the surplus of the Company at the close of its fiscal year, June 30, 1944, amounted to $91,874.00, which is $31,086.00 in excess of the surplus of a year previous.

Illinois Wool Marketing Association

The volume of wool handled by Illinois Wool Marketing Association was much less than that of the previous year. This was largely occasioned by the static market resulting from stipulated prices by the government. However, the services of the Association were valuable to farmers in holding a definite floor under the market in all sections of the state. Although showing loss in volume handled, the Association's earnings warranted the payment of the full dividends on its outstanding capital stock.

The operations of all of the business corporations, on which I have reported very briefly, continue under the management of Illinois Agricultural Service Company. The relationships existing between these organizations and the coordination of their activities with the general program of the Farm Bureau of Illinois were never better. The purpose of these service organizations is to serve Farm Bureau members, and that they are measuring up fully to these responsibilities, is proven by their steady and healthy growth in volume, in earnings and in the improvement of their financial positions. It is only fair to say that the valued service they are performing is gaining attractiveness and is contributing materially to the steady increase in the membership of the county Farm Bureaus and the Illinois Agricultural Association.

Illinois Milk Producers Association Illinois Fruit Growers Exchange and Illinois Cooperative Locker Service

Relationships with the Illinois Milk Producers Association, the Illinois Fruit Growers Exchange, and the Illinois Cooperative Locker Service continue on a very cooperative and satisfactory basis. While these organizations are not operated or managed by the Management Service provided by the Illinois Agricultural Association, their interests and activities are closely associated with those of the Illinois Agricultural Association and are generally regarded as being a definite part of the Farm Bureau program in Illinois. Reports on their respective activities during the year appear to be very satisfactory to those they serve, and I could not ask for more cordial understanding and relationships than those existing between them and the Illinois Agricultural Association.

Plan Program Expansion

While all Farm Bureau members in Illinois should be, and I believe are, rightfully proud of the outstanding success the Farm Bureau service organizations have made, and I find great satisfaction in their outstanding achievements, yet I feel deeply that an expanding membership requires improving, expanding and strengthening of the general Farm Bureau program.

Thoughtful people are laying plans so as to best meet the problems that will be confronted in the readjustment era. This is equally true of foreseeing institutions. The Illinois Agricultural Association is laying plans for further developments in the field of marketing, particularly grain and livestock. It also has well developed plans for a substantial increase and improvement in its various lines of publicity and in the field of public relations. Your organization has the necessary capital for these needed additions to the present program, and will be prepared to move forward to the full extent the membership may desire just as soon as limitations of manpower and materials are removed.

State Legislation Discussed

The Sixty-Fourth General Assembly will convene early in January, and as in former sessions, many hundreds of bills will be introduced having indirect, if not direct, effect upon farm and rural interests. I cannot, of course, anticipate the subject matter of such proposed legislation, but there are a few matters of widespread interest and importance to farm people that I feel I should discuss briefly. Undoubtedly, there will be many bills introduced having to do with our school system. This has been repeatedly true throughout many recent sessions of the General Assembly. While always trying to be constructive, the Association has been forced to oppose many of the bills having to do with the readjustment of our rural school structure. It is not my purpose to criticize or to question the motives of those initiating much of this legislation, but I do not hesitate to say that, with limited exception, proposals heretofore considered have come from people who had only limited understanding of the underlying school problems in our rural areas, some from those having selfish interests to serve, and very few, if any, of such proposals were the result of mature thinking and recommendation by the parents of children or those responsible for the maintenance of rural schools. I refer particularly to proposed legislation that would have forced consolidation of rural schools, that would have provided a statewide school board with widespread powers for the determination of local problems, and proposals of varied character, which in differing degrees, would strip from those most interested within the districts, rightful authority in directing the affairs of their respective schools.

IAA Committee Studies Schools

It was because of these continuing experiences that the Board of Directors a year ago last March authorized the selection of a statewide school committee for the purpose of reviewing the many problems connected with our rural schools, and to make recommendations for consideration at this annual meeting.

The leaders of the county Farm Bureaus from each of the fifteen congressional districts downstate were requested to select two interested and informed people, and these, together with the Public Relations Committee of the Illinois

Agricultural Association, constituted a statewide committee of thirty-five.

This committee held nine meetings, covering eighteen days, and three subcommittee sessions. It sought and received the advice and counsel of many outstanding educators of experience. It has reviewed, in reasonable detail, the conditions and the problems confronting our schools in all sections of Illinois. After careful consideration, the committee reached almost, if not unanimous, accord in recommending steps that should be taken to meet squarely the problems as they appear to exist.

I want to take this means of thanking the outstanding group of men and women who have served on the school committee, for the time they have given to this important problem. And may I add in passing, that it has been one of the most able and conscientious general committees it has been my privilege to meet and counsel with.

Farm Bureaus Get Reports

Both the preliminary and final reports of this committee were sent to every county Farm Bureau. Their recommendations will be considered in the School Conference, which is scheduled for this afternoon. I hope the results of this Conference will be reported to the delegates through the Resolutions Committee, so as to provide the Association with an outline of policy and procedure whereby the Association can be of the greatest assistance in adequately solving the many serious problems with which our rural schools are confronted. Of one thing we must be sure, either rural people must become much more aggressive in meeting and solving these problems, or I fear a renewal of attempts to remove from within the school district, the responsibility and the authority for the guidance and direction of rural schools.

It is my belief that we can no longer defend state assistance to schools where the daily attendance is so low as to remove even the necessary competitive conditions that are essential to develop the best within children, and where the per unit cost of maintaining such schools is beyond reason.

There are two over-all problems that must be met. First, will those most interested within the district or districts bring about such reasonable consolidations as are known to be warranted, or will their failure to do so result in some law creating a tailor-made way for the coordination of schools, that even when accomplished will not meet the reasonable needs of the rural community? This is largely, if not entirely, a local problem.

The other problem has to do with the readjustment of the basis upon which state equalization funds are distributed, to a basis of real need, rather than as at present — an unneeded subsidy to some and a deficit of revenue to meet the necessary requirements of children in other areas. This is largely a state problem. Both of these problems must be faced squarely.

Recognizing the importance of the rural school problem, the Association created a Rural Schools Department during the year, and employed an able, experienced man to direct its activities. He will be available to the county Farm Bureaus to assist them in the study and the solution of their local problems to the full extent his time will permit, and the counties may desire.

Postwar Planning Commission

Outstanding among recommendations before the next General Assembly will be the report and recommendations of the Illinois Post War Planning Commission, which was authorized by the last General Assembly, and appointed by Governor Green early in the year. The over-all purpose of this Commission was to make a comprehensive study and to make recommendations to the Governor and to the next General Assembly whereby the state could best assist business, agriculture and workers during the readjustment period following the war. As a member of this Commission, I was requested to recommend a number of representatives of agriculture to serve with me on a sub-committee of agriculture, and to make recommendations as to agriculture's needs. Dean Rusk and Dr. Case from the University of Illinois; Howard Leonard, Director of the State Department of Agriculture; Walter W. McLaughlin, former State Director of Agriculture and now Manager of Decatur Farm Management Service; Edwin Bay, President of the Farm Advisers' Association of Illinois; Dr. Henry Taylor of the Farm Foundation; E. A. Eckert, Master of the Illinois State Grange, and Chris Christensen, former Dean of the College of Agriculture, University of Wisconsin, now Vice-President of Celotex Corporation, rendered able service on this Committee.

The committee confined its report to matters having to do with rural schools, rural roads, soil needs and the importance of giving and maintaining official state support to broad national policies which are required for the stabilization of agriculture at a prosperous level.

The recommendations of the committee on rural school needs are not at variance with the report and recommendations of the Illinois Agricultural Association School Committee.

The committee emphatically set forth the immediate and widespread opportunity rural road improvement offers for the employment of men in all areas as soon as such labor is available. It called for immediate blue printing of rural road needs in all counties of the state, and it particularly emphasized the responsibility of the state in assisting local governments to meet these requirements.

The committee's report on soils was in some respects alarming, for it pointed out definitely the serious drain put upon the soils of Illinois, as well as other states, in meeting wartime production requirements. The report also pointed out the state's responsibility to assist in making available necessary machinery for the much wider production and use of limestone and other fertilizers, as soon as conditions permit. The report further pointed out the imperative need for official state support of broad agricultural policies that are necessary for the effective segregation and control of surplus reserves of basic soil crops and that this matter should be considered and supported on a strictly non-partisan and non-political basis.

I can here mention, only briefly, the aspects of this report, but when the final and official report of the Commission is available, I commend it for the careful study of all interested citizens of Illinois. During the next session of the General Assembly, the Illinois Agricultural Association will have a real opportunity to render the state, as well as all rural areas, great service in using its influence in support of efforts made to provide practical ways and means for the application of the recommendations of the Illinois Postwar Planning Commission.

Urges Gateway Amendment

The failure of the proposed constitutional amendment in the recent election again demonstrates the impossibility of amending our State Constitution under the present requirement that an amendment to be adopted must receive a majority of all of the votes cast in the election. The proposed amendment, which would have permitted sheriffs and county treasurers to succeed themselves in office had been submitted by a two-thirds vote of each House in the General Assembly It was considered by both political parties. It was defeated by those not sufficiently interested to even vote on the proposal. The experience with this amendment and with others submitted in recent years, should convince all thoughtful people of the necessity of submitting to the people at the next general election a so-called Gateway Amendment. Such an amendment, if approved, would permit the adoption of amendments to our State Constitution by vote of a substantial majority of those voting

RESOLUTIONS

Adopted By Board of Delegates at 30th Annual Meeting of IAA in Chicago, Dec. 1, 1944

FOREWORD

THE Illinois Agricultural Association has rounded out its first thirty year period. The Association was born during the violent stresses of World War I. These days of World War II are measuring its virility. This hour is the high water mark of its strength, its influence and its membership. From its farm homes have moved out onto the fronts of the world their legions of young men and women. Other legions upon the home front have sustained those in active service.

Of first moment is that we decisively overwhelm those with whom we are at war. Our ultimate faith in this cause will not diminish, and the day will come when there will be restored peace again among the nations of the world. With that day, new problems will arise. Young men and women from the Armed Services will come back into our homes and into our communities, and here they must find the faith and the freedom for which they fought. We pledge our organization to use its every effort in this period of readjustment to maintain a free economy where every willing person will find an opportunity to work or to build an enterprise of his own. Agriculture does not charge industry with having the full responsibility of creating full employment. Agriculture will join with business, whether large or small, in performing this task.

I. AGRICULTURE IN THE NATION'S ECONOMY

Employment, production and national income must be stabilized at a high level in order to service the national debt and to maintain free enterprise and democratic government in America. We believe that full and continuous national prosperity cannot be maintained without a prosperous agriculture. Agriculture is the largest single buyer of the products of mills, factories and mines and of the services of railroads and many other industries serving agriculture. We, therefore, strongly urge that all groups in the formulation of postwar plans and policies give full recognition to the importance of sustaining agricultural purchasing power by maintaining farm prices and agricultural income at a high level.

II. AGRICULTURAL ADJUSTMENT ACT

The Agricultural Adjustment Act must be preserved for aggressive use by American agriculture in the reconversion period. It is imperative that our economy during this period have a sustained agriculture. The existing parity formula should be maintained. Existing commodity loan bases should not be disturbed. The marketing agreement provisions of the act should be extended and a larger use of such provisions made by producers of crops and commodities authorized under the marketing agreement sections. Economy should be effected in the administration of the act. Greater decentralization, consistent with effective administration, should obtain and the general administration of the act should be placed by the Congress under an independent non-political board.

III. HOG PRICES

Chaotic conditions in the hog market during the past year and in recent weeks have been brought about by ill conceived regulations of governmental agencies. Failure on the part of these agencies to properly interpret, administer and enforce the act of Congress providing for price supports and controls has afforded meat packers and others the opportunity to circumvent the intent and purpose of the law resulting in millions of dollars of loss to hog producers.

Hog producers through their organizations on numerous occasions have submitted definite plans to OPA, WFA and the Director of Economic Stabilization to eliminate these abuses and to carry out the intent and purpose of Congress. These plans have not been accepted. We concur in the position taken by the Joint Livestock Committee, consisting of 130 livestock organizations, and by the Board of Directors of the American Farm Bureau Federation which was submitted in July, 1944. We particularly emphasize:

(1) **Ceilings:** If ceilings are continued they should be adjusted for increases in the cost of production. There should be only one ceiling for all weights and classes of butcher hogs. We urge the OPA to investigate the cut out value of hogs to determine the proper relationship between the ceilings on live weights and the ceilings on wholesale and retail cuts.

(2) **Subsidies:** We continue our opposition to the use of subsidy payments in lieu of fair market prices. We insist that any reduction below the ceiling in prices paid producers should be accompanied by a proportionate reduction in the subsidy paid to packers.

IV. INCOME TAX EXEMPTION FOR FARMER COOPERATIVES

For years it has been a national policy that every reasonable encouragement should be given to the organization and maintenance of a strong and effective farmer cooperative system for service to farmer producers in the marketing of their commodities and in the purchasing of supplies needed by them in production. The Internal Revenue Code provides for exemption from taxation of savings and earnings realized from member business of a farmer cooperative. Revenue exemption provisions are strictly construed. Such farmer cooperatives as have elected to receive and maintain complete exemption must currently distribute in large part their savings and earnings if such right of exemption is to be maintained. Farmer cooperatives not claiming complete exemption but desiring to keep free from taxation earnings and savings from member business, must likewise in large part currently distribute earnings and savings on member business to those entitled to such distribution.

All exempt farmer cooperatives are now required to file an annual informational return. This should be a wholesome obligation upon such farmer cooperatives. The filing of such informational return, should entitle such farmer cooperatives making such an informational return to the protection of the statute of limitations now available to corporations making a tax return.

The Association has supported and will continue to support the right of income tax exemption to farmer cooperatives doing business only with their producer members. The Association has supported and will continue to support farmer cooperatives not operating as exempt corporations in their right to make deduction of their member patronage earning distribution to members without the application of an income tax on such distribution.

V. FARM CREDIT

We reaffirm our support of the purposes of the Farm Credit Administration as embodied in the Farm Credit Act of 1933 and place special emphasis upon the cooperative principles emphasized therein. We stand unalterably opposed to any administrative procedure,

rulings or revisions in the Act which in any way disregard or impede the cooperative features of the system. In keeping with those cooperative principles, we believe increased direction and control should rest with farmer-borrowers and to that end, we advocate a sound plan for the orderly retirement of the government capital invested in the Farm Credit System. We favor its administration on a basis that enables farmers to obtain credit on a cost basis comparable to that paid by equally sound business and industrial organizations.

We commend the American Farm Bureau Federation for its position in supporting appropriations for the program enabling worthy tenants to purchase farms and for the necessary rehabilitation of farm people. We also commend the American Farm Bureau Federation for its position in urging the elimination of all appropriations for projects involving the socialistic or collective ownership and operation of land.

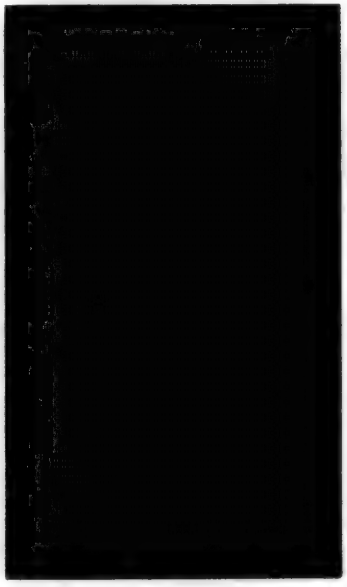
VI. FARM MACHINERY

The manufacture of farm machinery and repair parts has been sharply curtailed during the past three years by government orders. The ability of farmers to meet production goals will depend upon the availability of repairs and parts for machinery now on American farms in order that it may be kept in operation next year, and upon the availability of new machinery to replace worn out and broken machinery which cannot be repaired.

VII. CONSTITUTIONAL AMENDMENT

Experience has demonstrated that it is practically impossible to amend our State constitution under present amendment procedures. Attention must be given to making amendment of our constitution possible in order to meet present day needs and postwar problems. These real needs should not be sacrificed for proposals of no urgency and of little public benefit which are submitted for reasons of political expediency. We reaffirm our support of the Gateway Amendment of the State constitution to permit the submission of amendments to at least two articles of the constitution instead of only one, at the same election and to provide that an amendment may be adopted by the favorable vote of two-thirds of those voting on the proposal instead of by a majority of all votes cast at the election. We also reaffirm our support of the so-called party circle bills under which a proposed Gateway amendment would be submitted to the respective political party conventions for their action thereon and their action would be

Vice-President Talmage Defrees is chairman of the resolutions committee.



printed in the column under the name of the party, and a vote in the party circle would be counted as a vote for the position taken by that party on the proposal unless the voter should vote otherwise upon the proposed amendment. We pledge our aggressive support of such proposals.

VIII. RURAL SCHOOLS

We reaffirm our resolution of last year, which commended the action of the Board of Directors in establishing the special School Committee of 34 Farm Bureau leaders to make a thorough study of rural school problems and to recommend the position the association should take on various questions of school policy.

We commend and thank the Committee as a whole and individually for the vigor and earnest spirit in which they carried out the important but difficult duty assigned them. We concur in and approve the Final Report of the School Committee and accept the recommendations therein, which we declare to be the policy of the Association. We direct the officers and Board of Directors to take all proper measures to secure legislative action in harmony with the broad general purposes of the declared school policy of the Association. We further direct the officers and Board of Directors to provide wide distribution and publicity for the IAA School Committee Report among our membership and rural people generally and on request to give all feasible assistance to local communities in studying their own school problems.

We urge the County Farm Bureaus and all farm people in the State to give careful consideration to the findings and recommendations of the Committee. We further urge the rural people of each county to give very earnest attention to the improvement and strengthening of the educational system serving rural areas.

Solution of rural school problems will not be easy. Substantial improvement in the educational opportunities available to farm boys and girls will require continued study by the Association and local groups and the cooperation of farm people, teachers, county superintendents and all others interested in and concerned with rural schools.

IX. STATE AID FOR SCHOOLS

We condemn the gross inequalities in the present distribution of State aid under the law which was enacted to provide State equalization aid only for needy school districts. In many counties, a low assessment ratio (average percentage of actual value of real estate used in assessments) enables many financially able elementary and high school districts therein to qualify for as much equalization aid thereof as amounts thereof than equity and justice warrant. On the other hand, many needy schools districts in counties with high assessment ratios cannot qualify for as much financial aid thereof as they should have.

We believe that these inequalities can and should be removed without disturbing the levels of assessment in the Counties. Therefore, we direct the officers and Board of Directors of the Association, with the cooperation of representatives of other organizations favoring such action, to sponsor such

Two New Directors Elected To IAA Board

THE two new directors elected to the board of the Illinois Agricultural Association, C. J. Elliott, Streator, LaSalle county, and F. E. Morris, Buffalo, Sangamon county, have long records of Farm Bureau service.

Mr. Elliott, who was elected to complete the unexpired term of the late Rex E. Peddicord, Marseilles, in the 12th district, has been a member of the LaSalle County Farm Bureau's executive committee for 20 years and at present is its vice-president and chairman of the finance committee. He was one of the founders of the Farm Bureau in his county which was formed as the LaSalle County Better Farming Association.

Graduated from the University of Illinois College of Agriculture in 1912, Mr. Elliott has farmed ever since graduation, owning and operating 360 acres located five miles west and five miles north of Streator. His wife is the former Lillian King, who was graduated from the U. of I. in home economics in 1913. They have five sons and one daughter, and three of the sons and the daughter are in the armed services.

Mr. Elliott's other activities include a part in organizing the LaSalle County Farm Supply of which he is secretary. He is also a director on the Producers Supply board, member of the state advisory committee of the FSA. He served as appraiser for the Federal Land Banks from 1933 to 1940, and as farm evaluator for the FHA since 1938, and school trustee from 1915 to 1934.

Mr. Morris, elected to succeed Dwight Hart, Taylorville, Christian county, who represented the 21st district for 8 years, operates a 220-acre general livestock and grain farm. Part of this acreage he rents and part he owns. Mr. Morris was elected to the Sangamon County Farm Bureau board in 1936, and during the last three years has served as its vice-president. He was the first secretary of the county corn-hog program and later was elected county AAA chairman. He has recently served as a member of the IAA schools committee and as a member of its subcommittee. Mr. Morris was especially well fitted for the IAA schools committee having served as a director on both the grade and high school boards of Buffalo. He was on the board of the Buffalo High School at the time of its consolidation with the Tri-City High School.

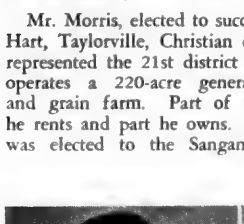
Mr. Morris' other activities include chairmanship of the rural division of the Sangamon county war fund drive last year, and service of several years as a member of the FSA farm loan committee of his county.

Mr. Morris is married and has four children, two daughters and two sons. One son is in the Navy, and one daughter is employed in war work at Illiopolis. Mrs. Morris is the former Amelia Sampen of Emden, Logan county. Mr. Morris was born in Lincoln, Logan county, and started farming at the time he was married in 1922 near Delavan, Tazewell county. He moved to Sangamon in 1926 and joined the Farm Bureau there the same year.

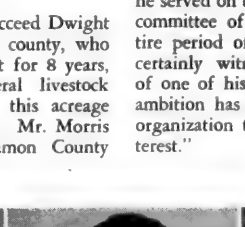
Mr. Hart who leaves the IAA board after eight years of service, has taken a keen interest in the growth of membership in the Farm Bureau in Illinois as he served on the organization-information committee of the board during the entire period of his directorship. He has certainly witnessed the accomplishment of one of his fondest ambitions — "My ambition has been to help build a farm organization to promote the farmers' interest."

Mr. Hart was one of the charter members of the Christian County Farm Bureau when it was formed in 1918. He served 5 years as its secretary and 10 years as its president. At present he is chairman of the legislative committee of the Christian County Farm Bureau. His other activities in the community include 12 years as president of the Christian County Agricultural Fair, and service as a member of his local school board. Mr. Hart expects to maintain his interest in the statewide activities of the Farm Bureau and its associated companies. He will serve during the ensuing year as a director on the board of the Illinois Grain Corporation.

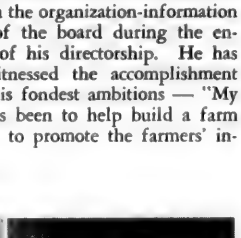
Mr. Hart operated a 275-acre farm from 1892 to 1924, and moved from the farm to Sharpsburg in 1924 where he lived until moving to Taylorville in 1942. He is maintaining his farming interests by operating his farm on a livestock lease basis with his son-in-law. He also owns 40 acres of unimproved land which he rents on a grain basis. Mr. Hart who was married Dec. 9, 1903, has two daughters, Mrs. Fern Brown, and Elma who lives at home.



C. J. Elliott



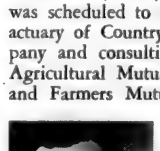
F. E. Morris



Dwight Hart

Engage New Actuary

Dirk Heezen, actuary for the National Guardian Life Insurance Company of Madison, Wis., for the past 12 years, was scheduled to start work Dec. 15 as actuary of Country Life Insurance Company and consulting actuary of Illinois Agricultural Mutual Insurance Company and Farmers Mutual Reinsurance Company.



Bruce Batho

Heezen succeeds Bruce Batho who resigned Dec. 15, to take a position as associate actuary of the Industrial Life & Health Insurance Company of Atlanta, Ga. Batho came to the IAA March 16, 1942 from the Illinois State Insurance Department where he was employed as assistant actuary. Previously he had served as actuary for the Franklin Life Insurance Company.

Heezen has been office manager of the life department for the National Guardian Life Insurance Company for the last two years in addition to being actuary.

Hamilton County Farm Bureau is the 98th Farm Bureau in Illinois. Officers and directors receiving congratulations from IAA Organization Director O. D. Brissenden, left to right, are Earl DeLap, director, Leonard R. Moore, director; John T. Eark-man, vice-president, Xavier Kiefer, president, Brissenden, and Glen F. Sons, farm adviser.

MEMBERSHIP GOAL SET AT 117,000

By W. P. Sandford

CALM, pre-planned and precisely executed progress toward the long-range goals of 117,000 Farm Bureau membership in Illinois by September 30, 1945 characterized the talks and discussions at this year's Organization-Information conference.

A year ago, 100,797. Sept. 30, at the end of the 1944 fiscal year, 105,057. At the moment of annual meeting, over 107,000. And by next September 30, the realization of the 117,000 total of long-range goals set last winter by county leaders themselves. It seemed just that inevitable.

The same men who exulted last year in song and cheers at the attainment of the long-sought goal of 100,000 were this year matter-of-fact, confident, and quiet about it all. Yet there was no lack of determination. It was rather the precise, well-balanced and integrated movement of a polished machine that is guided by experienced, competent, team-working men.

"Brissy", IAA director of organization, sounded the keynote when he said that organization workers are resolved, first, to administer policies more effectively and thoroughly than ever before; second, to have during the coming year the best-prepared and executed drives in history; and third, to give such service to membership that full satisfaction will be the lot of every member, old or new.

Care in the solicitation and approval of associate members, hewing to the line on the matter of partnership contracts, and enforcing established and authorized policies in these two matters, were emphasized. Thorough organization of membership campaigns, from the recruiting of volunteer workers through the well-planned kickoff meeting to the final report meeting and cleanup work, were also stressed. "M-M Meetings," in which every county goal will be re-examined and readjusted if needed, and the year's campaigns planned, and in which all of the employees of Farm Bureau will be informed of membership plans and of their part in rendering superior service, were announced as part of the midwinter preparations for the "117,000 year."

"Cap" Mast sang what he called his swan song before the C. O. D.'s and leaders, pleading for a public relations consciousness at county, state and national levels, and asking for his successor, "Cres" Foster, the same cooperation that had been accorded him in his years as director of information. "Cres" paid tribute to "Cap," and solicited the aid of his fellow-workers for himself and "Mike" Seagraves in measuring up to their new responsibilities. Chairman Otto Steffey, head of the organization-information committee, praised the workers for what they have accomplished. Ellsworth Lyon, director of youth activities presented his good-looking state committee for 1945.

George E. Metzger, field secretary, in a vigorous talk, told of new programs, such as the plant food and feed developments, and told of the evolution of locker plants into local packing functions as an example of what the future may hold. He, too, stressed the importance of thorough knowledge and adherence to policy resolutions affecting membership, and was optimistic about the prospects of an increase in membership in 1945 to the 117,000 goal.

Discussion of the goals, membership service programs, and other organization problems brought forth the declarations from a number of leaders and COD's. Fieldmen Claar, Hornbeck, and Moore, who had previously distributed the new certificates for attainment of 105 per cent dues income quotas to 86 county organization directors were in evidence, Claar leading songs ("All in Favor Say Aye, Aye" is a perennial favorite) and he and the others busily arranging with county representatives for the coming "M-M Meetings."

Dwight Hart and August Eggerding, members of the IAA's organization committee, were present and received applause from the group for their services to organization. Roger Corbett, secretary, and Thomas Cowden, research director of the AFBF, presented a progress report on the national Million Member drive, pointing out that Illinois is one of ten states that have achieved their goals. Corbett discussed plans for the 1945 effort, which is planned to raise AFBF membership from approximately 850,000 at present to the million mark.

That was what happened. No, it wasn't too demonstrative . . . . that will perhaps be the case next year, when this veteran group of workers has turned the trick once more, and attained the 117,-000. . . . when they have in truth "built a cushion" of membership over 100,000 so deep that the "more than 100,000" banner can always be exhibited at annual meetings . . . . when they have proved once more that no goal short of a mythical saturation point is too high . . . . when, to use the words of the "M-M Meetings" of 1944, they have "made Farm Bureau forever strong."

Their quietness wasn't the languor of apathy. Quite the contrary. It was the calm assurance of competent men . . . . men who have done the job and men who can do it again. And perhaps in the lack of noisy demonstration, too, was the thought that as builders of Farm Bureau, they are working to make agriculture still a better way of life, for the boys and girls who one day will return to it from the frenzied battle fields, and take over, to build in their own way a better America.

After all, that's what it's all for, isn't it?

WFA Official Lauds Co-ops for War Effort

Tom Stitts

John Hagenstoz, Washington, left, receives congratulations from his predecessor on the IMPA board, Ryland Capron, retiring president, Peoria.

FARMERS' cooperatives have made a distinguished contribution to the war effort and have been of inestimable value in working with the WFA to develop fair, practical programs, Tom G. Stitts, chief of the WFA's dairy and poultry branch, told members of the IMPA and Illinois Producers' Creameries at their sessions held in conjunction with the 30th annual meeting of the IAA.

Stitts was scheduled to speak at the IMPA meeting Wednesday morning, Nov. 29, but his train was delayed and he did not arrive until noon. Those who had attended the IMPA meeting were given an opportunity to hear his address at the Wednesday afternoon program of the IPC.

Citing milk statistics of the last decade to prove his point, Stitts characterized dairying as "One of the most stable of farm enterprises."

During years of falling agricultural prices, milk production increased even while total agricultural production was declining, he said. During years of rising agricultural prices, milk production also increased, but at a slower rate than total agricultural production, he asserted.

Stitts said he thought that America's dairy farmers would make the transition from war to peace in a more orderly and less disruptive manner than any other major farm group. The pre-war record, he stated, shows that consumption of fluid milk and every major dairy product except butter was on the increase. Moreover, far from over-expanding during the last 3 years, he said, milk production probably has increased less rapidly than if there hadn't been a war.

So far as demand is concerned, Stitts said, civilian markets alone would absorb the entire wartime increase in milk production if it were available to them.

In pointing up recent increases in war requirements, most of them occasioned by the increasingly large number of men overseas, Stitts revealed that the armed forces bought only 14 million cases of evaporated milk in 1943, whereas up to November this year they already had obtained 25 million cases.

Stitts emphasized that all war food orders applying to dairy products would be terminated or relaxed as soon as possible, but said that so far milk is still too "tight" to allow many significant adjustments.

WFA's dairy chief reported that from 1943, when the first set-aside programs were enacted, through December, 1944, the government will have purchased for U.S. military and lend-lease purposes 749 million pounds of butter — 464 million pounds in 1943 and 285 million pounds in 1944; 740 million pounds of cheddar cheese — about half each year; and 586 million pounds of nonfat dry milk solids — again about half each year.

Of the 749 million pounds of butter set aside during the 2 years, 551 million pounds went to U.S. military and war services. Most of the remaining 198 million pounds was for the Russian army, primarily for hospital use.

The mounting offensive in Europe and the South Pacific is as a twin summons to America's five million dairy farmers to break still more production records and to prepare, at the same time, to deal with the threat of a postwar surplus, Owen M. Richards, Chicago, manager of the American Dairy Association, declared.

While dairymen are ready to exert themselves still more to carry out a patriotic responsibility for boosting milk supplies, Richards said, they must also get set for "anything that may happen to change the entire food outlook," in view of the knockout drive which is under way.

Advising against "counting too strongly on experts" for future dairy food markets, Richards advocated united support by dairy farmers of their own business measures, including aggressive, nationwide advertising through their American Dairy Association, to elevate America's postwar consumption of milk and its products to the record war-time production levels.

Farm production, he said, underlies the jobs of more than five million persons in food, leather and textile manufacturing, in wholesaling and retailing farm products, and in the hotel and restaurant business. He asserted millions of other jobs "go hand in hand with farm prosperity because one-third of all manufactured products are bought by rural people."

Annual report of the Illinois Milk Producers' Association presented by Wilfred Shaw, secretary-manager, showed that more than 2 billion pounds of milk were marketed, which on a 3.5% price basis, amounts to $63,413,074.65. The volume of milk marketed in 1943-44 was 3.02 per cent greater than that marketed by the association as a group for the period 1942-43. The daily average number of shippers of member cooperatives during the year was 20,103 as compared with 19,802 a year ago, or an increase of 1.5 per cent. The daily average quantity of milk shipped by members of member associations increased 1.47 per cent over that for the year previous. Value received showed an increase of 7.09 per cent.

Newly planted trees need to be cultivated. Shallow cultivation will keep down weeds and will increase tree growth.

THERE'S A BIG JOB OF

ROAD BUILDING

TO BE DONE AFTER WAR

27,000 ILLINOIS FARMS STILL ON UNIMPROVED ROADS, REPORT AT ANNUAL MEETING SHOWS

Mrs. Stanly Castle, president of the Illinois Home Bureau Federation, brought greetings to the IAA convention at the Friday morning session.

THERE is still a job to be done in Illinois in providing farmers with all-weather farm to market roads.

This point was emphasized at the public relations conference of the 30th annual meeting of the IAA held in Chicago.

It was reported that the 1940 U.S. census showed that 27,000 Illinois farms are still on unimproved roads. As an example of the need for all-weather roads, the situation in two counties were cited. One county had 1351 farms on unimproved roads, and the other had 1384 on unimproved roads.

President Earl C. Smith of the IAA who is a member of the sub-committee on agriculture of the Illinois Postwar Planning Commission, told of the possibilities of using in the postwar period some of the vast store of road-building machinery owned by the U.S. Army.

President Smith pointed out that since Illinois is the third largest taxpayer among the states, it would seem reasonable that it should have its fair share of such machinery when it is released by the Army after the war. Such dirt-moving machinery might also be used for other soil projects such as terracing, etc.

President Smith also stressed the postwar use of state reserve funds for meritorious projects which would give gainful employment to returning soldiers during the conversion period.

"We must have plans ready after this war so that we will not be in the same position as we were after the first World War," President Smith said. If proper plans are made, he explained, it will be possible to provide men with an honest day's pay for an honest day's work.

Another major topic at the public relations conference was that of the need for a so-called Gateway Amendment to the state constitution. Under the present requirements of the state constitution, if an amendment is to be adopted, it must receive approval from a majority of all the votes cast in the election.

Thus, a citizen who casts his ballot in the general election, and fails to vote on the proposed amendment actually is counted as voting against the amendment.

To correct this situation, the IAA is urging that at the next general election a Gateway Amendment be submitted to the people. Such an amendment, if approved, would permit the adoption of amendments to the state constitution by a vote of a substantial majority voting on the proposal. In other words, the question of whether the amendment was passed or defeated would be decided by counting the number of votes for or against the proposal, regardless of how many votes were cast in the general election.

It also was pointed out that the Illinois General Assembly should provide that in considering the Gateway Amendment, the party circle would be counted for the position taken by the party on the proposed amendment unless the voter indicates otherwise.

Other topics considered at the public relations conference included the proposed veterinarian college at the University of Illinois, and postwar agricultural problems. L. H. Simerl, IAA director of research and taxation, reported on reciprocal trade agreements, lend-lease operations and other aspects of foreign trade of interest to farmers.

The position of the IAA on the veterinarian college is stated in the convention resolutions printed in this issue of the RECORD.

Thirty-three Richland County Farm Bureau members attended the 30th annual meeting of the IAA, and more than one-half of these were attending an IAA annual meeting for the first time. The County Farm Bureau provides a trip to the IAA convention to men who sign five or more new members in campaign drives.

Capacity Crowd at School Conference

Develop Program Where Local People Will Solve School Problems

Recommends final report of I.A.A. school committee!

THERE is an ever increasing interest among farm people about their rural schools. This fact was unmistakably clear from the record attendance of 300 and the live discussion at the schools conference held during the IAA 30th annual meeting in Chicago.

One of the highlights of the schools conference was the final report of the IAA schools committee. This committee, made up of 34 Illinois farm men and women have been studying rural school problems for more than a year. Their report embodies significant recommendations for the improvement of the rural elementary and high schools of the state.

In opening the schools conference, Homer Curtiss, IAA board member and a member of both the IAA schools committee and public relations committee, said "the work of the school committee was directed "toward the development of a program where the local people can, and will, determine the solution of their local school problems."

Foremost recommendation of the schools committee as contained in their final report is that, "Every effort should be made to equalize educational opportunities available to farm boys and girls. This equalization should be accomplished by raising the standards of the poorer rural schools up to those of the best public schools in the state." To implement this purpose the committee recommends that, "The training of teachers should be more thorough and more specialized . . . . . Teachers and teaching, especially in the elementary schools, should be much more carefully supervised . . . . . Every effort should be made to secure and retain the very best of teachers for rural schools . . . . . More modern and up-to-date facilities are needed in most rural areas . . . . . More effective and more economical teaching units must be established if the boys and girls of rural Illinois are to have equal opportunities with other boys and girls."

Turning to high schools the committee stated that, "High school pupils should have a choice of vocational agriculture and home economics, business training and manual arts or shop work. These subjects should be offered in addition to the usual college preparatory course. High schools should also carry on an active program in music, health and extra curricular activities."

On the important subject of school finance the committee recommended that, "The cost of maintaining the public schools of the state should be more equitably distributed." To bring this about the committee urges that, "A larger proportion of the funds needed by the schools should be obtained from other than property taxes, and should be collected and distributed on a state-wide basis . . . . . The first objective in the distribution of state funds should be to provide adequate aid for the children in districts which are financially unable to provide good schools . . . . . As a qualification for receiving special (equalization) state aid, local districts should be required to make a uniform minimum effort in support of their own schools." As a means of establishing more uniform school tax rates the committee recommends the establishing of larger school financial and administrative districts.

In conclusion the committee states that, "Real improvement of the rural schools is dependent upon the combined efforts of farmers, teachers, school directors, and county superintendents. The farm people, through their county and state organizations, are trying to meet their responsibility to the boys and girls of the state. Other groups have pledged and are giving their full cooperation. With all these groups working together the future holds great promise for the boys and girls in rural Illinois."

Copies of the complete report are available from county Farm Bureau offices and from the Illinois Agricultural Association, 608 South Dearborn Street, Chicago 5, Illinois.

Some of the main subjects covered by the School Report were discused briefly by members of the IAA staff. The subjects discussed were: "What makes a Good Rural School," "Pupil Transportation," "A Plan for a Fair Redistribution of Special State Aids," "The County School Committees and School Surveys," and "The Distinction between the Various Types of Units — Attendance, Financial and Administrative."

After these reports, the meeting was thrown open to discussion. In response to a question from the floor as to how the schools in an area could be unified under one head Mr. Bateman of Piatt county gave an illustration of what had been done in his own community.

Mr. Bateman said that they called a meeting of the directors of all the schools in the township and out of that number about seven schools were interested in reorganization. They then proceeded to circulate a petition and vote by districts, with the understanding that if any of the seven districts voted against the consolidation, the election did not bind any of them. All seven did vote for the larger district and they proceeded to elect officers and to transport their children. They now have 135 pupils in one school building and have sold their old buildings.

Said Mr. Bateman, "We hired a transportation company in Champaign, and they take care of the transportation. We do not know about the operating expenses as yet because we just started this year, but we think we are going to save quite a little money. We have three buses and each child is picked up at his door."

The chairman then requested some one to report on a case where a newly organized district was using two or more

schools in the consolidation. Charles B. Shuman, IAA board member, Moultrie county reported that they had a situation of that kind but that they intended to have one attendance unit wherever they would be permitted to build a new building. Their district included five old districts and has been in operation for three years. Their 65 children attend three schools, the 1st and 2nd grades in one building, and the 6th, 7th and 8th grades in a third. A complete story on this school district was carried in the February, 1944, issue of the IAA RECORD. The article will be found on page 6 of that issue. Mr. Shuman declared, "you find that transportation is what folks are most afraid of about reorganization, but when they see the advantages of bus service, it becomes the most important talking point for larger districts."

Mr. Gilmore of Greene county asked about increasing the financial aid. Then the discussion turned to the advisability of a re-enactment of the School Survey Law of 1941. There seemed to be considerable interest in its re-enactment and a number of people expressed the opinion that they thought it should receive more favorable reception in the various counties now that its purpose was better understood.

Paul Conklin, president of the State Association of County Superintendents, was asked to give his opinion of why the School Survey Law of 1941 achieved such meager results. He said that perhaps it came too suddenly. Also people in the past have been afraid of the term "consolidation." Again, he said, many people thought that the legislature did not appropriate enough money to each county to make an adequate survey.

Mr. Longerman of Madison county asked what could be done where consolidation was impossible and where some pupils were sent out of the district to other schools. He wanted to know what could be done to protect the home district. John Watson of the IAA staff stated that the school to which the strayed pupils had gone could not legally collect either general or special state aid on those non-resident pupils but that the home district could collect general aid on those pupils who were attending school elsewhere just the same as on those who remained in the home school.

Mr. Marshall of LaSalle county called attention to the recommendations in the school report that a county superintendent be allowed to appoint extra supervisors for rural schools and recommended that in order to take the appointment of these supervisors completely out of politics, it had best be done by a board or committee chosen by and from the rural area and acquainted with their interests.

There were a number of other suggestions made and questions asked and answered, but we attempted to give you only an idea of the trend of the discussion.

A number of people prominent in the field of education and particularly interested in rural school improvement were present, among whom were the following: Cary C. Byerly, first assistant to the State Superintendent of Public Instruction; Paul Conklin, president of the State Association of County Superintendents; Alden B. Mills, president of the Illinois Association of School Boards; Robert Cole, executive director of the Illinois Association of School Boards; John Strohm, managing editor of Prairie Farmer; Dr. Hans Olsen, College of Education, University of Chicago; H. D. Bossert, director of planning of the Postwar Planning Commission; and Prof. D. E. Lindstrom, College of Agriculture, University of Illinois.

Appreciation was expressed for the amount of time spent and the sacrifice made by members of the IAA school committee in making their report and commendation for their success.

H. F. Mullooly Is Hired As IPC Quality Fieldman

H. F. "Bert" Mullooly, graduate of of the University of Wisconsin in dairy manufacturing in 1935, began work Nov. 15 as quality fieldman for the Illinois producers' Creameries. He succeeds D. H. Jacobsen, who has taken a position with a dairy manufacturing equipment company in charge of laboratory experimental work with washing powders. Dr. Jacobsen started work with the IPC in April, 1941, when Dave Henry went in the Army.

Mullooly is the oldest son of L. M. Mullooly, who served as a director of Pure Milk Association for more than 11 years and retired in 1942 because he had to give more time to his 181-acre dairy farm at Clinton, Wis., since two of his sons are in the Army. The two in the Army are Sgt. William, stationed in this country, and Cpl. Gordon in the South Pacific. One son, Henry, is helping his father with the dairy herd of 35 cows at home.

After graduation from the University of Wisconsin, Bert Mullooly worked as butter maker at the university for eight months and then in 1936 went with an ice cream company at Milwaukee as plant manager. He later was transferred to the company's Fond du Lac plant in 1937, and from 1940 to November, 1944, worked as plant manager for several large dairy companies.

"Since my Dad has always been active in Farm Bureau and cooperative work, I naturally became interested in the cooperative field. That's why I came to work for the Illinois Producers' Creameries," Bert said. Bert is 33 years old, is married and has four children.

At the farm advisers'-Farm Bureau presidents' luncheon, left to right, Verne Holland, assistant manager, Farmers Mutual Reinsurance Company; Clyde D. Herbert, president, Fulton Farm Bureau; J. E. Watt, Fulton farm adviser; H. E. Hartley, president, Washington Farm Bureau; A. B. Rowand, Washington farm adviser. In picture to right, seated, left to right are Ray H. Jackson, president, Stark Farm Bureau; W. A. Gilbert, Stark farm adviser; H. H. Lett, Wabash farm adviser; L. E. Lingenfelter, Winnebago county, secretary, Farmers Mutual Reinsurance Company, and Leslie B. Broom, Pulaski-Alexander farm adviser. This joint session began at 10:00 A.M. and adjourned at 4:00 P.M.

Mast Resigns as Publicity Director; Foster Named To Head Department

RESIGNATION of C. L. Mast, Jr., as director of publicity for the Illinois Agricultural Association, was announced early in December by Earl C. Smith, president of the Association. Mast will leave the staff of the Association Dec. 4 to become editor of the United States Gypsum's publication, "The Business of Farming."

Smith also announced that Creston Foster, assistant editor of the IAA RECORD, official monthly publication of the Association, has been named as the new director of publicity.

A graduate of the U. of I. College of Agriculture, Mast grew up in Farm Bureau work. In 1930 he began work as assistant farm adviser in LaSalle county, and with the exception of a year and a half spent as assistant editor of Prairie Farmer, "Cap" has been in Farm Bureau work since that time. He joined the IAA staff in October, 1937, and as director of field service helped prove the value of film programs to Farm Bureau activities by writing, directing and editing three successful sound films. He also built up a film library of more than 100 motion pictures to be made available at Farm Bureau programs. In 1940 "Cap" was made director of publicity for the IAA, and his work in this department speaks for itself. The many friends "Cap" has made throughout Illinois will be sorry to learn of his leaving the IAA, but he has said that he intends to keep in touch with agricultural affairs and to watch the continued progress of Farm Bureau.

C. L. Mast, Jr.

Foster came to the IAA in the fall of 1941 after serving as farm editor of the Evening Courier, Urbana, for five years. He is a graduate of the University of Illinois School of Journalism.

Creston Foster

C. M. Seagraves, who has been on leave of absence for the past two years from his position as advertising director in the IAA publicity department while serving as a lieutenant junior grade in the U. S. Navy, has returned to assist Foster in the department.

C. M. Seagraves

Merrill C. Gregory, editor of the IAA RECORD, third member of the IAA publicity department is on leave of absence serving as a second lieutenant in the U. S. Army.

Fred E. Ringham, secretary of St. Louis Bank for Cooperatives; Dana Cryder, Locker Service president, and S. T. Warrington, FCA, at the locker conference.

"Great Future for Co-operatives"

THERE is great opportunity for co-operatives in the field of processing and merchandising agricultural products, L. B. Mann, senior agricultural economist, Farm Credit Administration, Washington, D. C., declared at the Illinois Cooperative Locker conference held in conjunction with the 30th annual meeting of the IAA in the Hotel Sherman, Chicago.

In the postwar period, agriculture must move "across the board" both in the marketing of farm products and in the manufacturing and purchasing of farm supplies, rather than remain in the field of selling raw products at wholesale and buying its requirements at retail, Mann said. This development is necessary if agriculture is to maintain a reasonably satisfactory standard of living in the postwar period, he said.

L. B. Mann

Under such a program farmers can, if necessary, produce crops and livestock at relative low prices if they are able to supplement this income with some additional savings from further processing and distributing margins, he asserted.

Through such a system, prices to consumers might also be held more nearly in line with those realized by producers and consumption outlets maintained and expanded, Mann explained.

"The Cooperative locker plant of the future can have a definite place in the postwar program of livestock and meat marketing and distribution, provided it fits itself into a sound pattern of operations.

"To fit into such a pattern it would seem advisable to give consideration toward centralizing their slaughter as well as processing into fewer plants, which, because of their size, could make more efficient use of trained labor and modern equipment," Mann said.

Mann also pointed out that by establishing rendering plants, locker plants could make economical use of the inedible by-products from slaughtering and processing. At the present time, most locker plants are only salvaging the hides and pelts. On the average, he said, it appears that at present prices the income which might be realized from inedible offal averages about $1 per head for hogs and $3.50 per head for cattle. An average locker plant of 400 lockers capacity might realize from $1200 to $1300 per year from this source. Tankage for mixed feeds was also listed as another source of potential income from rendering operations.

Mann warned, however, that careful study should be given to the type, size and location of slaughtering or rendering plants so that "we do not make the same mistake that was made a generation ago in the dairy field with the establishment of too many small creameries in many sections of the Midwest."

Mann also pointed out that one of the most important reasons for the failure of cooperative meat packing plants in the past has been the lack of satisfactory sales outlets. The locker plant, he said, might well be a means of developing new and satisfactory sales outlets for co-

JOBS AFTER THE WAR

Excerpts from the Address of

PAUL G. HOFFMAN

Chairman, Committee for Economic Development

At IAA Annual Meeting, Nov. 30

★ ★ ★ ★ ★ ★ ★ ★ ★ ★

Paul G. Hoffman is chairman of the Committee for Economic Development and president of the Studebaker Corporation.

SPEAKING for industry, may I say that the history of this country between World Wars I and II clearly showed that unless our seven million farmers are faring well, any prosperity on the business front is ephemeral and short-lived. Conversely, it seems obvious to me that the great hope for prosperity for agriculture in the postwar period lies in a high level of productive employment in the trades, commerce and industry. What I am saying is that for our mutual well-being, it is essential that we match the high level production which always obtains in the agricultural field with high level production in the industrial field.

56 Million Jobs

If there can be provided in the postwar period a sufficient volume of well-paid peacetime jobs, the general public will have little or no interest in proposals for overall economic planning. There is today general agreement among economists and statisticians that an employment level in the immediate postwar period of between 53 and 56 million civilian jobs will be eminently satisfactory. This assumes an additional two million men will be in the armed services. Involved in the reaching of this goal is the creation of from seven to ten million more peacetime jobs than were available in 1940, our last peacetime year.

To bring those additional jobs into being will take more than speeches about full employment, or resolutions demanding "jobs for all." All employment falls into two categories: (1) employment by the government, and (2) employment in the field of private endeavor.

Many loose statements are being made suggesting that if jobs are not available in the field of private endeavor the government will, of course, have to supply them. Perhaps we had best take a look at the potential postwar government employment before we put too much faith in these suggestions. In 1940 there were approximately three million three hundred thousand individuals employed in regular government establishments — federal, state and local. There were about two million nine hundred thousand employed on WPA, NYA, and CCC, and similar governmental units. There were approximately 97,000 employed on public works projects under the PWA. By the end of 1946 there might be as many as four million employed in regular government establishments. As for employment on public works projects, the best guess I can make after exhaustive investigation is that there might be as many as two million jobs available. It all nets down to just this — that if we push along with our public works planning we may have available useful jobs on the government payrolls totaling almost the same number we had on those payrolls in 1940. That's real progress, because in 1940 half the employment was of the "made-work" variety. Still, unless we want to go back to "made-work," I believe it is fair to say that we cannot look to the government for a single one of those seven to ten million new productive jobs we need.

If we cannot — let alone should not — look to government for the millions of new postwar peacetime jobs that will be needed, then the conclusion is inescapable that those jobs must be made available in the field of private endeavor — manufacturing, agriculture, commerce, trades and services. Perhaps of the seven to ten million jobs needed we can look to some five hundred thousand in the field of self-employment.

Need Expanded Production

As a collateral conclusion, it also seems obvious that the one sound way in which those jobs can be made available, if we are to maintain or advance our standard of living, is through a record-breaking expansion in the output of goods and services over the last peacetime year of 1940. That increase will have to be somewhere between 30 and 45%. Stated in terms of 1943 prices, it means we must achieve a gross output of from $155 to $170 billion. Just as a matter of information, that's equivalent to $130 to $140 billion in terms of 1940 prices. I should also like to make clear that I am talking about gross national output rather than net national income, which is, of course, a considerably lower figure.

The fact that a goal in output of $155 to $170 billion is needed in the postwar period does not prove, of course, that it is attainable. No one can guarantee it. However, it is the studied opinion of the Research Committee of the Committee for Economic Development that this goal can be reached — and perhaps exceeded — in the first postwar decade provided America's two million employers are ready when the green light is given for civilian production, with bold, smart plans; and provided the economic climate is favorable to the expansion of present businesses and to the starting of hundreds of thousands of new businesses quickly. A country that shocked the living daylights out of Mussolini, Hitler and Hirohito by raising and equipping a ten-million man army and a two-ocean navy in less than two years can take this task in its stride — if it achieves the same unity in the winning of the peace that it has in the winning of the war, and if it works with the same speed.

C.E.D.'s Work

The Committee for Economic Development has been endeavoring to contribute to the winning of the peace by carrying on a two-phase operation. Through its Field Development Division it has attempted to stimulate and assist America's two million employers in the making of

their plans, first selling them the idea that it is smart to plan boldly if you plan smartly. The second phase of the operation is carried out by our Research Division. Through this division we are hoping to effect the changes needed in government and business policies from the standpoint of an expanding economy.

The Field Development Division has two functions: (1) to gather from all possible sources helpful information on postwar planning, and (2) to disseminate that information to as high a percentage of America's employers as possible.

Much information of value to all businessmen already has been accumulated. More is being gathered. Experts in manufacturing, marketing, sales, finance and management engineering are pooling their knowledge and making it available to expert writers who can tell the story in such a way that you and I can understand it. Booklets and slide films in considerable number have already been prepared dealing with various aspects of postwar planning. Examples of this material are handbooks on manufacturing, wholesaling and retailing which were prepared under the direction of the Association of Consulting Management Engineers in the business management field. There is also a set of five booklets on sales training prepared by the National Society of Sales Training Executives. To be published shortly is a twelve-chapter book dealing with the twelve materials that will figure most importantly in postwar manufacturing. It is vital for those of us in the industrial field to know what has been happening to steel, aluminum, plastics and other materials during the war.

The fact that much information has been and is being assembled does not, of course, fulfill the second function of the Field Development Division, namely, to disseminate that information to America's employers. . .and that is a tough job. Selling a superior product is tough enough, but nothing compared with the difficulties of disseminating knowledge. To get a high percentage of America's two million employers to plan boldly and intelligently calls for a carefully conceived campaign. We are operating on three fronts: (1) through direct contact with the largest corporations, (2) through the United States Chamber of Commerce, the N.A.M., and trade associations, and (3) through C.E.D. committees in the more important employment centers.

More Farm, City Jobs

I am happy to report to you that Main Street *is* mobilizing. And I don't mean Main Street, New York, or Chicago, or San Francisco. More than two thousand C.E.D. committees have been organized throughout the country. In almost every case they are staffed by and working closely with existing local organizations. The programs of many of these communities make an exciting story and I wish I had the time to tell you about them. I am going to take the time to tell you briefly something of what just one state is doing — a typically agricultural state. The Greater South Dakota Association, working in cooperation with the C.E.D. recently completed a survey on "Postwar Employment and Postwar Buying Intentions." This survey was conducted by local committees in 117 cities and towns in South Dakota representing 78% of the urban population of the State, and by neighboring leaders in rural communities in all counties of the State. You may be interested to hear that this survey indicated that after the war South Dakota farms will provide about 10,000 more jobs than in 1940, while the state as a whole will have 23,000 more jobs than in 1940.

Now I should like to discuss the Research Division. It is charged with the responsibility of contributing as best it can toward providing an economic climate favorable to expansion. We do not have such a climate today. There are policies in business, government, labor, and agriculture which promote contraction rather than expansion. This is understandable, because many of those policies represent the thinking which stems from an economy of scarcity. The NRA, crop restriction programs, and featherbedding rules for labor all have their genesis in the weird belief that by producing less and getting higher prices we could somehow or other work our way out of the depression. Fortunately, as a result of production miracles achieved during the war period, that kind of thinking has temporarily lost its popularity, but the policies reflecting such thinking remain.

Our Committee, in considering how it might engage in a constructive activity looking toward the creation of a better economic climate, reached certain conclusions: First of all, we recognized that the only sound approach in the appraisal of policies should be from the standpoint of the general public welfare. We did not subscribe to the idea that what helps business helps you, but rather — what helps you and every other American, help business.

The activities of the Research Division have been organized to insure its operation at a statesmanlike level. The Division is composed of three sections: (1) a Research Committee composed entirely of businessmen; (2) a Research Advisory Board composed of outstanding social scientists which assists the Research Committee in planning and conducting studies; and (3) a full time Research Staff headed by Theodore Yntema, Professor of Economics, on leave of absence from the University of Chicago.

When a subject of research has been approved by the Research Committee, it is the task of the Research Director to select and employ the services of a specialist — or in some cases, several — in the particular field of the investigation. The individual so selected is responsible for the preparation of the study. The set-up of the Research Division is unique in that while independence is guaranteed the scholars, they have the opportunity to consult with businessmen and other scholars as their studies progress.

Two studies have already been completed: (1) the Liquidation of War Production (cancellation of war contracts and disposal of government-owned plants and surpluses) by Dr. A. D. H. Kaplan of the University of Denver, and (2) the study of federal taxation under the title of "Recasting the Postwar Federal Tax System to Encourage Production and Employment" by Harold M. Groves, Professor of Economics at the University of Wisconsin.

In addition to the reports made by the scholars themselves, the committee of businessmen reserved for themselves the right to make independent reports for which they were wholly responsible. Recently issued has been such a report under the title of "A Postwar Federal Tax Plan for High Employment."

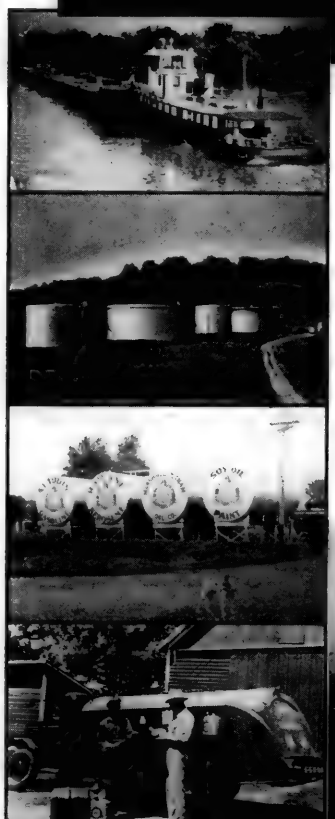
Foes We Must Combat

Ignorance is not the only foe we must combat if we are to win the peace. Skepticism, cynicism, and defeatism also must be dispelled. On the extreme right are those who believe that only through a postwar depression can the people, as they say, be brought to their senses. They refuse to recognize that a great postwar depression would put our freedoms in the greatest jeopardy. On the extreme left are the collectivists who see in postwar chaos the opportunity to build here in America some new type of fascist or communist state. Both groups, with vastly different ends in mind, suggest that the attainment of the great postwar expansion we need is an idle dream. My answer to that is that ever since the founding of this Republic those with faith and vision have been making the American dream come true, while the skeptics have stood by and scoffed.

As we meet here tonight, millions of American men are fighting throughout the world to maintain our liberty and freedoms. A very deep obligation rests upon those of us at home to keep alive for them the promise of a better postwar world — a world in which more people will have more than ever before.

18 Years Young—and Vigo

—WITH A LIFETIME AHEAD!



BORN MARCH, 1927, of Farm Bureau parents, a son. Today, charging the bastions of Metz—Ormoc—or Tacloban! So young, so vigorous, so heroic!

Born March, 1927, of Farm Bureau—an IDEA . . . an idea of farmers banding together within counties, and counties (only seven) banding together to establish a central purchasing cooperative to supply high quality petroleum products. Today, 65 Service Companies distributing 124,050 688 gallons of petroleum products to 105,000 members—an average of 1,180 gallons per member—a service that has been vital to the production of milk, meat, eggs, and grains that have helped to feed those heroes at Metz—Ormoc—or Tacloban!

Money values alone are poor measures in a world aflame. Yet it is significant that what farm people built to save money on their purchases proved to be the means of protecting their petroleum service of supply during the critical war days. For the year just ended, August 31, 1944, Illinois Farm Supply Company is distributing $795,730 to its member companies. These are savings brought about by centralized volume purchasing and manufacturing and transportation. This money will find its way into the pockets of Farm Bureau member patrons in the patronage dividend checks from their local associations.

In our 18 years of operation, Illinois Farm Supply Company has returned a grand total of $6,257,788.73.

. . . A LIFETIME AHEAD

In the beginning "gas and oil" was all. Now it's a full line of petroleum products, paints, tires, insecticides, accessories, poultry and livestock feeds, plant foods, inoculants, steel products equipment. The products and services are growing.

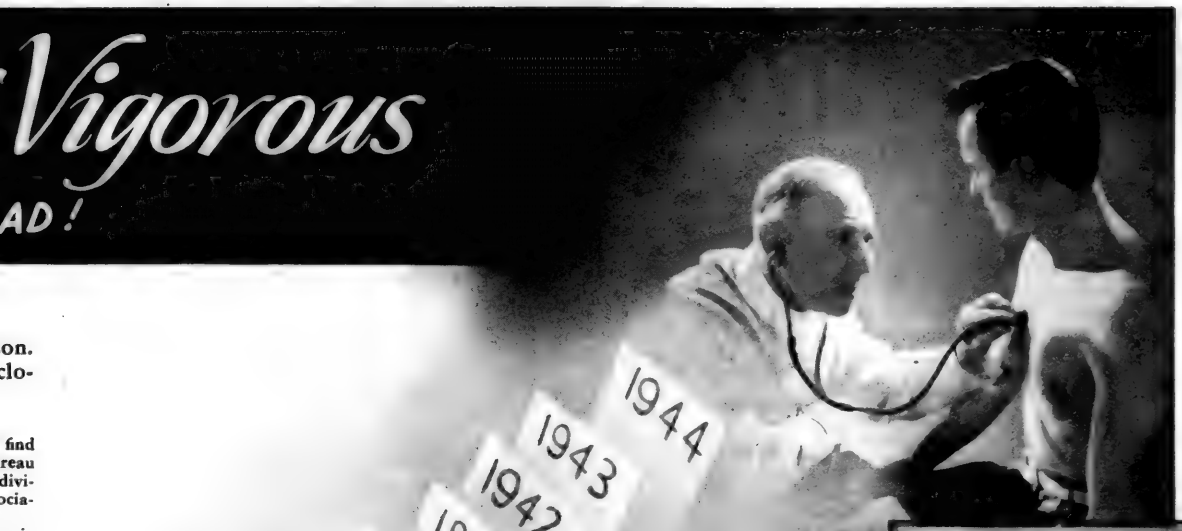
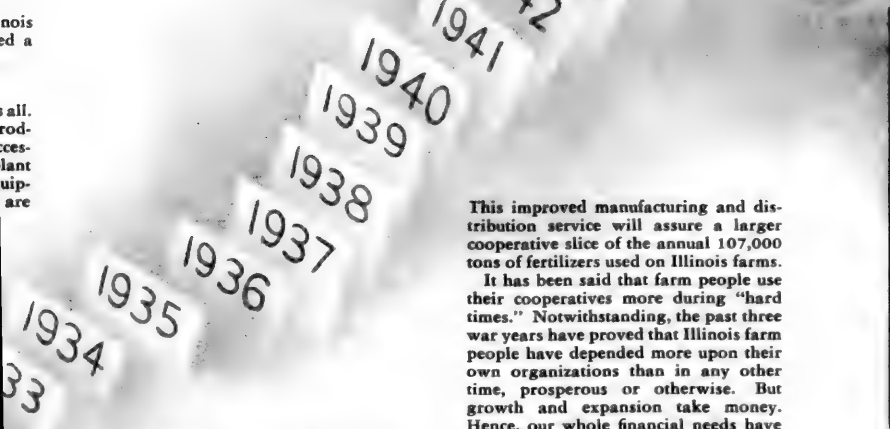
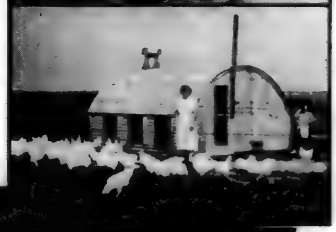
AD!







The "Direct-to-the-Farm" feed service has been stabilized after the upsets of the shortage era. This service will grow as trucks and manpower become more available. A new trend is evident, that of manufacturing "Service Brand" Feeds locally to save transportation costs on locally produced grains and assure effective quality control.

A plant food program for Illinois has taken new form. Farm people through their organizations are to have more to say on how, where, and who is to sell what Illinois has that enters into the manufacturing and mixing of plant foods. A majority of county Farm Bureaus have approved this program and designated their authorized local cooperative distributing organization.

This improved manufacturing and distribution service will assure a larger cooperative slice of the annual 107,000 tons of fertilizers used on Illinois farms.

It has been said that farm people use their cooperatives more during "hard times." Notwithstanding, the past three war years have proved that Illinois farm people have depended more upon their own organizations than in any other time, prosperous or otherwise. But growth and expansion take money. Hence, our whole financial needs have been examined with an eye to the future. It seems certain that we shall own some manufacturing facilities to protect our sources of supply. Likewise it seems advisable that local associations improve their facilities. But, as in the past, certain fundamentals will prevail. No new services or facilities will be added except those which farm people will support—with their money! Ownership of capital will be with farmers—reasonable returns will be paid on capital—adequate reserves will be built to protect this capital, and savings will be returned to member patrons in CASH patronage dividends. These fundamentals that built us strong in the first 18 years will be the same attributes of success in the LIFETIME ahead!

Dean H. P. Rusk
U. of I. College of Agriculture

WITH a succession of record-breaking harvests, American agriculture has met imperative wartime demands for increased production of foods, fats and fiber. Farmers have done a magnificent job and are continuing to carry on. During World War I American agriculture increased food production about 10 per cent, largely in wheat. During the present war the increase has amounted to about 30 per cent and has been spread over a greater variety of products (notably soybeans, milk, hogs, poultry, eggs, canning crops, and hemp), all needed in our wartime economy. And this increase was made over a high peacetime output, one which had resulted in granaries full to overflowing in the immediate prewar years.

This record poses some real problems as we look ahead to postwar adjustments in agriculture and to agriculture's relative position in our national economy. It seems reasonable to believe that demand for most agricultural products will remain reasonably high during the demobilization period and so long as lend-lease and rehabilitation aids are extended to war-torn countries. At the same time there will likely be inflationary pressures on prices of manufactured consumer goods of most kinds. This will be the probable result of the backlog of unsatisfied demands and the difficulties which industry will experience in changing over from production of war materials.

If all price controls were removed as soon as the fighting is over, agricultural prices would likely experience a temporary upswing along with the general price movement. But this upswing would be only temporary, because agriculture has no domestic backlog of demand and because its foreign outlets will most certainly be severely curtailed after the government stops its activities in foreign relief and rehabilitation.

In the meantime layoff of millions of war workers and demobilization of our armed forces will cause a significant amount of unemployment which, even if only temporary, will materially affect the domestic market for the higher priced food products. Food wants not satisfied on a day-to-day basis do not constitute a backlog of demand as do the unsatisfied wants for most other items of commerce. Hence if price restrictions are removed too soon, the exchange position of agriculture would likely deteriorate rapidly in relation to that of urban industry.

Agriculture in Strong Financial Condition

At the beginning of World War I the price of land and the prices of agricultural products averaged slightly higher than at the beginning of World War II. Prices of agricultural products advanced at about the same rate during the two wars but the price of land rose much higher during World War I than it has risen thus far in World War II. Farm mortgage debts also increased rapidly during World War I until by 1920 they were double the 1910-1914 average, and they continued to rise for four or five more years.

During the present conflict mortgage debts have consistently decreased, even though there has been a significant increase in the price of land. American agriculture had not fully recovered from the collapse that followed World War I, when the stimulating effect of present war began to be felt. Therefore, farmers have not forgotten the early twenties and the desperate thirties. Instead of capitalizing most of the wartime income in increased land values and contracting huge debts as they did during the last war, they not only have reduced their debts but have also accumulated billions of saving in the form of war bonds and more abundant operating capital.

This war, however, is not over. And it was during the latter part of the last war and particularly in the months immediately following it that the most disastrous inflationary movements in land prices occurred. Many farmers during that period contracted debts which resulted in the loss of their lifetime savings.

Danger of General Inflation

The temptation to conform more closely to the pattern of action followed during the last war becomes greater as savings accumulate from wartime prices and wartime wages. Not only are farmers more generally than ever before in A-1 financial condition but also a much larger number of people in all walks of life have accumulated significant savings. In so far as this accumulation represents a backlog of unsatisfied demands, it constitutes a very real threat of inflation. A further rise in prices of some consumer goods is probably inevitable. But if all price controls and all forms of rationing are suddenly ended at the close of the war and if this pent-up demand for goods is allowed to press freely on the price structure before compensating increases in production of consumer goods can take place, then inflation of a dangerous sort is likely to occur.

Factor for Stability

On the other hand, this backlog of consumer demand can be one of the most important contributions to a stable postwar economy. It can help to bring about reasonably full industrial employment for years to come if holders of wartime savings are willing to spend freely to meet their needs as consumer goods become available. They must insist on getting their money's worth, however, if their expenditures are to make the maximum contribution to full employment.

Of course, it may be argued that getting your money's worth depends as much upon the value of money as upon the price of the goods. In fact, the worth of money depends upon many factors, not the least important of which is the degree of confidence which people have in the stability of their national economy and this government's fiscal policies. . . . But our government has followed a reasonably sound fiscal policy in financing this war, and confidence in the value of the U. S. dollar is justified. Furthermore, continuance of national policies

necessary to prevent disturbance of that confidence are also justified.

For several reasons agriculture has a special interest in maintaining confidence in the worth of money. Among these reasons are:

1. In a period of rapidly rising prices not all prices rise evenly, and hence many inequitable changes occur. (Inequitable changes also occur during periods of rapidly falling prices.)

2. American agriculture is now overexpanded in relation to domestic needs. While certain foods such as meats and some dairy products might temporarily command considerably higher prices, if all price controls were immediately removed at the close of the war, the exchange position of agriculture in general would soon become vastly more difficult as costs of industrial goods and urban services spiraled.

EXCERPTS FROM ADDRESS BY

DEAN H. P. RUSK

AT IAA ANNUAL MEETING DEC. 1

---

3. All severe inflations have been followed by deflation with its inescapable attendants, unemployment and collapse of the farmers' markets.

4. Rural people have their full share of unsatisfied needs which will go a long way toward creating steady urban employment. Currently they have purchasing power and will use it if they are able to get their money's worth. This they will not be able to do if industrial wages and other costs skyrocket.

Farm Demand For Goods

. . . The extent of this backed-up farmer demand for both labor and goods is partially indicated by the first tabulations of results secured by a survey that the College of Agriculture has had underway for the past four months. In one northern Illinois county this survey indicates that there are about 300 farm operators ranging in age from 60 to 69, and that there are 40 who are over 70. Of these older farm operators, 180 are expected to retire soon after the war; 220 other laborers are expected to leave and there is a current shortage of farm labor of 520 men on a 12-month basis.

This makes an opportunity for a total of 920 new farm workers in that county after the war. Of these openings, 180 are expected to be filled by returning veterans and others absent for war work; 520 will probably be filled by boys now on farms just reaching working age. This leaves a net shortage of 220 workers — 220 jobs which will be available after the war.

A similar study of a southern Illinois county shows that there is a current shortage of 525 farm workers and that 105 workers now on farms are expected to leave, but returning veterans and war workers together with boys coming on total 1050. This makes an expected net surplus of 420 farm workers at the close of the war. Hence, it appears that different farming-type areas of the state will vary greatly in their ability to furnish farm jobs in the postwar period. Of this I will have more to say later.

In every county so far studied however, marked needs are shown for manufactured equipment, new building, long overdue major repairs, and other items the furnishing of which will be an important factor in the support of industrial employment. For example, the farmers of one county say they need and want to buy 1855 tractors, 210 corn planters, 525 wagons, 665 stoves and 455 deep freeze units. These same farmers are planning to build or remodel 210 homes. The foregoing are just a few items I have picked at random from the surveys that are now being analyzed.

But they are sufficient to indicate the potential demand backed up on the farms of America, a demand that will do much to sustain industrial employment — IF — if the farmers can get their money's worth — if the cost of these things the rural people of America need and want can be purchased at prices reasonably well in line with prices of products the farmers will have to sell. Farmers are now in much better position to be customers for industrial goods and services than they were after the last war and they will buy freely if they are encouraged by what they believe is a sound national business activity that promises a stable market for their products in postwar years.

Interdependence of Groups

. . . Looking beyond the demobilization and immediate postwar periods we must recognize that in a progressive society, standards of living rise as larger percentages of the population are released from the pursuit of the primary necessities of life and are thus enabled to contribute to society through the production of other goods and services. This can happen only where there is a continually increasing efficiency in agriculture. The efficiency of American agriculture has increased continuously from colonial days when 95 out of 100 families lived on farms until the present when only a little more than 20 per cent live on farms. Technological developments during the war or those about to emerge warrant the belief that agriculture may be on the verge of further revolutionary changes.

In the light of these facts and the necessity of adjusting production to postwar needs, it seems clear that agriculture should not be expected to provide opportunities for more than its fair proportion of returning veterans. Neither should it be expected to furnish a haven for large numbers of industrial workers who may become unemployed when war plants close.

Differences Between Agriculture and Industry

. . . That the gross money returns from this market for agricultural products are closely related to industrial activity is indicated by the fact that over the past 20 years one billion dollars of national income has meant 107 to 130 million dollars of farm income. However, there is not the same type of relationship between the prices of agricultural and industrial products. How prices of 10 major groups of commodities reacted to declining industrial activity during the depression of the early 1930's and how much more adversely the prices of agricultural products were affected than those of industry are shown by the following tabulation of changes in production and wholesale prices from 1929 to 1933.*

Commodity	Drop in Wholesale Prices	Drop in Production
Agricultural implements	15%	80%
Motor vehicles	16%	80%
Cement	18%	65%
Iron and steel	20%	83%
Auto tires	33%	70%
Textile products	45%	30%
Food products	49%	14%
Leather	50%	20%
Petroleum	56%	20%
Agricultural commodities	63%	6%

*Assembled by Gardiner C. Means and presented to Congress in 1935.

FORWARD STRIDES OF ILLINOIS AGRICULTURE

Governor Dwight H. Green

EXCERPTS
FROM THE ADDRESS OF
GOVERNOR DWIGHT H. GREEN
AT THE
IAA ANNUAL MEETING
NOV. 30

DURING the last four years I have learned, first-hand from farmers themselves, some of the problems involved in the agricultural industry, which, by virtue of its production of more than a billion dollars worth of food and fiber annually, is by far the largest single business in Illinois. I have marveled at the splendid war food production job of the Illinois farmer who, despite extreme shortages of labor and machinery and other handicaps, has, since Pearl Harbor, produced the greatest crops in history.

I have seen the Illinois farmer, often laboring from before sunrise until long after dark, producing record-breaking herds of cattle and hogs, bumper crops of grain, millions of gallons of milk and tons of milk products. To these must be added Illinois production of fruits and vegetables. poultry and soybeans, fats and edible oils — all of which play a vitally important part in winning the war.

The importance of Illinois agriculture to the well-being of all the citizens of our state becomes even greater when we realize that many of our greatest industries are wholly dependent upon the products of our farms for their raw materials. Our meat packing and soybean processing industries are the largest in the world. Our distilleries, canneries, flour mills and hundreds of other businesses depend upon the farm for their basic materials. And such industries as these which manufacture farm implements, in which Illinois also leads the world, depend upon a prosperous agriculture for their markets.

Activities of Department

During the last four years your state government has greatly expanded the activities of the Department of Agriculture. Our program has been particularly outstanding in the field of animal disease control. In the fight against cholera and erysipelas, both of them a costly menace to hog-raising, and in the battle against bovine tuberculosis and Bangs disease, which not only endanger the livestock industry, but which also menace human health, our work is further advanced than in any other state. Every request for assistance in animal disease control has been answered promptly by your State Department of Agriculture. The percentage of infection in Illinois livestock has been reduced sharply. And during the next four years we will continue to expand and develop this program.

The greatest forward stride in the fight against animal diseases will be the establishment of a College of Veterinary Science at the University of Illinois. This school, which we plan to get underway as soon as possible, will be submitted to the next session of the General Assembly as legislation which should mark a milepost in the progress of state government's cooperation with agriculture.

In a state which has nearly one billion dollars worth of livestock and poultry on its farms and which yet does not have one single school for veterinarians, I consider the establishment of this College of Veterinary science to be agriculture's most urgent need at this time. We are determined that no Illinois rural community shall be without a veterinarian. We are determined that the Illinois livestock and poultry industry, already strong and prosperous, shall continue to grow and expand unhampered by disease or lack of proper protection.

Praises IAA

Illinois agriculture is extremely fortunate in having an organization like the Illinois Agricultural Association, whose one hundred and seven thousand members represent such constructive thinking and such sound leadership in meeting and solving the problems of the Illinois farmer. And after comparing the IAA with similar organizations in other states, I know I can say without fear of contradiction that from the standpoint of membership, of sound financial structure, and of constructive policies and solid achievements, the Illinois Agricultural Association is the finest and most effective organization of its kind in the United States.

Here in Illinois, our cash reserve surplus of a hundred and ten million dollars in the state treasury saved during the war years by economy and budget-limit spending, will give us a head start on our sister states if it is expended wisely—used for the things of basic importance to stimulate Illinois agriculture and industry and to help create jobs for all workers. One of those basic improvements which is most vitally important to Illinois agriculture is transportation. And I am happy to be able to tell you that the blueprints for our multi-million dollar postwar highway construction program have already been prepared. That work only awaits the "go" sign after victory.

More Postwar Plans

The task of soil conservation—definitely a basic need of Illinois agriculture—has received particular attention from your state administration. The number of conservation districts has been increased in the last two years from twenty-five to forty-three, embracing something like nine million acres. More districts will be organized, and when these new ones are added under our long range plan, the technical resources of the state in preserving soil fertility by the very best methods will be extended to many new sections.

For flood control and drainage the postwar program calls for an estimated expenditure of approximately five and one half million dollars, subject to legislative approval. New levees will save

(*Continued on page 35*)

President Smith's Address

(*Continued from page 9*)

on the proposal. The General Assembly also should provide that in considering the Gateway Amendment, the party circle would be counted for the position taken by that party on the proposed amendment unless the voter indicates otherwise.

It certainly is time that leaders of the State, and thinking citizens generally, provide a method for the constructive amendment of our State Constitution. Attempts to amend the constitution should not be longer thwarted by that percentage of the people who are not sufficiently interested in matters of such vital importance to even vote.

In the field of Public Relations there is no more difficult period for an organization such as ours, or for its leadership and others who speak for an organization, than during a presidential campaign year. This has been particularly true during 1944, because of the nature of the campaign, the issues involved, and the tempering influence of wartime conditions. There were few, if any, issues presented during this campaign that were not of direct interest to the farmers of the country. But as in former years, policies of the organization were strictly followed, and those speaking for the organization confined their statements to the records of men and women in public life, and partisan interest or attitude was not permitted to influence official statements of any character.

Recommendations to Both Parties

As during former presidential campaigns, representatives of the American Farm Bureau Federation presented their views and recommendations on national agricultural policies to the platform committees of both major parties. Immediately after announcements were made by both the Republican and Democratic national conventions on matters directly affecting agricultural interests, I stated publicly "that the platform commitments of each of the major parties were reasonably satisfactory, but that a careful re-reading of both party commitments to agriculture was convincing that it behooved farmers to organize as never before, both for the purpose of securing and limiting agricultural laws and administrative policies to the real needs of agriculture." I still stand on that statement.

These and other broad national issues were freely discussed by candidates of all parties throughout the summer and fall. The election is over and the American people have made their decision. Let us now all recognize that our first and supreme duty is to continue making our greatest contribution toward achieving complete victory in war. Reports from the battle fronts everywhere are encouraging and convincing. American sons and daughters are invading the countries of the enemy on every front, but the road before them is long and arduous. All that we possess in productive capacity, in the strength of our hands and minds, and in patriotic zeal must be consecrated to the end of sure and final defeat of the enemy, and the establishment of a just and durable peace. Overwhelming is our desire for that happy day when American boys and girls return to their homes in the full realization of a job completely and well done.

Fully cognizant of their responsibilities, farmers have, throughout the war, demonstrated their fidelity and their devotion to their country. In spite of continued, and at times almost insurmountable difficulties, farmers have met every call of their government for food and fiber. Rural young people are serving in the armed forces in numbers at least equal in proportion to that of any other group, and thousands have made the supreme sacrifice. Farm families everywhere have not only bought, but are holding war bonds in volume that leaves no question of their devotion to the cause of freedom. All of these things farmers are continuing to do.

Must Prepare for Successful Peace

Regardless of obstacles already confronted or others yet to be met, farmers will neither slow up nor let down in their support of the gallant American men and women in uniform until their glorious achievements have been climaxed by the unconditional surrender of the enemy in both Europe and Asia. But we must not let our zeal for the defeat of the enemy becloud the responsibility of those of us on the home front in preparing for a successful peace.

It is high time that we recognize that while no country in the world can destroy us, we could commit national suicide. We must face the grim reality of a national debt approximating three hundred billion dollars. This is almost the equivalent of the total value of every kind of property in the United States. We already have those among us who are saying it will be impossible to meet this national obligation. We are already hearing suggestions as to the necessity of refinancing, of frozen or delayed payments, and some even suggesting a degree of repudiation. To adopt any of these courses is to invite disaster. I am one who believes that if we all face our responsibilities fairly and squarely, the production resources of the United States are of a size and character that will permit us to meet and discharge this national obligation with comparative ease. As a nation, we have surprised the world with our capacity in every field of endeavor in meeting the requirements of war. In the light of these accomplishments, how can anyone deny our capacity to meet the problems of peace? We have the raw materials. We have the skill. We have the reservoir of purchasing power and we have the need. The real nub of the question is — has experience yet taught us that only through a spirit of fair play and fair interchange of the commodities of our total productive capacity can the job be done.

Agriculture Must Have Recognition

What part, or rather I should say, what responsibility do farmers have in meeting and solving this over-all problem? People generally recognize and are increasingly appreciative of the ability and capacity of farmers to produce food and fiber, but there is yet altogether too little understanding of the important place agriculture occupies in our national economic life. In other words, I believe that the masses yet think of farmers as those who provide food, but they do not realize the importance of sustaining farm prices and farm income and farm buying power as a requisite to large scale production of other industry and to mass employment.

For twenty years those in public life have spoken frankly of agriculture as the basic industry, but I ask — has it been treated as such? Throughout the years every recognition given agriculture, and every advancement made by agriculture has been secured as a result of organization argument and pressure. With limited exception, every consideration given has been in the nature of a compromise. Never in my experience has the agricultural problem been met squarely from the standpoint of the importance of a prosperous agriculture to the welfare of every man, woman and child in the United States.

Agriculture Source of Raw Wealth

These experiences dictate the importance of reviewing the place agriculture occupies in the economic life of our country. The record discloses that the total investment in agriculture now approximates eighty-three billion dollars. This is more than the investment in our railroads, all of our utilities, and all of the equipment in all of the mills and factories of the country. In fact, total investments in the business of farming now approximate, if not exceed, the total of investments in all other American industries put together, outside of non-agricultural real estate. Economists generally agree that the production of agriculture constitutes a major portion of the new raw wealth produced annually. It

is an established fact that the level of values placed upon new wealth produced annually has a direct and effective influence in determining total national income. Under normal conditions and periods of relatively fair income, farmers constitute the largest purchasers of the products of mills and factories. With such an interdependency, how can anyone doubt the wisdom of establishing and maintaining national policies that are necessary to maintain the price levels of farm commodities and the income of farm people on a basis of fair relationships with industry and labor?

How can anyone deny interest in policies necessary to assure the placing of reasonable values upon the new wealth produced by agriculture, in the light of the established relationship of the value placed upon our annually produced new wealth, to total national income? With farmers constituting the largest outlet for the products of mills and factories, how can any stockholders or worker in a factory fail to recognize his interest in a prosperous agriculture?

Need High National Income

If this nation is to meet its obligations adequately, we must maintain in America a very substantial national income. Only from such a large national income can we find the reservoir for maintaining the type of a tax structure necessary for the orderly retirement of national obligations. Only by meeting these obligations can the solvency of the nation be assured, national integrity preserved, or can we, as a nation, avoid chaos and some type of dictatorship. Such a large national income can only be maintained through large scale production in both agriculture and other industry, and, as everyone knows, large scale business activity is essential for mass employment. Such large scale production can only be maintained through the adoption and the maintenance of policies necessary to assure the interchange of agricultural and other industrial commodities on a basis of fair exchange value. Thus is witnessed the inescapable inter-relationship of interest between jobs for the people at good wages, reasonable returns to the investors in business and business management, and a restored and prosperous agriculture.

Stresses Interdependence of Groups

Notwithstanding these relationships, we still have those who seek ways and means of securing or protecting unfair and selfish interests. We still have those who want high wages and cheap food. They point to the increase in farm prices since 1939, but fail to recognize that in 1939, farm prices were the lowest in twenty-five years, except for the depths of the depression. They fail to recognize that from the increase of seventy-seven and one-tenth billion dollars in national income in 1943 over 1939, farmers, who constitute approximately twenty-five percent of the population, received only eight billion dollars, or only ten percent of this increase in national income.

Importance of Stable Agriculture

We have those who still place major emphasis upon high hourly wages, but who give little attention to the importance of large scale employment at regular monthly wages and substantial yearly incomes. We still have those in industry who hold tenaciously to per unit profits instead of recognizing the greater value of net annual returns from larger scale production. It was the failure to recognize the inter-relationship of a prosperous agriculture, large scale business activity, and mass employment following the last war that sowed the seeds of the late depression. We must avoid a repetition of these experiences. To do otherwise, is to court disaster.

Many well meaning people seem to think that present day savings of farmers will constitute an adequate reservoir of purchasing power throughout the period of readjustment. Those who subscribe to that theory do not understand nor are they acquainted with the financial thinking of farmers. It is my well considered belief that unless farmers can be assured of the soundness and effectiveness of policies necessary to sustain agricultural prices and income in the days ahead, that purchases of the products of other industry will be confined to farmers' immediate needs. However, with the assurance of sustained agricultural prices and income, farmers' demands for the products of industry will reach a volume that will surprise the nation. One has only to witness the conditions and the limitations on the farms of America to recognize the vastness of a market for the products of industry that will be required to meet the pent-up needs of farmers and other rural people. It has been said that only one-tenth of one percent of the farm homes of America now have modern conveniences. It is the rural women of America who are bearing and raising relatively a preponderance of our children. It is in the farm homes of America that women are called upon for much greater daily toil than in other walks of life. Can anyone successfully deny that the women of rural America are entitled to every modern home convenience enjoyed by a substantial portion of the women of our cities?

Farmers, of course, recognize the importance of mass employment at substantial wages as essential to provide the farmers with their best market, but we also recognize there is a limit to the capacity of the human stomach. But at least for many years, there is practically no limit, except the limitation of purchasing power, on the volume of manufactured commodities farmers will require and will purchase for the improvement of farms and farm homes, if given the opportunity.

Control of Surpluses Necessary

How can agriculture be sustained at prosperous levels and avoid the experiences of earlier years, when the records show so clearly that in years of large production, the total value of farm commodities was much less than in years of more limited production? I believe the answer is much more simple than many seem to think. To me, the agricultural problem can be divided into two parts. First, the problems connected with the proper and effective control of surplus reserves of basic soil crops, and secondly, the problems of providing and maintaining policies known to be necessary for the stabilization of the prices of commodities produced from such basic soil crops. Dealing with the first — no one has yet invented any scheme to control elements of weather and growing conditions that largely determine the annual volume of production of basic soil crops, such as corn, wheat, rice, cotton and tobacco. National protection and welfare requires the production and the carry over of large surplus reserves of such basic soil crops.

Reserves Protect National Interests

Everyone knows that when supplies are greatly in excess of current demand, price levels break and values are substantially lowered. If we are to stabilize values, it becomes immediately apparent that policies must be maintained for the proper and effective control of such surplus reserves so as to remove their bearish effect upon current prices. Certain it is that if such surplus reserves are produced, for the protection of the consumer and the national interest, it becomes a national responsibility to adopt and to maintain policies essential for the effective segregation of these surpluses and their control in a manner necessary to remove their otherwise disastrous influence upon current price levels and values. As a backlog intended only to make sure that surplus reserve volume does not get out of bounds, we must at all times maintain policies necessary for the intelligent adjustment of supplies at the point of production.

Some people call this regimentation,

but the same principles and policies have been used and made effective by other lines of American industry throughout the century, and they have not only been used, but abused by monopolistic business and by certain groups of organized labor.

There need be no fear of farmers ever curtailing production beyond absolute necessity, as inherently they want to produce, and experience has proven throughout all history, that they will provide adequate volume of food and fiber to meet every national need.

Other Phase of Farm Problem

The other phase of the farm problem is somewhat different in character, although the principles involved are about the same. Hogs furnish a good example. They are produced largely from corn, but pound volume can be adjusted rather quickly to balance supply with demand by marketing within a rather wide range of weights. Marketing trade agreements have proven to be sound and effective in handling the milk problem, and I am one who believes that similar trade agreements could be used very effectively in stabilizing the price levels of livestock. Undoubtedly, under any kind of policies, there will be some reasonable fluctuation in prices and values according to current economic conditions and the relationship of current supplies to demand, yet when agricultural tradesmen come to realize that their self-interest can be best served through the stabilization of agricultural production and commodity values, we will have made great strides in stabilizing agriculture in a manner that will best serve the welfare of the nation as a whole.

Those engaged in the agricultural trades constitute a very considerable portion of the total manufacturing industry of the country. Records reveal that thirty percent of all manufacturing industries in the United States are engaged in the manufacturing and processing of food and other raw agricultural products. They employ one-fifth of the wage earners in our factories, and their manufactured products constitute one-fourth of the value of all products manufactured in the United States.

Of all wholesalers of commodities, thirty-six percent are engaged in handling agricultural products, and they in turn employ thirty-five percent of the total wage earners in the wholesale houses of the country. Nearly one-half of our total retail trade is engaged in retailing food. They employ thirty-five percent of all wage earners working in retail establishments.

Urges Marketing Agreement Extension

I firmly believe that through the proper use of the marketing agreement section of present law, agricultural producers and processors and manufacturers of food and raw agricultural products, and agricultural tradesmen could each protect their rightful interests and do so in a manner that would best serve the consuming interests of the country. Unwarranted fluctuations in prices and values could be avoided, speculation held to a minimum, confidence restored and the best interests of all people served. Thoughtful people recognize that under the speculative system, there are just as many downs as there are ups in price levels, and while at times there are those who reap large profits, in the long pull there are just as many who get squeezed out of business operations. I recommend that more attention be given to exhausting the possibilities in the use of marketing agreements.

Keep AAA Sound

We already have on the statute books a great national agricultural policy, known as the Agricultural Adjustment Act, which includes the agreements section to which I have referred. Many confuse the principles and the purposes of this law with the abuses that have been experienced in the field of its administration. For several years I have pointed out some of these serious trends and because of so doing have many times been misunderstood, even by friends. A year ago, I stated that I firmly believed the principles and purposes of the Agricultural Adjustment Act would be found more sorely needed in the days ahead than ever before. I repeat that statement now, but I am saying here with increasing emphasis, that if this law is to be protected and improved, and if it is to become more and properly effective in the field of its administration, many of the activities that have crept into its administration must be stopped. Its administration, its programs, and its day to day operations must be so conducted that they can be fully justified at all times by farmers and before the court of public opinion. The kind of agricultural policies which I believe are necessary for the maintenance of agriculture at the level of its national importance makes it imperative that such policies far transcend the field of partisan politics. It is imperative that such policies be considered and accepted in the proper realm of the national importance of agriculture and that we quit kitking the problems of agriculture around in every political campaign. Certainly, no political party is entitled to all of the credit or all of the blame for the manner in which agriculture has been treated.

The experiences of hog producers last spring and again this month, and the experiences of egg producers during the year are convincing evidence that partisanship has no place in the consideration of these important issues. Both Democrats and Republicans have to eat and they have to have jobs if America is to endure.

Recommends Non-Political Board

For these and other reasons, I again recommend placing all administrative responsibility for national agricultural agencies essential for the welfare of agriculture, under an independent non-political board. Until this is done, I do not believe it will be possible to have the problems of agriculture considered on the high plane of its overall national importance. Such coordination of these agencies is also imperative for greater efficiency, and for strict economy in their administration. We must face the fact that economy in all government functions must be demanded and practiced, if the nation is to meet its obligations. Farmers might well set the example in this respect, and thus be in a better position to demand similar economies in every activity of government.

Hold to Parity Formula

Before leaving the subject of national agricultural policies and programs, I feel impelled to say just a word about the parity formula, which is included in this Agricultural Adjustment Act. As you well know, this formula sets forth that a fair price for a basic farm commodity is one that gives the commodity a fair exchange value for the products of industry, and uses the average of the years 1910-1914, inclusive, as a basis for such determination. I do not believe there is any important provision of agricultural law enacted in the last twenty years that received as much careful and sympathetic consideration as did this provision of the Agricultural Adjustment Act. It is not perfect, and possibly it can be improved, but I am becoming not only concerned, but alarmed at the number of people, some no doubt, well meaning, who speak of this provision as being outmoded and belittle it in many ways.

I admonish farmers to hold tenaciously to this provision of law, at least until such time as those known to be sympathetic to agriculture can present something to take its place that in the light of careful study is equally good or better, and as defensible and understandable as the present formula.

Time will not permit, nor do I think it necessary to speak at any length on the question of farm credit. However, I again recommend that as an organization, we seek such adjustment of present laws as is necessary to put all phases of

agricultural credit under the administration of an independent non-political board. I believe this to be essential for the removal of duplication of credit agencies as they exist in many areas today, for the economic administration of broad credit laws, and for their practical application to farmers' needs.

If the industry of agriculture and the business of farming can be restored and maintained at the levels essential for the national good, the demands for credit of many kinds will be lessened and administrative costs can, and should be reduced comparably.

Serious Problems Ahead

Among the more serious and difficult problems that farmers must meet and overcome are those resulting from wartime subsidies that dairy farmers particularly, have been forced to accept as a substantial part of their income. That these subsidies will be discontinued when the pressure of war is lifted, there can be little doubt. It is well to remember that our organization recognized and warned of these problems when aggressively opposing the adoption of any government policy providing subsidies as a substitute for any portion of farmers' rightful income. We can be thankful that those urging and supporting policies of this character for other segments of agriculture, did not succeed, and it will be to the everlasting credit of middle west dairymen that they fought the adoption of subsidies, in lieu of fair market prices, to the last, and yielded only when forced to do so. It will be difficult, indeed, to secure proper readjustment in market prices to compensate for the loss of subsidies to the dairymen during a period when general employment conditions may not be as attractive as during war, but the valiant and determined opposition of middle west dairymen to the adoption of subsidy policies entitles them to, and they will receive," the wholehearted cooperation of all other farmers in seeking policies and programs necessary for the protection of dairymen when subsidies are removed.

Farmers Have Responsibility

A year ago I warned against overoptimism resulting from statements coming from men in public life and positions of authority, that farmers would experience a period of prosperity in the postwar world lasting for many years. At that time farmers were being told that the hungry world would require capacity production on the farms of America for many years after the close of the war. Only a few months ago, we all witnessed a rightabout-face by some of these same men in positions of authority when they expressed publicly their concern over the volume of food that was piled up under government control, should the war come to an abrupt close.

The complex problems connected with this important matter call for careful thinking and planning, and the constant vigilance of an aggressive organization, so that production plans of thinking farmers can be geared in a timely way to conditions as they currently exist.

We must, and we can, avoid a repetition of the conditions farmers experienced following the last war. We can do little as individuals, but in the ranks of an organization of ever-increasing influence, organized farmers, with a sympathetic Congress, can lay the groundwork necessary to meet the many problems of agriculture. But policies alone will not suffice. Through the influence of your organization, Congress has provided for the maintenance of floors under agricultural prices for two years after the war. Let farmers not be lulled to sleep by these assurances. Every individual farmer has a responsibility for the successful administration of policies providing price floors. No one, not even government itself, can long successfully maintain these floors unless production is kept in reasonable relationship to market outlets. We must remember that in providing these floors, the law stated "to the extent appropriations are available." Such appropriations will, and should be, held to the minimum necessary for the effectiveness of this law, and it behooves all farmers to appreciate fully this limitation.

All Must Work Together

The United States is the only important nation in the world that has held a national election during the present war. Because of our historic independence and inherited prejudices, and because of the issues involved, it was inescapable that many serious differences, and at times, bitterness developed during the campaign. But the election is now over and the American people have made their decision. It now behooves all worthy American citizens to lay aside personal views and partisan prejudices and to put their shoulders to the wheel as real Americans, so that as a nation we can do our utmost in speeding the day of final victory and of laying the plans for a permanent peace.

We have many problems within our counties, within our states and as a nation that must be met and solved. They are not problems of Democrats or of Republicans. They are problems of all the American people, and it is as Americans, and not as partisans, that we can and will make our greatest contribution. American farmers have a vast interest in seeing that these problems are squarely faced and honestly solved. Throughout the life of this country, farmers have never been found wanting in meeting every crisis this nation has faced. They will be found doing their full part again. Only by continuing to strengthen the ranks of organization can farmers render their greatest and most constructive service. The American Farm Bureau Federation has set a goal of one million members by the annual meeting of 1945. This should not only be met, but greatly exceeded. Throughout the years, Illinois farmers have charted the course and led the way toward this goal. I have not the slightest doubt they will continue to do so.

We are starting upon the circuit of a new fiscal year. Within its cycle, let us hope and pray for a decisive victory to our men in arms and for a clear outline and promise of a lasting peace.

In this report to the delegates and members, I have sought to emphasize anew my faith in the dominant place a sustained agriculture can and should have in our national economy and how a prosperous American agriculture will return many-fold new strength and vigor to the other segments of American life. A strength and vigor not measured alone in terms of bushels or bales or balances, but in those finer things of life which, rather than perish with their using, become thereby more plentiful.

I have tried only to keep proper emphasis upon the important place agriculture occupies in our national economic life. It is on this plane of opportunity and responsibility that I ask and urge all who are engaged in the business of farming, to measure their individual interests and responsibilities and to cooperate with one another in the ranks of a great, constructive, but militant, organization. I firmly believe that such an organization provides the only means through which farmers can make their greatest contribution to the welfare of all.

In these days of uncertainty and confusion, and in our own moments of passing doubt, I would suggest to the Farm Bureau folks in Illinois, as I do to myself so frequently, that if we will but keep our purpose pure, if we will but aggressively fear no evil, and if we will but broaden our conscious trust in that One who is not alone our Keeper, but our Guide, we can look with assurance to the fulfillment of His promise — "That as thy days, so shall thy strength be."

That the complexity and the seriousness of our national problems are almost beyond the comprehension of the individual, no thoughtful person will deny. That the road we must travel in solving these problems will at times be rough, and at others be clouded, there can be

no doubt, but by moving forward together in the real spirit that has made America the greatest nation of all time, we can look forward, not only with hope, but with confidence.

It will take the spirit of a Washington, the intelligence of a Jefferson, and the humility, the diplomacy and the honesty of a Lincoln to meet and to solve our gigantic present-day problems, but it can and it must be done.

Unity of Purpose

(*Continued from page 4*)

that he was confident of the future because of the unity of agriculture, and because of the sound program which the AFBF had established over the years.

Referring to the AFBF's position on national policies, President O'Neal said, "I quote the record and challenge any group in the nation to show a better record."

R. B. Corbett, AFBF secretary, discussing "Organization Responsibilities," listed three major ones:

1. Responsibility to represent farmers in public affairs to see that their side of all questions are defended in public debate.

2. Service to farm people when they cannot obtain that service from established business or where they can greatly improve on the practices of established business.

3. Development of the individual who participates in farm organization.

Corbett asserted that 25 years ago it was common for persons to state that agriculture could never be organized because farmers lived so far apart and were so accustomed to working alone and competing not only with themselves, but with the forces of nature. The record, he added, has proved this to be wrong.

Delegates adopted strong resolutions condemning "ill-conceived regulations" on the part of governmental agencies regarding the hog market, and declared, "Failure on the part of these agencies to properly interpret, administer and enforce the act of Congress providing for price supports and controls has afforded meat packers and others the opportunity to circumvent the intent and purpose of the law, resulting in millions of dollars of loss to hog producers."

The IAA delegates proposed that if ceiling prices on hogs are continued they should be adjusted for increases in the cost of production and made to apply equally to all weights and classes of hogs. They reiterated the organization's stand against subsidies, and demanded that any reduction below the ceiling in prices paid producers be accompanied by a proportionate reduction in the subsidy paid to packers.

Other resolutions called for continuation of the Agricultural Adjustment act, existing commodity loan bases, and marketing agreement provisions, with an expansion of the latter. Increased direction and control by farmers of farm credit agencies were called for, together with continuation of income tax exemption for farmer cooperatives doing business only with producer members. Another resolution pointed out that farmers cannot meet production goals if new machinery, parts and repairs are not made available.

Resolutions on state issues called for enactment of the proposed Gateway Amendment to the constitution; equalization of tax assessments to improve state aid for schools; an extended system of farm-to-market roads; stricter regulation of fertilizer and feed stuffs formulas; stricter oil production controls including drilling offset wells and prevention of waste of natural gas; levelling of land after strip mining; establishment of veterinary college at the University of Illinois; removal of limitations on materials to be used in extending rural electrification. Report of the special state school committee sponsored by the IAA was endorsed.

Mutual understanding between labor, industry and agriculture, and proper relationships between industrial and farm prices, were called for. Commendation of Farm Bureau organization workers for bringing membership in the state to a total of 105,057 as of September 30, and for the current aim of 117,000 in 1945, was voiced.

Two new members were elected to the association's board of directors. They are Floyd Morris, Springfield, who replaces Dwight Hart, Taylorville, as representative of the 21st district; and C. J. Elliott, Streator, elected to serve the unexpired term of Rex Peddicord, Marseilles, deceased, from the 12th district.

Directors from odd-numbered districts who were re-elected at Friday's closing sessions were: Harvey W. Adair, Chicago Heights, 11th district; Homer Curtiss, Stockton, 13th; Ronald A. Holt, Galva, 15th; Charles Lauritzen, Reddick, 17; Charles B. Shuman, Sullivan, 19th; Chester McCord, Newton, 23rd, and August G. Eggerding, Red Bud, 25th.

Earl C. Smith was re-elected president of the IAA, and Talmage Defrees was re-elected to the position of vice-president.

Dr. J. Raymond Schutz

IA Auditing Speaker Lists "Unfinished Jobs"

THOSE who believe that they can sit back in ease and comfort after the war is won, are in for a surprise, Dr. J. Raymond Schutz, chairman of the board, Standard Life Insurance Company of Indiana, declared before the anual meeting of the Illinois Agricultural Auditing Association held in conjunction with the IAA 30th annual meeting in Chicago.

"When the war is won we will have every problem we had at the time the war started, plus a number of others," he said.

Our biggest unfinished job, he continued, is to finish the war. Then we will have some other unfinished jobs. First of these is the rehabilitation of the men and women returning from service. "We will have to fit jobs to men, which is a harder job than fitting men to jobs."

Among the service men and women who will have to be rehabilitated are a number who never saw action, the speaker asserted.

Listed as the second big job to be finished is the reconversion from war to peace. "Whether we have a depression depends on whether or not we do a good job of reconversion," Schutz said.

Third on the list of unfinshed jobs is the proper guidance of the youths who will be tomorrow's citizens, the speaker pointed out.

Listed as fourth in the category of unfinished jobs by the speaker was the race problem. "Hitler may be dead, but Hitlerism may live on in our country if we do not recognize the race problem and do something about it."

Finally, the fifth unfinished job cited by Dr. Schutz was that of winning a total peace. A total war, he said, is one in which no one escapes responsibilities or consequences. A total peace means the same thing. "We cannot have a total peace unless it is a people's peace."

Wool Growers Face Keen Competition

WOOL growers and their cooperatives will face severe competition in marketing their product after the war both from foreign wools as well as from synthetics, L. B. Mann of the Farm Credit Administration declared at the annual meeting of the Illinois Wool Marketing Association. This meeting was held in conjunction with the 30th annual sessions of the IAA of Chicago.

From the grower's standpoint, Mann said, changes need to be made in reducing costs of production, in improving the quality and quantity of wool produced, in better preparation of fleeces for market, in more accurate determination of shrinkage, and the development of a less costly and more efficient assembling, transporting, warehousing and marketing system.

"Wool growers and their cooperatives can take the lead in bringing about improvements in a number of these activities," Mann said.

Mann stressed the need for cooperatives to be alert to the new methods of determining shrinkage in wool. Experimental results with core boring sample scouring obtained by the wool division of the Department of Agriculture promise a much more accurate method of determining shrinkages than the present estimating practice now in common use, he said.

In addition, wool cooperatives need to give serious consideration toward moving into warehousing and processing in order to return to the growers some of the "in-between-margins" and thus supplement their returns from the sale of raw wool, Mann advised.

As a means of meeting competition with other fibers, improvements are also needed in the manufacturing field. Experimental work, he said, has already accomplished a number of worthwhile improvements such as: treatment of wool to avoid shrinking and to improve wearing qualities, treatments of serges to eliminate shine qualities and to improve creasing qualities, and treatment of fibers so they will not slip. Other developments include moth proofing and treatment of lightweight garments for summer wear to make them cooler.

Mann said that one of the most promising of new uses of wool is its adaptability for fur garments. Experiments have been carried on to produce imitations of silver fox, Canadian lynx and others. The natural beaver has been closely imitated by the manufacturers of "Mouton", Mann reported.

Mann reported that we have on hand today very heavy supplies of both foreign and domestic wools in this country. Estimates run close to 1¼ billion pounds. In addition to these supplies, there is the competition to be faced from fibers. While most of these synthetics are inferior to wool in some respects they can be used as blends to excellent advantage, especially in lower priced clothing where they will present tough competition with wool, he pointed out. These competitors are rayon, aralac from milk casein, soybean fiber from casein, vinyon from resin, redwood fiber, and zein, a by-product of corn.

A committee has been appointed to develop a more comprehensive statewide wool marketing program for Illinois wool growers for the year 1945, according to S. F. Russell, secretary-manager of the Illinois Wool Marketing Association. Advice will be sought by this committee from all those interested in improving the position and bargaining power of the association.

During the five clip years since the Illinois Wool Marketing Association was organized, there has been almost 2 million pounds of wool marketed through the state association. The 1944 tonnage was 275,241 pounds, furnished by 45 counties.

Dr. E. A. Logan, left, South St. Joseph, Mo., and K. T. Smith, IAA board member, appear at the speakers' table at the Illinois Farm Bureau Serum Association annual meeting.

Illinois Farm Bureau Serum Gains Two Major Objectives

Illinois Farm Bureau Serum Association has accomplished the two major objectives set up at the time of its organization — to furnish a high quality product at cost and to act as a stabilizer in the industry.

The records show that both of these have been accomplished. In 1933 the first dividends were paid to members of the association. From then and up to Sept. 30, 1944 some $680,597 have been paid to hog producers who patronized their own association.

For the fiscal year of 1944, patronage dividends amounted to $52,555.

Illinois Farm Bureau Serum Association furnished nearly 49 million cc's of anti-hog cholera serum and virus to Illinois hog raisers during the year ending Sept. 30, 1944. Value of this serum and virus was $420,440.

Counties handling more than 1 million cc's of serum and virus for the year were: Henry, Knox, Warren, McLean, Fulton, Peoria, Mercer, Hancock, Pike, Sangamon, LaSalle, Bureau, Morgan, Whiteside, McDonough, Henderson, DeKalb, and Marshall-Putnam.

Illinois wool growers received an authentic picture of the current wool situation from L. B. Mann, Farm Credit Administration, and were told of the problems ahead.

Producers' Market After War Depends On High Consumer Income — Pollock

LIVESTOCK producers will have a good postwar domestic market for their product if consumer income is maintained, R. C. Pollock, general manager of the National Livestock and Meat Board, declared at the annual meeting of the Illinois Livestock Marketing Association in the Hotel Sherman, Chicago. The meeting was held in conjunction with the 30th annual meeting of the IAA.

"Meat will hold its own and advance in the postwar battle of foods," he said. "I am sure that neither synthetic steaks nor so-called meat substitutes will replace it in the postwar diet."

Pollock was not optimistic, however, concerning the potential European demand for meat. He quoted Dr. Karl Brandt of the Food Research Institute of Stanford University, who reports that the actual decline in farm output of the warring and the ravished countries during the war has been less than anticipated.

Brandt's report points out that in continental Europe, excluding Russia, the cattle and the sheep population has been reduced only about 7 per cent. The reduction in hog numbers has been greater — about 30 per cent.

The report also indicates that if peace and order are restored in Europe at the close of hostilities, agricultural production will probably recuperate rather quickly. The United Kingdom will need meat, but has already made plans to buy from Argentina, and will also likely secure supplies from Canada and New Zealand.

Belgium, Switzerland, Norway, Denmark and Holland — with a revival of their fishing industry and increased production of domestic food products, will not need much meat from outside sources. Russia's food supplies have been depleted to a considerable extent, but in Dr. Brandt's opinion, Russia will import little or no food.

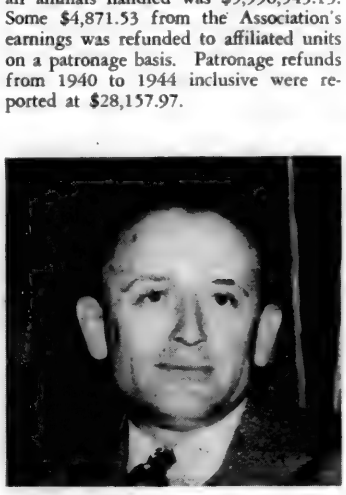
Pollock reported that livestock producers of the United States have performed an outstanding job in furnishing supplies to our forces and those of our Allies. Meat production is far outstripping World War I totals. The margin

R. C. Pollock

over the 1917-19 period is 9½ billion pounds, and in the 1941-43 seasons 3 million more cattle, 20 million more hogs, and 10 million more sheep and lambs were marketed annually than during World War I. Yet, he added, there are nearly 4 million fewer people on farms than during the first world conflict.

Illinois farmers and livestock men located in the heart of the nation's major corn and meat-producing area have played an important part in this all-time production record, Pollock said. Last year Illinois ranked second among all states in the production of pork, 8th in the production of beef and veal, and 20th in the production of lamb.

In his annual summary of business for the Illinois Livestock Marketing Association for the year ending Sept. 30, 1944, H. W. Trautmann, manager, reported 171,910 hogs handled. Total value of all animals handled was $5,996,543.13. Some $4,871.53 from the Association's earnings was refunded to affiliated units on a patronage basis. Patronage refunds from 1940 to 1944 inclusive were reported at $28,157.97.



LaRue Tice, Shelby county, is a new director on the board of the Illinois Livestock Marketing Association.

Report Elections Of IAA Associated Company Directors

Directors elected at annual meetings of the following associated companies of the Illinois Agricultural Association during the 30th annual convention of the IAA are as follows:

Illinois Grain Corporation: Carl O. Johnson, Varna; A. E. Burwash, Champaign; Chas. Schmitt, Beason; E. E. Stevenson, Streator; Arthur Bertsche, (replaces G. L. Potter) Pontiac; John Butterfield, Pana, (replaces Frank Garwood); A. O. Eckert, Belleville; Dwight Hart, Taylorville; Chas. Lauritzen, Reddick, (replaces Ronald Holt).

Illinois Wool Marketing: William Temple, Serena; A. L. Doubet, Williamsfield; Escol Oxford, Elizabethtown; August Eggerding, Red Bud; Lyman Bunting, Ellery.

Farmers Mutual Reinsurance Co.: J. M. Becket, Blue Mound; Geo. F. Hayes, Galva and J. E. Miller, St. Jacob.

Illinois Farm Bureau Serum Ass'n: R. V. McKee, Varna; Ray Cunningham, Alvin; William Stockley, Earlville; Ben Bodecker, Sutter; Everett G. Reynolds, Jacksonville; Jesse E. Tuttle, West York; K. T. Smith, Greenfield; C. E. Yale, Amboy.

Illinois Agricultural Auditing Ass'n: Frank Easterly, Carbondale; B. W. Horan, Reynolds; Roy Edwards, Champaign (replaces A. E. Staley); R. H. Voorhees, Jerseyville; Carl A. Lage, Saybrook.

Illinois Cooperative Locker Service: Dana Cryder, Minooka; Carl Bates, Kewanee; Earl Wenzel, Kirkland; C. Ray Ward, Cropsey (replaces P. Ropp); Paul Rosentroter, Carlinville.

Illinois Milk Producers Association: John Hagenstoz, (replaces Rylan Capron); Earnest Reed, Canton, (replaces Earl Richardson); Ray H. Miller, Decatur; Edwin Gumm, Galesburg; Dean H. Radford, Kewanee; William L. Mays, Bloomington; Chas. H. Cameron, Peoria; Anthony Grawe, Quincy; Fred Patterson, Harrisburg; A. E. Meyer, Moline; Lowell Coomber, Freeport; B. J. Schumacher, St. Louis; Geo. I. Maxwell, Champaign, (replaces J. C. Pennell); J. Warren Ellis, Danville; William O'Malley, DeKalb; Harold Kamm, Jacksonville; O. H. Ryan, Tonica; W. A. Newman, Rockford; Mattie Nolan, Pontiac; Chas. W. Krell, Springfield; W. J. Swayer, Chicago; J. D. Allen, Springfield; Glen Tombaugh, Streator.

(*Continued on page* 40)

Farm Bureau Insurance Companies Report New Gains in Fiscal Year

ILLINOIS Farm Bureau members have built an insurance program that has no equal. This is apparent from the reports made by the three Farm Bureau insurance companies at annual meetings and conferences held in the Hotel Sherman, Chicago, in conjunction with the 30th annual meeting of the IAA.

According to the annual reports of two of these Farm Bureau insurance companies — Country Life and Farmers Mutual Reinsurance Company, farmers have increased the insurance in force on their lives and property in 1944 to more than 561½ million dollars. This represents a net gain of some 92 million dollars over 1943.

Illinois Agricultural Mutual Insurance Company on Sept. 30, 1944, had 135,748 policies in force including auto, employer's liability, cargo and accident. This is a new record and compares with 119,532 policies a year ago. IAA Mutual paid dividends of more than 1 million dollars to policy holders during the year ending Sept. 30, 1944. This includes a special dividend to auto policy holders of more than $719,000 and regular dividends of $397,000, A. E. Richardson, manager, reported.

Since IA Mutual began operating on a dividend paying basis in 1935 it has returned to policyholders in the form of regular and special dividends a total of more than 3½ million dollars. This does not incude an amount of approximately $300,000 of excess premium deposits and surplus share contributions which was returned to policyholders at the time the company began writing its non-assessable policy.

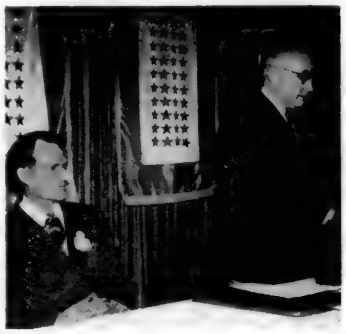
Statistics on the operation for the past year show that the premium earned in all lines was $316,070.68 higher than in any previous year.

Farmers purchased life insurance from Country Life in the total amount of $30,249,000 during the year ending Sept. 30, 1944. This was five million dollars over the previous best year of the company which was 1936. The net gain of business in force for the last year averaged more than 2 million dollars per month, making the total insurance in force $222,059,698 as of Oct. 1, 1944, Dave Mieher, manager reported.

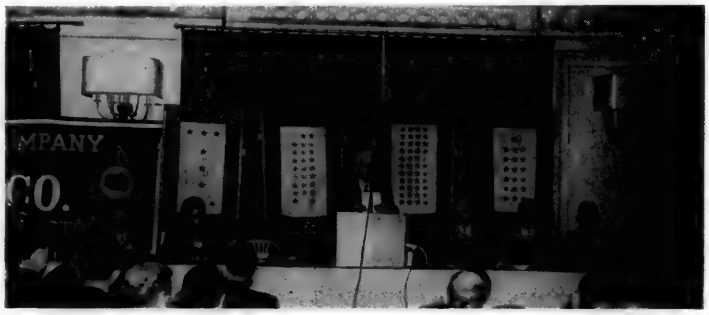
During the past 15½ years Country Life has returned to policyowners and beneficiaries more than 7½ million dollars.

Country Life has not only rendered a service by helping individuals maintain a better standard of living, but it has also made a vast contribution to our country. As of Oct. 1, 1944, 39.7 per cent of the total investments of the company were in government bonds. Fifty-two per cent of all the investments made during the past year were in government bonds.

Dividends and claims paid to policyholders by the Farmers Mutual Rein-



Dave Mieher, manager, Country Life Insurance Company, listens to report of Dr. Duane Propst, medical director, at the company's conference held in conjunction with the 30th annual meeting of the IAA.



Manager A. E. Richardson makes report at IA Mutual annual meeting.

R. A. Cowles makes treasurer's report at annual meetings of Farmers Mutual Reinsurance and Illinois Agricultural Mutual Insurance companies.

At the speakers table of the Farmers Mutual Reinsurance Company's annual meeting, Nov. 29, left to right, were Manager J. H. Kelker; directors, Claude Hiestand, Marion county; George F. Hayes, Henry; E. B. Reeves, Grundy; George F. Tullock, Winnebago; George F. Lingenfelter, Pulaski; George W. Lenhart, Vermilion; Clifton Davis, Morgan; and J. E. Miller, Madison.

surance Company for the fiscal year ending Sept. 30, 1944, amounted to $1,306,059.39, according to the report of Manager J. H. Kelker.

Dividends paid were as follows: fire and extended coverage, $92,210.13; windstorm, $12,046.79; hail on crops, $363,436.37, to make a total of $467,693.29. Losses paid in these three classes amounted to $838,366.10, as compared with $463,860.17 in the previous year.

Kelker reported that insurance against hail damage to crops reached its peak in the 1944 season. A total of 22,454 applications in an amount approximating 80 million dollars of insurance were received as compared with 15,750 applications and 50 million dollars of coverage in 1943.

In addition to the hail insurance business, the home office processed 17,128 applications for fire and windstorm coverage, the amount written or renewed being more than 100 million dollars. Applications in all classes were 39,582 as compared with 33,542 in the previous year.

Illinois Agriculture

(*Continued from page 26*)

thousands of acres of our finest crop land from innundation and guarantee regular production and steady income to many farm families.

It is my firm conviction that the best way to improve farm living conditions in the matters of housing, plumbing, power, and educational opportunities is to promote those things which will give the farm family a steady income maintained at a fair parity with the income of other economic divisions.

Veterans' Program

I have spoken often on the subject of our state program for veterans. There probably is not a parent here tonight who does not know the general outline of that program which calls for complete rehabilitational and medical care for the disabled veteran, and job-finding service for the able-bodied. As you know, I have appointed a war veteran in every Illinois county as a Service Officer to aid and advise the fighting men and women as they return. These officers are already at work, assisting the veterans and their dependents in obtaining the benefits due them under the mass of State and Federal legislation that has been enacted while they were at war.

In order that no one who needs and wants this assistance should be overlooked, we have trained more than a thousand volunteer Service Officers, representing municipalities, counties, civic clubs, and other agencies to help the state Service Officers in contacting the returning soldiers. And to make certain that the thousands of farm boys and girls in uniform will not be slighted, I have asked Director of Agriculture Howard Leonard to contact every County Farm Adviser requesting that he serve, or name a volunteer who will serve, as a special contact for veterans who live on the farms in their respective counties. Through this free service, the veteran may be apprised of many benefits and special privileges to which he is entitled, but of which he did not know.

. . . Our task is to build a new and better world — a sane, sound, practical world — in which security, prosperity, and happiness will accrue to all Americans who have supported and fought this war so loyally. May Almighty God give us the strength and guidance to achieve that goal.

ILLINOIS FARM BUREAU SERUM ASSOCIATION

AN ALL-TIME HIGH IN SALES

C. H. Becker

15 MILLION DOLLARS IN SALES IS RECORD SET BY ILLINOIS FARM SUPPLY COMPANY

★

Dr. George Scarseth

OUTSTANDING achievements in the field of cooperative purchasing of supplies are revealed in the annual report of the Illinois Farm Supply Company.

IFS has just set an all-time record in sales, according to figures presented at its annual meeting held in conjunction with the 30th annual sessions of the IAA.

Total wholesale value of all goods sold during the year amounted to nearly 15 million dollars, representing a 6.2 per cent gain over last year, the previous high record, according to Manager C. H. Becker.

Farmer patrons have shared in this business. During the year, more than 2 million dollars in patronage dividends were returned to members on retail purchases of 20 million dollars from 65 local service companies.

IFS' petroleum service also has played a vital part in wartime food production through maintaining a constant flow of petroleum products to bulk plants and to the farms. In spite of many obstacles, the petroleum division of IFS delivered 18 million gallons more fuel than in 1941, the last peace-time year. During May and June alone IFS gallonage exceeded that of the entire year of 1932.

Of the 124 million gallons of petroleum products delivered by IFS, 78 per cent was handled by its own marine and motor transport system.

In addition, some 39,337 tons of feed and feed ingredients were distributed by the company's feed division.

Now IFS is looking ahead to further services to its members through new developments in its programs for manufacturing and distributing feeds and plant foods.

The Service Brand feed program provides for local Farm Bureau cooperative associations to grind and mix feeds in the localities where the feed grain is grown. This program is designed to assure top quality feeds through careful laboratory testing and to take full advantage of economies made possible through transportation savings on locally-grown grain and protein products. Certain pre-mixes involving possibly 200 to 400 pounds in each ton of complete feed will be prepared by IFS in its central mills.

Service Brand feed program is not intended to replace Blue Seal feeds but rather to augment them and to render a more complete service. Service Brand merely identifies the feed as having been partially mixed locally. Its formulation and quality will be comparable with Blue Seal.

In the new plant food program, IFS, with similar cooperatives in Indiana, Wisconsin, and Minnesota, is setting up an acidulating plant and enlarging a mixing plant for processing and mixing fertilizers. The acidulating plant will turn out 40,000 tons of superphosphate per year and the mixing plant 30,000 tons of mixed fertilizers.

The same quality supervision given to the feed program will be given to the manufacture of plant foods.

One of the most important services that IFS is giving its patrons is in its technical department which was expanded during the past year when it was moved to Naperville. Some 4762 tests and analyses were made here in the year in regular quality control work, while 544 experiment tests were conducted for the petroleum, feed, and general purchasing division. One of the main reasons that IFS was founded was to provide farmers with quality products and this department is carrying out that aim.

A considerable amount of experimental work was conducted by this department with anti-rust compounds, lubricating stocks and additives, and grease materials.

Many chick feed experiments were carried on, and in addition, experiments were set up to determine the effects of certain ingredients and vitamin carriers upon egg production, fertility, and hatchability. A small experimental farm is also operated by the IFS research department so that tests can be made under actual farm conditions.

One of the most important assignments of the laboratory is the control of quality in the Service Brand feed program. It is the duty of the technical department to safeguard the quality of all IFS products and to investigate and report new technical findings in all fields related to company's business. IFS also is one of the active participants in the American Farm Research Association.

A whole, rich new continent is represented in the discoveries already made in agriculture but not put into practical use on an extensive scale, Dr. George D. Scarseth, director of research for the American Farm Research Association, declared at the IFS meeting.

"In agriculture," Scarseth said, "we have the scientific information that can make any land highly productive. No soil need be poor if we want it to be rich. . . .Since we have these facts, why

don't we use them?. . .Lack of information is the barrier, a barrier that can only be crossed by an extension of knowledge. It appears thus that education is our greatest hope in agriculture to translate discoveries into action."

Scarseth also pointed out that many of the new farming practices that the farmer learns from the experiment stations through the extension service require new materials such as fertilizers that are different from the old, new feed supplement mixtures, new designs in farm machinery such as new fertilizer attachments, hay making equipment, tillage machines, etc., as well as other innovations for which existing industries may be slow to develop.

"Industry will indeed develop these materials but usually after a sufficiently large market has been created to justify their investments," Scarseth said.

Since the farmer is interested in these developments he will progress faster if he exercises leadership through his service companies in developing these new materials, Scarseth pointed out.

"If he (the farmer) does not lead in developing these new materials, a long lag may be experienced between discovery and use. If the service companies are to pioneer new developments, it seems obvious that they must be well informed on the new discoveries being made," Scarseth asserted.

The state experiment stations with its system of extension service moves its newly discovered facts to the farmer, Scarseth said, and parallel with this arrangement in effort, an arrangement for action must operate.

"It is to shorten the gap between discoveries that call for the use of materials and the service company distributors that distribute these to the farmer that the American Farm Research Association has been created," Scarseth explained.

"In this respect the new research association becomes a translator of discoveries to the service companies and thus completes the 'shortcut' to the farmer.

. . ."The success of this rather new movement in American agriculture to combine the efforts of education with the action of materials in a rounded program to bridge the gap between the discoverer and the benefactor is bound to be an important factor in keeping America strong."

A new picture of the Illinois Farm Supply Company's board of directors shows, left to right, first row, Wrate H. Hill, Boone county, who replaces Charles Keslinger, Kane; George Chapple, John P. White, and Jesse L. Beery. Back row, left to right, Harley Neal, Frank Flynn, Fred Herndon, Glenn H. Geiter and B. Monke.

Babcock Defines Marketing

IF THE farmer wants to get a better price for his raw product, he and his cooperative need to set up processing and other marketing services which reach clear across the board to the ultimate consumer.

This is the opinion expressed by H. E. Babcock, at present research director for GLF, and formerly its general manager for some 15 years, at the marketing conference of the IAA annual meeting.

Babcock pointed out that raw material on the farm doesn't ever have a very high value, but it picks up value as it works toward the consumer.

Marketing, as defined by Babcock, "is the application of a succession of services to raw material so as to make the raw material useful and to make it available to the consumer when and where he wants it."

It is in the performance of the services in making the raw product into a useful finished product for the consumer that the farmer and his cooperative has an opportunity to improve price, Babcock pointed out.

To illustrate his point, Babcock told of the program of his organization which has 275,000 cull dairy cows to market every year. First step taken by his organization was to authorize the building of 10 super markets with meat departments. The next move was to build a slaughter house costing less than $10,000 and to begin slaughtering a few cull dairy cows and move them into their meat markets. Before long, the meat markets were taking in more than could be handled in a $10,000 slaughter plant, so a $25,000 plant was built.

Marie Heatherington, Illinois Grain Corporation office secretary, is kept busy taking notes on H. E. Babcock, GLF official. A. O. Eckert, IAA board director, and chairman of the marketing committee pays close attention.

"In five years we will have built an across-the-board' marketing service, clear-through to the hamburger sandwich. We are now putting in some diners — little restaurants alongside these super markets, because it is in the diners that the cull dairy cows turn up as hamburgers," Babcock explained.

Babcock warned however that "we must never set out on the road where we have a monopolistic view on these marketing services. All I want to do as a farmer is to be in on a percentage of all of these services so that I can influence them."

Babcock said that one philosophy was that "farmers could set up a cooperative, obtain a lot of commodities, and then by the very possession of those commodities could get the farmer more money for them through bargaining power." He indicated that this type of cooperative was considerably less effective than the one which carried its services clear across the board.

Rural Youth *again sparks* IAA CONVENTION

Jewell Emmerich, Jasper county, demonstrates platform manner to fellow state talkfest winners, Max H. Kuster, Macon; Louis Hoerr, Tazewell; Gloria J. Hayden, Pulaski-Alexander; Kenneth Lanter, St. Clair; Richard Linden, Bureau; and honorable mention contestants, Willis R. Ehnle, Peoria, and Clyde Boyd, Randolph.

RURAL Youth aggressively brought their inspiration and verve to the annual meeting, furnishing the color and life for Wednesday's sessions and attracting hundreds of grown-ups who applauded speeches, enjoyed entertainment features, and secretly thrilled at the view of tomorrow's leadership.

Whether the high spot was the talkfest, or the afternoon session, or the glorious entertainment session of the evening will probably always be a moot question, depending upon the personal reaction of participant or observer, but on the serious side, the impact of personality and ideas, given vigorous expression by Youth speakers in the talkfest and conference, furnished the promise of strong and constructive leadership for Farm Bureau in the years to come.

From the time that chairman Lester Sterchi, Richland county, called the talkfesters into session in the Bal Tabarin, and Ellsworth D. Lyon, IAA director of young people's activities, gave the participants their "ringside instructions," until the final election of the 1945 state committee, the young men and women were in the saddle and "riding them" hard, straight, and enthusiastically.

Eighteen talkfesters — 17 winners from the districts and one alternate who not only was called on to fill in, but who won an honorable mention, staged a program before a Bal Tabarin audience that over-ran capacity. It was the opinion of those who have followed many of these annual affairs that this was the best on record. There was straightforward communicative speaking, sound and original thought on problems of farm and home life, humor, self-possession and effectiveness in every talk. When it was all over and the corps of auditors had compiled the scores from the ballots of participants and adult helpers, the following were named Topnotchers of 1944: Richard Linden, Bureau county; Max Kuster, Macon; Gloria Hayden, Pulaski-Alexander; Kenneth Lanter, St. Clair; Jewell Emmerich, Jasper; Louis Hoerr, Tazewell. Honorable mentions were awarded to Clyde Boyd, Randolph county, the alternate who furnished the Cinderella motif for the contest, and to Willis R. Ehnle, Peoria county. Linden, who received the highest total vote, shading Max Kuster by a matter of 16 points in the aggregate, was chosen to represent Illinois in an interstate talkfest sponsored by the AFBF for its annual meeting in December. Miss Hayden and Miss Emmerich broke the famine on girl topnotchers, being the first girls to break into the charmed circle since 1943.

Others who took part in the talkfest were Virginia Benton, Richland; William C. Young, Jr., Henry; Ferne Kennedy, Livingston; Raymond Kelm, Marshall-Putnam; Freida Sowers, Schuyler; Kay Little, Morgan; Clifford Heaton, Bureau; Joe Brankey, Kane; Clifford Briggs, Edwards; and Ross Gates, Macoupin. They had all won their way to the state contest by winning topnotch ratings in district contests held during October and November.

With Margaret Sharp of Woodford county presiding, the afternoon conference opened with group singing led by Bill Thomas of Whiteside county and an address of welcome by Field Secretary George E. Metzger. Then Rural Youthers William Eastman, Woodford; Ray High, Christian; Maxine Roosevelt, Edwards; and Mary Luft, Tazewell, set forth the views of young people on a variety of subjects. The program included also an address by Mrs. Raymond Hanley, 4-H club chairman of the Illinois Home Bureau Federation, and the announcement of the talkfest winners, greeted with cheers and enthusiasm by the crowd of youth and adults.

"Act the way you want to be and you'll be the way you act," said Bill Eastman in a discussion of "Understanding Oneself and Others." At the same time, he cautioned his hearers not to try to be other than their natural selves, not to "change your own abilities or go against your pattern."

Ray High, speaking on "Rural Youth as a Personality Developer," said that engaging in youth activities builds confidence and thus aids personality growth. He advised youth not to copy others but to build their own characteristics. Personality can grow, he stressed, and those without strong personality may either be unimportant or develop into the upper groups, as they choose.

Streamlined methods in the designing and construction of homes are coming after the war, Maxine Roosevelt said in her talk on "Homes of the Future." Entire walls will be made of glass panels, which can be kept closed in chilling weather or rolled aside, thus making the room part of the garden, she predicted. Improved heating, lighting and other services are all part of the picture as she described it.

Schools of the future will have five main aims, Mary Luft declared in her speech, "The Ultimate Aims of Rural Education." They are first, the opportunity to acquire mental and physical skills by actual practice in various arts and sciences; second, health building and muscular development; third, personality development; fourth, social adjustment; and fifth, citizenship preparation.

Mrs. Hanley, the former Mildred Mies, stressed homemaking as a profession and the Illinois Home Bureau Federation as the professional organization of Illinois homemakers in her address. "In this era of high wages, hasty marriages, juvenile delinquency, broken homes, and returning service men, it is especially important that we build a strong America through our homes," she concluded.

Franklin Allen, Tazewell county, was master of ceremonies for the annual Ru-

ral Youth Mixer and Good Time Session in the Bal Tabarin. Square and social dancing were enjoyed.

A committee of five, representing the several districts of the state, was in overall charge of the program. Members were Margaret Sharp, Woodford; Franklin Allen, Tazewell; Lester Sterchi, Richland; Harold Toekpe, McLean; and Lawrence Hebert, Christian. Alternates were Harold Teeples, Kane; Evelyn Mire, McLean, Theron Summers, Edwards; Don Bowton, Peoria, and Clifford Betzold, Montgomery.

A new state committee was elected at the final meeting, held Thursday morning, with Harold Teepke as chairman. Talmage DeFrees, IAA vice-president, brought greetings, and W. B. Peterson, director of distribution, Illinois Farm Supply Company, spoke.

Members of the new committee, which will supervise youth activities for 1945, are as follows: northern Illinois, Joseph Brankey, Kane county; central, Bob Croxton, Schuyler; southern, Wanda Bradshaw, Wayne; at large, Bill Thomas, Whiteside, and Jewell Emmerich, Jasper. Alternates, northern, Willis Ehnle, Peoria; central, Jerry Leeper, Fulton; southern, Forrest DeTroy, White; at large, Warren Carlson, Winnebago, and Tom Kerley, Brown.

At speakers' table of the Illinois Grain Corporation annual meeting, left to right, Charles Nieman, Farmers Union Grain Terminal Association, St. Paul, Minn.; Don E. Edison, secretary, Farmers Grain Dealers Association of Iowa; E. J. Kazmarek, IGC assistant treasurer and Chicago office manager, and E. E. Stevenson, LaSalle county, IGC president. IGC paid a cash patronage dividend of $91,000.

Must Interest *Young People* in CO-OPS

TODAY the No. 1 job facing cooperative elevators is to get the young farmer interested in the cooperative grain marketing movement, Don E. Edison, secretary of the Farmers Grain Dealers Association of Iowa, declared at the annual meeting of the Illinois Grain Corporation in the Hotel Sherman, Chicago. The Illinois Grain annual meeting was held in conjunction with the 30th annual meeting of the IAA.

"We must remember," Edison said, "that the young farmer today does not know of the grain cooperative's history back around 1900 and the struggle that was necessary to assure the future of the farmers' elevator movement.

"To me it is an educational program in getting the young farmer to become a member and to become interested in cooperative endeavor. I also think it is important that we realize the ownership and control must at all times be vested in the hands of the agricultural producer. When a cooperative elevator ceases to serve the best interest of the agricultural producer, then we have reason to believe there is little need for its existence."

While Edison paid tribute to the efficiency of the Illinois Grain Corporation and for the job it is doing, Edison said it might be well to make plans for having grain facilities in Chicago.

"Here we are in Chicago," he said, "the largest grain market in the world, and still there is not a cooperative organization operating terminal facilities."

He cited other members of the Federation of Grain Cooperatives whose members are operating in almost every important terminal market in the United States.

Volume of grain handled by the Illinois Grain Corporation in the last fiscal year was the largest in any of the six years of operation, Frank Haines, manager, reported. Approximately 17¼ million bushels were handled during the period, or an increase of 23 per cent over the previous period. Savings for the year were more than 4½ times the previous year, while expenses increased less than 11 per cent.

A cash patronage dividend of approximately $91,000, and a patronage in the form of class "C" stock of approximately $246,000 was declared and paid on business handled in the last and previous years. The cash dividend was on patronage for the year July 1, 1943 to June 30, 1944. The patronage stock was issued on the basis of business placed with the Illinois Grain Corporation for the six years starting with 1938-39 and up to and including the 1943-44 fiscal year ending July 1, 1944.

The patronage dividend on business in the last year approximated 1¼ cents per bushel, after paying a 6 per cent dividend on the preferred stock and making suitable additions to surplus.

During the year, Haines said, the "Uniform Field Service Agreement" between the county Farm Bureaus and the Illinois Grain Corporation was, by mutual consent, cancelled and the "Marketing Agreement" between Illinois Grain Corporation and its member elevators was changed and simplified. Under the new agreement any patronage dividends declared will flow directly to member elevators.

In order to facilitate the handling of grain for members, Illinois Grain is qualified to do business on the established grain exchanges in Chicago, St. Louis, and Peoria. Branch offices are maintained at Champaign, Bloomington, Mendota, and Jacksonville.

Illinois Grain owns the elevator at Morris, but operates it under lease to a local elevator group. Control of this elevator affords an outlet by water for grain from the immediate vicinity.

Mutually beneficial relations continue with Indiana Grain Cooperative of Indianapolis through whom grain from Illinois is handled cooperatively with substantial savings returned.

In the last year, Haines reported, service has been extended to producers in Iowa. The Farmers Grain Dealers' Association of Iowa qualified as a member during the year and has contributed a substantial volume of grain to the total. This volume has aided materially in decreasing the cost and increasing the savings per unit. Producers in both states have benefited by the arrangement, Haines said.

Rural Youth *again sparks* IAA CONVENTION

Jewell Emmerich, Jasper county, demonstrates platform manner to fellow state talkfest winners, Max H. Kuster, Macon; Louis Hoerr, Tazewell; Gloria J. Hayden, Pulaski-Alexander; Kenneth Lanter, St. Clair; Richard Linden, Bureau; and honorable mention contestants, Willis R. Ehnle, Peoria, and Clyde Boyd, Randolph.

Alternates were Harold Teeples, Kane; Evelyn Mire, McLean, Theron Summers, Edwards; Don Bowton, Peoria, and Clifford Betzold, Montgomery.

A new state committee was elected at the final meeting, held Thursday morning, with Harold Teepke as chairman. Talmage DeFrees, IAA vice-president, brought greetings, and W. B. Peterson, director of distribution, Illinois Farm Supply Company, spoke.

Members of the new committee, which will supervise youth activities for 1945, are as follows: northern Illinois, Joseph Brankey, Kane county; central, Bob Croxton, Schuyler; southern, Wanda Bradshaw, Wayne; at large, Bill Thomas, Whiteside, and Jewell Emmerich, Jasper. Alternates, northern, Willis Ehnle, Peoria; central, Jerry Leeper, Fulton; southern, Forrest DeTroy, White; at large, Warren Carlson, Winnebago, and Tom Kerley, Brown.

IPC PLANTS GAIN $90,000

FARMER patrons of the 10 member plants of the Illinois Producers Creameries are making a real contribution to the war effort. This fact was revealed in the production figures reported at the annual meeting of the IPC held in conjunction with the 30th annual meeting of the IAA in Chicago.

In the 1944 fiscal year, the 10 member plants produced nearly 6½ million pounds of butter, and 2½ million pounds of powdered milk. One plant produced 233,740 pounds of cheese. Of this production, the amounts going to America's fighting forces and Allies through government purchases were: butter, 1,007,742 pounds; powdered milk, 1,781,796 pounds, and cheese, 136,209 pounds, J. B. Countiss, IPC sales manager, reported.

This represents 15.5 per cent of all butter manufactured, 69.1 per cent of all powdered milk manufactured, and 58.3 per cent of all cheese manufactured by the member plants.

Total butterfat purchases during the year increased more than a million pounds for the year, or 19.3 per cent, 546 new members were added, and profits of all member plants were in excess of $90,000, or enough to build and equip another creamery.

Farmers have invested in their Illinois cream marketing program $471,092 in the form of stock and the new worth according to official audits at the close of the fiscal year was $1.67 for each dollar invested.

Plans for new creamery plants outlined at the annual meeting also indicate that the Illinois cream marketing program is not resting on its oars — it's moving ahead.

The north territory now being serviced by Producers' Creamery of Peoria, consisting of Peoria, Woodford, Stark, Bureau, and Marshall-Putnam counties, will soon have one of the most modern plants in the state. Finances have been furnished by producers to build and equip a two-story plant 54 by 90 feet to be located at Henry. This plant will receive and handle both milk and cream. Plans and specifications have been prepared and bids are now being taken.

The south part of the Peoria territory, consisting of Mason, Tazewell, Fulton, Cass and Menard counties, will have a new Producers' Creamery located at Havana. This plant will handle both milk and cream. Finances are being raised through the sale of stock to producers in the territory.

SOIL NEEDS NUTRIENTS

ILLINOIS farmers are now applying limestone at the rate of more than 3,500,000 tons annually. If this can be continued for 15 to 20 more years, all of the acid soils in the state will have been limed sufficiently to support maximum soil building legume crops; and that is a fundamental step in a permanent and economical agricultural program.

This point was made by Prof. A. L. Lang, U. of I. College of Agriculture, at the soil improvement conference of the 30th annual meeting of the Illinois Agricultural Association in Chicago.

In addition to limestone usage, rock phosphate, superphosphate, potash and supplementary fertilizers are being used to the full extent of their availability, Professor Lang said.

"However, even this stepped-up usage does not begin to meet maintenance needs in these important plant food elements. Illinois alone would have to use more than 10 million tons of rock phosphate or its equivalent, and 200,000 tons of potassium chloride in the next 10 years to replenish and maintain its fast diminishing supplies of these materials," he said.

Dr. George D. Scarseth, director of research, American Farm Research Association, declared that in our rich nation "we have been inclined to look only on the size of yields of our crops, but science is revealing that the nutritional quality of these crops is as important to the well-being and happiness of man as the yields."

"A traveler along the highways of the nation will see hunger signs in the crops of the fields crying out that something is wrong and that an unbalanced harmony in the nutrition of the plants is causing trouble," Scarseth asserted.

John R. Spencer, director of soil improvement for the IAA, reviewed the quality supervisional work of his department on limestone quarries over the state, and advised prospective purchasers to inspect these tests at their Farm Bureaus before making purchases.

"Great Future For Co-ops"

(*Continued from page* 18)

operative slaughtering and processing plants.

Studies were presented to the locker conference by S. T. Warrington, senior agricultural economist, FCA, and F. E. Ringham, secretary, St. Louis Bank for Cooperatives, on 20 Illinois cooperative associations operating 46 plants. Complete records of income and expense were tabulated for the year on these associations and the summary showed the average net income per plant was $3,708.25. Source of income of the associations were as follows: locker rentals, 51.05 per cent; processing, 31.68 per cent, and other income, 17.27 per cent.

C. M. Ferguson

C. M. Ferguson, Ohio State University, discussing the dressing of poultry for freezer lockers, said the first consideration in putting up poultry for lockers is that of quality. He also declared that birds should be kept off feed for at least 12 hours before killing and during this time they should be given water to drink.

Building of new locker plants and expansion of existing plants is progressing rapidly within the limitations of wartime materials, Dana Cryder, president of the Illinois Cooperative Locker Service, reported.

Elections

(*Continued from page* 33)

Illinois Farm Supply Co.: Wrate H. Hill, Kingston, (replaces Chas. Keslinger); Frank J. Flynn, Murrayville; Jesse L. Beery, Cerro Gordo; George Chapple, Dwight; Glenn H. Geiter, Dakota; Harley R. Neal, Lawrenceville; John P. White, Washington; R. H. Monke, Litchfield.

Illinois Livestock Marketing Ass'n: LaRue Tice, Shelbyville (replaces Daniel Smith); Mont Fox, Oakwood; Ralph Beckett, Blue Mound; Carl Lage, Saybrook; Fred Smittkamp, Paris; Charles Shuman, Sullivan; Clark Wise, Champaign.

Illinois Producers Creameries: Harold W. Enns, Minier; E. A. Fosse, Jackson county; (replaces Chas. Eddleman); Thad Loveless, Gillespie; A. Oliver Bower, Bushton; Harry Gehring, Altona; W. A. Bismark, Geneseo; H. B. Smith, Bardolph; John Sterchi, Olney; Harry L. Leeper, Farmington; Chester McCord, Newton; D. L. Garber, Mt. Carroll.

Looking Ahead

(*Continued from page 25*)

. . . I would not imply that if agriculture had curtailed production schedules as did implement manufacturers and the iron and steel industry the resulting price and income would have been comparable to theirs. But I am sure that if agricultural production had declined 80 per cent a considerable portion of our population would have starved regardless of prices and that those who survived would have had a much more wholesome respect than they have now for the importance of productive effort as opposed to reduced output and maintenance of high prices and wages.

. . . American agriculture now faces the postwar period with shrinking markets and an expanding productive capacity. Hybrid seed corn is now used almost universally in the heavy corn-producing states. The Lincoln soybean and other high-yielding varieties are here and their use will expand rapidly. The war taught us many labor-saving methods. The cotton picker is here and is being used successfully in limited numbers. These and many other developments point toward more rather than less production.

Under such conditions, the accumulation of surpluses and another collapse of agricultural prices is inevitable unless demand can be maintained at a high level or the trend of production changed. If in the event or threat of such collapse specific price supports are adopted as a means of governmental relief, they must be set at very modest levels and must be flexible enough to meet changing conditions or they will result in very burdensome production controls on individual products. Some students of the problem have suggested, as an alternative procedure, programs designed to maintain a parity income rather than parity prices. Under such a plan free market prices would be expected to regulate production. Government payments if and when necessary to maintain a reasonable parity income might be made for soil conservation practices which are now generally recognized as essential to protect the public interest.

As I have already indicated, I believe the most effective aid to postwar agriculture would be a high degree of industrial employment that would furnish a good market for agricultural products and keep surplus workers out of agriculture. But necessary adjustments within agriculture itself will require skillful planning on the part of farmers and their organizations as well as the adoption of wise policies on the part of the government if the best interests of all of the people, both rural and urban, are to be served and if the physical basis for this nation's future food supply is to be conserved and maintained in a high state of productivity.

Maybe what we need is a Bretton Woods type of conference for agriculture, industry and labor. Those of you who read the articles of agreement adopted at that conference remember that the word "parity" is used and that the main purpose of the International Monetary Fund proposed at that conference is to maintain parity of exchange in the interest of free and unhampered international trade.

What amounts to a continuous record of each country's inflow and outgo of goods and its financial transactions, is to be maintained so that difficult situations can be quickly recognized and remedial measures taken. If industry expects a continuous and adequate supply of agricultural products, then agriculture has a right to expect industry to furnish a continuous and adequate supply of its products on a fair basis of exchange — something after the Bretton Woods ideal. But industry has not always been able or willing to do that.

. . . Fortunately there is a growing realization of the fact that agriculture and industry are complementary — that neither can function at full efficiency unless the other is doing its part, and that only to a minor extent can one compensate for the failure of the others.

. . . The smart farmer will

1. Pay his debts or get them into sound relationship with his equities.
2. Keep inventories low.
3. Cull marginal animals from herds and flocks.
4. Not expand land holdings at excessive prices.
5. Emphasize soil conservation and fertility maintenance in his plans of operation, and
6. Do much of his hedging with war bonds.

Resolutions

(*Continued from page 11*)

amendment of the present law as will fully equalize in all counties, on the basis of full value of property, the actual tax rates qualifying school districts for equalization aid.

X. SECONDARY ROADS

Illinois farmers have worked for many years for a complete system of farm-to-market roads. However, many farmers, and some entire neighborhoods, are still mudbound during a large part of the year. Latest Census reports show that more than 27,000 Illinois farm homes were located on unimproved dirt roads in 1940. Since that time road conditions have deteriorated rather than improved.

In many counties the road situation is extremely bad. In numerous counties, especially in the southern part of the State, more than one-half of the farms are served only by dirt roads which are impassable during a substantial portion of the year.

This deplorable road condition exists notwithstanding the fact that farm people have paid, in property and gasoline taxes, vast sums of money for road improvement. Plans are now being made for further large expenditures of both State and federal funds for a system of super-highways to connect the large cities.

We demand that low-cost secondary roads receive proportionate and proper attention in the postwar period. We believe that programs should be planned and put into operation to provide for the building in the early postwar years of a practical all-weather road to serve every farm home.

Present formula for the expenditure of State and federal highway funds and the usual specifications for the construction of State aid roads do not meet the needs of farm people.

We urge the officers and directors of the Association to request the University of Illinois and the State Highway Department to institute an adequate program of research on the problems of materials, construction and maintenance of secondary farm-to-market roads.

We authorize and direct the Board of Directors and the officers of the Association to use every proper means to secure an adequate system of low-cost all-weather roads to serve all the farm homes in the rural areas of Illinois.

XI. FERTILIZER — FEED STUFFS

The volume of commercial fertilizers and fertilizer materials sold in Illinois is increasing constantly. The law fixing the specifications for fertilizer sold in this State does not provide as strict requirements as the laws of adjacent states. This makes it possible to use Illinois as a dumping ground for off-grade fertilizer that cannot be sold in other states. We urge the Association

to sponsor amendments setting up an inspection program, comparable to that now in effect in adjoining states, providing for the inspection of additional fertilizer materials, reducing the tolerances and fixing the minimum plant food content of any mixed fertilizer, and requiring the publication of the results of the tests made by the State agency.

We also favor amendment of the law governing the inspection and guarantee of analysis on animal feeds to include mineral feeds and to require that any and all minerals and mixed minerals offered for sale in the State bear an analysis tag designating the minimum mineral elements and the ingredients contained therein.

XII. OIL PRODUCTION CONTROLS

Under the present law in Illinois companies controling a large area of oil producing land may drill a single well and drain the oil from adjoining land through this well. The owner of the adjoining land has the oil taken from under his land but is not compensated for it. We request the Association to support legislation to require the drilling of proper offset wells on adjoining property under lease to the same operator or the payment of a percentage of the royalty to the adjoining land owner. We also request the Association to support legislation to prevent the waste of natural gas and make provision for use of this irreplaceable natural resource. We further believe that legislation should be enacted to more effectively prevent damage to adjoining property from salt water and overflow from slush pits.

XIII. STRIP MINING

Many acres of our richest and most productive agricultural land have been destroyed though strip mining operations. Additional large acreages are subject to strip mining. Legislation has been enacted requiring strip mine operators to level the land after stripping. This legislation is now under attack in the courts and the court proceedings have been long delayed. We urge the Association to make every effort to have the Attorney General and State officials take whatever action is necessary to secure an early determination of the validity of this legislation. If the legislation is valid, then it should be rigidly enforced. If it is found to be invalid, then we urge the Association to support other legislation which will insure that eventually this land will be returned to production.

XIV. VETERINARY COLLEGE

The number of practicing veterinarians in Illinois has decreased until there is not an adequate number for protection of the public health and protection of the livestock industry. Many veterinarians now in active practice have reached an age where they cannot long continue. A considerable number of well-trained veterinarians will be needed in the State each year. It appears that the veterinary colleges in other states cannot accept a sufficient number of students to fill our needs. A number of groups have recommended that a veterinary college be established at the University of Illinois. We believe any such college should be located on the campus at Urbana, should be closely affiliated and tied in with the College of Agriculture, that particular attention should be given to research and that definite assurance should be given that the service, similar to that now given by the Division of Animal Pathology and Hygiene will be continued. We recommend that the Association support the establishment of a veterinary college upon this basis.

XV. RURAL ELECTRIFICATION

The demands of war for materials have resulted in limiting and restricting the expansion of rural electrification. We urge the removal of the limitations upon the use of these materials for rural electric lines at the earliest moment consistent with military demands. We oppose any effort to injure the rightful interests, or to impair the service of, rural electrification cooperatives. We request the Board of Directors to use every proper influence of the Association to further the extension of high line electric service to the farm homes of Illinois.

XVI. AGRICULTURE, INDUSTRY AND LABOR

A proper relation must exist between the prices of agricultural commodities and the prices of industrial products, and between farm income, industrial wage rates and business income. These conditions must prevail in order that there may be full employment and a large and balanced production of agricultural commodities, industrial products and all forms of service.

Labor and industry have often misunderstood agricultural programs and policies, and, no doubt, agriculture has not been fully informed as to some of the problems and aims of the other groups. We believe that mutual understanding is necessary to the establishment of policies essential to national well-being. We, therefore, request the directors and officers of the Illinois Agricultural Association to attempt to arrange for conferences with other groups to discuss problems of mutual interest and concern.

XVII. PRICE CONTROLS

We recommend the continuation of price controls and rationing until scarce goods become available in sufficient quantities to prevent demand from exerting inflationary pressure on price ceilings. These controls should be flexible enough to meet changing conditions and they should be abandoned as rapidly as supplies in relation to demand reach proportions that remove the dangers of inflationary prices.

XVIII. ORGANIZATION

We commend organization forces all over the State for the very substantial increase in membership in the County Farm Bureaus and the Illinois Agricultural Association during the past year. The prestige of the whole Farm Bureau Movement has been very greatly strengthened by this accomplishment. We commend especially the County Farm Bureaus in establishing goals which if attained will bring the membership in the State Association to 117,000 members in 1945. We are especially pleased that our portion of the American Farm Bureau Federation's one million member goal was attained in Illinois during the past fiscal year. We call upon all County Farm Bureau officers and boards of directors to cooperate wholeheartedly and to put forth extra effort in the membership work in their respective counties during the coming year so that the long-range goal in the county and in the State may be attained by September 30, 1945.

* * *

We commend the officers, directors, committees and employees of the Illinois Agricultural Association, and the officers, directors and employees of the various business and service corporations affiliated with the Illinois Agricultural Association for the high plane of stewardship revealed in the reports presented in the various meetings beginning November 28 and being completed with this present session. The fidelity and efficiency exhibited in the discharge of responsibilities have contributed substantially to gains achieved. They merit our deepest appreciation. We further commend the display of confidence in the ability of farm people to cope with the future as plans were revealed for enlarged operations and services.

The Resolutions Committee senses the tremendous interest of the Convention in the statesmanlike character of the address of President Earl C. Smith in his annual address to this Convention.

The Resolutions Committee therefore suggests to the Board of Directors of the Association that it use every reasonable means to obtain an extensive publication and wide circulation of President Smith's address.

Protecting your business . . . . is our business

Not only your buildings and machinery, but the time, effort and money you expend in planting your crops represent values which should be protected against loss. Fire, wind and hail are all capable of destroying these values, but they cannot destroy our ability to replace your loss if you have the proper insurance in this company -- the only such company owned, managed and operated for Illinois Farm Bureau Members.

FARMERS MUTUAL REINSURANCE COMPANY

608 So. Dearborn St., Chicago 5, Illinois

FIRE, WIND, GROWING CROP HAIL INSURANCE

Preferred rates for preferred risks

PROTECTING YOUR PROPERTY IS PROTECTING YOUR SHARE IN AMERICA

Most of us this Christmas will look upon this solemn occasion with a renewed sense of its world-saving significance. Dearer to us than our precious heritage of the good earth is our birthright of living as Christians. As Christians first and American farmers secondly we shall continue in our devotion to the duties of each.

Precisely Right

— is a big order. Few things so qualify. In those few, 3 factors are always present:

1. Designed for a specific purpose by minds intimately acquainted with **all** the problems involved.
2. Painstaking attention to the design in building the product.
3. Intelligent application of the product to the use for which it was created.

Consider how well the I.A.M. Insurance Company fits these exacting specifications. Designed by Farm Bureau members, built by Farm Bureau members, owned and managed by Farm Bureau members, all for the **exclusive** protection of Farm Bureau members! No wonder rates are low, dividends high and claim settlements prompt and fair.

If you are not yet a policyholder of this "PRECISELY RIGHT" company ask the insurance agent at your Farm Bureau to tell you about its many advantages.

Automobile, Employers' Liability, and 4-H Calf Club Insurance at Cost.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

JANUARY, 1945 **VOLUME 23 - NUMBER 1**

This Month

By Earl C. Smith

TWO landmarks were noted on the pages of history of organized agriculture with the recent 1944 annual meetings of the Illinois Agricultural Association and the American Farm Bureau Federation. The Association rounded out its first thirty-year period of service to Illinois farmers and the American Farm Bureau Federation observed its silver anniversary — 25 years of service to American agriculture.

In reviewing briefly these annual meetings, there are several significant facts that well deserve consideration. As Farm Bureau people met for their annual sessions in the fourth successive year that our Nation has been engaged in war, there was a deep consciousness of organized agriculture's ever-increasing responsibilities in making a full contribution to the winning of the war and to the winning of the peace. The foreword of the resolutions adopted by the delegates to the Association's annual meeting reflects the sentiment dominating the thoughts of all. That statement in part read, "The Association was born during the violent stresses of World War I. These days of World War II are measuring its virility. This hour is the high-water mark of its strength, its influence and its membership. From its farm homes have moved out into the fronts of the world their legions of young men and women. Other legions upon the home front have sustained those in active service."

At the same time Farm Bureau people felt a thrill of pride in the increase in membership and sound progress reported by the Association and the American Farm Bureau for the year 1944 and in the accomplishments achieved in the outstanding food production record for the year. Also recognized was the contrast of voluntary organizations of farmers coming together in free and open meetings to determine plans and policies while people in many other lands, bowed under the yoke of dictatorship, are denied the privilege of shaping their own destinies. The annual meetings of the Association and the American Farm Bureau are concrete examples of American democracy in action and show how the inherent rights of a free people guaranteed by the Constitution may be exercised.

Farm people may look back on the year 1944 with the satisfaction that comes in the knowledge of a job well done. They have overcome many and difficult obstacles through long hours of toil and labor and through ingenuity in planning. Many farm fathers and mothers have carried these great loads under the stress of mental anguish and worry that comes with the knowledge that a son, daughter, or close relative is in peril on a shell-marked battlefield. Others have had to carry on after they received word that a dear one has made the supreme sacrifice.

As we look to the year 1945 we realize that the road to victory will be long and hard. It will bring more and greater trials and tribulations. It seems fitting that we here repeat a sentence in the foreword of the resolutions adopted at the American Farm Bureau convention:

"To these aims — victory in war, and victory in peace — the organized farm people of America have pledged themselves anew. So help us God, we shall not fail."

Set 1945 Production Goals

By L. H. SIMERL

FARMERS are responsible for the production of the primary munition of war — food. In spite of a greatly reduced labor supply — (over 26,000 members of Illinois Farm Bureau families are serving in the armed forces and many others are working in war plants) — farmers have increased the production of food by an almost unbelievable amount. As compared with the average of the years 1935-39, food production in the United States in 1944 was increased as follows:

Food grains	53%
Meat animals	52%
Poultry and eggs	50%
Fruits and nuts	21%
Dairy products	13%
Truck crops	40%
Other vegetables	6%

In order to complete the record it is necessary to report that the production of sugar in 1944 was 17 per cent less than in 1935-39.

Favorable weather and great effort has enabled farmers to supply civilians with more food than they had before the war, to provide food necessary to make our military forces the best fed group in the world, and to permit our sending large quantities of food to relieve hunger in other countries.

But what of next year? The government has asked Illinois farmers to make some adjustments in production for 1945. The adjustments for the major products are indicated in the accompanying table.

Product	*Adjustment*	*Goal*
Corn	5% reduction	8,700,000 acres
Soybeans	No change from 1944	3,400,000 acres
Oats	5% increase	3,500,000 acres
Sows for spring farrow	3% reduction	871,000 head
Eggs	15% reduction	200,000,000 dz.
Milk	1% increase	55,500,000 cwt.

According to preliminary indications the 1945 national goals for most farm products will be about the same as in 1944. The largest increases asked are in flaxseed (52%); sugar beets (47%), and sugar cane (11%). The largest reduction is in egg production (16%).

The overall view seems to be that the land should be farmed somewhat less intensively in 1945. This is to be brought about by growing less corn and more small grains and hay. In livestock production it seems desirable to increase meat production by a relatively heavy slaughter of cattle, even to the extent that the total number of cattle on farms is substantially reduced from present levels.

The biggest shortage of food seems to be that of sugar. Before the war the United States used about 7 million tons of sugar each year. Approximately 2 million tons of this was produced in continental United States. Another two million tons was imported from Cuba and a million tons each from Puerto Rico, Hawaii and the Philippines. The shortage of sugar was caused by the loss of the Philippine Islands, the difficulties of shipping from other sources of supply, and the need for large quantities of sugar materials for the production of alcohol and explosives.

Before the war the United States used about 26 million bushels of flaxseed annually. About two-fifths of this amount was produced in this country and three-fifths imported, mostly from Argentina. The war brought greatly increased needs for flaxseed, used principally for its linseed oil, the principal drying ingredient for paint. To meet these needs farmers produced 52 million bushels of flaxseed, about five times the prewar crop in 1943 and 25 million bushels in 1944. The import situation is uncertain because of the unsettled nature of relations between Argentina and the United States.

Unforeseen developments may cause some readjustment in the agricultural goals for 1945. In any event, it should be recognized that these goals are not statements of the quantity needed, but only an estimate of the amounts which it is hoped can be produced. The actual needs for sugar, meats, dairy products and many other food items will be much greater than the announced goals.

A new circular, "About That Farm You're Going to Buy," has just been published by the Farm Credit Administration and may be secured by writing the FCA at Kansas City, Mo.

Plan Series of Labor Saving Shows in State

A series of 24 labor-saving shows will be held in various parts of Illinois during January, February and March, according to P. E. Johnston, state farm labor supervisor. The extension service of the College of Agriculture, county farm and home advisers and the Illinois Farmers' Institute are cooperating in staging these events.

Latest methods of saving labor through machinery, time-study and general farm and home management will be featured.

A truckload of models, machines, photographs, motion pictures and display panels will be taken to the places where the show is scheduled and will be set up for one-day stands. In addition, each county adviser and his farm labor assistant are rounding up for display local labor-saving equipment, inventions and "gadgets" developed by farmers that have proved practical during the labor shortage. Housewives are also encouraged to bring in labor-saving ideas and devices, Johnston says. County and state prizes will be offered.

The first labor-saving show will be held in Champaign county at the College of Agriculture on January 12.

"I hope every farmer who has an idea, device or gadget will display it at one of these labor-saving shows," he added. Those interested should contact their farm adviser in the following counties where shows will be held: Mason, Jan. 17; Macon, Jan. 18; Logan, Jan. 19; Livingston, Jan. 23; Marshall-Putnam, Jan. 24; Stark, Jan. 25; Henry, Jan. 26; Iroquois, Jan. 30; LaSalle, Jan. 31; Will, Feb. 1; Kane, Feb. 2; Richland, Feb. 13; Fayette, Feb. 14; Bond, Feb. 15; Jackson, Feb. 16; Pike, Feb. 20; Morgan, Feb. 21; McDonough, Feb. 22; Knox, Feb. 23; Rock Island, Feb. 27; Lee, Feb. 28; Stephenson, March 1; and McHenry, March 2.

Swartz Resigns As Fruit Exchange Sales Manager

Howard Swartz, who has been sales manager for the Illinois Fruit Growers Exchange for the past three years, has resigned his position and is moving with his family to Grand Rapids, Mich. His resignation became effective Dec. 15. Swartz will be associated with his father-in-law as representative of a large manufacturing organization.

Swartz, a graduate of Michigan State College, came to the Exchange after serving as manager of the Fennville Fruit Exchange in Fennville, Mich., for five years. His work in Illinois has been unusually successful.

Farm advisers covering the entire period of Adams County Farm Bureau history to date had a 100% attendance record at the IAA annual meeting. Starting with E. W. "Farmer" Rusk, Ruhm Phosphate Co., second from the left, in order of tenure are F. A. Gougler, IAA director of produce marketing; Ray E. Miller, secretary, St. Louis PCA; S. F. Russell, IAA director of livestock marketing; George B. Whitman, Illinois Chain Store Council; and T. E. Myers, present farm adviser. At the extreme left is C. C. Mast, manager of the Adams County Shippers Association, active in Adams County Farm Bureau work since the beginning, and at extreme right, Prof. J. C. Spitler, state leader of farm advisers.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES
By O. D. Brissenden

MEMBERSHIP Maintenance meetings will furnish the organization highlights of the midwinter season, with IAA Organization fieldmen Harry Claar, L. B. Hornbeck and John C. Moore now engaged in scheduling them in their respective districts.

The "M-M" meetings of 1944 proved to be sparkplugs in focusing attention on the great possibilities yet remaining for increased Farm Bureau membership. Every county in the state set long-range goals, totaling more than 117,000, to be achieved by Sept. 30 of *this year*. Employees of Farm Bureau and the associated cooperatives met to hear discussions of their role both in acquiring and servicing membership.

Now — with the accomplishment of these goals as a keynote — county groups will meet once more, to re-study their objectives, to re-plan their programs of acquisition and maintenance. W. P. Sandford, IAA director of sales service, and the three assistant directors of organization, will conduct the programs. Scheduling is being done now by Claar, Hornbeck and Moore.

Illinois was in its rightful place as one of the ten states that achieved the AFBF's Million Member Goal, when the national organization's annual meeting was held. Of the 98 county Farm Bureaus, 52 in the state made their local goals and were rewarded by the AFBF prize of expenses of a representative at the annual meeting.

Roger Corbett, AFBF secretary, has appealed to counties which have already attained their goals to take an extra quota of 50 additional members or 10 per cent of the remaining potentials, whichever is larger, thus when achieved, will entitle each to be known as a "Big Brother" county.

One of this year's objectives is to have all of the remaining 46 counties make their Million Member goal, and the 52 to qualify as "Big Brother" counties.

Illinois County Farm Bureaus reaching their goals in the Million Member contest were: Boone, Calhoun, Cass, Champaign, Christian, Clark, Coles, Cook, DuPage, Edgar, Ford, Fulton, Gallatin, Greene, Grundy, Henderson, Henry, JoDaviess, Kane, Kankakee, Kendall, Knox, Lake, LaSalle, Lee, Livingston, Logan, McDonough, McLean, Macon, Macoupin, Madison, Marshall-Putnam, Mason, Menard, Mercer, Monroe, Morgan, Moultrie, Piatt, Randolph, Richland, Rock Island, St. Clair, Sangamon, Schuyler, Scott, Stark, Stephenson, Will, Winnebago, Woodford.

News from county organization activities in all parts of the state continues to be splendid. Certainly 1945 is THE year to build membership higher.

Wabash county signed a total of 48 in its recent drive.

Brown county drove on to attain its long-range goal of 600 members. The drive was followed by a new member meeting.

Schuyler county is within just a few members of its long-range goal of 800.

Woodford county workers reported 72 new members signed in 172 visits, and believe 31 more can be signed in another contact.

Jefferson county's contest resulted in 35 signed by the East Side team and 32 by the West Siders to climax a very successful drive.

Peoria's membership effort was launched by a ripsnortin' kickoff meeting attended by 104, and there were 102 contracts turned in at the report meeting a week later.

Rock Island had 160 men and women at their kickoff meeting. Other counties recently launching drives are Warren, with 90 present; Mason, Marion, Cumberland and Kendall.

McHenry county signed 86 new members in its November campaign, led by E. M. Lehman, who brought in 21 contracts. "We are still quite a way from our ambition, 1500, but now have well over 1200," COD Earl Swenson writes.

Fayette's report for the drive ended Nov. 9 was 74 new members.

Henry county had signed 68 new members with several townships yet to report, according to latest word from the C. O. D.

Mason county's recent drive netted 46 new members.

Williamson's contest campaign netted 30 new contracts.

Effingham county came up with 70 new members. Those born in the 20th Century signed 44, while the 19th Century group brought in 26. Penalty for the losers: eating without a fork, and using a burlap napkin.

Marion county held a memorable kickoff meeting Dec. 9 with 150 farmers and their wives, representing all 17 townships, in attendance. Interesting is the item in the Marion County Democrat, which says among other things, "Preceding the meal the group sang 'America,' gave the pledge of allegiance to the flag and repeated the Lord's Prayer in unison. 'Onward Christian Soldiers' was sung midway in the speaking program." They are using a 20th-vs.-19th Century contest plan, too.

Franklin county is driving on toward more memberships, reports Carl Cox, while Hamilton county, which recently set up the 98th Farm Bureau, held its first annual meeting recently. Butch Wanstreet and Jerry Embser as captains for the East Siders and West Siders respectively are both fighting for the coveted goal of a membership of 500 and soon.

Warren, Kendall, Kane and Rock Island counties are among those who have held their kickoff meetings in December, but reports on the results are not yet available.

Smith Resigns As Farm Adviser in Livingston

R. C. Smith, Livingston county farm adviser, is leaving his position in that county March 1, to accept a position with the Harry Ferguson company of Dearborn, Mich., according to an announcement of Livingston County Farm Bureau officials.

Smith submitted his resignation in November, but is remaining until March.

MEMBERSHIP ANNOUNCED AT ALL-TIME HIGH OF 828,486 AS ANNUAL

MORE than 828,000 Farm Bureau members with their total efforts pledged toward total victory and total peace for America and her allies — that's the message that went out from the annual meeting of the American Farm Bureau Federation as the AFBF quietly observed its silver anniversary — 25 years of service to American agriculture.

Records showed that AFBF membership stood at the highest peak in the organization's history — 828,486 Farm Bureau members, or a gain of 140,987 over a year ago and representing a percentage increase of 20.5. This leaves the AFBF only 171,514 short of its "Million Member" goal.

The Midwest region, which includes Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, Ohio, and Wisconsin, had a gain in membership of 66,442, over last year, or an increase of 19.42 per cent. This brings the Midwest region total membership to 408,478.

Ten state and 669 county Farm Bureaus which had reached their goals in the "Million Member" campaign were awarded certificates at the AFBF annual meeting by R. B. Corbett, secretary-treasurer. Illinois was one of the state winners and 52 county Farm Bureaus in Illinois received awards for attaining their goals. Iowa was the only state in the Midwest which had a higher number of county awards. Iowa had 58 county awards.

The annual address of AFBF President Edward A. O'Neal and the resolutions adopted at the closing session indicated clearly that the strength of the organization's united membership was pledged toward building an even better America.

Said President O'Neal: ". . .I take great pride in the fact that we now have the largest membership in our history, and that our organization has risen to a position of great importance in the affairs of the Nation. Never before has so large a group of farm people marched together behind a single banner . . . I earnestly hope that we will all go home less impressed with what we have done in the past than with the grave responsibilities which farm people have imposed on us for the future. The decisions which the people of this country make during the next few years will establish the pattern of American life for generations to come.

. . .Farm people must be as zealous serving their nation through their organizations as in developing their own industry. The nation's character was formulated largely by farm people. It is our responsibility to perpetuate those principles for which our forefathers fought and died."

President O'Neal declared that the postwar world security organization must be prepared to maintain peace by force if necessary, but force will not be necessary if the victorious countries will permit all nations to rebuild their shattered economic structures.

Turning to the domestic front, the AFBF leader said, "All leaders and groups in this country are agreed the only possible way we in America can maintain employment after the war and service our national debt will be through creating an economy of abundance.

"But we can't have such economy under high-tariff policies. Restriction, scarcity, monopolies, unemployment, and eventually war are certain fruits of excessive tariffs."

President O'Neal also warned that if the various groups in our economy depend too much upon the government and fail to coordinate voluntarily their own efforts to achieve the same goal, the government will become the sole employer and our historic tradition of freedom of the individual will become a thing of the past.

In conclusion, President O'Neal said, "We must meet the stern realities with

MEETING IS HELD; MILLION MEMBERS, GOAL

rigorous action, but may our action be guided by uncompromising love of justice and hatred of tyranny in all its forms. Surely we have the spiritual strength to put aside malice and suspicion and selfishness, and to labor faithfully toward the Christian ideal of a world made up of sovereign states living together in peace and cooperating together to guarantee to all individuals the freedoms and rights that are their heritages as children of God."

That unity and harmony of interests was evident in the deliberations of the delegates at AFBF annual meeting was indicated by IAA President and AFBF Vice-President Earl C. Smith, who served as chairman of the resolutions committee, when he said, "During all of the deliberations of the resolutions committee there wasn't a time when a voice was raised in anger."

Eric Johnston, president of the Chamber of Commerce of the United States, one of the main speakers at the convention, declared that "Agriculture must maintain a high level of purchasing in America to enable people to buy food produced under a program of expanded economy instead of curtailing production." He also declared that the principal solution to our postwar economic problems lies in an expanding economy, and the peace and security of the world depend upon it.

Grover B. Hill, under-secretary of agriculture, and assistant administrator of the WFA, praised farmers for their outstanding job in food production and declared that "no farmer would want to cut his production now on the chance that the war in Europe might be over in a few weeks or a few months. We can't run that risk with the lives of our fighting men." Hill also declared that during the postwar period farmers will need their organizations more than ever, and he said it was up to farmers "to help get sound agricultural programs and the kind of understanding of those programs that will give them the backing of sound public opinion."

I. W. Duggan, governor, Farm Credit Administration, declared that farmers are now in the best financial position in the history of American agriculture, but face difficult postwar conversion problems.

"Our agricultural income," he said, "will be greatly influenced by the amount of employment and our national income. However, even with full employment we may not have a prosperous agriculture. Also, full employment in industry is going to depend upon the purchasing

SUMMARY of RESOLUTIONS

Adopted By Voting Delegates at 26th Annual Meeting of AFBF in Chicago, Dec. 14, 1944

TO THESE aims — victory in war, and victory in peace — the organized farm people of America have pledged themselves anew. So help us God, we shall not fail.

I. Democracy and Balance

America needs an economic balance which will assure security for labor, stability for industry, and parity for American agriculture. Therefore. . . . . we appeal to the leaders in other groups of agriculture and the recognized leaders in labor and in industry, to join in a series of conferences in 1945, to formulate a program necessary for the establishment and maintenance of policies designed to assure large-scale production of the products of both agriculture and other industry, and their interchange on a basis of true economic balance and the establishment and maintenance of a standard of regular wages for workers on such a basis of economic balance.

II. Importance of a Prosperous Agriculture to National Welfare

The demands of farmers for industrial products and services will be the greatest single contributing factor to a continuous prosperity of all segments of our economy . . . . . .Therefore, the welfare of labor and industry — in fact, the national wellbeing — requires the adoption and maintenance of economic policies and relationships necessary to assure a fair exchange value for the products of industry and agriculture, and the maintenance of continuous and substantial wages for labor in line with such a balanced price level.

III. National Farm Program

We insist on the following basic measures:

1) Retention and strengthening of the Agricultural Adjustment Act and all related measures.
2) Continuation of present mandatory loan rates on basic commodities and price supports under the Steagall Act.
3) Continuation and strengthening of the Agricultural Marketing Agreements Act of 1937.
4) Adoption of a positive, effective policy and program for regaining our fair share of world markets. . . . . .developing new and expanded domestic outlets.
5) Goal of all farm programs to be parity prices in the market place, with ceiling prices so adjusted as to eliminate subsidies in lieu of fair prices.
6) Intensification and expansion of farm research.
7) Adequate appropriations necessary to carry out the above programs.
8) Simplification, decentralization, and coordination of administration of the various phases of the program. We recommend that hereafter no soil conservation practice be included in any program for any State unless it is approved by the State Experiment Station or the State Extension Service.

IV. International Trade

We recommend:

1) Calling an international trade conference to consider lowering barriers to trade, and to discourage erection of barriers in the future.
2) That the United States participate in international action on monetary and credit policies designed to stabilize currencies and prices.
3) That foreign and domestic barriers be gradually adjusted or removed.
4) That the trade agreements program be improved and expanded.
5) That new and improved international trade agreements for surplus agricultural products be developed.
6) That all nations be given access to the raw materials needed for their peacetime economies.
7) That, during postwar reconstruction, our exports for rehabilitation of other nations that are honestly trying to rebuild their economies be primarily considered as outright expenditures.
8) That our Government adopt a positive program to develop world trade.

V. International Cooperation

We recommend U. S. cooperation with other nations along the following lines:

1) A general international organization for maintaining world peace, based on the principles outlined at the Dumbarton Oaks Conference, such organization equipped to maintain peace by force if necessary.
2) International monetary programs for stabilizing currencies and prices, including the International Monetary Fund and the International Bank for Reconstruction and Development proposed at the Bretton Woods Monetary Conference.
3) A international food and agriculture organization such as the one initiated at the Hot Springs Conference.

VI. A Federal Tax Program

A bi-partisan Federal tax commission should be created to develop an equitable program of taxation. The personal income tax should continue as the major source of Federal revenue. Low exemptions should be retained. Income on future issues of Federal, State and local government bonds should be taxed as other bonds are taxed. The excess-profits tax should be repealed when excessive wartime earnings end. Corporation earnings distributed to stockholders as dividends should be exempt from taxation except as the stockholder is taxed on such dividends. Undistributed earnings should be taxed at rates sufficient to encourage but not compel distribution. Government-owned property, managed on an earning basis in competition with private enterprise, should be taxed by all other governmental units. Federal social security taxes should be increased only upon proof of necessity. Unemployment compensation taxes should be levied on employer and employee alike by the States, not the Federal Government. The estate tax-offset law should be modernized.

This Federation will continue to support income tax exemption of patronage refunds of cooperatives.

VII. Monetary Control and Price Stabilization

We will work for a sound monetary and fiscal policy designed to stabilize the general price level.

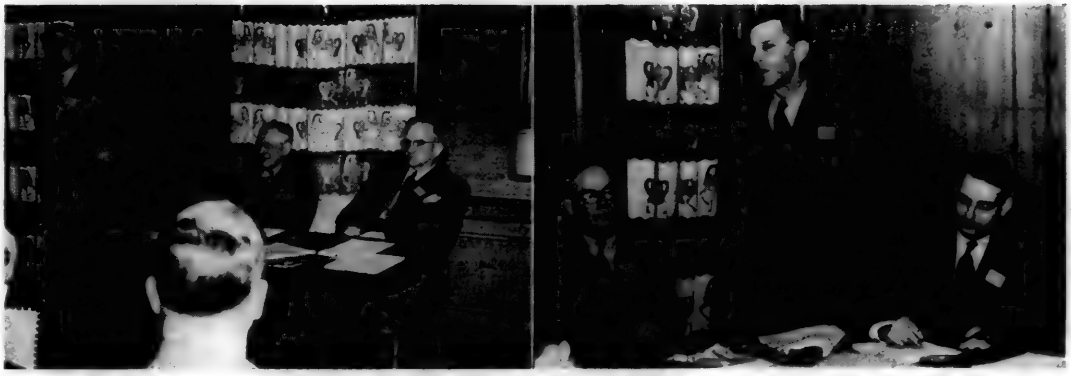
VIII. Inflation Control and Price Control

We recommend that price controls, when necessary and workable, be continued until goods are once again abundant; that the "Little Steel" formula be retained for the duration; that the intent and specific provisions of the Price Stabilization Act be carried out; and that regulations and orders of the War Food Administration and the Office of Price Administration be coordinated so as to prevent delay and misunderstandings.

IX. Farm Credit

We will continue to oppose all efforts to convert the Farm Credit System into a government-owned or government-operated institution. We make the following recommendations for reorganization and improvement of the System:

1) Direction of all agencies now in the System, plus control of direct-lending agencies dealing with farmers, should be vested in an independent policy-making, bi-partisan board.
2) With respect to present Farm Credit Administration agencies:
   a) All should be farmer-owned and farmer-controlled.
   b) Initiative and responsibility should rest in the local associations.
   c) National farm loan associations and Federal Land Banks should share profits on a 50-50 basis, and a portion of interest payments should go to the associations for operating expenses and reserves.
   d) Government capital now in the System should be made available to all units in the System when needed, but should be gradually returned according to an orderly plan.
   e) Interest rates should exceed the average cost of capital funds by an amount sufficient to meet costs and provide for reserves, with any amount left over returned to borrowers as patronage dividends.
   f) Adjustments in organization and administration should be made to increase efficiency without imparing necessary services.
3) With respect to governmental direct-lending agencies, we recommend:
   a) All except the Federal Farm Mortgage Corporation should be administered by an executive officer employed by the national bi-partisan board according to policies to be laid down by Congress and regulations to be issued by the board.
   b) Necessary Congressional appropriations for loans and expenses should be made to the proposed bi-partisan board.
   c) Loans should be made only to those unable to qualify with the usual sources of credit.
   d) Interest rates should be not less than rates on similar loans made by permanent cooperative units of the Farm Credit System.
   e) Existing loans of all direct-lending government agencies should be consolidated in this agency.
   f) All loans should be limited to amounts that can normally be repaid out of the earnings of the farm. Clients should be encouraged to aspire to attain a credit status which will enable them to borrow from the usual farm credit agencies.
   g) Administration should be decentralized, improved, and kept free of political control, and the creation of collective colonies forbidden.



At the AFBF annual meeting tax conference are, left to right, B. A. Thomas, Shelbyville, Ky.; George E. Metzger, IAA field secretary, and A. S. Thomas, director of taxation and legislation, Indiana Farm Bureau. At the right, Illinois is represented at the fruit and vegetable conference by IAA Vice-President Talmage Defrees, at left, Porter Hardy Jr., of Virginia, and at right, L. L. Colvis, IAA director of fruit and vegetable marketing.

4) Credit should be so controlled that it will not contribute to land inflation.
5) All interested groups and agencies should collaborate in safeguarding returning veterans against unwise loans.
6) All public farm credit agencies dealing with real estate loans should use the Appraisal Division of the Federal Land Bank System, with service made available at cost to the Veterans Administration for any veteran desiring to buy a farm.

X. Land Grant Institutions

We urge increased appropriations to the Extension Service sufficient to provide a County Agent and Home Demonstration Agent for every agricultural county, plus such assistant Agents as are necessary.

XI. Agricultural Research

Information on production records and farm practices, now in the files of various public agencies, should be turned over to the Land Grant Colleges for study and tabulation, with final reports made available to farmers. Research is needed on the comparative value of natural foods and fibers, compared with the value of synthetic substitutes, on better methods of production, soil use, and new and expanded uses for agricultural commodities. Work of the Regional Agricultural Laboratories should be broadened. Better coordination is needed in the planning and carrying out of all research.

XII. Rural Electrification

Further extension of electric service to rural areas should be pushed as rapidly as feasible. REA projects must be made truly cooperative, and politics kept out of the movement. Farmers should have equal access with other groups to power developed at government-owned dams.

XIII. Surplus Property

We insist that surplus property owned by Government be disposed of with due regard to protection of free markets and competitive prices, and condemn uncontrolled dumping. Rural needs for such property should receive every consideration. The statute-created Advisory Board to the Director of War Mobilization and Reconversion be permitted to function as representatives of the general public and their interest, as provided by law.

XIV. Returning Veterans and Agriculture

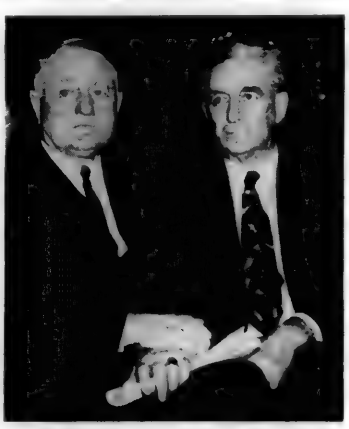
We support the creation of local advisory committees to help veterans to find their places in civilian life. Agriculture itself can absorb only a portion of those wishing to go into this field, but attractive opportunities should develop in rural communities in rendering services not supplied by farmers. Veterans should be informed as to these opportunities and aided in getting established in this field.

XV. Military Training

Compulsory military training in times of peace is foreign to the American way of life. We recommend that a broad program leading to physical fitness be incorporated in our high schools, and we approve of the system of military training now provided in our Land Grant Colleges; but we oppose the program of compulsory military training now being publicly advocated, as leading inevitably to some form of militarism.

XVI. Roads

We favor continuation of Federal aid to States, but insist that such aid be based on actual need, that States be required to match Federal funds, that the formula for apportionment now in use be continued, low-cost farm-to-market roads, including school and bus routes be given more consideration, and that future Federal super-highways be routed to serve existing market centers.



R. W. Blackburn, former AFBF secretary, and Donald Kirkpatrick, AFBF and IAA counsel, listen to the reading of the resolutions.

XVII. Conservation of Mineral Resources

U. S. farmers customarily add to the soil less than half the amount needed to maintain our soil fertility. Therefore we recommend that the Board of Directors of the American Farm Bureau Federation take appropriate action to protect, improve, and increase the supply and use of mineral fertilizers drawn from the large, undeveloped deposits in the West and in Florida.

XVIII. Social Security

We urge our Board of Directors to seek a practicable plan under which farm labor may be covered by old-age and survivors' insurance under the Social Security Act. When such a practicable plan is developed, we will endorse it.

XIX. Sale of Surplus Lands

We commend Congress for safeguarding the sale of Government-owned surplus land, and particularly for the provision that land be offered to former owners at the original purchase price, adjusted for damage or improvement.

XX. Farm Machinery and Supplies

We urge continued aggressive action to speed up the production and delivery to farmers of all necessary machinery, repairs, and supplies.

XXI. War Memorials

We recommend to State and county Farm Bureaus, that where war memorials are being considered, they direct attention to the urgent needs of rural America for adequate health and hospital facilities. In all cases, funds should originate entirely with the respective States and counties.

XXII. Freedom of Speech, Press, and Radio

We condemn any restrictions of the right to criticize acts of public officials whether in private conversation, by statements in the press, or by broadcasting over the radio . . . . . Clear channel broadcasting, free from interference, is invaluable to rural America. We urge no reduction in the number of clear channel stations and no limitation of clear channel broadcasting.

XXIII. Membership Achievements

We commend the State and county organizations for their accomplishments in membership acquisition.

The FARM FRONT ROUNDUP

1945 WOOL PROGRAM — The 1945 wool purchase program of the WFA which became effective Jan. 1 is essentially a continuation of the marketing plan which has been in effect for domestic wool since April 25, 1943. WFA will enter into agreements with established wool dealers and cooperative associations under which they will purchase, store, handle and sell domestic wool for the account of the Administration. Purchases will be made at substantially the same level as under previous programs — that is, at prices in line with the ceiling value, less allowances to cover the cost of transporting and marketing the wool and a service fee of 1-⅛ cents per grease pound. In order to avoid a decline in lamb prices during the late months of 1945, the new program will apply to domestic wool offered to the WFA and appraised by June 30, 1946.

EGG PRICE SUPPORT — War Food Administrator Marvin Jones announced Dec. 12, a minimum 1945 producer price of 27 cents per dozen for candled eggs. This price will be supported by purchases from dealers upon certification that they in turn paid no less than the support price to producers. In areas where marketing facilities for purchasing candled eggs from producers cannot be made available, a minimum producer price of 24 cents a dozen was announced. In these areas the WFA will stand ready to purchase eggs from farmers at 24 cents per dozen straight-run. Purchasing agents will be designated in all areas prior to the beginning of heavy egg production.

HOG PRICES — OPA announced, effective Dec. 13, a ceiling of $14.75 per hundredweight, Chicago basis, for all live barrows and gilts. Ceiling for sows, stags and boars is $14. This action, OPA said, will allow farmers to feed hogs to heavier weights without fear of a discount and probably will result in more even marketing. However, the Chicago Producers news letter of Dec. 14 points out that this order setting the top on all sows at $14 means that lightweight sows under 270 pounds, heretofore eligible to the ceiling of $14.75, cannot sell over $14.

RAISE WHEAT CEILING — Ceiling price of wheat was increased effective Dec. 13, 4 cents a bushel. OPA said the increase was necessary to fulfill the requirements of the Stabilization Extension Act of 1944. The prices established by this amendment are calculated to reflect parity to producers.

FARM MACHINERY — Production of farm machinery, exclusive of wheel tractors, repair parts and attachments, for the four months' period July 1 to Oct. 31, 1944, is approximately 25 per cent behind manufacturers' schedules, the Farm Machinery and Equipment Industry advisory committee was informed by WPB officials recently. Military requirements, which are more critical than they were two to three months ago, are creating critical shortages in components needed for farm machinery production, WPB officials said.

FARM SUPPLIES — According to the USDA war letter for agriculture Dec. 11, distributors of farm machinery and equipment are now able to obtain AA-2 preference ratings for purchasing electric motors, circular cordwood saw blades, and 18 other kinds of repair parts for resale to dealers serving farmers, the WPB has announced.

LIVESTOCK SITUATION — A bureau of agricultural economics report says in part: "Prices for meat animals will be maintained at or above 1944 levels in 1945. Total meat output in 1945 probably will be at least 2 billion pounds smaller than the 24.6 billion pounds indicated for 1944 (dressed-meat basis). Prices for hogs during the present hog-marketing year may average higher than a year earlier. Large purchases of pork by WFA and the armed forces, and a sharp reduction in hog marketings during the remainder of 1944 and the first 7 months of 1945, will tend to hold hog prices above the level of a year earlier. Purchases of beef by the armed forces in the first half of 1945 probably will be larger than in the first half of 1944.

RADIO TUBES — Scarcely half enough radio receiving tubes have been available during the last two years to replace those worn out in civilian receiving sets. The shortage is expected to continue until several months after the defeat of Germany and Japan, says the WPB, which adds that the civilian replacement tube shortage is due to the fact that military demands increased from 16 per cent of the total production in 1941 to 65 per cent the next year, 82 per cent in 1943, and 86 per cent in 1944.

STOVES — Stove dealers and distributors in most areas will be granted additional ration certificates to build up their stocks of oil cooking stoves and gas heating stoves, according to OPA. This does not indicate any substantial improvement in supplies. Shifts in wartime population, variations in seasonal demand for different types of stoves, changes in fuel supply conditions, make this method of redistributing supplies necessary. Inventory ceilings for oil heating and gas cooking stoves remain the same.

WFA CHANGES — The following main changes have been made by the WFA, effective Jan. 1: the office of distribution, and the office of production are abolished and three new offices are established, each to be headed by a director — the office of basic commodities, the office of marketing services, and the office of supply.

NEW CCC HEAD — WFA on Dec. 15, announced the designation of Frank Hancock as president of the Commodity Credit Corporation.

Resolution

Whereas: *Many supplies and materials are still limited and,*

WHEREAS: *Delays may come from shortage of manpower and transportation bottlenecks, therefore, be it*

Resolved: *That during 1945 I will carefully estimate my farm supply needs and place my order well in advance.*

This map shows the territories (in black) where distribution of Blue Seal Plant Foods has been authorized.

WHAT MAKES A CO-OP GROW?

IN THE picture above can be found some of the main reasons why Producers Creamery of Carbondale is a successful cooperative. These men and women are among the cooperators who have been continuous members since the Creamery was organized in 1935. They were in attendance at the Creamery's annual meeting. The picture does not include all of the estimated 275 original members who are still active. These individuals, together with many others who have joined the ranks since 1935, prove that a cooperative is as strong as its membership.

As producers gathered for their annual meeting late in 1944, it was recalled that in the early days people often said "you can't make good butter in Southern Illinois." Today that theory has been thoroughly disproved. During 1944, more than 97 per cent of the butter produced at the Carbondale plant met the high quality standards for marketing under the Prairie Farms label. The scope of this achievement is better realized when the quality of butter production in the first year of the Creamery's operation is considered. In 1935, a considerable portion of the output was below 90 score. During that first year of operation and in later months there was the problem of eliminating undergrade cream. Areas badly infested with wild onions made for poor cream in the early spring and late fall. Another problem was that of building cream volume in counties mainly devoted to fruit and vegetable growing.

The onion flavor problem was licked in 1940 with the purchase of a vacuum pasteurizer, the first of its kind installed in Illinois, and the third in the United States. The Creamery has concentrated on improving quality since the very beginning, and the influence that the Carbondale Creamery and the state-wide organization, Illinois Producers Creameries have had on cream prices runs into thousands of dollars in increased returns to producers.

Pounds of high quality Prairie Farms Butter pile up at the wrapping machine in the Carbondale Producers Creamery.

Now this cooperative is launching an expansion program. Some $50,000 in stock is being sold to help finance the installation of equipment to make sweetened condensed milk, plain condensed milk, ice cream mix, dried skim milk, dried whole milk and dried buttermilk. Some of the new equipment will be of such a nature as to eliminate the onion flavor in garlic milk.

The need for such a conversion program has been brought about by a shift of patrons to milk during the past two years. During the past year the Creamery's volume has dropped nearly 8 per cent. This occurred during the last three months of the fiscal year. Each time that a drouth is experienced in the area, such as the one last year, some of the larger producers are contacted immediately by representatives of milk companies, who urge them to convert to milk production. Over half of the needed $50,000 in stock was sold or subscribed in only one day's time spent on the territory. The directors and the manager feel that the total amount will be oversubscribed before the end of January.

As of the last of December, WPB had granted priority to the Creamery to build a garage and also a priority

New directors of the Creamery board confer with Manager Harold C. Brackett. Left to right, they are: Henry Reuscher, vice-president, Jackson county, and Fred Keller, first director from Perry county, and Brackett. Reuscher replaces Frank Easterly, and the new director from Perry county was added when the Jackson-Perry county district was divided last year.

to cover the purchase of refrigeration and receiving room equipment for the conversion project. Application for some of the additional equipment had to be revised. This has been re-submitted for approval.

One of the highlights of the Creamery's annual meeting in 1944 was a "mortgage burning" ceremony marking the final payment on loans from the St. Louis Bank for Cooperatives which amounted to $34,000 over a period of five years. The officers reported that the Creamery had no unpaid debts on the books, and that the organization was able to pay a dividend of $10,170.95 on preferred stock covering a period of five years. This completed all payments of dividends due stockholders up to Oct. 1, 1944. Many of the stockholders reinvested their dividend checks in the new stock subscription to finance the Creamery's proposed conversion program.

During 1944, a cooperative locker plant was started in Carbondale, with the lockers housed in part of the Creamery. The general administrative boards for the Creamery and the Locker plant are the same. This modern locker plant was officially opened Aug. 10. More than 600 lockers are rented and 146 more will be installed during January. In addition to the space occupied in the Creamery, the locker plant has a modern brick structure back of the Creamery plant for its smoking, curing and rendering facilities. Designs are being drawn for slaughter facilities with special equipment for milk feeding and dressing poultry. The locker plant came into a profit-making position in its third month of operation.

William Clarence Hawthorne, Creamery and Farm Bureau member, and his son, Donald Clarence, look over new lockers with Headley Ferrell, plant butcher, at left.

Returning to the Creamery's operations, it seems that a fitting summary of its worth is contained in this statement from the annual report:

"The final result was the ability of your plant, this year, to pay producers for butterfat 81.6 cents out of each sales dollar received. It pays to belong."

From Our Readers

Gentlemen: Dutch East Indies

I take this opportunity to thank you for sending me the Illinois Agricultural Association RECORD. To date I don't believe I've missed an issue and to make certain that I get the future issues I am enclosing my present address. It will no doubt be changed again in the future and I'll try to keep you up to date in that respect. Thanks again for the "RECORD". It's my best connection with the Illinois home front.

Sincerely yours,
Capt. Merle M. Zeine

Protein Meal Order

Restrictions of War Food Order No. 9 which controls distribution of protein meals have been modified by the WFA. Set-aside orders and distribution controls have been retained, but quota and inventory restrictions have been revoked. WFA warns however, that any substantial disturbance of the current pattern of distribution might lead to re-instatement of the controls that have been abandoned.

The U. S. Bureau of Agricultural Economics reports total milk production at a new record high for the month of November, estimated at 8.4 million pounds, or 5 per cent higher than for November, 1943.

Butter production is running about 10 per cent below a year ago.

Cheese production last month was about 15 per cent above a year ago.

Total U. S. butter stocks in storage on Dec. 1, were 91,104,000 pounds, compared with 178,750,000 a year earlier, and a 1939-43 average for that date of 106,910,000 pounds.

Carbondale Creamery directors "burn a mortgage" signifying payment of last debt. Left to right are Adolph Rickenberg, Randolph county; Ira Beall, Jefferson; Erwin Fosse, secretary-treasurer, Williamson; Claude Cossey, Pope; Ernie Harper, Massac, and Charles Eddleman, president, Union. Frank Easterly, who resigned from the board, was absent when picture was taken. At the right is part of the large attendance at the annual meeting. O. D. Brissenden was guest speaker.

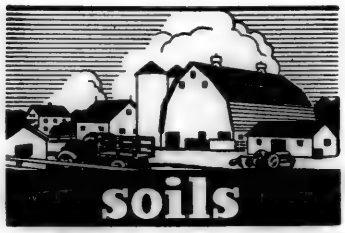
Junior Feeding Contest Features Fat Stock Show

THE Chicago Fat Stock Show uncovered many interesting features, not the least of which was the outstanding junior feeding contest, with its record entry of 768 steers that were exhibited by farm youths.

In the fat carlot competition, Karl Hoffman of Ida Grove, Iowa, for many years a Producer patron, secured the top honor for the third consecutive year. This outstanding load, bred by the T. O. Ranch, Raton, N. Mex., averaged 932 pounds and brought the record price of $59 per cwt.

The junior feeding contest was featured not only by the large number of entries, but a group of remarkably well fed steers and quite satisfactory prices. In fact, the average price of the steers in this event was $27.05 per cwt. This does not include the champion steer.

As usual, a large percentage of the calves were consigned to the Chicago Producers — more than 40 per cent, including 51 prize winners. They included the champion Angus calf shown by Sarah Ann Hoffman; champion Shorthorn of the junior feeding contest exhibited by Gerald Fairchild, Buena Vista county, Iowa; the reserve champion Shorthorn of this contest shown by Wayne K. Conover, Ida county, Iowa and many others that won noteworthy honors. Among those with prize winning entries from Illinois that had steers consigned to the Chicago Producers were: Marvin Kuipers, Iroquois county, who took a first prize with his Angus steer; Sandy Schulte, Mason county, who secured a second prize with his Shorthorn; Wm. Hanks, Jr., Champaign county, who won a second prize with his Angus; Delbert Rahe, Scott county, who took fourth prize with his Angus steer; Ruoff H. Dhuse, Kendall county, took fourth prize with his Shorthorn; Wm. E. Johnson, Iroquois county, 5th, 6th and 8th prizes with three Herefords; Lawrence Frank, Sangamon county, 5th prize with a Shorthorn; Ira Aves, Jr., De Kalb county, 5th with an Angus steer; Glenn Lodge, Henry county, 6th with a Shorthorn; Marion Snyder, De Kalb county, 7th with a Hereford; Kenneth Fahsbender, Livingston county, 9th with an Angus; Ronald Hack, Will county, 9th with a Shorthorn; John A. Collis, Henry county, 10th and 14th prizes with two Angus steers; Jerry Schlickting, Jo Daviess county, 10th with a Shorthorn and Jim Shoger, Kendall county, 15th with a Hereford.

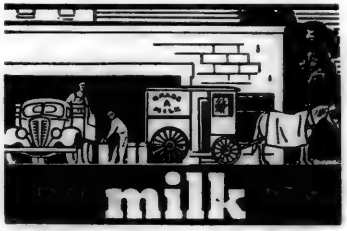


By John R. Spencer

The following statement from Dr. E. E. DeTurk, professor of soil fertility, U. of I. College of Agriculture, answers satisfactorily the question regarding injury of calcium chloride on farm soils. (This material is being added to agricultural limestone in rail cars during the winter months with a slight additional cost by several producing quarries to prevent freezing of material in transit). "There is no objection whatever to putting calcium chloride on the soil. The calcium is absorbed in the clay complex and is essentially the same situation as calcium from limestone. The chloride is soluble and eventually leaches out of the soil. Calcium chloride is a standard form of calcium which we use in water culture and sand culture work in the greenhouse. Also, I have added a ton of calcium chloride per acre to one of our lysimeters two years ago and there has been no evidence of harmful effects on the crops which were grown."

"First Things First in Soil Fertility" was the title of the talk given by A. L. Lang, association chief, Illinois Soil Experimental Fields, at the IAA annual meeting in Chicago. A few mimeographed copies of this talk are available and those who wish them may write this department.

Every farm along a seven-mile road in Lee county between Franklin Grove and the quarry has been supplied limestone by an operator at Lee Center.



By Wilfred Shaw

The 15th annual meeting of Sanitary Milk Producers of St. Louis will be held in the Lincoln Theatre in Belleville, Monday, Jan. 29, starting at 10 a.m. The program will include reports of officers, election of sixteen directors, short talks by well known speakers, entertainment, and a free dinner to all present, according to A. D. Lynch, secretary-manager.

The National Cooperative Milk Producers' Federation at its annual meeting in Chicago in December, voted to withdraw as a member of the National Council of Farmer Cooperatives. "No break in the ranks of agricultural co-ops is involved by this action," declared Charles Holman, Federation secretary. "The move was taken solely to assure the Federation full autonomy in representing in national affairs the interests of the farm families of its 68 member associations."

The 23 milk marketing cooperatives who are members of the Illinois Milk Producers' Association marketed 2,022,025,101 pounds of milk for the year ending Sept. 30, 1944, with a value of $63,413,074.65. This volume of milk marketed was 3.02 per cent greater than for the year previous.

Four employees of the Peoria Producers Dairy, who are on leave and in the Armed Forces, have been recently wounded, according to E. J. Rush, manager of the dairy. Sgt. Don Holtzman and Riley Boyer of the Army were injured in recent battles in the European theater. Seaman David Ballinger and Marine Alvin Wagner were injured in battles in the South Pacific theater.

Annual meeting of the McLean County Milk Producers will be held in the McLean County Farm Bureau Building on Saturday, Jan. 27, starting at 10:30 a.m., reports Forrest Fairchild, manager. The afternoon session will be held in conjunction with the annual meeting of the Farmers' Creamery Company.

The following are the blended prices received by producers supplying the respective Illinois markets. All are November prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.45
Canton	2.75
Champaign	2.75
Chicago	3.17
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.77
Galesburg	2.65
Harrisburg	2.55
Jacksonville	2.85
Kewanee	2.55
LaSalle	2.70
Moline	3.09
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.13
Springfield	2.85
St. Louis	3.63
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for November unless otherwise noted:

Boston (191-200 mile zone)	(Oct.)	$3.76
Chicago (70 mile zone)		3.17
Cleveland	(Oct.)	3.48
Dayton		3.04
Denver		2.90
Detroit	(Oct.)	3.60
Evansville	(Oct.)	2.92
Indianapolis		3.54
Kansas City		3.51
Milwaukee	(Oct.)	3.00
New York City (201-210 mile zone)	(Oct.)	3.98
Omaha		3.03
Seattle		3.10
St. Louis		3.63
St. Paul and Minneapolis		3.01
Washington, D. C.	(Oct.)	4.00

What kind of a school is needed by lads like these alert farm youngsters? That's the question for rural people in the local communities to decide.

What Kind of School?

By JOHN K. COX

THESE ideas are in answer to often repeated questions from farm people when discussing their school problems.

What kind of school plant, program and teaching staff do we want?

The plans should include an attractive, well located building, appropriately built and equipped on an adequate parcel of land to serve the particular community. The educational program should be sufficiently broad and similarly adapted to the needs of the community. Also each teacher and principal or superintendent should be selected with due consideration to his or her training, and general adaptability to the life and work in that particular community. In all cases each of them should have the personality, appearance, bearing, and ability in the special field to demand respect and cooperation from the pupils. Each of them should maintain high ethical and moral standards and view his or her work from a professional standpoint.

How broad should the school program be?

To be more specific, what skills, qualities, and attitudes should the school seek to uncover or implant and stimulate to further growth in our boy Johnnie and our girl Mary? In the first place, the school should provide for each pupil an opportunity to become skilled in the fundamentals of learning, as well as an opportunity to explore some other field of special interest. There should be a sufficient number of pupils in each one's grade level, so that a reasonable amount of competition between students is obtained and so that the cost of instruction per pupil is not unnecessarily high.

What provision should the school make for instruction in hygiene and physical education?

The laws of physiology and hygiene should be not only taught but practiced daily. Also Johnnie and Mary should have the advantages of a good well-rounded physical education program to develop his or her physical strength, poise, and bodily coordination. Each should have an opportunity to participate physically in a sports program and to learn how to win or lose with equal grace.

What responsibility does the school have toward Johnnie's and Mary's personality development?

In class work, clubs, or other school activities each needs to develop habits of courtesy and good manners, originality and the ability to think for one's self, even in a crowd. Each needs to have a consciousness of his or her immature judgment and inexperience and yet to develop a proper measure of self-assurance. Each needs daily activity in a group large enough to help eliminate shyness and self-consciousness. Each needs an opportunity to train for leadership as well as for minor participation in the group. Each needs to know that regardless of abilities and talents, there is no fair substitute for diligence and effort.

Should the school endeavor seriously to enable Johnnie and Mary to adjust themselves socially to many different personalities and situations?

They should have many opportunities in a reasonably large group to establish pleasant social relationships. There should be occasional school parties, picnics, dinners and programs where they can learn to work with the group and to conduct themselves properly as individuals within the group. In a nation such as ours they will need to know not only how to express their thoughts as individuals but to give up their ideas, if necessary, for the good of the group. Each will need to learn how to get along with others, even with whom he or she differs. And each will get much satisfaction and benefit from participation in group music and dramatic events, as well as from opportunities to display his or her individual talents.

How far should the school go in preparing Johnnie and Mary for future citizenship?

Good citizenship should be analyzed into its component parts, so that each can see just what is required of a good citizen. Each should be made to realize that the qualities of honesty, courage, and loyalty are fundamental. Also each should learn that society runs more smoothly and government more efficiently when people adopt and maintain attitudes of intelligent thinking, unselfishness, and cooperation. Johnnie and Mary should be impressed with the idea that the qualities and attitudes that they build in a school will generally be the ones each will have when he gets out of school. Not only should the school furnish Johnnie and Mary a knowledge of what is required of good citizenship and recognition that the qualities they develop in school will be generally carried into adulthood, but they should be taught how to evaluate propaganda, and to understand social, economic, and political issues of the day. They should be led to understand their liberties and privileges and how they were secured and defended in the past. Each should be impressed with his or her individual responsibility to estimate the promises and performances of candidates for public office in order that each can help to safeguard those liberties and extend them to others. They should understand the underlying framework of their local, state and national governments.

If our Johnnie and Mary can secure that kind of background of educational experiences, there is little doubt that they will discharge their future obligations with credit to themselves and to society. The school whose program and ideals are broad enough to include training in the above mentioned areas can justifiably claim credit for training the whole child.

By G. H. Iftner

The elevators and facilities of the Bushnell Co-op Company, McDonough county, have been purchased by the McDonough Grain & Milling Co., a Farm Bureau cooperative. The property consists of two grain elevators, a grain storage warehouse and all of the equipment used in the handling of feeds, seeds, grains and coal.

The Farm Bureau cooperative plans to begin a feed mixing program with the facilities some time during the first of the year. Officers of the cooperative are Leo Walter, Prairie City, president; Ryal Leithley, Macomb, vice-president; Ernest Combs, Bushnell, secretary; J. D. Murphy, Bushnell, treasurer. Incorporation papers have been filed.

Moultrie Grain Association, which owns and operates the elevator at Cadwell, announced recently the purchase of the C. F. Scott elevator at Williamsburg. In order to extend cooperative marketing to a larger number of producers and to provide another outlet for grain, the board of directors has made the purchase and was scheduled to have possession soon after Jan. 1.

The Moultrie Grain Association was started in 1936 when the need for a cooperative elevator became apparent in the Cadwell area. L. D. Seass of Jonathan Creek township was the association's first president. Its successful operation since the beginning has enabled the association to provide a strictly cooperative outlet for grain and retire all of the association's indebtedness. In addition, storage and operating facilities at Cadwell have been increased.

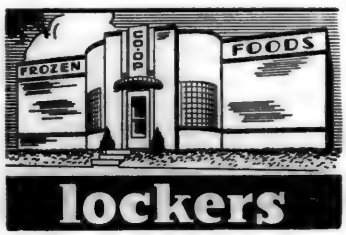
Present members of the board are: W. S. Elder, president; C. M. Howell, vice-president; Edmund Daily, secretary; Charles McDonald, treasurer; Melvin Beals, C. F. Davis and Charles Casteel. T. H. Boyd, Sullivan, is the manager.

This office is getting more requests from farmers' elevators for assistance in changing to true cooperatives. Right now, there are at least ten farmers' elevators working on this problem. The Cooperative Act of 1923, secured by the Illinois Agricultural Association, was streamlined for cooperative performance. It takes some effort to change over, but it is worthwhile to do so.

Member managers throughout the state who were unable to attend the annual meeting on Nov. 28 will be pleased to hear that there was a large delegation of managers present. At least 35 stood up and took a bow when the guests were introduced.

Special guests at the annual meeting were, R. B. Wilson, assistant manager of Indiana Grain Cooperative, Inc., of Indianapolis, Ind.; Charles Nieman, assistant general manager of the Farmers Union Grain Terminal Association of St. Paul, Minn.; Don E. Edison, secretary, Farmers Grain Dealers Association of Iowa; Fred Maywald, manager, grain department of the same organization; F. E. Ringham, secretary, St. Louis Bank for Cooperatives; Mr. Thompson, secretary, Omaha Bank for Cooperatives, and three managers of Iowa elevators, namely, Mr. Jurgens, West Bend; Mr. Anderson, Pocahontas; and Mr. Christenson, Malcolm.

The year 1944 closes the seventh one in succession that the nation's farmers have produced more bushels of feed stuffs than were produced the year before. The upstream of production started in 1937. Each year since then we have had increased food production. Each year people have said, "This is the big year, surely we can't produce such a bumper crop next year." Then they went out and planted more acres and blessed with favorable seasons, out-produced the previous year. If men would market their grains as well as they produce them, cooperative structures would be valued in the millions of dollars and patronage dividends would flow like gold from the horn of plenty.



By Frank Gougler

Farm Bureau leaders in the Chapin, Morgan county community, are interested in establishing a locker plant at Chapin. Wednesday evening, Dec. 6, about 75 farmers and their wives met to hear the project explained. Following the discussion, an organization committee was selected consisting of the following: Daniel Detrick, president; Arlo Schumacher, vice-president; J. E. Herbert, sec'y-treasurer; Harry Kock, and Luther Bockhouse, directors.

This committee was charged with the responsibility of renting the necessary number of lockers and the sale of stock. Dec. 21 was scheduled for a report meeting.

During the month of December new locker plants have opened up for business at Mounds, Pulaski county; Mount Carmel, Wabash county; Fisher, Champaign county; Piper City and Sibley, Ford county; and Shipman, Macoupin county.

The Fisher plant was opened officially Nov. 24 with 456 lockers. County Manager Kugler stated that practically all lockers had been rented.

Three Illinois Advisers Receive National Awards

Three Illinois farm advisers were among the 90 county agricultural agents from 26 states who were presented with certificates for outstanding service to agriculture at a joint dinner meeting Dec. 7 in Chicago of the National Association of County Agricultural Agents and the National Association of County Home Demonstration Agents.

The three farm advisers honored were L. E. McKinzie, Paris, Edgar county; J. E. Watt, Canton, Fulton county, and W. B. Bunn, Pittsfield, Pike county.

To qualify for the distinguished service award, a county agent must have been an agent or assistant agent for 10 years and must have taken graduate work in addition to his college degree. He must have developed an outstanding program for serving the farmers in his county, and must be an outstanding leader.

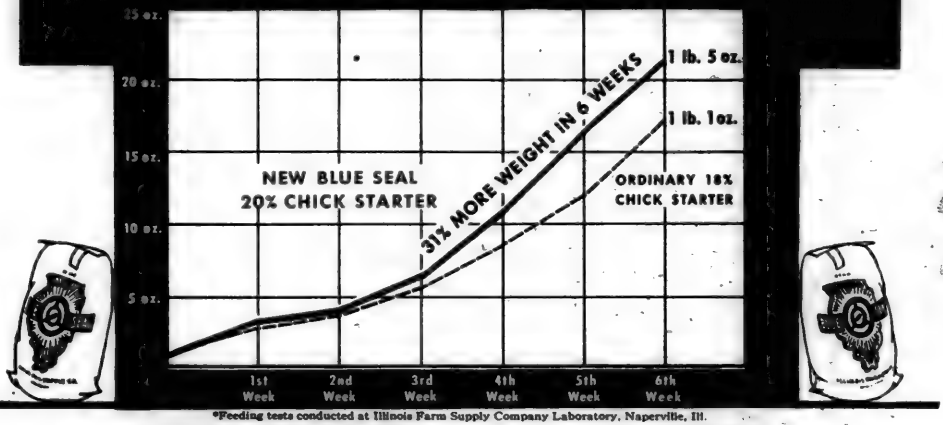
A major part of the county agents' meeting consisted of reports from committees on agricultural planning, farm labor, agricultural adjustment, soil conservation, rural youth, farm credit, rural electrification, relations with various organizations, and professional improvement.

E. A. Bierbaum, Union county farm adviser, served as chairman of the publicity committee for the national meeting.

Left to right are the officers and directors of the Illinois State Association of farm advisers. Front row: F. A. Bierbaum, Union county, secretary-treasurer; H. R. Brunnemeyer, Winnebago, director; Edwin Bay, Sangamon, president; C. E. Yale, vice-president. Back row, all directors: Jonathan B. Turner, Fayette; E. O. Johnson, Piatt; C. T. Kibler, Jersey; F. H. Shuman, Whiteside, and H. K. Dunforth, Henry. E. S. Amrine, Monroe county, is not in the picture.

They'll Grow Faster with BLUE SEAL 20% Chick Starter

LABORATORY FEED TESTS*



*Feeding tests conducted at Illinois Farm Supply Company Laboratory, Naperville, Ill.

SAVE MONEY by Ordering NOW!

BLUE SEAL Chick Starter—now stepped up to 20% protein—and, of course, properly balanced with minerals and vitamins—is an EXTRA MONEY MAKER for poultry raisers. Actual feeding tests in BLUE SEAL Laboratories show that chicks receiving this starter gained 31¼% MORE WEIGHT over chicks fed ordinary 18% protein chick feed. They feathered out better—were stronger, healthier, as well as heavier. Place a reservation order *NOW* for your supply of BLUE SEAL Chick Starter and take advantage of our

SPECIAL PRE-SEASON DISCOUNT

This special discount is for pre-season orders only. This is for a limited time. Place your order NOW—take delivery as you need the starter, and save money on every pound!

The higher protein level in BLUE SEAL Chick Starter means healthier, faster growing chicks—*more profits.* Ask the BLUE SEAL Salesman in your community.

AFBF Silver Anniversary

(*Continued from page 7*)

power of agriculture. Thus, we should not ignore the importance of industry to agriculture and conversely, industry should not ignore the importance of agriculture."

Noble Clark, associate director of the experiment station, University of Wisconsin and chairman of the committee on postwar agricultural policy, created in 1943 by the Association of Land Grant Colleges and Universities, said that "Farm folks have much to gain by using their influence to induce other occupational groups to follow a policy of a free market and the widest possible opportunity for individuals to make the most of their talents and their labor." Clark also said his committee believed that the social security program should be extended to farm laborers; that state health committees should be organized in every state to promote rural health programs; that electric service and rural phone service should be expanded in the postwar period, as well as an expansion of all-weather farm to market roads.

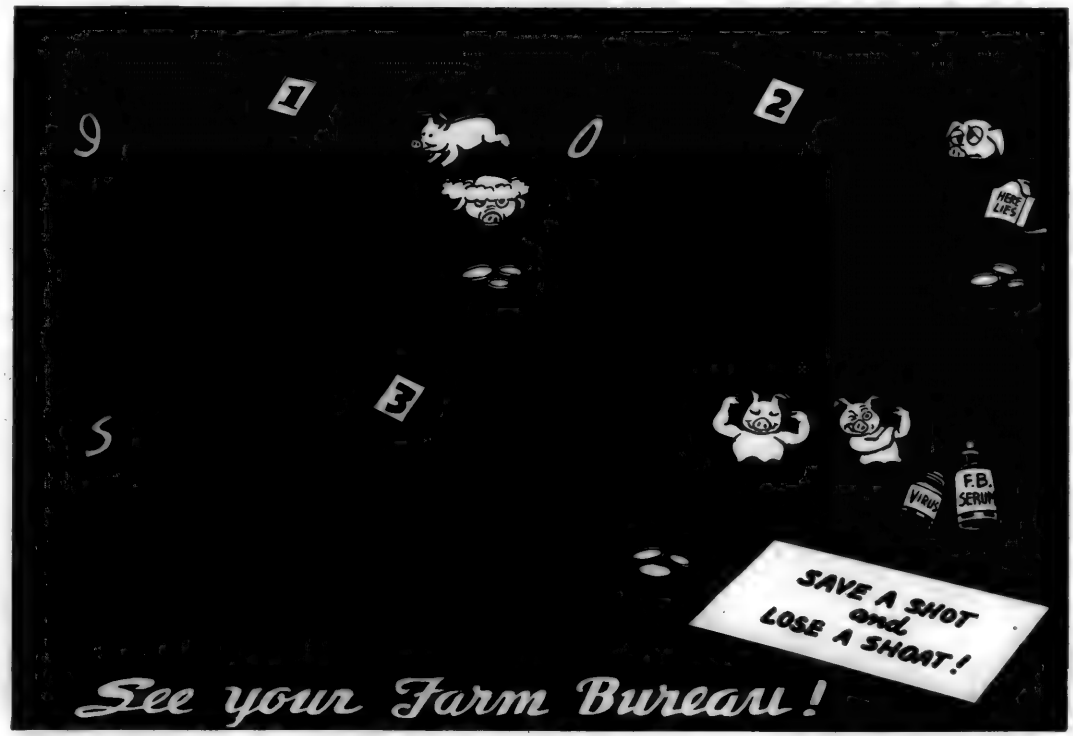
Hon. Kenneth S. Wherry, Senator from Nebraska, who has been active in the fight for agriculture, declared that "If we are to stabilize our national economy and continue to pay high wages to organized labor economic balance must be maintained for agriculture. Lincoln said, 'I believe this government cannot endure permanently half slave and half free.' Neither can it survive half broke and half prosperous. This means full production, and fair prices for that production. Anything which retards full production will retard prosperity."

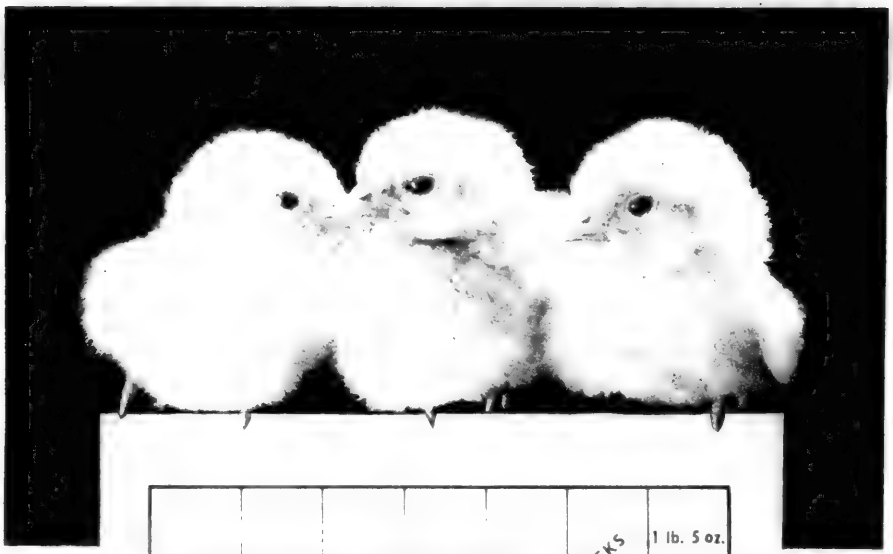
Hon. Tom Stewart, senator from Tennessee, declared, "I have served on the agricultural committee of the Senate ever since I have been in Washington and I have had opportunity to view a pretty good cross section of the American farmers' problems during these very serious and most unusual times. . . I must say to you that in this organization, that is, the American Farm Bureau Federation, the American farmer is more nearly ideally organized than he has ever been. . . I cannot stress too strongly the idea of the overwhelming importance of continuous unity among the farmers in all sections of the United States."

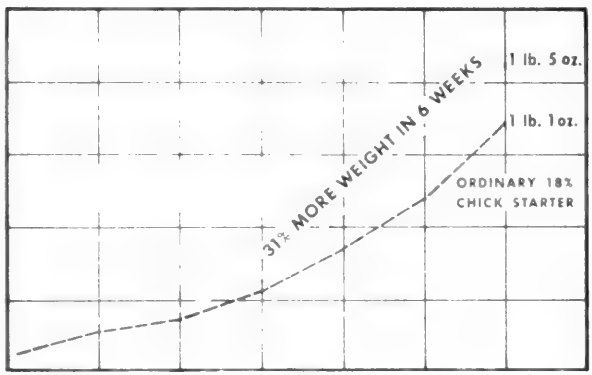
David Nichol, foreign correspondent, Chicago Daily News, a featured speaker on the program, told of his coverage of the war front with particular reference to Russia. He declared that Russia's main desire is for peace in which to rebuild her war-ravaged country. He also said he believed that good relations should continue in the postwar period between the United States and Russia, with each following its own economy. Russia, he said, does not want charity, but it does want to trade with the United States and purchase materials which are needed for its national building program.

Awards for distinguished service to agriculture were made at the AFBF convention to William W. Waymack, director of the editorial section of the Des Moines Register and Tribune, and to Lloyd R. Simons, director of extension of the New York State Colleges of Agriculture and Home Economics.

AFBF directors elected from the Midwestern Region were: Frank W. White, Minnesota; Allan B. Kline, Iowa; and H. E. Slusher, Missouri.







*Feeding tests conducted by Illinois Farm Supply Co. Poultry Research Farm, Ashkum, Illinois.

SAVE MONEY by Ordering NOW!

BLUE SEAL Chick Starter is now supplied at 20.0% protein level. It is of course properly balanced with minerals and vitamins. It is an EXTRA MONEY MAKER for poultry raisers. Actual feeding tests at BLUE SEAL Laboratories show that chicks receiving this starter gained 31% MORE WEIGHT over chicks receiving ordinary 18% protein chick feed. They feathered out better, were stronger, healthier as well as heavier. Place a reservation order NOW for your supply of BLUE SEAL Chick Starter and take advantage of our

SPECIAL PRE-SEASON DISCOUNT

This special discount is for pre-season orders only. This is for a limited time. Place your order NOW, take delivery as you need the starter and save cash on every pound.

The higher protein level in BLUE SEAL Chick Starter means healthier, faster growing chicks—*more profits*. Ask the BLUE SEAL Salesman in your community.

Four of Illinois national winners in the 4-H Club Congress, left to right, are: Donald Stoxen, 20, Hampshire, Kane county, dairy; Irene Lofftus, 20, Roseville, Warren; clothing; Norma Ruth Gahm, 17, Streator, LaSalle, foods, and Wayne Bates, Carlinville, Macoupin, meat animal contest. Prizes were scholarships.

ILLINOIS 4-H SCORES AT NATIONAL

ILLINOIS was well represented in the 23rd National 4-H Club Congress held in Chicago with six scholarship winners, according to official reports from the national committee.

The scholarship winners were:

Irene Lofftus, 20, Roseville, Warren county, who in nine years made and remodeled 129 garments for herself and family. She was awarded one of the 12 $200 scholarships in the nationwide 4-H club clothing achievement contest in which 43 state champions were entered. She has served her club as president two years, and as leader two years.

Donald Stoxen, 20, Hampshire, Kane county, who during six years of club work has raised the butterfat average of his herd up to 349 pounds, with a $197 return on every $100 worth of feed. He is a member of the Holstein-Fresian national association. He was one of the six national winners in the national 4-H dairy production contest in which 10 sectional winners competed.

Norma Ruth Gahm, 17, Streator, LaSalle county, won one of the six $200 scholarships awarded in the national 4-H food preparation contest. In winning a national award she competed with 42 state champions. In 8 years she planned and served 297 meals for her family, baked 437 cakes, bread loaves and many batches of cookies and rolls. She specialized in whole grain products, and milk soups, drinks and desserts and cottage cheese.

Wayne Bates, 20, Carlinville, Macoupin county, winner in the national meat animal contest, received a $200 scholarship. In 10 years he handled 126 cattle and 370 swine, and raised 455 fowls. With $2,267.82 won in cash prizes, his livestock income is given as $25,063.68, while his total from all projects was $36,655.18.

Two winners of $200 scholarships each in the junior livestock feeding contest were **Robert Guehler, 19, Somonauk, DeKalb county,** and **Keith F. Schertz, 17, Benson, Woodford county.**

Guehler has been in 4-H club work 8 years, completing 30 projects, six of them this year in swine, sheep, corn, beef, dairy and electricity. His 1944 inventory is $15,831. He is president of the county 4-H federation and of the county's Rural Youth group.

Schertz has eight years experience in 4-H club work and has made nearly $3900 from all his 4-H projects. His 1944 inventory is certified as $1981. Although this was his first experience exhibiting at Chicago, he owns 55 purebred Durocs, 10 Shropshire sheep, and two purebred Guernsey cows. He has completed 15 projects during his 4-H career. He took two thirds in the Chicago light and heavy barrow class, and a fourth in the medium weights.

State winners as announced by U. of I. 4-H club officials were:

Merrill Upp, Yates City, Knox county; Rex Emory, Prairie City, McDonough; and Raymond Thompson, Minooka, Kendall, were winners of three 4-H Farm Underwriters scholarships.

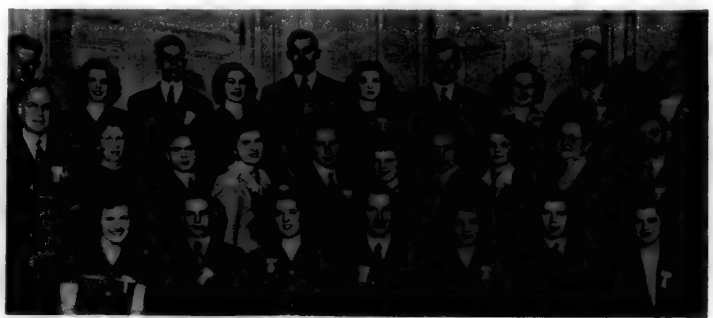
Glen Thomas, 19, Dwight, Livingston county, state winner in the national rural electrification contest, wired all the buildings on the farm with the help of his father, Harold Thomas. Also made and wired eight pig brooders, a pig shed, three sow farrowing houses and an emery wheel, and put electricity to use on many farm jobs.

Robert F. Croegaert, Annawan, Henry county, was selected as Illinois' candidate in the national 4-H leadership contest. He began his 4-H career 10 years ago in Whiteside county. He assumed leadership of a local club in Henry county in 1941, and is president of the county 4-H federation.

Eugene Poynter, Paris, Edgar county, was named state winner in the national 4-H food for victory contest. He has a flock of 62 sheep and raised hogs and baby beef in the past seven years. He has been president of his 4-H club for three consecutive years, and has been assistant leader since 1941.

Imogene Inez Clark, Mt. Vernon, Jefferson county, was selected as state winner in the national 4-H canning contest. She was chosen by U. of I. 4-H club officials from nearly 3000 contestants for her outstanding work in food preservation, both freezing and canning.

Virginia E. Hagen, Morris, Grundy county, was chosen from more than



Illinois' delegation to the National 4-H Club Congress in Chicago and the U. of I. 4-H club officials represented the state to a good advantage in the national.

16,000 girls to represent Illinois in the national record contest. During the past year she devoted 940 hours to the victory service project, driving a tractor during the spring and working full time in a store after the close of school. During her entire 4-H club career she has given 1692 hours to victory service.

Bonnie Jean Switzer, 18, Knox county, was named to represent Illinois in the national 4-H leadership contest. During her nine years in club work, she has participated regularly in local, county and state events and has been a repeated prize winner for her work in canning and clothing.

Robert M. Guehler, 19, Somonauk, DeKalb county, and Keith F. Schertz, 17, Benson, winners of $200 scholarships each in junior livestock feeding contest at Chicago.

Among the other state delegates and representatives selected to go to the national 4-H club congress were: Ruhama Lodine Walling, Streator, LaSalle county; Marian Healy, Kankakee, Kankakee county; Rosemary Sharp, Eureka, Woodford county; Rosemary Casteel, Lovington, Moultrie, county; Agnes Bridgeland, Winnebago, Winnebago county; Ila McDonald, Trivoli, Peoria county; Martha Mollett, Greenville, Bond county; Robert J. Alms, Cortland, DeKalb county; Morris L. Bell, Chandlerville, Mason county; Kenneth Clay, Kent, Jo Daviess county; LeRoy Copple, Farmington, Fulton county, and Bruce Mowery, Ullin, Pulaski county.

Illinois 4-H Clubs Name Liberty Ship For Pioneer

Illinois 4-H clubs have been honored for their outstanding contribution to the war effort by the U. S. Maritime Commission, which selected them for the privilege of naming a new Liberty ship which was launched Nov. 28 in Houston, Tex.

The ship was christened the "Will B. Otwell" in honor of the man who pioneered in the work with farm boys and girls that later grew into the present 4-H organization in Illinois. Mrs. M. E. Eldred of Greenfield, Greene county, daughter of the late Mr. Otwell, christened the ship.

The late Mr. Otwell was born in 1877 and began work with the boys of Macoupin county in 1898. As president of the county farmers' institute, he purchased and distributed seed corn to approximately 500 boys. In 1904 at the St. Louis World's Fair, his exhibit of 10-ear samples of corn grown by 8000 Illinois boys attracted nation-wide attention.

Rural Youth state committee for 1945 gets started on its work. Left to right are E. D. Lyon, IAA director of young people's activities; Bill Thomas, Whiteside county; Jewell Emmerich, Jasper; Bob Croxton, Schuyler; Wanda Bradshaw, Wayne; and Joseph Brankey, Kane. This committee gets valuable training in its work.

Rural YOUTH

By Ellsworth D. Lyon

War Bond purchase reports received up to the first week in December from Illinois Rural Youth show that they have purchased a total of $209,000 in War Bonds during 1944. Additional reports for the month of December are expected to bring Rural Youth near their $300,000 goal for the year. The first $110,000 bonds purchased entitled Rural Youth to name an ambulance plane, and the next $75,000 in purchases earned for them the privilege of naming a pursuit ship.

Illinois was represented by eight youth delegates at the annual American Farm Bureau Federation meeting in Chicago, Dec. 11 to 14. Two Illinois young people had official responsibilities — Margaret Sharp, Woodford county who had charge of registration, and Franklin Allen of Tazewell county who was chairman of the National talkfest.

Attendance at all Rural Youth sessions of the annual meeting of the IAA was very good. There were 248 young people who registered. Reports from official county sources indicate that there were many young people who did not register. Participation at all Rural Youth sessions was on a high order — educational, entertaining, and helpful.

Reports of Rural Youth regular meetings indicate that a number of very interesting topics have been discussed at recent meetings. Clay County Rural Youthers recently presented "Young People of Other Lands." The countries studied especially were Russia and China.

The Twin City Ripples of Whiteside county took up the same topic by studying food, education and features of everyday life of the young people in France, England, Germany, China, Japan and Russia. The Twin City Ripple correspondent remarks that talks on such themes "may help to bring about a better world in the future after the war, perhaps making us more tolerant."

St. Clair county discussed "Sharing the Family Income." They had Elmer Searls, University of Illinois, as speaker on this subject.

Randolph county discussed "Internationalism at Christmas" at a recent meeting. The secretary says of this meeting, "The program was very good this time with everybody taking part."

The Newton Notions of Whiteside and Morrison Merrymakers recently studied the subject of race relations. The secretary comments "This meeting was well planned with nearly everyone taking part."

The Prophetstown-Tampico Warriors discussed "Farming in Wartime." This group is especially interested in the blood donor service.

Some fine examples of community service by Rural Youth groups come from St. Clair county by ushering at the annual Farm Bureau meeting; Tazewell, Peoria and Effingham counties by sending boxes to men overseas; Saline, Brown, Wayne, LaSalle and Edgar counties by sending letters to servicemen.

THE MOST EXPENSIVE POLICY IN THE WORLD MAY BE . . .

. . . THE ONE WHICH WASN'T BOUGHT

AFTER FIRE has struck, how many times have you heard: "why in the world didn't I have insurance?" or "I carried fire insurance for 20 years; then last year I decided to save money — now look what has happened to me!"?

Now is no time to take chances. Fire losses are mounting daily. Agricultural colleges and safety engineers are greatly concerned over the increase in farm fires. They attribute the increase to several factors: shortage of materials to re-place worn out stoves, heating plants, and flues; lack of help to make needed repairs; general carelessness on the part of property owners because of over-fatigue and worry.

Whatever the causes, the result is the same — millions of dollars of destroyed property at the very time when much of it is irreplaceable, and all of it needed as never before.

This company joins with all conservation agencies in urging greater attention to the removal of fire hazards, *AND* adequate insurance to protect savings should a fire occur.

FARMERS MUTUAL REINSURANCE COMPANY

608 S. DEARBORN STREET — BUY WAR BONDS — CHICAGO 5, ILLINOIS

Receiving IAA annual reports are two delegates from Bureau county, Howard Allen and Ray T. Snyder.

Will county folks at IAA annual meeting: Catherine Wenck, Harry Swamsey, and Farm Adviser J. H. Brock, who still seems to be able to get cigars.

Fulton county Rural Youth enjoy IAA annual meeting.

This is Patricia Rehg, cousin of Robert Nolte of Columbia Co-op. Grain Co., Columbia, St. Clair county.

Four Charlie McCarthys, T/5 Virgil A. Gray, Knox county; Dale Wilson, IFS district field manager; Director Albert Voight, LaSalle Farm Bureau; and R. H. Guthrie, Vermilion county. These men were volunteers in an impromptu "talking act" at the IAA annual meeting. Their performance was "excellent."

Picture sent by Russell Brown, Farm Bureau Auto Insurance adjuster, from South Pacific.

Attending Illinois Grain Corporation dinner were C. M. Colburn, Logan county; Mrs. Charles Schmitt, Beason; Mrs. H. P. Joy, Chapin; Mrs. Carol Brockhouse, and Mr. Brockhouse, Chapin.

$5 PICTURE OF THE MONTH

Winner of $5 picture prize is Mabel S. Colcord, Bond county, with this photo of Emily Joy, Bond county.

WOMEN AND THE WAR

THEY PAY A GREAT PRICE, BUT THEIR IDEALS WILL HELP THEM SOLVE WAR'S PROBLEMS, IS CONVENTION THEME

Participating in a broadcast over WLS from the Associated Women's annual meeting are, left to right, Mrs. Helen Carlton Smith, London; Mrs. A. R. Rohlfing, Illinois, publicity chairman for convention; Mrs. Abbie Sargent, New Hampshire; Gladys Blair, WLS-Prairie Farmer; Mrs. H. W. Ahart, California, and Mrs. Raymond Sayre, Iowa, newly elected vice-president, in the foreground.

WOMEN pay a great price for the waging of war. They give their husbands, brothers, sons, and daughters. Their homes are endangered or entirely destroyed. The welfare of the family and everything women hold dear is threatened. But out of the suffering and hardship women around the world, inspired by the same ideals, will be able to do much toward solving the problems which inevitably result from war.

We must not repeat the mistakes of a quarter century ago. From the experiences gained through united efforts to win the war we must, with broader and more sympathetic understanding, win the peace.

We believe that the American Farm Bureau Federation and the Associated Women should use every rightful influence to see that farm men and farm women should be represented at the peace conference.

Thus reads in part one of the most important resolutions adopted by the Associated Women of the AFBF at their 10th anniversary in Chicago. The Associated Women held their annual meeting in conjunction with the AFBF annual meeting.

It was just 10 years ago that the Associated Women was organized in Nashville, Tenn. Twenty-four states were represented in that meeting and the joint membership totaled 250,000. In the 1944 meeting, there were voting delegates from 40 states and membership was reported at 880,000.

The keynote of the women's meeting also was sounded in the foreword of their resolutions:

"While our united nations are winning the war, women on the home front must hold fast to the faith of our fathers, cherish the ideals of our democracy, and strive for higher spiritual, intellectual and physical values to cope with the emergencies beyond the present crisis.

"In the days and years to come, our democratic institutions which have guaranteed our liberties will be faced with critical ordeals as never before. Farm women must assume their big share of responsibility in the protection and perpetuation of these historic institutions."

Mrs. Charles W. Sewell, administrative director of the Associated Women, in her annual report pointed out that "scores of projects accomplished indicate the interest and enthusiasm of our membership in every section of the country.

"Farm Bureau women in several states have sold War Bonds, collected scrap paper, contributed to the blood plasma units, assisted with USO services and every other phase of the war program. All this, while they were engaged in helping produce food and fiber to feed and clothe the world. While they have waited with anxious hearts for news of their boys on the battle fronts around the world, they have written a chapter in our Nation's history that must never be forgotten."

Mrs. Mark W. Clark, wife of the Allied Fifth Army commander, in her address to the women declared: "To attain political or industrial democracy without spiritual democracy is impossible. We are learning in war the community of sacrifice which makes victory possible — the unselfishness and devotion of millions to a common cause. . . With a sense of this same community of interest we must approach our political and industrial problems. We must develop something that resembles religious fervor — a great, impelling motive that will unite all people of good will upon principles to which all can be devoted. . ."

Mrs. Roy C. F. Weagley, Maryland, after serving three years as secretary and two years as vice-president, was named president succeeding Mrs. Elsie Mies, Champaign county, Illinois. Mrs. Mies who has represented the Associated Women in national councils with exceptional ability for several terms was unable to attend the 10th anniversary meeting because of illness. Mrs. Raymond Sayre, Iowa, was elected vice-president, and Mrs. Lewis Minion, Minnesota, took Mrs. Sayre's place on

the board of directors.

A Red Cross clubmobile, purchased by the Associated Women and already in use on the Italian front, was accepted formally at the Monday evening program by Albert E. Chamberlain, assistant national director of fund raising for the Red Cross.

Mrs. Sewell also reported that the Associated Women had received a personal letter from Madame Chiang Kai Shek in appreciation for the collection of funds for United China Relief. The total for 1944 was $5,939.54.

Senator George D. Aiken of Vermont, detained in Washington, was unable to keep his appointment to address the women on Sunday and his place was taken by O. D. Brissenden, director of organization for the Illinois Agricultural Association.

Other resolutions adopted by the Associated Women called for protection and preservation of the inherent values of home and family; urged placing greater emphasis upon the larger part the rural church must play in our national life and in the winning and maintenance of a just and abiding peace; favored reasonable federal grants-in-aid to supplement state funds for schools to be allocated in proportion to state needs, dispensed by state boards with adequate agricultural representation and entirely independent of federal jurisdiction; favored the maximum amount of local guidance and initiative consistent with operating efficiency and a sound program of education.

Urged renewed interest in extending library privileges to all rural people; reaffirmed position on health problems of rural America and recommended full cooperation with established units, with emphasis on clinics, dental, hospital, surgical and medical care, immunization and other preventive measures.

Mrs. Roy C. F. Weagley, Maryland, new Associated Women's president, with the first president, Mrs. Abbie C. Sargent.

Recommended development of a national nutrition program; recommended the fullest cooperation with the National Safety Council in the distribution of information as a protective insurance against home accidents.

Urged that more stress be placed on woman's work in the Farm Bureau by member states, and that more attention be given to Farm Bureau youth activities; urged expansion of the public relations program; urged that rural women study not only their own local legislation, but state and national as well.

Favored continuation and expansion of the military training program as a part of our educational system, and opposed a program of compulsory military training "which leads to regimentation, a militaristic point of view, and future wars."

Declared that "our first consideration" in postwar reconversion must be to our returning service men and women that they be given every opportunity to become re-established. Urged that facilities from military camps, hospitals and other wartime establishments be used in communities needing hospitals, medical supplies, school and rural library equipment following demobilization.

Mrs. Charles W. Sewell, administrative director of the Associated Women of the AFBF, and Mrs. Mark W. Clark, wife of the Allied Fifth Army commander, at the women's meeting.

Mrs. Raymond Sayre, Iowa, unveils the picture of the Red Cross clubmobile purchased with funds donated by the Associated Women of the AFBF.

HINTS FOR THE HOME

An increasing number of women are making smocks from their husbands' old shirts to save wear and laundering of their housedresses. If the collar of the shirt is worn, cut it off and restyle it into a low-cut V. Trim off the shirt above the curve at the side seam, or put in a gusset. Should the sleeves be too long, cut them down to three-quarter length or salvage the cuff and replace it at the right length.

Beanies for children can be fashioned from old felt hats or from worn-out corduroy jackets.

When you are refurbishing your old curtains and draperies or making new ones that are needed, keep in mind that the attractiveness of a home's interior depends largely on the way windows are treated.

You may be faced with the problem of making a window appear larger or smaller, taller or shorter, wider or narrower than it actually is. If the window is very narrow, every bit of it may need to be left unobstructed in order to provide the room with the desired sunlight or spaciousness. A span of glass that is so large that the room lacks a friendly atmosphere can be disguised behind wide draperies.

Famous last words: "Put it there on the steps. I'll take it down when I go."

EDITORIAL

Aid on Basis of Need

ILLINOIS citizens long ago adopted a policy whereby each school is largely dependent for its financial support upon the taxes on real estate and personal property in the district. The citizens have recognized, however, that many school districts do not have sufficient financial resources to provide adequately for their schools. Therefore, the state provides additional money to each district to supplement locally raised funds. Approximately 35 million dollars was appropriated for this purpose for the two year period ending next June 30. The principal part of this large sum is being raised by the sales tax.

It would be reasonable to expect state school funds to be distributed with care and justice. It would seem reasonable and proper that the larger part of this money should be allocated to the districts least able to support their own schools. The fact is, however, that over two-thirds of the fund is given to school districts on a basis of a fixed amount per pupil without regard to the needs of the school or the ability of the district to finance its own program.

While millions of dollars of state funds are being given to the wealthier districts, children in many hundreds of other districts are not getting an equal educational opportunity. In these districts the state aid received, together with the limited local resources, does not permit the payment of adequate salaries to teachers and the maintenance of a satisfactory educational program.

The Illinois Agricultural Association believes that if the state is to discharge its responsibilities, as authorized by the state constitution, to assure every child of the state a reasonable and equal opportunity to secure a good common school education it will be necessary for the state to revise policies having to do with the distribution of moneys now available from the state for school purposes. The Illinois Agricultural Association believes that the fund provided by the state to assist in the operation of schools should be largely distributed to the various districts of the state on the basis of need, rather than upon a basis of flat grants regardless of need. The Association hopes that the state legislature, which is in session during the first half of this year, will give serious attention to this important school problem.

Farm Income

ALTHOUGH farm income has more than doubled during the war years farmers are not getting an undue share of national wartime income, according to Asher Hobson, agricultural economist with the University of Wisconsin, writing in the National Live Stock Producer.

Hobson points out that with farm prices below parity levels for a period of 20 years, farm purchasing power stood at 76 or 24 per cent below parity at the outbreak of the war in 1939.

"It wasn't until three years later that farm purchasing power reached sea level," Hobson declares. "As of September 1944 farm purchasing power stood at 113. It is not generally understood that while farm income in 1942 was 5 per cent more than in 1919, farmers produced 36 per cent more food in 1942. An increase of 36 per cent more goods for 5 per cent more money is far from a profiteer's wage. In 1943 farmers gave this nation and the world 42 per cent more food than in 1919."

These facts as presented by Hobson are well known to agricultural producers, but are often overlooked by other groups. These are facts that organized agriculture must get before the public in order that farmers may have a fair hearing in the court of public opinion.

It is likewise of equal importance that the public recognizes that full and continuous national prosperity cannot be maintained without a prosperous agriculture. Agriculture is the largest single buyer of the products of mills, factories and mines and of the services of railroads and many other industries serving agriculture. If our national income is to be stabilized at a high level in the postwar period this fact must be given the fullest consideration by all groups.

Young Americans

RECORDS of achievement by 4-H boys and girls during these critical days give reassuring indications that the agriculture of future years will not be lacking in leadership. Each year as farm boys and girls from all over the country gather for the National 4-H Club Congress, the city dweller as well as the farm folks at home receive new inspiration in reading of the accomplishment of these clean, industrious and forward-looking Americans.

Today there are many former 4-H youths serving in all branches of the armed services and from time to time the press reports some outstanding deed of heroism performed by a former club member. Similarly on the home front, in a somewhat less spectacular manner, 4-H club members are carrying on projects to back up the men on the battlefront.

Recently the U. S. Maritime Commission recognized the outstanding contributions of Illinois 4-H clubs by permitting them to name a new Liberty ship. In 1944, 4-H clubs in Illinois produced 10 million pounds of pork and 3½ million pounds of beef, raised 3500 dairy calves and heifers, made or remodeled 19,000 garments, and worked more than 3 million hours in victory service projects. Enough food was produced and conserved by 4-H members in one year to feed 16,000 fighting men for one year. Other 1944 accomplishments of Illinois 4-H club members included the collection of 5 million pounds of scrap material, and sales of $500,000 in War Bonds.

These are a few of the contributions that can be recorded in round figures, but there are other less tangible contributions of the 4-H club program which are more difficult to tabulate. These are to be found in the 4-H program of building and developing character, leadership, patriotism, independence, and love of home, community and church. Four-H boys and girls enrolled in such a program represent the nation's best safeguard in the preservation of the American way of life. May their efforts continue to succeed during the perilous days ahead.

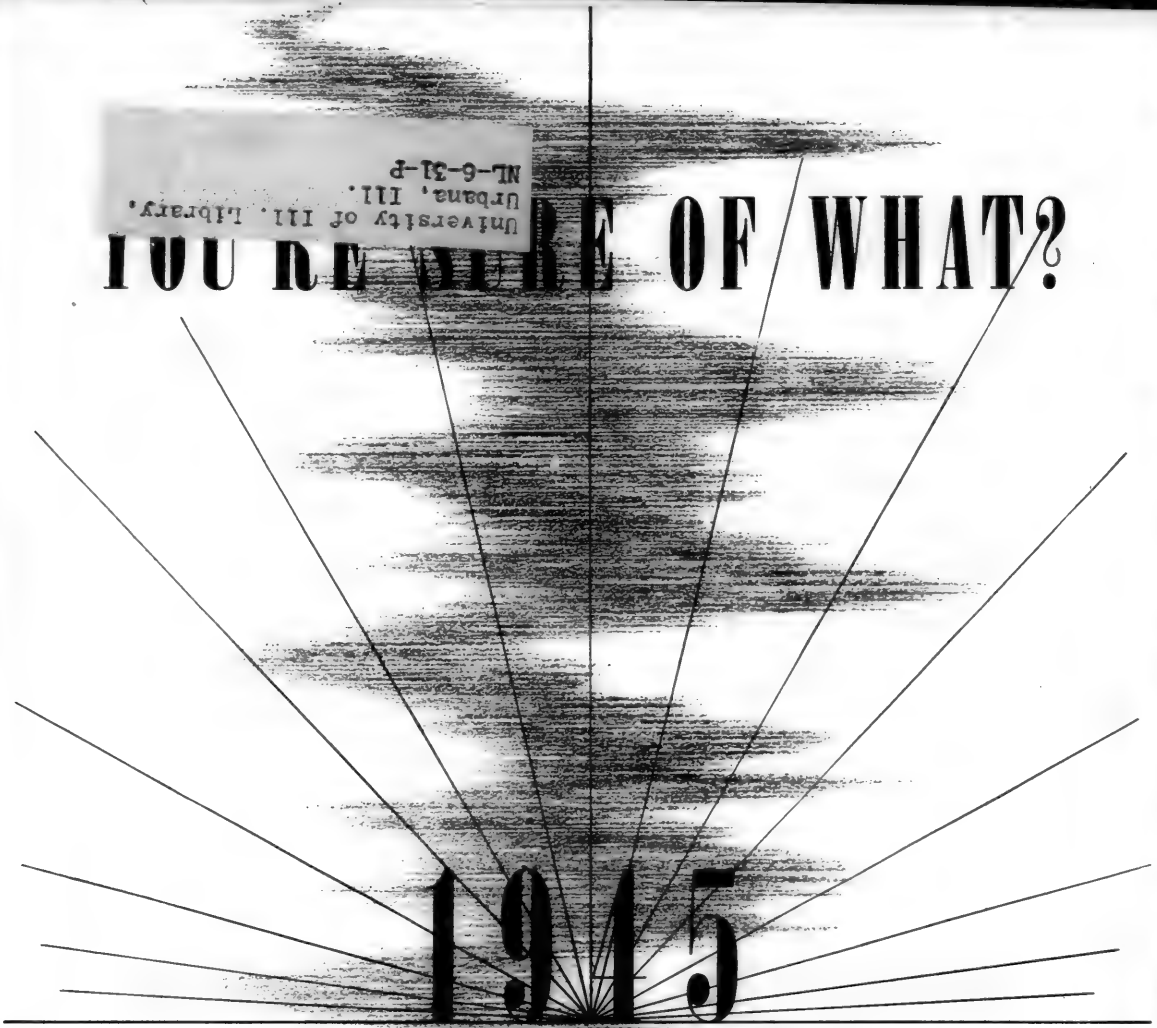
YOU'RE SURE OF WHAT?



Peace? Fair farm prices? Good crops? More or less help? Inflation?

As a matter of fact, thoughtful persons are sure of very little in the year ahead. The same is true of thoughtful organizations. We do not know what the future holds either, EXCEPT — *we do know that the full power of 107,000 organized Illinois farmers will be concentrated in the direction of greatest benefit to their country and its basic industry — agriculture.*

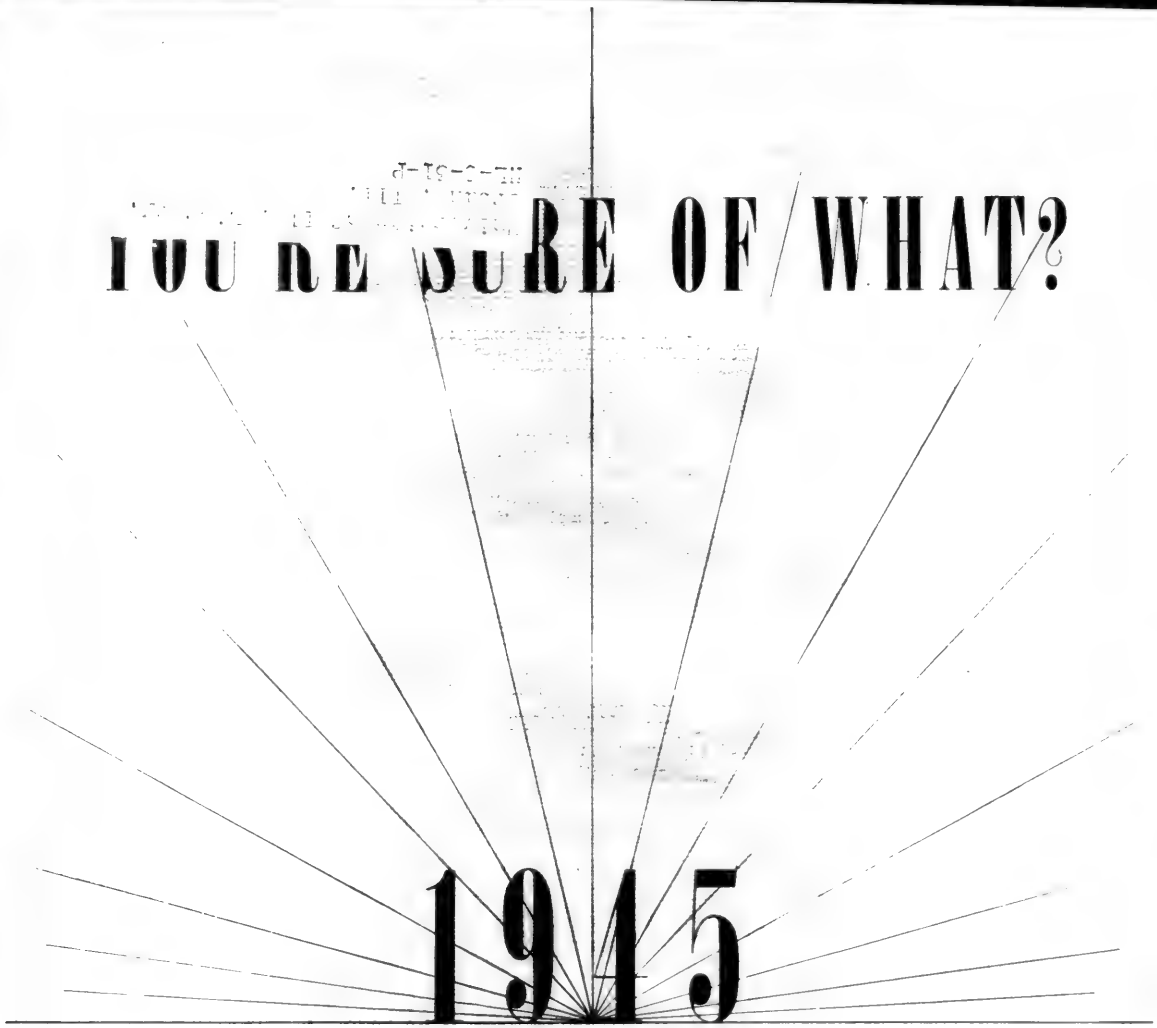
YOU'RE SURE OF WHAT?



Peace? Fair farm prices? Good crops? More or less help? Inflation?

As a matter of fact, thoughtful persons are sure of very little in the year ahead. The same is true of thoughtful organizations. We do not know what the future holds either, EXCEPT — *we do know that the full power of 107,000 organized Illinois farmers will be concentrated in the direction of greatest benefit to their country and its basic industry — agriculture.*

it's better to brake it gently!

Skidding will continue as a driving hazard for several more weeks. In the interest of car conservation all drivers are urged to follow these suggestions for safer winter driving:

1. Check vehicle regularly. Special attention should be given brakes, lights, defrosters, exhaust system, and tire chains.
2. Regulate your driving to road conditions. On slippery surfaces even 20 miles per hour may be too fast.
3. Follow other vehicles at a safe distance. It takes three to eleven times as far to stop on packed snow or ice.
4. Reduce braking distance 40 to 50 per cent by the use of tire chains on surfaces of this kind.
5. If vehicle starts to skid turn wheels in the direction of skid.
6. Don't drive when you cannot see.
7. Slow down at sundown. Use lower headlight beam in sleet, fog, snow or rain.
8. Give snowplows plenty of clearance. A stalled or standing snowplow is a dangerous obstacle.
9. Pedestrians and children on sleds should be approached carefully. Their traction is no good either.
10. On ALL slippery surfaces remember to "brake it gently."
11. Drive without fear. Your I. A. Mutual policy stands ready to protect your interests should an accident occur.

The Illinois Agricultural Association Record

The Illinois Agricultural Association RECORD is published monthly except August by the Illinois Agricultural Association at 1501 W. Washington Road, Mendota, Ill. Editorial Offices, 608 So. Dearborn St., Chicago, Ill. Entered as second class matter at post office, Mendota, Ill., Sept. 11, 1936. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1935. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 608 So. Dearborn St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578 and undeliverable copies returned under Form 3579 to editorial offices, 608 So. Dearborn St., Chicago, Ill.

Director of Information, Creston Foster; Editor, Merrill C. Gregory, on leave of absence with the United States Army; Director of Advertising, C. M. Seagraves.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture

FEBRUARY, 1945 **VOLUME 23 - NUMBER 2**

This Month

By Earl C. Smith

FARMERS generally, and their organization, rightly resent the strong implication, if not definite statements, coming from high administration authorities that men and boys heretofore deferred for agricultural purposes constitute in a substantial measure a group from which the nation would have to draw for further additions to the armed forces.

Farmers never have nor will they seek special consideration or deferment of men from the armed forces for agriculture beyond the actual need to meet the requirements of the nation in the production of food. Records disclose that with very limited exception, boys heretofore deferred for agriculture not only were absolutely necessary, but they delivered the goods in breaking all records of production even though working under severe handicaps and hours each week far beyond the hours of employment of those engaged in other business and production activities.

The order which required all boys between the ages of 18 to 26, which had been deferred for agricultural reasons, to report for pre-induction physical examinations was construed by many to mean a first step into the armed forces, and many were manifesting an intention to enter the services regardless of their need in agricultural production.

The American people must be reawakened to the well-known fact that experienced farm labor has been reduced to the point that any further inroads on this group of essential workers in agriculture cannot fail to result in a substantial reduction in the production of farm commodities.

Also it should be increasingly recognized that experienced farm boys who are so fully employed are not only necessary in the field of this important activity, but that they are making a substantial contribution to the nation's requirements in time of war.

Leaders of the Farm Bureau called this matter to the attention of the highest government officials and the House military affairs committee. These efforts resulted in a clarification of the order by General Lewis B. Hershey, director of national headquarters of Selective Service, and Col. Paul G. Armstrong, director of Selective Service in Illinois.

We commend Colonel Armstrong for his immediate attention to the serious trend referred to above and for his clear statement covering the purpose of the new order.

Colonel Armstrong's statement is herewith printed and I recommend it for careful reading and full understanding on the part of all those affected under the order.

Colonel Armstrong's statement:

"Contrary to widespread belief, all farm workers under 26 years of age who are being given preinduction physical examinations will not be inducted into the armed forces.

"It has come to my attention that many farm employers are planning farm sales because of their belief that all young farmers ages 18 through 25 years are to be inducted. There is no basis for such belief.

"While it is true that all farm registrants under 26 years old are being sent for preinduction physical examinations, not all of them will be reclassified to Class I-A simply because they have been found physically qualified for military

(Continued on page 4)

This Month

(*Continued from page 3*)

service. All other classes of registrants in this age group have been given pre-induction physical examinations, and the recent order for examination of young farm registrants was undoubtedly issued to determine how many men in this group were physically qualified for service, as well as to expedite the induction of those no longer considered necessary to agriculture.

"In carrying out the recent order pertaining to young farm registrants, local boards and boards of appeal carefully consider the farm status of each man. Boards are still following the requirements of the Tydings Act which provides that every man actually necessary on a farm shall be deferred until a replacement can be found. In some instances, boards have previously been liberal in border-line cases, and the main purpose of the new directive is to have every farm case reviewed under stricter standards to determine whether or not a farm worker under 26 can possibly be spared to the armed forces. If a board, after thorough consideration, determines that the farm worker is definitely essential to the production of food and fibre for the armed forces as well as the civilian population, and that no replacement for him is available, the board may properly continue the agricultural deferment of such man.

"Physically and mentally fit young men on farms which simply produce subsistence for a single family can probably expect to be inducted in the near future. Registrants who are helping to produce food and fibre in quantity for general military and civilian use will necessarily be given greater consideration.

"Agriculture in Illinois has done an outstanding production job for this nation at war. The local and appeal boards of this state have fully recognized this great contribution and have, in my opinion, done efficient classifying of registrants, following the Tydings Act closely in order to protect agriculture."

FEBRUARY COVER

This month's cover picture of the IAA RECORD is from a copy of a photograph of Lincoln by Mathew B. Brady made Feb. 9, 1864. Robert Todd Lincoln has stated that he considered this to be the best photograph of his father. It is the most widely known of all the portraits of Lincoln, as it appears on the five-dollar bill.

Mrs. Lemmie Thompson

Sam H. Thompson's Wife, Daughter Die On Jan. 5

Mrs. Lemmie Thompson and Miss Florence Thompson, wife and daughter of Sam H. Thompson, former president of the American Farm Bureau Federation and Illinois Agricultural Association, died Jan. 5 in the family home in Quincy. Mrs. Thompson died just three hours after the death of her daughter, Florence.

Mrs. Thompson, a prominent and active worker in the Vermont Street Methodist Church of Quincy, was born in Gilmer township, Adams county, Jan. 17, 1870, the daughter of Charles and Katherine Schnur Dickhut, and was married to Mr. Thompson in her parents' home, Jan. 23, 1889.

Mr. and Mrs. Thompson began farming in 1889 on 80 acres in Gilmer township, about 10 miles from Quincy, and throughout the years gradually increased the acreage around the home farm. Mr. and Mrs. Thompson have lived in Quincy for the last 26 years, and they celebrated their golden wedding anniversary in 1939.

Miss Thompson was born in Gilmer township April 17, 1900, and had lived in Quincy with her parents. She has been in failing health since December, 1943. Like her mother she was an ardent worker in the Vermont Street Methodist Church.

Mrs. Thompson leaves her husband; five children, Ray, Sam R., Mrs. Mabel Crossland, Mrs. Arthur Tenhouse, and Mrs. Louise Durst; one brother, Walter Dickhut; 25 grandchildren, and 11 great grandchildren. One son, Charles, died 15 years ago.

Funeral services for Mrs. Thompson and her daughter were held in the Vermont Street Methodist Church, and burial was made in Quincy Memorial Park. Representing the AFBF and IAA at the services were Earl C. Smith AFBF vice-president and IAA president; Talmage Defrees, IAA vice-president, and Alvin O. Eckert, IAA board member.

The central high purpose of Mrs. Thompson's life was her home, her family, and her church. While she travelled extensively with her husband in all the activities connected with the duties of his offices, she formed many new acquaintances and made a host of friends who remained loyal and true during her lifetime. This was a source of joy and happiness that afforded her great pleasure as well as the opportunity to be with her husband and help and encourage him in the performance of his duties connected with the important positions of leadership he held from time to time.

• This was a great opportunity which she prized highly, yet, for 56 years of her married life, the central high purpose of her life was her home, her family and her church. To these she gave her love, her strength, and unselfish devotion to such an extent that her friends and neighbors, and the entire community gave her a standing of the highest order — as wife, mother and homemaker.

New Assistant Adviser Hired in DeKalb County

DeKalb county Farm Bureau has employed Dale Phillips, Dakota, as assistant farm adviser. He will be in charge of the county 4-H club program and the soil testing laboratory which is being installed at the present time by the DeKalb County Farm Bureau.

Dale Phillips

A graduate of Iowa State College, Phillips has taught vocational agriculture for six years at Hinckley, during which time he was also a 4-H club leader. While at Hinckley he developed an outstanding program in the way of extensive agricultural projects.

Since leaving the vocational field, Phillips was employed for a time as district sales manager for the DeKalb Agricultural Association. More recently he has been engaged in farming in Stephenson county. He began work during the first part of January as assistant farm adviser in DeKalb county.

On its way to war is this LST 652. These ships are called the backbone of invasions. It weighs about 2200 tons, carries a maximum load of 500 to 600 tons.

★

MOVIES FOR LST CREW

ILLINOIS FARM BUREAU EQUIPS RECREATION ROOM

CREW members of U.S.S. LST (Landing Ship, Tank) 652 are enjoying movies aboard ship these days as the result of cooperation of the Illinois Agricultural Association representing Farm Bureau families of Illinois in sponsoring recreational equipment for the ship.

A recent letter from the commanding officer states that the crew members used the funds to purchase a movie projector and screen. This will mean many hours of pleasant recreation not only for the crew in their short hours off duty, but also for many other service men in many distant battle areas where the LST sails. This is because crews share their movies with other groups where the ship encounters them.

In November of 1944 the board of directors of the Illinois Agricultural Association learned that LSTs at the time of being launched had very limited recreational facilities for crew members, and that organizations had been sponsoring recreational equipment for these ships.

The matter of the IAA sponsoring recreation room was referred to the finance committee of the board for investigation. After the committee conferred with the captain of U.S.S. LST 652 which had just been built at Seneca, a resolution was presented Dec. 1 to the board recommending an appropriation by the IAA for the sponsorship of a recreation room.

The IAA board approved the resolution and early in December, presentation of funds was made to the crew of U.S.S. LST 652. Members of the IAA finance committee and other members of the IAA board who were in Chicago attending the AFBF convention accepted an invitation to dine with the officers of the ship which was then anchored at Navy Pier, and the presentation was made at that time.

In making the presentation, Talmage Defrees, IAA Vice-President, stated that the gift was in reality from the Farm Bureau families of Illinois and represented a contribution from their hard work and toil on the farm.

Lt. (j.g.) M. S. Fein, executive officer of the ship, who accepted the gift in the name of the commanding officer and men, asserted that many of the crew were from farms and small towns in Illinois and they appreciated what the contribution meant.

Following the dinner, the IAA board members were taken on a tour of the ship and had an opportunity to visit with some of the crew members who were from Illinois farms and communities.

On Jan. 11, the IAA received a letter from Richard N. Shaw, commanding officer of U.S.S. LST 652, in which he said:

"The holiday season was considerably less gloomy than it otherwise would have been, as a result of the generous gift of your members to the crew of this ship. None of the men were able to go ashore Christmas, and for many of them it was their first Christmas away from home.

"Just as any spirited group of young Americans would have done under similar circumstances, the men got up an entertainment on the tank deck, with one of them playing Santa. The entertainment was topped off with a showing of a motion picture, "Silver Stallion," using the 16 MM Bell & Howell motion picture projector purchased with funds donated by your members.

"One film was shown Christmas eve and another Chrstmas night."

Dining with the officers of LST 652 are IAA board committee members. Left to right are: K. T. Smith, Ens. E. P. Neugebauer, Lt. W. H. Crabb, Ens. Herbert Burgess, Otto Steffey, W. A. Dennis, Albert Hayes, Vice-President Talmage Defrees, Homer Curtiss, Chester McCord, Lt. M. S. Fein, executive officer, and C. J. Elliott. IAA committee members of the board enjoyed a chicken dinner.

FIELD DAY for HANDY-ANDIES

Farm Inventors Exhibit Their Gadgets, Gimcracks and Time-Saving Devices at County Labor-Saving Shows

FARMERS have always been pretty handy about making things out of a few spare parts and some baling wire so when you hold a contest and offer prizes for homemade gadgets, there's bound to be a lot of entries. That's why there is considerable interest in the labor-saving shows now being held around the state.

Neighbors are sharing ideas on a number of homemade devices at these shows, and the U. of I. College of Agriculture has provided two truckloads of material, with all departments cooperating. Prizes amounting to $1000 are being offered for the best gadgets shown at the county exhibits. Winners in the county shows will be given an opportunity to compete for statewide awards, according to P. E. Johnston, state extension farm labor supervisor.

The shows are being held through March 2. County shows scheduled for the last half of February include: Richland, Feb. 13; Fayette, Feb. 14; Bond, Feb. 15; Jackson-Perry, Feb. 16; Pike, Feb. 20; Morgan, Feb. 21; McDonough, Feb. 22; Knox, Feb. 23; Rock Island, Feb. 26; Lee, Feb. 28; Stephenson, March 1, and McHenry, March 2.

A windmill "throwout", an automatic device to shut off the pump, won a $25 war bond prize for Frank Schumacher, Piatt county, at the first labor-saving show held in Champaign at the University in January.

He also exhibited barbed wire reel, a jig saw, a tractor guide with a power life, and a model of his corn dump signal equipped with an electric bell that warns him when the dump is jammed with corn.

Schumacher's "throwout" is simple in design and utilizes the principle of a float in the tank to influence its working. As the water level descends or ascends, the float, a gallon bucket, goes with it and moves a rod attached to the float. As the rod moves it either hooks or unhooks a wire run by pulleys to the pump. Unhooking of the wire causes an arm to fall and the action of this arm turns off or turns on the pump.

Schumacher developed his corn dump signal as a parts-saving device. When a jam develops in the chute, he explained, there is a tendency for the chain to rake the corn and eventually for the chain to be torn up. The bell signal enables him to stop the mechanism before serious trouble develops.

Other devices exhibited at the Champaign show included: a weed cutter, made with a Briggs-Stratton motor, bicycle wheels, and a v-belt. This was made by Hugh James, Champaign county farmer. Clarence Harris of Champaign showed a powered garden cultivator with a washing machine motor. George Collins, Champaign, received first honorable mention for a horse planter with a power lift, and Darrell Armstrong, Champaign county, received second honorable mention, with a posthole digger he had attached to his tractor.

Some 600 farmers and their wives attended the Macon county show where C. R. Rogers, Maroa, took first prize with a tractor-powered manure scoop. T. J. Shambaugh, also of Macon county, manager of the statewide exhibits, took second place with a manure scoop of different design. Keith Albert took third prize for an electric pump switch, which he said cost him $2.88 to make. He also took fifth place for a tractor grass seeder. Ernest Braden was seventh with a sack filler and Linn Rau, eighth, with his bean cultivator. L. W. Shutter won a prize for a milk stool which included a holder for the milk bucket.

This weed cutter is not only a labor saver but it really "mows 'em down." It was shown at the Champaign labor-saving show. It is driven by a gasoline motor from an old washing machine. The V-shaped cutting points welded on the old disk really do a job. In this way rank growth can be kept down by going around fence posts neatly and quickly.

At the Havana show in Mason county, the winning gadget was an elevator for putting baled hay in the mow.

Farmers who are interested in obtaining plans for a particular device may write to the university extension department at Urbana and plans will be sent to them.

Purpose of the exhibits and shows is to serve as a "clearing house" for new gadgets and ideas which lessen and simplify the work of the farmers handicapped by manpower and equipment shortages.

In most of the labor-saving shows, farmers demonstrated how they had adapted their tractors for many jobs about the farm. At the Logan county show, George Gehlbach, who farms near Lincoln, exhibited a three horsepower homemade tractor which he uses to pull a low two-wheel cart to haul feed, water, etc. Old auto parts were used in making the two wheeled tractor, which is narrow enough to pass between corn rows, for seeding rye or grass for pasture.

Also exhibited at the Logan show was a homemade power weed cutter — a two-wheeled push type tractor with a 30-inch cutter bar mounted in front so it can be pushed right under fence wires to get the last of the weeds in any fence row. This was exhibited by Harry Last of Beason, Logan county. Two old airplane wheels were used, and a small washing machine engine, transmission by V-belts, with some parts from a combine harvester to move the short cutter bar.

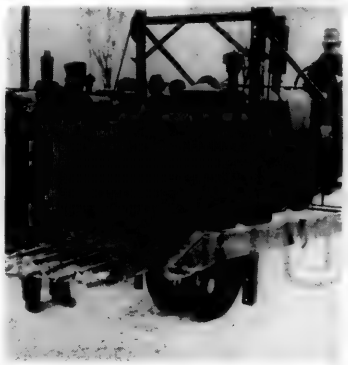
A larger tractor, on three wheels, was shown by Louis Bellati, Mt. Pulaski, Logan county, who uses it for odd jobs on the 610 acres he and his father operate, without using horses. It was powered with a nine horsepower engine, had a pipe frame, welded together, used a V-belt drive and auto transmission and pulled a 12-inch plow.

While labor saving devices are important, the practical aid of planning work is demonstrated in the information given by the extension workers in charge of the labor-saving shows over the state. It is reported that one Illinois dairyman has reduced his daily chore time from five hours a day to three hours, has saved 700 miles of walking and 60 full days of labor a year by careful planning and reorganizing chores.

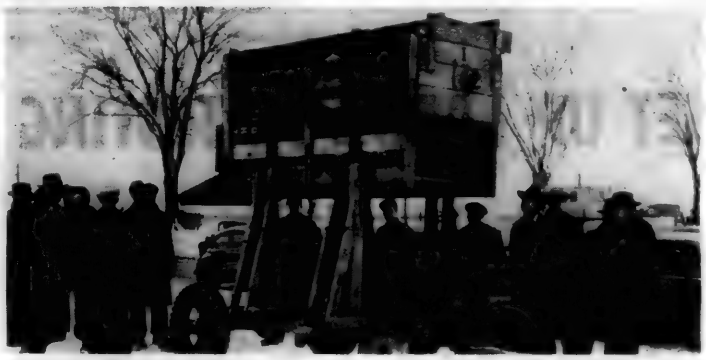
Here is T. J. Shambaugh with a model of an automatic hog waterer. In his hands is the full-sized float box used to regulate the flow of water.
(U. of I. Photo)

Frank Schumacher, Piatt county, describes his windmill "throwout" over Station WILL with Farm Adviser J. E. Harris, Champaign county.
(Courier Photo)

Pictured here is a tractor-powered wood saw devised by M. M. Wilson and entered in the Macon county show. It attracted wide interest.
(Herald-Review Photo)



C. R. Rogers built this manure scoop which he attached to his tractor. The lift can be elevated to any desired position.
(Herald-Review Photos)



A group of farmers look at a lift wagon built by W. W. Sentel, Moultrie county, to lessen the labor and time ordinarily required in scooping corn from a wagon to a truck when the corn is hauled from the fields. This was at the Macon exhibit.

Louis Duitsman, Champaign county, proudly shows his tractor loader. It is being used as a scoop in the picture with either manure or dirt being tossed up with ease. It is possible to hook a hay buck on the lift, too, which is powered by the tractor, of course. Duitsman has also hauled many loads of gravel for use on his own place and on neighbors farms which were scooped up by this device. He also uses it as a snow plow.
(U. of I. Photos)

Here is a handy "gadget." It is a motor table made so that the meat grinder shown in place can be quickly changed for a tool sharpening wheel, small churn or ice cream freezer.

"We Do The Bookkeeping for Your Soil Fertility Bank Account"

Here is a general view of the Whiteside County Farm Bureau soil laboratory

SET UP LABS FOR TESTING SOILS

"WE DO the bookkeeping for your soil fertility bank account."

This could very well be the sign posted by a number of county Farm Bureaus these days as they launch soil testing laboratories to serve the farmers of their respective areas.

Some 27 county Farm Bureaus have signified their intention of starting laboratories and several of these are already in operation. Laboratories have been started in Whiteside and Lee counties, and Morgan county was scheduled to start operating in mid-January.

Here is the plan that most Farm Bureau soil laboratories are following, according to R. H. Bray, chief, soil survey analysis, U. of I. College of Agriculture. The plan is to have one of the Farm Bureau personnel receive training at the University in running the tests before potash testing is attempted. This person is then given bottles of standard "K" solution as a "graduation present" and takes them back and uses them to check his work.

Some of the first soil samples run are sent to the University and the results are checked. Bray also reports that men from his department plan to drop in on the laboratories occasionally with standard samples and have the operator run them to help check their work. This cooperation is purely voluntary. The farm adviser is responsible for the interpretation of the tests to the farmer.

County Farm Bureaus that have started laboratories, or plan to have them in operation soon are: Bureau, Champaign, Christian, Cook, DeKalb, Edwards, Grundy, Henry, Jo Daviess, Kane, LaSalle, Lee, Macoupin, Marshall-Putnam, McDonough, McHenry, McLean, Morgan, St. Clair, Sangamon, Scott, Shelby, Stephenson, Tazewell, Williamson, Whiteside, and Woodford.

At the Whiteside County Farm Bureau soil testing laboratory which was set up last fall, Farm Adviser Frank Shuman reported that in a very short period of time the laboratory completed more than 600 soil tests covering some 48 farms. Seventy-three per cent of these tests indicate that the soil was from low to slight in phosphorus; 27 per cent medium to high and only 4 per cent showed high. He further stated that these tests indicated that 48 per cent were low in potash, yielding barely 100 pounds to the acre.

Mrs. Finnicum, Whiteside county's soil fertility bookkeeper, with the photolometer which aids in reading potash tests.

"We have not been awake to potash needs," Shuman said. "We must emphasize and re-emphasize the need of rock phosphate and muriate of potash ahead of legume crops to build up the organic matter and to hold moisture.

Here's the comment of Thomas Kennedy, Whiteside county, on the worth of the laboratory, "Why should I hesitate to pay a few dollars for soil testing when I have lost several hundred dollars worth of clover seed the last two years and don't know why I lost it?"

Kennedy had sweet clover growing in strips across his field. The test showed sweet soil where the sweet clover was growing and a 2-ton acidity on the bare spots. One field tested so

low in phosphorus that good red clover seed would not grow even if the limestone situation was corrected, Farm Adviser Shuman said.

In addition to correcting the acidity with limestone, Kennedy was advised to drill in 150-pounds per acre of a 0-20-0 super phosphate ahead of his legume seeding.

Duplicate records of every tested field are being kept on file at the Whiteside laboratory because the original test record is so important in checking on the deposits and withdrawals in the soil fertility bank account, Shuman said.

Instruction sheets for gathering soil samples are furnished farmers by the Farm Bureau. It is pointed out that many more tests can be made by the laboratories if farmers will collect and send in their own samples. In cases where this is impractical, the Whiteside laboratory will have someone collect the samples at the farm for a $3 service charge.

The Whiteside laboratory fee per sample test is: acidity, 5 cents; phosphorus, 10 cents; potassium, 20 cents. Since several thousand dollars of Farm Bureau funds have been used in installing the soil testing laboratory at Whiteside, the charge for tests to nonmembers is slightly higher than for members.

Grundy County Farm Bureau also has its laboratory under way. Farm Adviser M. E. Tascher, reports that the laboratory will give complete service, including potash tests using the newly-developed photolometer.

Lee County Farm Bureau also is in the business of keeping "soil bank accounts." Farm Adviser C. E. Yale explained that in the past the Farm Bureau has given the service of testing for acidity, phosphate and potash, using the Purdue method for potash. A new photolometer for the reading of the new potash test has been installed. Farm Adviser Yale pointed out that the demand for soil testing has grown so that the farm adviser cannot take care of all the work and the soil samples have been piling up. A technician now will be able to keep up with the work schedule.

Farm Adviser Tascher says that the soil laboratory is "the only way we can stay on top of our soil program. To instill confidence and assurance in our recommendations, the existence of the laboratory will be of immeasurable value, particularly in getting the correct information to farm people on their soils. By having it within the county and near to their homes, more farm people will take advantage of it because of greater confidence and time-saving features."

Farm Adviser Shuman on Jan. 18 had this to report on 115 days of operation of the laboratory. Some 3100 tests have been made, or an average of 25 samples per day. Maximum operation possible by the laboratory is estimated at 50 samples per day.

Since the laboratory has got in full swing, the income from tests has a little more than offset the technician's wages. It is estimated that by September, 1945, more than 300 farmers will have made use of the laboratory services. The farm adviser holds a clinic every 10 days for those who have submitted soil samples for testing.

★ ★ ★ ★ ★ ★

FARM AND HOME WEEK IS CANCELLED

The 44th annual Farm and Home Week originally scheduled for Feb. 6-8 at the University of Illinois, Urbana, has been cancelled.

Decision to cancel Farm and Home Week was reached after the Office of War Mobilization directed that all conferences and group meetings of more than 50 persons scheduled after Feb. 1 be cancelled.

★ ★ ★ ★ ★ ★

An acorn can never grow up to be a sugar tree but some acorns develop into scrubby oaks. Cut the poor trees for fuel or posts.

When you build that new home after the war, remember to build it termite-proof.

1. As a result of Dr. Bray's soil tests, properly used and interpreted, we are in a position to make definite and accurate fertilizer recommendations.

2. The tests are practical.

Farm Adviser Frank H. Shuman checks over the drying racks in Whiteside county's soil laboratory.

3. A minimum of 1 million acres tested per year should be the goal for Illinois.

4. County soil testing laboratories are urged as a basis for fertilizer recommendations.

5. Quick action is necessary if laboratories are to be set up and soil samples are collected for recommendations for the 1945 season.

6. Testing of samples should be done by a part-time employee or regular employee devoting part time to testing samples. Farm advisers should interpret all tests.

7. Farm operators are to collect samples.

8. County laboratories may be of two types:

a—Laboratory for acidity and phosphorus test. Samples to be sent to the university for potash test. b — Complete laboratory equipped for testing acidity, phosphorus and potash.

Other recommendations dealt with the equipment for the laboratory.

PLAN HAS SUPPORT OF FARM ADVISERS' ASSOCIATION HERE ARE ITS CONCLUSIONS

The FARM FRONT ROUNDUP

SURPLUS AUCTION SALES — Two public sales of surplus war plant property have been scheduled in Illinois. They are: at Sterling, Whiteside county, Feb. 13, and Princeton, Bureau county, on Feb. 15. Another was scheduled to be held at Ashland, Cass county, during the week of Feb. 1.

BAN ON CONVENTIONS — Organizations planning to hold conventions, conferences, trade shows or group meetings after Feb. 1 "will have to show how the war effort would suffer if the meetings were not held," Col. J. Monroe Johnson, chairman of the war committee on conventions, announced Jan. 11. Application forms for groups seeking to hold meetings of more than 50 persons may be secured from ODT regional and district offices. All applications should be sent directly to Secretary Clare, Room 7321 Interstate Commerce Commission Building, Washington 25, D. C., where they will be reviewed by the committee.

FARM CENSUS STARTS — The Census Bureau is conducting an agricultural census over the United States in 230 census districts. Many of the farm enumerators will be crop reporters because of their knowledge of farm conditions in their neighborhoods. All farmers are to be contacted in person by the enumerators. Farmers are asked to be prepared in advance to answer the more difficult questions that require calculations or estimates of values of land, buildings, crops, and even the vegetable and small fruits.

SPRING PIG GOAL — WFA has asked hog producers having adequate feed supplies to keep additional sows suitable for farrowing next spring to help meet the goal for spring pigs, and announces extension of the present support price of $12.50 per hundredweight, Chicago basis, for good to choice butcher hogs weighing 200 to 270 pounds, to March 31, 1946. In order to reach the goal of 57,500,000 spring pigs, hog producers would need to increase the number of sows farrowing next spring by about 11 per cent over the number planned, as indicated by the December pig crop report.

FLAXSEED PROGRAM — WFA has announced a program to pay farmers $5 an acre for flaxseed planted for 1945 harvest within goals set for individual farms. To qualify for this special payment, farmers must plant the flaxseed on land adapted to the crop and care for it in a workmanlike manner. National flaxseed goal for 1945 is 5 million acres. Goal for Illinois is 2 thousand acres as compared with planted acreage of 4 thousand in 1944.

INCOME TAX DEDUCTION — Farmers may deduct their costs and expenses in carrying out soil practices under last year's AAA program from their 1944 income tax, according to the Bureau of Internal Revenue. Any assistance received from the program must be accounted for as income. Farmers were required to make their final declaration on their 1944 estimated income Jan. 15, but will still have until March 15 to file their return.

REVISED EGG GOAL — WFA announces a revised farm egg production goal for 1945 of 4350 million dozen eggs as compared with the preliminary goal of 3920 million dozen suggested in November. The goal of 4350 million dozen while slightly less than the 1944 record production, would provide 347 eggs for each civilian in 1945, which is equal to the record consumption in 1944 and an increase of 49 eggs over the prewar 1935-39 average consumption. It also would provide for all military requirements for shell eggs and for military and lend-lease needs for dried eggs from 1945 production. About 125 million pounds of dried eggs carried over from surplus 1944 egg production are available to meet the balance of the lend-lease program. WFA suggests that the number of early hatched chicks should be maintained at a level at least as high as last year.

WFA TO BUY CORN — WFA is offering to buy 50 million bushels of yellow corn from farmers for delivery to WFA during the summer months at ceiling prices for corn grading No. 3 or better, and at market prices for corn grading below No. 3. The corn will be purchased in farm storage prior to March 15 in areas where farmers have a surplus above local needs with delivery on or before Sept. 30. Until then, purchased corn will be stored on farms. A down payment equal to the government loan value per bushel for the quantity purchased will be made to farmers when contracts are signed. Upon delivery of the corn, farmers will be paid the applicable delivery price less the down payment. County AAA committees will handle the contracts.

LIGHT TRUCKS — With about 60 per cent of the scheduled 1945 output of 35,704 light trucks earmarked for agricultural applicants, county AAA committees have been given the go-ahead to receive farmers' applications for purchase priorities. Applications filed with the county AAA are submitted to the ODT for final approval.

MILITARY TRUCKS — Thirty-eight per cent of all military vehicles manufactured by the American automotive industry have been shipped to Allied Nations under lend-lease or direct purchases according to the 1944 edition of "Motor Truck Facts" published by the Automobile Manufacturers Association.

USED CAR CEILING — A farmer who buys a used car primarily to carry on his business is not considered a "consumer", according to OPA. He is in the same category as a salesman or doctor who uses his car for work. Such buyers are not entitled to recover in case they are overcharged.

ILLINOIS FARM SUPPLY COMPANY
608 SOUTH DEARBORN STREET • CHICAGO 5, ILLINOIS

PEORIA PRODUCERS REPORTS MOST SUCCESSFUL YEAR OF ITS CAREER

"MOST successful year of its career in point of volume and sales value." That's the way the operations of the Peoria Producers Commission Association were described for the 1944 fiscal year by Manager W. R. Hembrough at the 23rd annual meeting in Peoria Jan. 10.

Marketings included 272,783 head of cattle, hogs, calves and sheep during the 1944 fiscal year for a total sales value of $10,519,907.46, exceeding the 1943 figure by more than $922,000.

Re-elected as directors of the Peoria Producers at its annual meeting were, left, Guy R. French, Putnam county, and Maurice F. Holmes, Peoria county, right. (Star Photo)

Net income of the producers was $18,360.31, or an increase of $3,630.74 over the previous year. A patronage dividend of 20 per cent of the commission charges was declared and paid. This amounted to $13,681.24.

Marketings for the 1944 calendar year were approximately the same for the fiscal year which ended May 31, 1944. In the 1944 calendar year, marketings amounted to 267,392 head as compared with the 1943 calendar year of 247,984.

Manager Hembrough pointed out that this amount of livestock was produced by the membership under the most trying times of this generation. "Labor shortages, equipment scarcity, and feed difficulties became a challenge to our national war effort and was met in this successful manner by the livestock producers," he declared.

Membership in the Producers also showed an increase for the year. Thirty-five counties in the Peoria area were responsible for 7,509 members with the neighboring state of Iowa contributing the balance, making a total of 7,762 members, or an increase of 298 over a year ago. Tazewell county took the lead in 1944 with 982 members, or an increase of 98 over a year ago. The next nine high counties in numerical order were: Peoria, Fulton, Mason, Woodford, Logan, Marshall-Putnam, McLean, Knox, and Stark.

In volume of livestock the 10 high counties were: Fulton, Peoria, Tazewell, Woodford, Mason, Marshall-Putnam, Knox, Stark, Logan, and McLean.

Manager Hembrough referred in his annual report to the tremendous growth of the Peoria livestock market in the last 20 years. For example, hogs on the market in 1944 numbered 943,504 as compared with 504,728 in 1924.

"Buyers and buying competition has increased accordingly," Manager Hembrough said, "making Peoria one of the best markets in the Middle West. The Peoria Producers has shown a tremendous growth in business during the 20 years. . . Your Association has been given a maximum amount of credit in the development of this market. Through the Producers' subsidiary, the Peoria Marketing Company, slaughter outlets have been made available at critical times before sufficient volume had attracted the present competition and slaughter outlets."

Participating in the Peoria Producers annual program were, left to right, George Wilson, Stark county, president of the Producers; P. O. Wilson, secretary-manager of the National Live Stock Producers association, and S. F. Russell, IAA director of livestock marketing. (Journal-Transcript Photo)

The ceiling on live cattle which became effective Jan. 29, also came in for discussion at the Peoria Producers annual meeting.

P. O. Wilson, secretary-manager of the National Livestock Producers Association, declared that the order of Fred Vinson, director, Office of Economic Stabilization, was an "improvement of the original plan proposed by OPA." He referred to the setting of the ceiling at $18 a hundred weight instead of $17.50 as originally proposed. This ceiling however, will be lowered to $17.50 July 2.

At the same time, Wilson was critical of the OPA for ignoring a livestock committee's recommendation for an increase in the maximum price on AA cattle.

Officers and directors of the Peoria Producers are as follows: George Wilson, president; J. Frank Felter, vice-president; Seaton Moore, secretary-treasurer; Guy French, Maurice Holmes, C. W. Ackerman, Loren S. Heller, directors. The same board of directors serves for the Peoria Livestock Marketing Company, and D. H. Hirth is manager of the latter subsidiary.

. . . "AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

IT APPEARS that 1945 is indeed proving THE year in which Farm Bureau membership can be increased. Counties in all parts of the state are reporting enthusiastic kickoff meetings, good drives, and excellent results. Many of these were mentioned in last month's RECORD, and there are many more coming in almost daily.

It is not at all unusual for counties to report not only good drives, but the best ones on record. This may be attributed to (1) the growing realization of farmers that a strong organization is needed, both for now and postwar; and (2) to the outstanding services rendered by county Farm Bureau offices in spite of the stresses and strains of wartime.

Organization workers are enthusiastic, too, and are pledging carefully-planned campaigns, with the objective of reaching every non-member in each county. The long range goals totalling 117,000 will be reached if each and every county group makes up its mind to go "all out" and tell the story of Farm Bureau to the non-member.

Franklin county took its place among the dynamic Farm Bureaus in the state when in a contest drive, east side versus west side, 100 members were signed to bring membership to 400. Organization Director Carl K. Cox reports

that Captain Bernard (Butch) Wanstreet, the east-side winners' leader, personally signed 28 new members. One of Capt. Jerry Embser's west-side boys also hit a high mark with 13.

Wayne county kicked off Jan. 8 with 75 in attendance, also on a contest drive with the county divided into districts.

Another splendid drive, in spite of adverse weather and road conditions, was in Logan county, launched on Jan. 8 with 54 workers. Thirty-seven were back at the report meeting — turning in 100 new member contracts. Five townships were incomplete and one not reported, says organization director Ray H. Schilling.

COD Terry Elder wires from Crawford county that their drive which culminated in a report meeting Jan. 12 resulted in 96 new members, one of the best, if not the best drive ever held in that county.

On a township-by-township effort, COD Lloyd Ummel reports from Tazewell that 32 members were signed in the first four townships covered, an average of 8 to the township.

In Cumberland county, 50 contacts in a recent drive resulted in a signup of 26 — a representative relation of results to calls.

Rock Island county's drive has yielded the good number of 72 new members.

Over sixty contracts have been reported to date in Marion county's drive.

County Organization Director C. A. Markman, Bureau county, has enthusiastically reported the signing of 165 new members in the recent membership drive. This is a new high for this year and Markman says that they are driving on to their long range goal of 2168 members by Sept. 30.

Jasper County Farm Bureau held a report meeting with 130 present following a membership contest campaign wherein the senior team were winners over those born in the 20th century and, therefore, ate with a full array of silverware, tablecloths and napkins to match. Total of 86 new members was reported in this county.

Pulaski-Alexander will hold their kick-off meetings on February 20th, according to COD Wiesenborn.

W. S. Brock, left, president of the Production Credit Corporation of St. Louis, accepts a check from M. S. Morgan, president of the Kewanee Production Credit Association, in full payment for all the capital stock owned by the St. Louis corporation in the Kewanee PCA. At extreme left is J. M. Robinson, treasurer of PCC of St. Louis, and at extreme right, C. E. Humphrey, secretary-treasurer of Kewanee PCA. Kewanee PCA is now wholly owned by members.

ANOTHER FIRST FOR ILLINOIS

ANOTHER first has been chalked up by Illinois farmers! This time it's in the field of credit. The Kewanee Production Credit Association has become the first production credit association in the United States to be wholly owned by its farmer-members.

Just at the close of 1944, Meryl Morgan, president, and C. E. Humphrey, secretary-treasurer of the Kewanee association, presented the association's check for $60,000 to W. S. Brock, president of the Production Credit Corporation of St. Louis, in full payment for all the capital stock owned by the St. Louis corporation. The Production Credit Corporation of St. Louis originally subscribed for "A" (non-voting) stock to assist in the organization of this cooperative credit association.

How did the Kewanee cooperative achieve its record? President Morgan says, "It was simply a question of presenting a sound cooperative business proposition to the members who have personally experienced the advantage of production credit . . .

"Recently our board of directors decided that this was a most opportune time for farmers to purchase all the stock in their association. The idea was presented by association employees to farmer-members as they were contacted in the field. About 97 per cent of all members contacted subscribed for additional stock, and the amount needed was easily secured."

A number of substantial members who gladly subscribed for the additional stock stated that they might not personally need the credit services of their association extensively in the future, but that their sons intended to succeed them in farming and they wanted to make certain that their own cooperative production credit association would be there to serve their sons in time of future need."

The Kewanee association was organized in November, 1933, with 13 farmers as charter members, each subscribing for $5 in "B" (voting) stock. As each farmer-member obtained a loan, he acquired an amount of the "B" (voting) stock in the association equivalent to not less than 5 per cent of the amount of his loan. However, during the early years of operation, most of the capital of the association was supplied by the Production Credit Corporation of St. Louis which by December, 1934, had purchased $100,000 of the "A" (non-voting) stock.

As of the close of business on Nov. 30, 1944, the Kewanee association had 590 farmer-members with $688,111 in outstanding loans. From organization to the above date, the association made loans totalling $9,598,011. Total losses sustained in the 11 years of operation amounted to $1,015, or 0.01 per cent of the amount of loans made.

As of Dec. 30, the association had a total capital of $132,875, all of which was owned by farmer-members. In addition, the association had reserves and surplus of $60,835. This association serves farmers in Henry, Knox, Stark, and Bureau counties. It has demonstrated how a group of capable farmers can successively operate their own credit cooperative.

INDIANAPOLIS PRODUCERS REPORTS NEW VOLUME HIGHS DURING 1944

INDIANAPOLIS Producers Live Stock Commission Association in 1944 handled more hogs, cattle and calves than in any recent year, according to the annual report of Manager Scott Meiks made at the 23rd annual meeting of the Producers Jan. 19, in the Claypool Hotel, Indianapolis.

The Producers handled 3183 more cattle than during 1943, the greatest yearly total in its history; 7283 more hogs, the greatest number since 1933, and 5371 more calves, the largest volume since 1933. Reduction in the volume of sheep and lambs handled by the Producers was attributed to pasture conditions last summer and the price of feed in the fall of 1944.

"The year 1944 has been a continuation of agriculture's part in the war program, and it is evident that 1945 will be another chapter in the war story," Manager Meiks said.

Meiks pointed out that more meat animals were produced than ever before in 1944 — more even than government authorities have asked for — more than processors at times were able to care for.

"Thousands of hogs and hundreds of lambs have died at the producers' expense while waiting for processing facilities to take care of them," Meiks said.

"With the greatest demand for meat ever known this year's supply of hogs have gone to market at a lower price level than last year," he added. "The Chicago Drovers Journal reports that the average price of both cattle and hogs has been $1 per hundred weight lower than in 1943. What other essential products are being sold at a lower price level than a year ago or two years ago?"

C. W. Sadd, manager, GLF Retail Stores, Ithaca, N. Y., listed the objectives a cooperative marketing association should have.

Sadd pointed out that the average housewife spends in cash each year $500 for food. The producer finally gets from $175 to $225 out of the original $500.

"What happens to the difference is marketing whether conducted by private or cooperative business," Sadd explained. "The ratio is two to one — $2 for marketing and $1 for the product. There is only one answer, as far as the farmer is concerned, if he is to get part of the $2, and that is marketing. If producers are to develop a system of cooperative marketing, it would seem best to list some of the objectives they should have with such a program. It seems to us that these are the principal objectives a cooperative marketing association should have:

"1. To recover for farmers the maximum possible out of the $2 spent for marketing.

"2. To always have a market for what farmers produce.

"3. To gain a knowledge of consumer requirements and thereby produce to meet their needs.

"4. To operate so efficiently that the cooperative becomes the operating pace-setter for private business.

"5. To keep ownership of such a system with the farmers who use the service."

Ceiling on Cattle of $18 Is Announced by Government

A DIRECTIVE was issued Jan. 10 by Economic Stabilization Director Fred M. Vinson, which provides for five important changes in the cattle stabilization program. In brief this directive is outlined by the USDA office of information as follows:

1. An over-riding ceiling of $18 ($17.50 beginning July 2, 1945) on live cattle and calves, per hundredweight, Chicago basis.

2. An increase of subsidy payments to slaughterers who buy good and choice cattle of 50 cents to $1, respectively. On July 2, the increase in subsidy on choice cattle will be reduced to 50 cents.

3. Corresponding adjustments is stabilization price ranges for good and choice cattle.

4. Payment in excess of the maximum provided by the stabilization range for cattle slaughtered during each monthly period is made an OPA violation.

5. Maximum percentages of good and choice cattle which may be slaughtered will be established by the OPA.

The maximum and minimum prices between the buyers average monthly price of cattle must fall in order to qualify for subsidy is known as the stabilization range.

The maximum price of the stabilization range for choice cattle is being raised $1 and the minimum on choice cattle is being raised 50 cents. This will hold until July 2 at which time both the maximum and minimum levels of the stabilization range for choice cattle only will drop 50 cents. The maximum price of the stabilization range for good cattle is increased by 50 cents. These changes are nationwide.

Here is a table which shows the changes in the stabilization ranges; figures are per hundredweight, live weight, Chicago basis:

AA beef (choice) present range	$15-$16
raised to	$15.50-$17
on or after July 2	$15-$16.50
A beef (good) present range	$14.25-$15.25
raised to	$14.25-$15.75

The stabilization ranges for other grades will remain as they are except that minimums for all grades will be adjusted so as to provide a uniform spread between the maximum and the minimum prices of $1.50 per hundredweight throughout the entire country.

Individual purchases may be made at prices over the stabilization range, but not at prices which exceed the over-riding ceiling.

The average of the monthly drove must fall within the stabilization ranges.

Under the directive of Jan. 10, it will be an OPA violation for a slaughterer to pay more, on the average, than the maximum prices of the stabilization range for the cattle purchased and slaughtered by him over a month's period. (This does not include calves.)

OPA will specify to packers the percentages of good and choice cattle which any slaughterer can slaughter or deliver over a month's time.

Name Working Committee on Livestock Problems

A five-man working committee to study ways and means of establishing a coordinated livestock marketing program for Illinois was named Jan. 26 at a meeting of the state-wide Illinois Agricultural Association Livestock Marketing committee in the IAA offices, Chicago.

Named to the committee were: Carl Johnson, DeKalb county; Ed Gumm, Knox; Byron Kline, McLean; Lawrence Todt, Christian; J. P. Redman, Pulaski.

The five-man committee set Feb. 8 for its first meeting to be held in Chicago. At that time the committee will outline its procedure of study.

A statewide IAA livestock committee was set up in 1944 at the recomendation of Illinois producers. The statewide committee is composed of two representatives from each of the 15 congressional downstate districts together with representatives of producer agencies. The standing marketing committee of the IAA board of directors heads up the statewide livestock committee.

The appointment of the five-man working committee on Jan. 26 by the statewide committee is the culmination of previous meetings and sessions held to study livestock marketing problems.

52%

of this company's investments last year were in government bonds.

■That is why we say "your Country Life premium dollar is a fighting dollar." It fights for peace on two fronts: it helps supply the sinews of war on the battle front; it gives you peace of mind on the home front.

COUNTRY LIFE INSURANCE CO.
CHICAGO (5), ILLINOIS

McDONOUGH COUNTY LAUNCHES

NEW GRAIN CO-OP

★ ★ ★ ★ ★ ★ ★ ★ ★

W. A. Elam is Manager of New Service Enterprise

A COUNTY-WIDE grain marketing and feed distributing organization, the McDonough Grain and Milling Company, incorporated under the sponsorship of the McDonough County Farm Bureau, opened its doors for business Jan. 3.

Launching of this new cooperative culminates more than six months of study and planning by the McDonough County Farm Bureau grain and soybean committee.

The committee enjoyed the cooperation and collaboration of the directors, managers, and stockholders of the Bushnell Farmers Elevator Company whose properties were taken over by the new cooperative. These properties include two grain elevators, a grain storage warehouse, and all of the equipment used in the handling of feeds, seeds, grains and coal.

With these properties and equipment, the new cooperative will operate on a county wide basis and will ultimately serve Farm Bureau members and other patrons throughout the entire county.

Grain marketing will be carried on through the offices of the Illinois Grain Corporation, IAA associated company, and a county-wide distribution program of both Blue Seal and Service Brand feeds will be afforded. It is planned that the manufacture of Service Brand feeds will become one of the major operations.

Blue Seal feed distribution, hitherto the function of the feed department of the McDonough Service Company, has been transferred to the new cooperative, and direct-to-the-farm service will continue under the present feed salesmen, Fred Heck and Harold Oberman.

In addition to grain and feed, the cooperative will enjoy a large volume of business in coal and other farm supplies.

Manager of the cooperative is W. A. Elam, formerly assistant to the manager of the Shelby-Effingham Service Company in charge of the feed department. Manager Elam was at one time a petroleum truck salesman for Bond County Service Company. Prior to that he had extensive experience in elevator operations. For 10 years he managed the Greenville Equity elevator, and for eight years preceding that period he was supervisor of elevator operations for the Valien Spiess Milling Company of St. Louis. He has a long record of experience in the elevator business and is well qualified to handle the grain marketing and feed mixing program which the board has outlined. He is 47 years old, has two children, and is a veteran of World War I having served with the Marines.

Taking inventory are Manager W. A. Elam and President Leo Walter

This is the feed mixing unit of the McDonough Grain and Milling Company.

This is a view of the properties purchased by the McDonough Grain and Milling Company. Elevators and storage facilities are at the left. At the right is the working plant. Low building in the foreground is an office of the properties.

Officers and directors of the new cooperative are: Leo Walter, Prairie City, president; Ryal Keithley, Macomb, vice-president; Ernest Combs, Bushnell, secretary; J. D. Murphy, Bushnell, treasurer; Grover Swigart, Ralph E. Wilson, Industry, and Marion Herzog, Blandinsville, directors.

The McDonough Grain and Milling Company is one more link in a rapidly developing chain of Farm Bureau cooperatives in Illinois. Similar projects are soon to be concluded in more than a dozen Illinois counties.

TIGHT SQUEEZE

SEEN IN FARM SUPPLIES FOR 1945 BY WFA OFFICIAL AS RESULT OF MILITARY NEEDS

"IT IS clear now that we're in for a tight squeeze."

These are the words of Frederic N. Northrup, director, office of materials, and facilities, WFA, in addressing the National Committee for Farm Production Supplies in Chicago, Jan. 9, on the farm supply picture for 1945.

Here are some of the highlights of the picture drawn by Northrup in his first public statement since the Germans started their big counter offensive in December.

"Machinery is not coming off the lines as fast as most informed people expected. . . At last report, tractor production was approximately up to schedule. Spring tools and some other items requiring heavy use of castings were running behind schedule. Farm machinery in general — with the exception of tractors — was running 20 to 25 per cent behind schedule.

"A lag of this proportion, coincident with a demand increased by the tightening farm labor supply, may mean a serious pinch on farm machinery this year. . . The wise farmer will check over and repair every old machine he can possibly keep in operation. . .

"Transportation problems will undoubtedly reach a new peak. ODT, which is the claimant agency for trucks, recently pointed out that the approved truck production program will provide less than a fourth of the new trucks that are estimated to be essential.

"Production of light trucks, which are especially important to farmers, is authorized at about 12 per cent of ODT's estimated requirement.

"The shortage of heavy truck tires will also handicap our transportation of farm commodities. We'll probably get some more surplus Army trucks, but we can't predict or count on any particular number."

. . ."Manufacturers are turning out another big supply of parts, and there should be enough to go around.

. . ."This year we're starting to take up the lag on some of the planting, fertilizing and tillage equipment — such items as corn and cotton planters, listers, potato planters, beet and bean drills, endgate seeders, fertilizer distributors, tractor plows and cultivators, disc harrows, walking cultivators, and rotary hoes.

. . ."Labor-saving machines for harvesting and haying are still recognized as our greatest need, but the planting, fertilizing, and tillage equipment I mentioned will take a bigger share of the authorized material than in our past program.

"As to tractors: Last year we got around 180,000 wheel tractors, including 30,000 through the carryover authorization. This year, as the situation looks now, we'll get between 150 and 160 thousand.

. . ."**This year's program is about the same as last year's program, but less than last year's total production. Labor-saving machinery is again emphasized. But production of many items is running consideraby behind schedule. Care, share and repair will be essential once again.**

. . ."We'll probably have enough gasoline for farm work, as in the past year.

"Lumber, though now critically short, is not causing as big a problem in agriculture as we anticipated, possibly because farmers have so little time to do construction and maintenance work.

"Farmers can now go to the county AAA committees and get certificates for lumber to be used in urgently needed repair and maintenance of farm dwellings, just as they now get certificates for lumber to be used on other farm buildings.

We expect about as much metal roofing and siding as in 1944.

"Copper wire is getting a little tighter but the shortage of transformers may continue to limit the demand for wire.

"Electric motors of fractional horsepower — about the same as in 1944.

"At least as many hand tools are in prospect as 1944. Manufacturers of fence wire and netting are authorized to produce at a greater rate than their prewar rate. As to nails, staples, bale ties, and pipe — no shortage expected.

"Farm chain of most types is expected to be adequate for essential needs.

"Ammunition supplies will be tighter but further steps are planned to assure supplies to farmers for the control of predatory animals and birds.

"Binder twine quality will improve in 1945 and supplies will be adequate. Rope will continue to lack something of meeting prewar quality.

"We'll have fewer milk cans but probably enough to meet farmers' needs.

"We'll continue to battle shortages of wooden containers. Our only hope of having enough containers is to re-use every second-hand container that can be re-used.

. . ."One of the most troublesome results of the fabric shortage will be the scarcity of agricultural bags.

"On insecticides and fungicides — we'll have about the same short supply of rotenone as last year. We'll have very little pyrethrum. If we have severe infestation of bugs whose control calls for nicotine, we may run quite short of nicotine. . .

"On fertilizers — prospects for nitrogen and superphosphate have been going down due to military demands for some of the materials used in fertilizer production. Of course we expect to have more nitrogen and superphosphate than we used in the prewar years of 1935-39 — 60 per cent more nitrogen and 54 per cent more super. But we'll have perhaps 10 per cent less nitrogen and 7 per cent less super than we had last year.

"Potash is better. We'll have nearly twice as much as used in the years just before the war and 20 per cent more than last year. That brings our total supply of commercial plant food to about the same tonnage as last year. But the tonnage of approved grades high in nitrogen will be lower.

"We'll have less superphosphate for straight use. The approved grades high in potash contest should be more abundant. Taking early delivery improves the chance of meeting farm requirements as fully as supplies of all these supplies permit."

Crop Goals

Final agricultural production goals for 1945, as announced by War Food Administrator Marvin Jones, call for continued full production. The final national goals represent the total of state goals recommended by farmers, farm leaders, and state agricultural officials.

Crop acreage goals call for production above the high levels of 1944. For flaxseed, sugar beets, and cover crop seeds, the goals have been materially increased over 1944.

Moderate increases over 1944 acreage are shown for dry beans, potatoes, and tobacco. The goals for legume hay seeds and for soybeans are maintained at the record 1944 levels.

HERE'S HOW

to get *NEW* BLUE SEAL CHICK STARTER *at a* PRE-SEASON DISCOUNT

PLACE YOUR ORDER *NOW*
with your Blue Seal Salesman
and receive $2.00 per ton discount
Delivery will be made when your chicks arrive

This special discount is for pre-season orders only. This is for a limited time. Place your order NOW—take delivery as you need the starter, and save money on every pound!

The higher protein level in BLUE SEAL Chick Starter means healthier, faster growing chicks—*more profits.* Ask the BLUE SEAL Salesman in your community.

HERE'S WHY

BLUE SEAL CHICK STARTER *is IMPROVED!*

BLUE SEAL Chick Starter—now stepped up to 20% protein—and, of course, properly balanced with minerals and vitamins—is an EXTRA MONEY MAKER for poultry raisers. Actual feeding tests in BLUE SEAL Laboratories show that chicks receiving this starter gained 31¼% MORE WEIGHT over chicks fed ordinary 18% protein chick feed. They feathered out better—were stronger, healthier, as well as heavier. Place a reservation order *NOW* for your supply of BLUE SEAL Chick Starter and take advantage of the discount.

Assistant Farm Adviser Overseas Gets Citation

Capt. Raymond D. French, on leave of absence from his job as assistant farm adviser in Champaign county, has received the Silver Star for gallantry in action against the enemy in France on D-Day.

As a battery commander of a field artillery battalion, he landed his battery on the beach and provided artillery support for the assault wave of ground troops. Exposing himself with complete disregard for his own safety, Captain French went from vehicle to vehicle administering aid to the wounded and seeing that all personnel had protection from the shelling. He then removed his unit from under the direct fire of the enemy and returned to the beach to salvage all equipment possible.

Captain French is the son of Guy R. French, Putnam county, recently re-elected to the board of directors of the Peoria Producers, and an active Farm Bureau member.

Captain French was an outstanding 4-H club champion and later was a member on University of Illinois judging teams.

Lt. Richard H. Burwash, son of A. E. Burwash, Champaign county, a director in the board of the Illinois Grain Corporation, writes that "he seems to be following French around on the Western front." Lieutenant Burwash noticed French's name on the register in the Red Cross officers' club in both London and Paris, but has yet to catch a glimpse of him.

AFBF To Participate In NBC's New Radio Series

The American Farm Bureau Federation will go on the air in a radio program some time during the first of April, according to an announcement made by AFBF and National Broadcasting Company officials.

The proposed plan calls for the AFBF and the National Grange to alternate in preparing the program and naming speakers for a roundtable discussion for 10 Sunday afternoon programs starting in April. The Chamber of Commerce will take over after this period and handle the programs for three Sundays, followed by the CIO for 13 Sundays. The AFBF and Grange then will return and alternate programs for another 10 Sundays and the Chamber of Commerce will conclude the series with three additional programs.

The A. F. of L. opened the program schedule on Jan. 7 and will continue to select participants at the roundtable for 13 Sundays.

Program time is Sunday 1:15 to 1:30 P.M. on the NBC network.

Each organization will build its own program for the discussion of national issues and problems. Each organization also is inviting representatives of the other groups to participate on its programs.

President Edward A. O'Neal in commending NBC on its new program, said, "It is only by getting together and talking things out across a conference table that any one group can reach an intelligent understanding of the problems, hopes, and objectives of the other groups. I feel that a better understanding among groups will surely lead to coordination of all group activities in the public interest."

The entire series will be under the auspices of NBC's public service department and the company's public service counselor, Dr. James Rowland Angell.

Jan. 3 the Chicago OPA regional office authorized milk dealers in Bloomington and Normal to increase their producers milk price upon milk for bottling purposes to $2.90 per cwt. for 3.5% milk, f.o.b. dealers platform, and to pay a butterfat differential of 5c for each 1/10 of a per cent butterfat above or below 3.5%. This permissive increase in producers price was granted retroactive to Dec. 15, 1944, in response to a request filed with OPA by the McLean County Milk Producers Association of Bloomington. Milk dealers in Bloomington are buying the milk upon the basis of prices provided for in this order.

The previous Bloomington price to producers for 3.5% milk was $2.48 per cwt. with a butterfat differential of 7.8c per tenth of a per cent added above or subtracted below 3.5%.

A state government commission headed by Sen. Simon E. Lantz, chairman of the senate agricultural committee, and Harold D. Kelsey, chairman of the house agricultural committee, has been holding a series of hearings over the state. These hearings were held for the purpose of obtaining first-hand comments from livestock producers regarding the present livestock laws and regulations and their adequacy, particularly with reference to Bangs disease eradication and control.

It is anticipated that, based upon the information and suggestions obtained at these hearings, recommendations may be made by this commission to the General Assembly for additions or changes in the present laws and regulations.

WFA announced the following set aside orders upon dairy products, effective Feb. 1. Butter, 20% for February, 25% for March; cheese, 30% for February; non-fat spray powder, 50% for February and March.

Urgent military requirements were the reasons for these set aside orders for these products.

Board of directors of Illinois Milk Producers' Association, in a meeting Jan. 10, elected Edwin Gumm president, and B. J. Schumacher vice-president, of the Illinois Milk Producers' Association and the Illinois Milk Producers' Supply Company for the coming year. Gumm has been a director of Illinois Milk Producers' Association for many years and is president of the Galesburg Pure Milk Association. Schumacher has been the director on the board from Sanitary Milk Producers of St. Louis since Sanitary became a member of Illinois Milk Producers' Association. Wilfred Shaw was re-elected secretary-treasurer of the Illinois Milk Producers' Association and Illinois Milk Producers' Supply Company. The following were elected by the directors to serve upon the executive committee for the year ahead: Edwin Gumm, Galesburg; B. J. Schumacher, St. Louis; W. J. Swayer, Chicago; Glen Tombaugh, Streator; O. H. Ryan, La-Salle-Peru; A. E. Meyer, Moline; Chas. Cameron, Peoria.

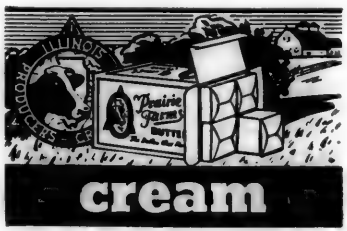
Annual meetings are scheduled by the following milk marketing cooperatives and will be held if permitted under the new ODT regulations recently announced: Feb. 12, 10:00 a.m., Producers Co-Op Dairy, Adams County Livestock Shipping Assn. Bldg., Quincy; Feb. 23, 10:00 a.m., Peoria Milk Producers and Peoria Producers Dairy, American Legion Building, Peoria; March 13, 10:00 a.m., Pure Milk Association, Sherman Hotel, Chicago; March 27, 10:00 a.m., Mid-West Dairymen's Company, Shrine Temple, Rockford.

The following are the blended prices received by producers supplying the prospective Illinois markets. All are December prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.45
Canton	2.75
Champaign	2.75
Chicago	3.14
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.76
Galesburg	2.65
Harrisburg	2.55
Jacksonville	2.85
Kewanee	2.55
LaSalle	2.69
Moline	3.01
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.09
Springfield	2.85
St. Louis	3.39
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for December unless otherwise noted:

Boston (191-200 mile zone) (Nov.)	$3.88
Chicago (70 mile zone)	3.14
Cleveland (Nov.)	3.52
Dayton	3.09
Denver	2.90
Detroit (Nov.)	3.64
Evansville (Nov.)	2.96
Indianapolis	3.58
Kansas City	3.53
Milwaukee	3.00
New York City (201-210 mile zone) (Nov.)	4.06
Omaha (Nov.)	3.03
Seattle	3.10
St. Louis	3.39
St. Paul and Minneapolis	2.98
Washington, D. C.	4.00



By Frank Gougler

During 1944, total income from the sale of milk amounted to $2,050,000,000 while during 1943 total milk sales amounted to only $1,874,000,000. Butterfat sales during 1943, equaled $572,000,000, but dropped to $540,000,000 in 1944. Since 1940, receipts from wholesale of milk has more than doubled. In 1940, the value was $840,000,000 compared to a value of $2,050,000,000 during 1944. Combined sales of milk and cream during 1944 amounted to $2,947,000,000.

Less than four years ago, the board of directors of Farmers Creamery Company of Bloomington decided that a new home should be had to house the creamery. Accordingly, an appropriate location was secured where about an $80,000 building was constructed and another $30,000 was spent for new equipment. Saturday, Jan. 27,

Soldiers at Scott Field, Ill. Army Air Forces Training Command Radio School literally "milked" the accumulated dividends and profits stored by the Exchange. Half-pint bottles of milk were sold at all Exchanges on the base for one-cent each for one week. Pints of ice cream formerly sold at 15 cents were 10 cents. These less-than-cost sales were made possible by an accumulated dividend built up from the profits of the more than average sales made during the last period. The sale of dairy products does not exceed the quotas established for Scott Field. The Exchange absorbed a 4-cent loss on each half pint of milk.

(Official Photo US AAF — By AAF Training Command)

one of the main features of the program of the annual meeting was the mortgage burning ceremony. O. M. Richardson, manager of the American Dairy Association, gave the principal address. The creamery had a very successful year which closed Sept. 30, 1944 and a substantial sum of the earnings for the year was paid out in the form of patronage dividends.

In his annual report to shareholders and members of Producers' Creamery of Carlinville, Manager F. A. Gourley showed gains made during 1944 over a year earlier, as follows: Butter made, 550,000 lbs., gain 20%; milk powder, 1,220,000 lbs., gain 50%; butterfat purchased, 950,000 lbs., gain 50%; total sales, $783,000, gain 50%; net earnings, $23,000, gain 40%. There was an increase of 300 milk patrons during the year. Because of the increased business, present building and facilities of the Carlinville Creamery will not handle the volume. Additional property has been purchased back of the creamery to provide space for a second boiler and the creamery proper is to be made 20 feet wider which will provide 2,800 additional square feet of space. This new addition is to be built immediately. The board of directors has authorized the purchase of a water cooling tower; one 3,000 gallon milk storage tank; another 150 horse power boiler and one automatic milk receiving scale.

Recently, D. L. Garber, member of the Mt. Carroll creamery board and representative on the IPC board, reported that construction on the new Mt. Carroll Creamery buildings had been temporarily held up because steel beams for supporting the roof had not been shipped. Otherwise, construction had gone forward on a satisfactory basis. Manager Ray Sailor reported that new equipment is arriving so there will be no delay in installing the equipment when the building is completed. Volume of milk and cream received through the winter months is steadily increasing and is now 20% above a year ago.

Recently, the board of directors of Prairie Farms Creamery of Henry, let the contract for the construction of a new $60,000 creamery building at Henry. The successful bidder was the Ole Jorgensen and Sons, contractors of Clinton, Ia. Construction is to start immediately. The board of directors and officials of this new creamery district are as follows: Marshall-Putnam, Herb Schumacher, president, Toluca; Stark county, Joel Wilson, secretary-treasurer, Toulon; Peoria county, Joseph Rahn, Edwards; Bureau county, Carl Neureuther, Spring Valley; Woodford county, Peter R. Schertz, Roanoke.

The board of directors elected at the annual meeting of IPC met recently and elected officers for the current year. The full board and officers are as follows: Harold Enns, Minier, president; Harry Gehring, Altona, vice-president; W. A. Bismark, Geneseo, secretary; Robert Cowles, Chicago, treasurer; E. A. Fosce, Marion; Thad Loveless, Gillespie; A. Bower, Bushton; H. B. Smith, Randolph; John Sterchi, Olney; Harry Leeper, Farmington; Chester McCord, Newton; D. L. Garber, Mt. Carroll.

Make labor-saving hay devices work for you — not you for them. A little thought and system reduces the number of "grunts" per ton.

Newark Farmers' Grain Company Manager Dies

The death Jan. 11 of Roy Holverson, manager of the Newark Farmers' Grain Company, Kendall county, for the last 19 years, marked the end of a long career in the field of cooperative grain marketing and community service. Although Mr. Holverson had been gradually failing in health for the past year, his death was a shock to the community and his many friends. Funeral services were held Jan. 14 at the Newark Lutheran Church, and burial was made in Norway cemetery.

Roy Holverson

Mr. Holverson was closely identified with activities of his community through his long association with the Newark elevator, believed to be the only elevator in the country that owns and operates its own railroad and locomotive over a short two-mile line between Newark and Millington.

Mr. Holverson was born at Lee, Lee county, Oct. 31, 1884, son of John and Elizabeth Williams Holverson. He started farming for himself near Seneca, LaSalle county, and at the time of his death still owned the farm he purchased there. About 25 years ago he helped to organize the Seneca Shippers' Association, and he managed it for seven years. In 1926, the Newark Farmers' Grain Company needed a new manager and the board prevailed upon Mr. Holverson to give up farming and take the job of reorganizing their business. The success of the elevator tells the story of his management.

In 1912 Mr. Holverson married Ellen Hall of Chicago. There are two children living, Russell and Bernice Hanson, and four grandchildren.

Name Coolidge Adviser For Livingston County

W. F. Coolidge, farm adviser in Morgan county since 1935, has been hired to succeed R. C. Smith as farm adviser in Livingston county. Smith's resignation as farm adviser is effective March 1. He is taking a job with the Ferguson company in Michigan.

Coolidge was born and reared on a farm northwest of Bloomington and has been in farm adviser work for the last 17 years and prior to that period was engaged in farming for eight years. He is a veteran of World War I, having served in the Navy.

Mrs. Coolidge and her two daughters plan to remain in Jacksonville until the end of the school term.

By G. H. Iftner

T. D. Karnes, manager of the Farmers Elevator at Fairbury, died Jan. 21. He had recently suffered a heart attack and had been unable to return to his office. He was rounding out 34 years of service with the Fairbury cooperative. He is an old personal friend of Frank Haines, manager of the Illinois Grain Corporation. Notice of his death was received just as the IAA RECORD was going to press and details on funeral arrangements for Mr. Karnes were not available.

Donald Rowe, son of Mr. and Mrs. W. C. Rowe, Paxton, has accepted the managership of the Elliott Farmers Elevator in Ford county. Mr. Rowe is a graduate of the College of Agriculture, University of Illinois, and until recently was employed by the division of seed inspection of the Illinois department of agriculture, Springfield.

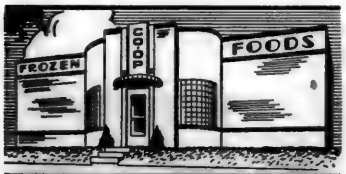
The director attended annual meetings of farmer elevators at Jerseyville, Perdueville and Kewanee during the month. Highly satisfactory financial reports were returned by Managers Friesmayer, Weter and Drew. Patronage refunds were declared by Jersey County Grain and by the Kewanee Farmers. Perdueville stockholders considered re-organization plans which will enable them to pay patronage refunds.

Latest new member of Illinois Grain Corporation is the Penfield Grain and Coal Company at Penfield, Champaign county. Lee Wilson is manager.

The Grundy County Farm Bureau has purchased the Coal City Grain Company from the former owner, J. W. Bovkwalter. A Farm Bureau grain and milling company is being organized.

G. H. Iftner, IAA director of grain marketing, attended the annual meetings of the Farmers' Grain Dealers Association at Des Moines, Iowa, and of the Farmers' Union Grain Terminal Association at St. Paul, Minn. A net profit of around $400,000 was reported by the Iowa Cooperative on the handling of 28,000,000 bushels of grain. A net profit of more than two and a half million dollars was reported by F.U.G.T.A. The Northwest Cooperative handled 129,000,000 bushels of grain last year.

J. O. Cain, Manager of the Jacksonville office of Illinois Grain Corporation addressed the annual meeting of the Bunker Hill Farmers Elevator Company on Jan. 20.



lockers

By Frank Gougler

Wabash Locker Service opened up for business Tuesday, Jan. 2, and Thursday, Jan. 11, the writer visited the plant and attended the 25th annual meeting of the Wabash County Farm Bureau. During the first 10 days of the locker plant operation, John Walser and Mrs. Walser had about all they could do to keep from becoming buried under the flow of business coming into the plant. The present 650 installed lockers are about all full, and additional lockers have been ordered. When filled to capacity, there will be 736 lockers. Herman Schnitz, president, is of the opinion that soon after all lockers are installed, they will be rented. The board of directors of the locker company is of the opinion that there is a great need in the county for slaughter service and is considering very seriously making this service available to locker patrons at an early date.

Other new locker plants to open up for business recently are located at Piper City, and Sibley in Ford county, and Fisher, Champaign county.

Oliver Bower, Bushton, Coles county, reported recently that the Coles County Locker Service has let contracts for reconditioning a building for housing a plant in Charleston. The contract has been let for insulating the refrigerated rooms and orders have been placed for all necessary equipment.

The new 850-locker plant to be constructed at Paris has been delayed because of adverse weather for construction. Most necessary building materials are on the ground and with favorable weather, construction will move forward.

The construction of a new building to house a plant at Steelville, Randolph county, is also underway. Plants are also going into existing buildings at Noble, Richland county, and Windsor, Shelby county.

Dec. 4, William Hegenbart, who has been first meat cutter for more than three years took over the management of the LaSalle plant and the branch plant at Grand Ridge. The two plants serve more than 700 patrons. Processing services are rendered also to a number of small locker plants privately owned. President L. C. Rinker is of the opinion that at an early date their operations should be expanded greatly. At only slight additional cost a large room adjoining the present locker plant could be insulated to accommodate 300 or more lockers. Slaughter service should also be made available to locker patrons and others, is the opinion of the board of directors.

A new broom sweeps clean. So does a mower cut clean when it has a sharp knife and properly adjusted cutter bar.

Advise Farmers To Check On Grinding of Limestone

Recent investigations indicate that it will pay farmers to check on the fineness of grinding in the agricultural limestone that they purchase.

In the last three months the soil improvement department of the Illinois Agricultural Association in its quality supervisional work has sampled 27 different quarries in 20 counties and found that only 9 were producing limestone 80 per cent or more of which passed an 8 mesh screen. Four were below 60 per cent, 3 were between 60 and 70 per cent and 11 between 70 and 80 per cent passing an 8 mesh screen.

The importance of a reasonable fineness of grinding of agricultural limestone is recognized when one realizes the tremendous job of work that limestone performs on an acid or sour soil. For example, 3 tons of limestone or 6000 pounds on a medium acid soil are expected to correct the acidity of 2,000,000 pounds of surface soil (depth of 6 2/3 inches) or 6 pounds of limestone is expected to correct the sourness of approximately 2000 pounds of soil.

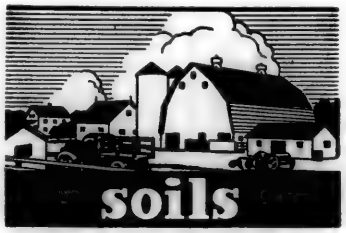
The U. of I. College of Agriculture after years of study recommends that limestone be ground so that 80 per cent or more will pass an 8 mesh screen (8 wires to the inch or 64 openings per square inch).

Ton for ton the more finely ground limestone will correct acidity more quickly than will the coarser ground material. The reason for the more rapid action is that the finer limestone having a great number of particles per ton is able to establish more areas of sweet soil immediately. Disking or harrowing scatters the particles of limestone through the top surface soil.

Each limestone particle then begins to correct the acidity of the soil surrounding it and during the first year may neutralize an area ranging from the size of a hazelnut to a walnut. Thus, thousands of areas of sweet soil are developed over the entire field.

The inefficiency of coarse limestone is due to the relatively small number of limestone particles and consequently only a small number of areas of sweet soil can be established. High testing material (CCE content), a reasonable fineness of grinding (80 per cent passing an 8 mesh), and a careful even job of spreading are three very important factors in limestone usage.

Farmers can do much to correct the coarseness in limestone by objecting to material not properly ground. Test reports on quarries serving the area as well as a specimen sample showing proper fineness of grinding are available in each county Farm Bureau office.



soils

By John R. Spencer

To produce one hundred bushels of corn the soil must deliver 150 pounds Nitrogen, 23 pounds Phosphorus (P), 72 pounds Potash (K) organic matter and 5 million pounds of water. These figures are large and further emphasize the importance of soil building and fertility maintenance.

There is considerable speculation on the total tonnage of limestone applied in the state last year with some quarries reporting a larger output and some a smaller production. A Chicago Company (one plant) marketed more than 135,000 tons in 1944 compared with 109,000 tons in 1943. A St. Louis company, (four plants) reported an increase, marketing one million tons of limestone last year.

A company in Johnson county recently changed over from diesel power to electricity for its principal crushing operations. The John McClure Quarry in McDonough county recently received WPB approval for a complete change over to purchased electric power.

Joe Stelbrink of Calhoun county whose farm is on upland loess soil, level land, gives an interesting experience of results with rock phosphate on alfalfa. In October 1943, he applied one half ton per acre of rock phosphate to five acres of an established alfalfa field which according to Farm Adviser Allison tested "A good medium" phosphate content. In the first cutting of 1944, there appeared to be no difference in yield; in the second cutting the unphosphated five acres yielded 45 bales and the phosphated acres yielded 137 bales. There was evident a substantial difference in growth and there appeared to be less insect damage in the fertilized section of the field.

According to college authorities it would cost approximately 10 cents a bushel, at present prices for fertilizers, of soybeans to replace the phosphorus and potassium removed by them from soils. This is based on the results of a five year test at the Joliet experimental field. H. J. Snider states, "From the most part, the beans are sold from the farm and since they contain such a large proportion of the total nitrogen (in the entire crop) there is little probability that soybeans contribute anything toward building up permanently the nitrogen content of soil."

While Illinois farmers are using very large amounts of limestone annually a recent estimate by college authorities is that slightly more than one third of the crop and pasture in Illinois is adequately limed now and that approximately thirteen million acres still need treatment.

Announcing the 3rd Annual

PRE-SEASON SALE

BLUE SEAL INOCULANTS FOR SOY BEANS

HIGH QUALITY

Blue Seal "Grow Crop" Inoculants are of the highest Quality. They have been tested in reliable nationally known laboratories. These tests have demonstrated that Blue Seal "Grow Crop" inoculants contain adequate numbers of nitrogen-gathering bacteria of the proper strain to give the desired results. Each 25-bushel package of Soybean Inoculant is packed with a minimum of 187 billion bacteria of pre-determined strains.

Rural YOUTH

By Ellsworth D. Lyon

At the beginning of 1944, Rural Youth of Illinois set out to reach the goal of $300,250 in bond purchases to be reported through the department of Young People's Activities of the Illinois Agricultural Association. This goal has been more than reached. The amount of $309, 918 has been reported by Rural Youth for 1944.

Reaching this goal has won for the young people the privilege of naming various pieces of military equipment. It was the responsibility of the five members of the State Rural Youth Committee to designate the projects to be sponsored. Soon after the goal was set the committee decided upon four projects. The projects and the amount of purchases to be allocated to each project were: Two ambulance planes, $110,000 each; one pursuit ship, $75,-000; and an amphibious jeep, $5,250.

The first piece of equipment was sponsored during the first six months of the year. The bonds and stamps reported for this project amounted to $111,903.45. This ambulance plane was named "The Spirit of Illinois Rural Youth" at the Rural Youth Training Camp at East Bay in August. The other three pieces of equipment were to be named at Farm and Home Week. Since Farm and Home Week was cancelled, the State Rural Youth Committee decided that each County Rural Youth Organization should be asked to submit a name for each piece of equipment. From the names suggested, ten names will be selected by the committee. These in turn, will be submitted again to the county groups and voted upon by them.

The State Rural Youth Committee for 1945 has decided upon a service project with the American Red Cross to run for the entire year. The program is to follow the needs of the local Red Cross Chapter but will center around such activities as blood donor service, financial campaigns; courses in first aid, nutrition, and home nursing, and such other projects as might be helpful locally or nationally and sponsored by the Red Cross.

It is the hope of the committee that Rural Youth groups will call upon local Red Cross leaders to explain how programs might be conducted and that Rural Youthers will make themselves available to the service of the Red Cross.

The DuPage county Rural Youth is moving upward in membership. Six new members were received at the January meeting making a total of twenty new members in the last four months. At the January meeting the secretary Mary Brummel read a very appreciative letter from an orphanage in Lisle, thanking the group for its contribution of Christmas toys.

Henry county is studying parliamentary procedure as the educational feature for the February meeting. Here is helpful educational material because Rural Youthers like to conduct meetings in an orderly manner. At this meeting officers were elected. Nearly 200 members and guests attended the recent annual Rural Youth dance even in below-zero weather and snow.

Randolph county comes through with basketball teams for both men and women as a part of the group recreational program. The educational feature of the January meeting of the group consisted of a discussion led by Alice Brown, Marcella Harmon, Marie Rockwell on the theme "Meeting the World Gracefully".

Recent annual banquets have been held by Brown, Carroll, Edwards, Wayne, Richland, Schuyler and Henry counties.

The Cook county Rural Youth group studied public health at its January meeting. A member of the Cook county public health unit was present and showed a movie on public health. Discussion by the group followed the movie.

4-H Club Member's Sow Makes Unusual Record

More than six tons of pork in three years is the record of the purebred 4-H Chester White sow, "Marie" owned by Robert Meyer, of the Crescent City 4-H Club in Iroquois county.

A total of 70 pigs in six litters farrowed by this Chester White sow in three years have been raised to 180 days. Their total weight was 12,830

Robert Meyer, Iroquois county 4-H club member, has established something of a record with his purebred Chester White sow.

pounds. This is an average of 4277 pounds or 2.14 tons of pork per year for three consecutive years.

The dam of Marie, a 4-H club sow owned by Carl Dixon of Prairie Green township, produced two ton litters. One litter of 12 weighed 2245 pounds at 180 days and a second litter of 10 weighed 2360 pounds.

In 1941, the spring and fall litters raised to six months consisted of 11 and 13 pigs respectively weighing 2128 pounds and 2340 pounds.

Ten pigs weighing 1922 pounds constituted the 1942 spring litter. The fall litter of 12 pigs weighed 2482 pounds when 180 days old.

The 1943 spring litter of 13 pigs weighed 2300 pounds. The fall litter of 11 pigs weighed 1658 pounds when 180 days old.

Robert and his father are firm believers in a good swine sanitation program

Radio School For Vets Project Of 4-H Members

While wounded veterans of overseas duty are convalescing at Mayo General Hospital in Galesburg, they will have an opportunity to receive valuable radio instruction — thanks to the latest contribution of Illinois' 34,000 4-H club members for the welfare of U. S. servicemen.

When a survey was conducted among the patients at the hospital to see what type of instruction they wanted, radio was one of the three receiving the most votes.

Through scrap drives, dances, parties, and auctions, 4-H club members raised $1,764.82 so that the veterans could have the type of school they wanted.

On Jan. 17 the school was opened with 50 4-H representatives from Knox and the seven surrounding counties present for the occasion.

From first-hand experience, Sgt. Earl Poulsen, who was wounded at Cassino and later sent to Galesburg for convalescence told the group of the importance of such a school to the patients.

In accepting a placque from 4-H members to be hung in the laboratory, Maj. James C. Vaughan, post adjutant, stated, "The reconditioning service of Mayo General Hospital is most grateful to the 4-H clubs for their unselfish and patriotic contribution toward the establishment of a radio school in this institution.

"Such a school designed for the reconditioning of patients, will provide a practical and therapeutic laboratory where the soldier may recapture lost skills and, at the same time, be restored to his normal, healthy self."

ILLINOIS FOLKS FORGE AHEAD ON STUDIES OF RURAL SCHOOLS

By JOHN K. COX
Director of Rural School Relations for the IAA

ILLINOIS farm people are forging ahead in the study of rural school problems according to reports received from all parts of the state.

Some indication of this interest is furnished in the number of requests for copies of the Illinois Agricultural Association's School Committee report which was issued at the time of the IAA annual meeting last November.

To date more than 6000 copies have been distributed in Illinois, and the demand continues daily. The report is the result of study by the Schools Committee of the IAA which began work in August, 1943. The IAA Schools Committee consisted of two persons selected by the leaders of the Farm Bureau in each of the 15 downstate congressional districts, and three members from the IAA board of directors. One farm adviser served in an advisory capacity.

Topics covered in the report include: the importance of education, school authority and responsibilities, development of the Illinois school system, elementary schools, pupil transportation, high schools, school finance, school districts and reorganization, and summary of recommendations.

Foreword of the report states in part: "The committee recognizes that no one pattern of school organization will fit all communities. . . Careful study and consideration, however, disclose that certain fundamental principles apply in every area. . . The recommendations in this report are intended to bring about substantial improvements in the organization and operation of the public schools serving the people living in the rural areas of Illinois. . ."

County school committees throughout the state have extended approval generally to the report and have made recommendations to their farm people similar to those made by the Champaign County Farm Bureau school committee which were as follows:

(1) That all farm people study their local school situation and know the problems of the school in their district.

(2) That all study the IAA School Committee report which has been prepared in booklet form and is being distributed as rapidly as extra copies can be made available.

Most of the county school committees set up by the Farm Bureaus have a representative from each township. Some counties have a representative of the Home Bureau or someone appointed by the Home Bureau unit director from each township. All committees attempt to work closely with the county superintendent of schools and many of the latter sit in the committee meetings. Sometimes other school men are present and invariably the committee has a number of rural school board directors in its group.

The general procedure for the county school committee's action is as follows:

1. Meet and discuss the general problems of rural schools in Illinois at which time they agree to make a survey of vital information concerning the schools in their own county.

2. Some one is appointed by the committee to collect the information for the entire county by townships. This information is largely secured in the office of the county superintendent of schools.

3. This information is presented to the representatives from each township, with the request that they study the information and report on school conditions in their respective areas at the next meeting of the county committee.

4. After the meeting of the county committee, in which local school problems in each township are discussed, the committee votes to organize the material that has been found for each township, and the county as a whole, and present such information to Parent-Teacher Associations, Farm Bureau units, and other local community groups for consideration.

When this information is properly distributed in the various communities, then the state and county organizations have in the main met their primary responsibility to rural people, and the responsibility then rests upon the shoulders of the local people to make such adjustments as are necessary.

From experience with county school committees it appears that when they view the limited opportunities in many small rural schools today in the same manner as they appraise erosion on their land, they are convinced of the need to improve rural schools.

The failure to provide the proper educational advantages for rural pupils can result in erosion of rural life just as surely as soil erodes on a hillside corn field that is plowed up and down the hill.

Is there not something lacking in rural life when many of our imaginative and progressive young people, even those trained in 4-H clubs and Rural Youth groups, leave the farm for the city? Too often people have fallen into the habit of thinking of the plodder as ideally suited to farm life.

From a long range point of view there is no contribution which farm people can make that is more vital to America's future and to rural life in general than a calm consideration of rural school problems, an enlightened appraisal of their limitations and points of strength, and a conscientious attempt to adjust the school programs to the needs of rural communities in a modern world.

Suitable adjustments in other fields have been made in rural areas. Farm people have learned to cooperate on a broader scale in the marketing of their products in order to receive greater returns for their labor. These achievements were made by local people working together. Similar achievements can be made in the educational field by local people to provide better and more uniform educational opportunities in rural areas, to bring about a more equitable distribution of the costs of maintaining schools, and to insure that the basic control of rural schools remains in the hands of the rural people of the various counties.

Patrick Henry once said, "He is the greatest patriot who stops the most gullies!"

NOTICE

Illinois Agricultural Association
Election of Delegates

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of February, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the association, including the election of officers and directors, as provided in the By-Laws of the Association.

During February, annual meetings will be held in Coles, DeKalb, Douglas, Grundy, Lake, McHenry, Wayne, Whiteside and Will Counties.

Paul E. Mathias,
Corporate Secretary
January 11, 1945

EDITORIAL

A Travesty of Justice

A CLEAR thinking school superintendent from central Illinois recently wrote to the editor protesting against the inequalities in the present method of distributing state aid to needy schools. The present procedure "makes a travesty of justice," he wrote.

With this view the Illinois Agricultural Association is in complete agreement. Both the IAA School Committee and the delegates to the last annual meeting called attention to the injustices of present procedures. Both groups also urged the adoption of a new plan of distribution whereby all districts in similar circumstances would be treated uniformly and equitably.

Under the present law the distribution of special state aid, intended for the assistance of needy schools, is largely governed by property assessment practices. These practices vary greatly from county to county. In some counties property is assessed at as much as 75 per cent of its actual value. In others assessments are made at less than 25 per cent of the real value of the property.

As a qualification for receiving special aid a needy school district is required to levy for educational purposes a tax of $1.00 on each $100 of assessed value. In the highest assessment counties, therefore, school districts must levy a tax of 75c on each $100 actual worth of property in the district before it can be considered for special state aid. But in the lowest assessment counties districts may become eligible for special state aid by levying a tax of less than 25c on each $100 actual worth of property. Thus school districts in the lowest assessment counties are able to qualify for special aid with less than one-third the local effort required in the highest assessment counties.

It so happens that the poorer counties usually have the higher assessments. Therefore, needy school districts, both urban and rural, in the poorer counties are required to tax themselves heavier in order to qualify for special aid than are similar districts in the wealthier counties. Furthermore, all other things being equal, the state pays the largest amounts to the districts in the low assessment counties. Schools in the high assessment counties, therefore, are doubly discriminated against. First, by being required to levy a higher tax on themselves and second, by having their special state aid reduced sufficiently to offset the larger amount raised locally.
